THE PARLIAMENTARY DEBATES

OFFICIAL REPORT

IN THE SECOND SESSION OF THE FIFTIETH PARLIAMENT OF THE UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND
[WHICH OPENED 25 JUNE 1987]

THIRTY-EIGHTH YEAR OF THE REIGN OF
HER MAJESTY QUEEN ELIZABETH II

SIXTH SERIES **VOLUME 150**

NINTH VOLUME OF SESSION 1988-89

House of Commons

Tuesday 4 April 1989

The House met at half-past Two o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

Oral Answers to Questions

EDUCATION AND SCIENCE

Schools (Opting Out)

1. **Mr. Thurnham:** To ask the Secretary of State for Education and Science how many schools have voted to opt out to date; and if he will make a statement.

3. **Mr. Harry Greenway:** To ask the Secretary of State for Education and Science if he will make a statement on his proposed funding of opted-out schools.

The Secretary of State for Education and Science (Mr. Kenneth Baker): At least 63 schools have begun the legal procedures for seeking grant-maintained status. So far parents have voted at 51 schools. In 38 they have authorised a formal application, and I have already approved four such applications. My proposals for funding grant-maintained schools were set out in a consultation paper on 10 March.

Mr. Thurnham: Does my right hon. Friend welcome the confidence shown by the parents of pupils at St. James's Church of England school which has allowed the school to take up a full entry quota for next year? Will he assure the governors of the school that they will receive all the support that th[illegible]d in view of the mean-mindedness of Bolton council which has threatened to withdraw all but the legal minimum of support services, even though the people of Bolton greeted my right hon. Friend's decision to provide grant-aided status with jubilation?

Mr. Baker: I deplore the absurd and rather threatening statement made some time ago by Bolton's chief education officer that teachers in grant-maintained schools do not have the right experience to serve in LEA schools. That is transparent nonsense. With regard to funding, local authorities will retail some legal responsibilities for certain services to pupils in grant-maintained schools, but when governors become responsible for running schools, they will have the money to provide the basic education service and to buy specialist support either from the local education authority or, if the authority is not willing, from other suppliers.

Mr. Greenway: Bearing in mind the excellent opt principle and its fairness, will my right hon. Friend assure the House that he will under no circumstances allow grant-maintained schools to be in any way disadvantaged in comparison with local authority schools? Will he take note of what the hon. Member for Birkenhead (Mr. Field) said—which contrasts with what his party has said—that Church schools and others should opt out of the local education system?

Mr. Baker: I assure my hon. Friend that the rules about parity of funding are clearly set out in the memorandum that I have already issued. Like my hon. Friend, I was very interested to see the report produced by the hon. Member for Birkenhead (Mr. Field). In it the hon. Gentleman praised the status of grant-maintained schools and advocated that that option should be taken up by Church schools. That is clearly a very significant contribution to the debate from a distinguished member of the Labour party. I only hope that the hon. Member for Leeds, Central (Mr. Fatchett) will listen to him.

Mr. Frank Field: Clearly the Secretary of State for Education and Science did not attend a grant-maintained school because if he had, he might have read the pamphlet more ably. In that pamphlet I advocated that opting out

schools should opt in to a federated Church status. If that happens, does the Secretary of State agree that the Education Reform Act 1988 would be radically changed in a way which might be more on keeping with his views, but less in keeping with those of the Prime Minister?

Mr. Baker: No. I think that in his pamphlet the hon. Gentleman urged that Church schools of all denominations should take advantage collectively or individually of grant-maintained status. I am glad that he had the courage to say that. I was a little surprised by the reaction of the Member for Leeds, Central when the pamphlet was published. He said:

"Frank is out of line with party and Church thinking on this."——

but he added, and this must be very reassuring for the hon. Member for Birkenhead——

"We are not going to kick him for having other views."

Mr. George Howarth: Does the Secretary of State agree that 97·4 per cent. of parents at Ruffwood school in my constituency, who voted against opting out, pretty well tumbled what a fatuous and stupid way that would have been to run their school?

Mr. Baker: The whole purpose of a ballot is that parents have a choice; some say no and some say yes, and more are saying yes than no. I am sure the hon. Gentleman will find it reassuring that more schools in Labour authorities—*[Interruption.]* I have the figures. Indeed, of the 63 schools which have so far embarked on the statutory procedures, 24 are in Labour-controlled local education authority areas, 22 in Conservative, 16 in hung areas and one in an SLD-controlled area. That disposes of the rumour that it is only in the Tory areas that schools wish to opt out.

Mr. Pawsey: Does my right hon. Friend agree that grant-maintained schools will have an impact out of all proportion to their numbers, because they will do a great deal to improve the quality and standard of state education and will be used as benchmarks against which other schools will be judged?

Mr. Baker: I am quite sure my hon. Friend is right. This is one of the reasons why we introduced this new type of school, and I am sure that they will provide a standard of excellence and will be beacons. This is, after all, the very thinking behind the pamphlet issued by the hon. Member for Birkenhead.

Mr. Straw: I, too, have a list, Mr. Speaker—on this occasion supplied by the GMS trust—which shows that of the 49 schools balloted, as of 4 April, only 20 are in Labour-controlled areas and many more in Conservative-controlled areas. *[Interruption.]* Sorry, 22—two more.

What is the Secretary of State's view of his senior chief inspector's report "Education Standards 1988-89" which shows that plans to reorganise secondary schools appear to have been slowed by uncertainty over the effect of recent legislation, especially that relating to grant-maintained schools? Does the Secretary of State agree with the chief inspector that opting out is paralysing the sensible planning of school provision, wasting money and is undermining education opportunities for a great many young people?

Mr. Baker: It will come as no surprise to the House that my figures are more up-to-date and correct than the hon. Gentleman's. I do not believe that reorganisation plans are being paralysed. It is interesting that some of the schools which decided to vote no are themselves subject to major reorganisation, amounting virtually to closure, and that they have voted in favour of that rather than go for grant-maintained status, which indicates that the essence of this and what the Labour party does not like about it is that grant-maintained status is all about parental choice, and that is what we are seeing.

Schools (Financial Management)

Mr. Anthony Coombs: To ask the Secretary of State for Education and Science what representations he has received on the average cost method of allocating resources to schools under the local financial management provisions of the Education Reform Act.

The Minister of State, Department of Education and Science (Mrs. Angela Rumbold): My right hon. Friend has received some correspondence from authorities and schools expressing concern about the requirement for schemes of local management to provide for average costs, including average salary costs, to be reflected in the formula for distributing resources between schools. Circular 7/88 allows LEAs to devise formulae which safeguard the position of small schools which might otherwise find it difficult to accommodate actual salary costs. I understand that the majority of authorities are satisfied that this flexibility provides a certain measure of protection.

Mr. Coombs: Will my right hon. Friend confirm that in the consultation processes in schools there is a tremendous and almost universal acceptance of the opportunities put forward by local financial management? Will she also agree, however, that there is some concern at the interaction between the provisions of the school pay and conditions document and the average cost per capita methods of funding different schools, which may in some cases lead to differences of £40,000 between similar schools? Will she therefore consider giving the opportunity of flexibility to certain LEAs in order to be able to vire funds between those schools to avoid those kinds of anomalies?

Mrs. Rumbold: It is true that during the consultative period a large number of authorities agreed that local management of schools will be beneficial. Also, it is misleading at the present time to look simply at one of the cost elements in isolation when considering some of the formulas. It is essential for all authorities to consider the combined effect of all the elements in the formula and not simply the salary costs. On the final question, I do not want to anticipate the statutory approval process but, of course, it may well be possible that there would be some flexibility in individual, exceptional cases, where there are particular difficulties.

Mr. Jacques Arnold: Has my hon. Friend noted that a number of Kent schools have been running under local financial management for some time, two of them in Gravesham? Has she further noted that that is immensely popular with the local schools since it allows them to obtain greater value for the money provided and the ability to make cash purchases which has resulted in the quick delivery of books, and at a discount?

Mrs. Rumbold: I am delighted to hear of those experiences in Gravesham in my hon. Friend's constituency. During a recent visit to another authority a head teacher told me, of his own volition, that he had been very much against the idea of local management schemes, but after three years of operating he was entirely in favour of it because he had found so much to his benefit that he had not expected.

Mr. Frank Field: The Minister says that local education authorities are happy that they should determine the formula. Are small schools happy with that?

Mrs. Rumbold: As the hon. Gentleman will know, there is special provision for small schools with fewer than 10 teachers to have their provisions determined by the local education authority within the formula weighted in their favour. Therefore, there is provision within the formula for small schools.

4. **Mr. Stern:** To ask the Secretary of State for Education and Science if he plans to issue further advice to education authorities on the criteria to be used in dividing existing education budgets among the schools under their control for the purposes of local financial management.

Mrs. Rumbold: Circular 7/88 sets out the framework for local education authority schemes of local management. My right hon. Friend has no plans to issue further guidance. Officials of the Department's LMS unit are in touch with individual local education authorities and are happy to advise on any particular points of concern which may arise during the preparation of a scheme.

Mr. Stern: I am grateful to my hon. Friend for that reply. Will she encourage local education authorities as much as possible to use all the flexibility that is available within the current guidelines and, where necessary, advise local authorities on an individual basis of the amount of flexibility that it is available to avoid unnecessary and unacceptable results in the funding of individual schools?

Mrs. Rumbold: Yes. I can reassure my hon. Friend that local authorities have the necessary flexibility to construct a formula for special circumstances—for example to weight resources in favour of individual schools in inner cities, those which serve disadvantaged areas, those which admit a higher than average proportion of pupils from ethnic minorities or those with special educational needs.

Mr. Spearing: Can the Minister confirm that local financial management includes responsibility for the repair and maintenance of buildings? If that is so, is that not rather arbitrary? Could it not put an unfair burden on some schools? What guarantee can the Minister give that her Department will provide local authorities with sufficient funds to ensure that schools are treated equitably in that matter?

Mrs. Rumbold: The local financial management schemes will include some money within the formula for general repairs and maintenance. Where such work can be shown to be capital expenditure, it will fall outside delegation within a local financial management scheme and it will be the local authority's responsibility to allocate resources.

Universities (Salaries)

5. **Mr. John Marshall:** To ask the Secretary of State for Education and Science what representations he has received on academic salaries in universities.

The Parliamentary Under-Secretary of State for Education and Science (Mr. Robert Jackson): My right hon. Friend has received representations from the Committee of Vice-Chancellors and Principals and the Association of University Teachers seeking additional funds for pay increases for university staff. He has also had many letters about salary levels in universities and in criticism of the boycott of examination work by lecturers.

Mr. Marshall: Does my hon. Friend agree that those academics who are refusing, or threatening to refuse, to mark examination papers are behaving in an unacademic, immoral way which is tantamount to blackmail? Does he also agree that some of them may well be in breach of their contractual obligations to their university, and will he advise pusillanimous principals to take the necessary disciplinary measures against them?

Mr. Jackson: My hon. Friend is right. The money offered represents a fair increase in academic pay. The Government have put in extra money and there is no more to come. I hope that all parts of the House join us in condemning any prospect of the rejection of that offer, because that would put students at risk and damage the professional reputation of British university academics.

Mr. Simon Hughes: Does the Minister recognise that university teachers have a justifiable complaint, given that they received a 0·5 per cent. increase last year and have just been offered 6 per cent. for this year? In view of the great Budget surplus of which the Government are so proud, and given that we cannot allow students to suffer, with the prospect of no examinations in the summer, will the Secretary of State and his Ministers take the initiative by pouring oil on troubled waters and offer to talk about more money in return for the lecturers offering to suspend their action and allow this summer's examinations to take place?

Mr. Jackson: The House should appreciate the context and the sequence of events. On 1 December 1986 there was an increase of 16·6 per cent., and on 1 March 1988, an increase of 7·4 per cent. That meant a 24 per cent. increase in dons' pay between 1985 and 1988, at a time when the retail price index rose by only 13 per cent. There is now an offer from 1 March 1989 of the equivalent of 6·5 per cent., with a further 1 per cent. due for discretionary payments from October. That is a very reasonable and generous offer that has involved additional Government resources, and it should be accepted.

Mr. Brandon-Bravo: My hon. Friend will acknowledge that Nottingham university is not exactly a hotbed of militant unrest. Nevertheless, whatever may be the rights and wrongs of this particular case, and regardless of whose figures are right, does my hon. Friend acknowledge that, particularly in science and managerial disciplines, we cannot offer the salaries that will ensure the standards that we believe are necessary in higher education in the long term?

Mr. Jackson: Some evidence was provided—it must be said, rather scanty evidence—of recruitment and retention

difficulties in some areas in the universities. That was one of the reasons that led the Government to advance proposals for extra money. The key to solving the problem lies in increased differentiation in university pay. That element has been included in the offer we have made.

Mr. Andrew Smith: Does the Minister acknowledge that his letter published in *The Independent* last Thursday and his advocacy of university teachers moonlighting to make up what he conceded to be a 25 per cent. cut in their relative pay is singularly ill-judged and insulting, and provides incendiary support for the cause of rejecting the ballot offer? Is moonlighting now the policy of the Government throughout public sector higher education, and is it the policy also of the Secretary of State?

Mr. Jackson: I was attempting to meet the argument that there has been a 25 per cent. cut in dons' pay relative to average earnings. I made the rather elementary point, which I hope the hon. Gentleman understands, that pay is not the same as earnings, and that there is reason to believe that the earnings of academics have increased in the same way as the earnings of other people. It is appropriate for the Government to encourage dons to write books and articles, undertake consultancies, and to assume directorships—all of which involve extra earnings.

Assessment Tests

6. **Mr. Nicholas Bennett:** To ask the Secretary of State for Education and Science if he will make a statement on the progress being made towards implementing assessment tests for school pupils at seven, 11 and 14 years of age.

Mrs. Rumbold: The first step towards implementing the Education Reform Act 1988 is to establish programmes of study——

Mr. Skinner: Mr. Speaker, have you read *The Observer*——

Mr. Speaker: Order. That matter has nothing to do with Education Questions.

Mrs. Rumbold: The first step towards implementing the Education Reform Act 1988 is to establish programmes of study for each of the core and foundation subjects. That process is well under way and programmes of study will be introduced for mathematics and science for seven and 11-year-olds this autumn. Children will be assessed in these subjects on a trial basis in 1991, and from 1992 on a reported basis. Assessment arrangements in other subjects and for those and other key ages will be phased in over succeeding years.

Mr. Bennett: In view of the fact that teachers have always tested children, does my hon. Friend share my astonishment, and that of parents, that some teachers and some teachers' unions oppose those tests? Does she agree that assessment tests will provide a national standard benchmark by which schools and teachers can be judged, which will also help parents to judge the progress of their children and how they can best be helped?

Mrs. Rumbold: My hon. Friend is absolutely right. The importance of introducing assessment together with the national curriculum is that it will enable teachers, parents and children to monitor the children's programmes of study within the national curriculum. It is absolutely essential that assessment is introduced. I am surprised to learn that some teachers do not agree with this particular policy since I understand that for many years it has been the practice of the majority of teachers to assess the children in their classes on a monthly basis.

Mr. Grocott: Given the Minister's enthusiasm for this endless formalised testing, despite all evidence to the contrary, will she tell us at what point she will have an assessment of the effectiveness of these tests? Will she give a commitment that if they are discovered to be valueless she will scrap the system?

Mrs. Rumbold: I think it very unlikely that assessment will prove valueless since it is a part of the process of teaching which has been going on in schools throughout the country, as we have been assured endlessly by teachers. So the assessment process that we are introducing, following the introduction of the programmes of study with the national curriculum, will be useful not only to the teachers but to the parents. It seems very unlikely that there will be any occasion for parents to wish that assessment be discontinued.

Mr. Favell: At the moment it is virtually impossible to dismiss an incompetent teacher. What is to be done about teachers whose pupils consistently fail their assessment tests?

Mrs. Rumbold: It is hoped very much that we shall ask for teachers themselves to go through a form of assessment. The introduction of teacher appraisal will help those who have difficulty to reassess themselves and to undertake in-service training to improve their performance with pupils. It is crucial that our children are given the best possible teaching and that the teachers themselves produce the results, through assessment and testing, to which pupils and parents are entitled.

Ms. Armstong: Will the Minister take the opportunity to tell the House if age-related testing is to be used as part of the process of ensuring that all children reach their full potential or if, as many now fear, it is to be used as a totally inadequate way of pitting school against school and child against child? Will she further make it clear that crude test scores will not be published for seven-year-old children because such scores would be both misleading and potentially damaging to children's progress?

Mrs. Rumbold: I find it very sad that the hon. Lady should repeat that kind of misinformation to the general public. The whole purpose of testing and assessment of children is to ensure that all children, throughout their school years, can achieve their potential. This is what the whole of the national curriculum is designed to do. We are putting the programmes of study first and the assessment of those programmes afterwards to discover what children have in the way of understanding and knowledge.

Primary Schools (Staffordshire)

7. **Mr. Knox:** To ask the Secretary of State for Education and Science how much was spent per pupil for primary schools in Staffordshire in the most recent year for which figures are available; and what was the comparable figure in 1978-79, at constant prices.

The Parliamentary Under-Secretary of State for Education and Science (Mr. John Butcher): In cash terms,

Staffordshire spent £370 per primary pupil in 1978-79 and £980 per primary pupil in 1987-88. At 1987-88 prices those figures are £755 and £980 respectively.

Mr. Knox: Does my hon. Friend agree that these figures show an impressive increase in expenditure per pupil in primary schools in Staffordshire since the present Government came to power? Will he further agree that they provide no evidence at all of alleged cuts in education and staffing by the Government?

Mr. Butcher: I fail to understand how the word "cut" can be used accurately in relation to education budgets. Nationally there has been a 35 per cent. increase in real terms in expenditure per pupil and a not too dissimilar increase in Staffordshire. My hon. Friend is absolutely right: those of us who wish to see improvements in standards of education have put our money where our mouths are and have adequately funded that improvement.

Primary School Teachers

8. **Mr. Matthew Taylor:** To ask the Secretary of State for Education and Science what proportion of primary school teachers' working time has been assigned as non-contact time in each of the last five years.

Mr. Butcher: The 1987 primary school staffing survey showed that there were 22·5 hours of taught lessons in the average pupil's week in maintained primary schools in England. Within that total, teachers had an average of two hours' non-contact time.

Mr. Taylor: The Minister will be aware that the same unpublished staffing survey, which is lodged in the House of Commons Library, makes it clear that fewer than half of all primary school teachers have any non-contact time. In my own area, virtually no teachers have non-contact time. A typical school in Cornwall has been described as three teachers and three classes. What will the Minister do to ensure that resources are provided to give teachers the necessary preparation time, particularly in view of the demands placed on them in the drawing up of preparations for the national curriculum?

Mr. Butcher: Non-contact time within the pupil week is not the whole story. Considerably more non-teaching time is available within the 1,265 hours a year that teachers are required to work, and that can be used to prepare for the national curriculum. Of the 195 days a year on which a teacher is required to work, five may be used for in-service training, and schools may close for two days this year specifically to prepare for the introduction of the curriculum.

I know that many representations are being made on the need for further in-service training, but any dispassionate examination of the figures will show that the teaching profession in this country is very well provided for in training.

Mr. Harry Greenway: Will my hon. Friend examine marking periods in the school week, as distinct from non-contact time as set out in the Education Reform Act? Will he do all that he can to ensure that periods are set aside for marking?

Mr. Butcher: As I said earlier, considerable discretionary allocation of time is available to headmasters. Some 800 of the 1,265 hours are direct teaching time. I should have thought that the activity to which my hon. Friend refers could be catered for within a well-managed school, provided that headteachers were prepared to use their management discretion appropriately. That, indeed, was one of the conclusions reached in the recent Her Majesty's inspectorate report.

Mr. Flannery: The shortage of teachers is now so serious that the Select Committee on Education, Science and Arts is examining it very carefully. Has not that shortage, which the Government have created by attacking teachers relentlessly—an attack led from the top on the Front Bench—resulted in the virtual disappearance of non-class-contact time in primary schools? Not only that, but teachers in the primary sector are now staying behind regularly, for an hour or two every day, because of the pressures imposed upon them. When will the Government realise that to bring back teachers who have left the profession they must increase wages and give teachers back their negotiating rights?

Mr. Butcher: The position described by the hon. Gentleman is simply not reflected in the facts. Primary class contact rates have fallen from 91 per cent. in 1984 to 89 per cent. in 1988. That means that, on average, teachers are spending less time in front of classes.

The question of teacher shortages is complex. We understand that there are geographical and, indeed, subject difficulties, and I hope that some of the action plans introduced by my right hon. Friend the Secretary of State will be supported by the hon. Gentleman, as they are proving effective.

Pupil-Teacher Ratio

9. **Mr. Patnick:** To ask the Secretary of State for Education and Science what has been the change in the ratio of pupil-teacher numbers over the last five years for which figures are available.

Mr. Butcher: The overall pupil-teacher ratio in maintained nursery, primary and secondary schools has improved from 17·9 in January 1984 to 17 in January 1988. There are now more teachers relative to pupils than ever before.

Mr. Patnick: I thank my hon. Friend for his answer. Would he care to comment on the initial teacher training recruitment, which is vital if the trend established under the present Government is to continue?

Mr. Butcher: Yes, I should like to report to the House on initial teacher training, but before I do so let me give the House some new information. We have received a massive response to our recent advertising campaign, and more than 8,000 people have expressed an interest in teaching as a career. Surely that gives the lie to the assertion that those who wish to enter the teaching profession are being deterred by alleged demoralisation in the profession.

Recruitment to ITT reached a record in 1988; it was up by 5 per cent. on recruitment in 1987. Primary recruitment was up by 12 per cent. Secondary recruitment was down, but by only 250 students; the underlying trend is still upward.

Mr. Andrew F. Bennett: Of the 8,000 people to whom the Minister referred, how many were interested in

teaching science, maths, combined technology and similar subjects? Does he have evidence to show that the Government's recruitment drive is solving the shortage of teachers in those subjects?

Mr. Butcher: I do not have a breakdown of subjects of interest referenced by those 8,000 responses. If the hon. Gentleman looks at the figures from the Universities Council for the Education of Teachers he will find that there was a higher placement of teachers of maths and science than was the case for teaching in the generality. The fact is that many people are looking for a job in the profession. There are geographical difficulties and differences in standards of living in different regions, and we are aware of them, but I wonder whether the hon. Gentleman would care to talk to his ex-colleagues in the teachers' unions about, for example, regional pay.

Teacher Recruitment

11. **Mr. Wallace:** To ask the Secretary of State for Education and Science if he has any plans to provide additional resources for teacher recruitment.

Mr. Kenneth Baker: My Department's action programme includes bursaries, in-service training, the teaching as a career unit and new publicity, which has amounted to over £51 million in the last three years. That programme will continue and will be extended.

Mr. Wallace: Is the Secretary of State willing to accept that there are still acute shortages in subjects such as maths and physics and that in the last two years his bursary scheme has reached target only once in one subject? Does that not represent a failure? Is it not a fact that far more resources are required if people are to be brought into teaching, not least in subjects such as maths and physics, in which there exist important and serious shortages?

Mr. Baker: Last year saw record figures for the intake of trainees into initial teacher training. The number of applications for the autumn of this year show an increase of 10 per cent. over the number last year. I accept, however, that there are difficulties in the subjects to which the hon. Gentleman referred—in maths, physics, technology and chemistry—and that is why I have extended the bursary scheme to chemistry trainee teachers.

Mr. Baldry: Does my right hon. Friend agree that the deciding factor in whether a sufficient number of people come forward is the way in which the profession portrays itself? To that end, does he agree that every teacher should take cognisance of the advice given by June Fisher, president of the National Union of Teachers, that teachers should stop whingeing and moaning and should take a pride in making a success of the Government's education reforms?

Mr. Baker: My hon. Friend is right. Far too many people at the teacher conferences last week were talking down their profession. We want to extend the opportunities for qualified people to become teachers. That is why we are putting forward our proposal for licensed teachers, a proposal which is being widely welcomed by many Labour local education authorities. It is absolutely absurd to believe that people who are qualified—who have had two years in higher education and experience in business—should not come into the teaching profession.

Mr. Fatchett: When will the Secretary of State recognise that we are now faced with acute teacher shortages in our schools? When will he also recognise that morale is at an all-time low in the teaching profession? How does he think he will be able to attract more people into the profession when this year he has imposed a cut in real living standards on teachers? When will he stop kicking teachers around?

Mr. Baker: In the recently completed advertising campaign we received over 8,000 applications from people seeking to be teachers. The numbers going to initial teacher training later this year are up by nearly 10 per cent. compared with last year. As for attracting people into the profession, I hope that the hon. Gentleman will welcome our proposal for licensed teachers, because many Labour education authorities are welcoming them.

City Technology Colleges

12. **Mr. Squire:** To ask the Secretary of State for Education and Science how many parents have written to him objecting to the establishment of a city technology college.

Mr. Kenneth Baker: Our records show that only 15 letters of objection have been received in nearly two and a half years to city technology colleges. Parents see the CTC programme as a great opportunity for their children. There have been over 1,200 applications for 180 places available this year at Kingshurst, the first CTC. That is what parents think of CTCs.

Mr. Squire: Does my right hon. Friend agree that that excellent answer give the lie to the comments that we sometimes hear from Labour Members to the effect that parents and children do not want CTCs? Will my right hon. Friend particularly confirm that the interest is as high, if not higher, in areas where poorer standards of education and an absence of choice have been a legacy from the Labour party?

Mr. Baker: We are receiving applications from many areas to have CTCs—either new colleges or schools converted to CTCs. This is proving to be a very popular policy, because people recognise that these schools provide a special type of education. We want them to become beacons of excellence, copied by others. Of course, that is now happening in the Birmingham area.

Mr. Madden: If the Secretary of State is so confident that parents want CTCs, why is he so terrified to allow parents in Bradford a ballot to decide whether £8 million of their money should be spent on setting up a CTC, at a time when the vast majority of them see the expenditure of that amount of money as being wholly unnecessary, very divisive, and damaging to the existing schools in the city?

Mr. Baker: That is simply not true. It has been possible to establish a CTC in Bradford—a new one, to be built next year—only because the Conservatives now control Bradford city council. The hon. Gentleman will find that, once that school is established and has started to recruit,

it will be one of the most popular in Bradford, to which the children of many of his constituents will want to go. *[Interruption.]*

Mr. Speaker: Order. I ask the House to listen to Education Questions.

Mr. Holt: My right hon. Friend will know that the new Macmillan CTC in Teesside has been oversubscribed by teachers many times over, and that many of the parents of the 40 to 60 children who applied to join but have not been found places this year will want a new college in addition to the one that we already have.

Mr. Baker: Once again, I am quite sure that that school will be very popular. Many teachers want to teach in it, and many parents want to send their children to it. I am quite sure that after it has been established for a few years its popularity will grow even further.

Mr. Straw: The Secretary of State must be aware that the parents of children at the Sylvan school in Croydon, which is the subject of a proposal to turn it into a CTC, have voted overwhelmingly to keep it as a county school. Why is the Secretary of State refusing to accept the outcome of that parents' ballot?

Mr. Baker: I understand that the Croydon local education authority voted only last night to publish statutory notices to close the school. That triggers a formal process, and the application will come to me. Of course, I will take into account any objections to the proposal.

School Closures

13. **Mr. Rooker:** To ask the Secretary of State for Education and Science to what extent he takes into account parental wishes when considering a school closure.

Mr. Butcher: In considering statutory proposals for school reorganisations, my right hon. Friend takes full account of all representations made by parents, both for and against the proposals.

Mr. Rooker: If the majority of people who have children at Sylvan high school in Croydon are so determined that the school should not be closed, as they have constantly made clear to all four Members of Parliament for Croydon, including you, Mr. Speaker, will the Government accept the wishes of the parents?

Mr. Butcher: The section 12 proposal has now been issued, and we will look at it—as we look at all section 12 proposals—on its merits, separate from the consideration of the CTC.

Mr. Latham: When my hon. Friend comes to consider the section 12 notice to close Long Field high school in my constituency, which is full and, indeed, is extremely popular, will he confirm that he will consider at the same time the 96·4 per cent. parents' vote to go for grant-maintained status?

Mr. Butcher: Of course, we look at the merits of a particular school proposed for closure. Indeed, I take very seriously representations from parents who are concerned to maintain the quality of an existing, well-managed school with a good ethos. Matters of that sort will be taken into account.

City Technology Colleges

14. **Mr. Simon Hughes:** To ask the Secretary of State for Education and Science what measures are being taken to find sponsors for city technology colleges.

Mr. Kenneth Baker: We have worked hard to bring the CTC programme to the attention of industry and commerce, and there has been a magnificent response to its aims of raising standards, increasing choice, and giving the private sector a say in how schools are run. Thirty-four million pounds—and unprecedented sum—has already been pledged, and much more will follow.

Mr. Hughes: Given that there is some reported indifference among big business to sponsorship of CTCs, what does the Secretary of State consider will be the effect of Tory-controlled Bexley deciding not to go ahead with one, and of the parents in Tory-controlled Croydon voting by 480 to 14 not to go ahead with a CTC? If parents say not to CTC, will the money from the sponsor be made available to the school, via the local education authority?

Mr. Baker: I should be grateful if the hon. Gentleman would make his views on CTCs known, because in the past he has attacked them. However, I gather that, as a member of the governing body of Bacon's school, he has voted for the proposals for that school to become a CTC to go out to consultation. He really should get off the fence.

Council for Industry and Higher Education

15. **Mr. Ian Taylor:** To ask the Secretary of State for Education and Science when he last met the chairman of the Council for Industry and Higher Education; and what matters were discussed.

Mr. Jackson: My right hon. Friend meets the chairman of the Council for Industry and Higher Education periodically, both formally and informally.

Mr. Taylor: Will my hon. Friend note the welcome that we give to the council and its work and our acknowledgement of the importance of links between education and industry? Will he encourage the idea of regional councils and will he note in particular that the university of Surrey is doing splendid work with local industry and is pioneering further development?

Mr. Jackson: One of the most encouraging features of the higher education scene is the growth of contact between the world of academe in the universities and the polytechnics and industry. The Council for Industry and Higher Education is one of the most notable manifestations of that. We very much welcome it and all proposals for its further development.

PRIME MINISTER

Engagements

Q1. **Ms. Mowlam:** To ask the Prime Minister if she will list her official engagements for Tuesday 4 April.

The Prime Minister (Mrs. Margaret Thatcher): This morning I had meetings with ministerial colleagues and others. In addition to my duties in this House, I shall be having further meetings later today.

Ms. Mowlam: As it is the Government's view that doctors who oppose the Health Service plans are simply feeling for their wallets, what motive does the Prime Minister use to explain the nurses' opposition?

The Prime Minister: I believe that the nurses who have taken part in the five-hospital experiment for the financial initiative will give evidence that it has worked extremely well and has given far more responsibility to both doctors and nurses. Many other reforms in the Health Service have been fought most bitterly by the medical profession. The initial introduction of the National Health Service in 1948 was fought most bitterly by the medical profession, but it was welcomed later.

Q2. **Mr. Curry:** To ask the Prime Minister if she will list her official engagements for Tuesday 4 April.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Curry: I congratulate my right hon. Friend on her successful visit to southern Africa, particularly her decision to visit Namibia to support the United Nations plan to bring that territory to independence. Will she therefore condemn the incursion from Angola by SWAPO guerrillas into that territory, which is putting at jeopardy the whole of the painfully acquired process?

The Prime Minister: Yes. The secretary general's report to the United Nations and the Security Council specifically confirms that there has been a large-scale incursion from Angola into Namibia by armed SWAPO personnel. It is a most serious challenge to the authority of the United Nations and the internationally agreed arrangements for Namibia's independence, and I certainly condemn it. There is no provision in the United Nations plan for SWAPO to have bases in Namibia. SWAPO committed itself to the Geneva accord under which it is required to stay north of the 16th parallel in Angola. It is the breach by SWAPO which has led to the most regrettable fighting and loss of life. I emphasise that the South African units involved are acting with the authority of the United Nations. It is now important that the authority of the United Nations—*[Interruption.]*

Mr. Speaker: Order. These are very important matters.

The Prime Minister: It is important that the authority of the United Nations should be upheld and the arrangements implemented in full.

Sir Russell Johnston: Is the Prime Minister aware that many of us believe that the lengthy reply that she has just given should have been in the form of a statement which the House could have examined at greater length? Is she completely confident that the description of events that she has given us, which is being disputed by several newspapers, is absolutely accurate?

The Prime Minister: The hon. Gentleman can read for himself the report of the secretary general to the United Nations Security Council, which specifically confirmed that there has been a large-scale incursion from Angola into Namibia; he can obtain for himself a copy of the agreements to which the several member states were signatories; he can also obtain for himself a copy of the Geneva protocols which were specifically agreed to by SWAPO. All those are public knowledge, and the hon. Gentleman can get them from the Library at any time.

Q3. **Mr. David Porter:** To ask the Prime Minister if she will list her official engagements for Tuesday 4 April.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Porter: As many East Anglian people are worried that Suffolk and Norfolk may miss out on the benefits of 1992 and the Channel tunnel, can my right hon. Friend reassure East Anglians on the coast that road and rail investment will not be left behind, and that the persistent long-term unemployment there will give way to the prosperity which is now being enjoyed by most other parts of the United Kingdom?

The Prime Minister: We recognise that East Anglia is a very important area of economic growth, and our substantial and continuing programme of road improvements includes 29 schemes, worth about £220 million, in East Anglia. We have also recently approved investment in electrification from Cambridge to King's Lynn and in new rolling stock to relieve overcrowding. I am pleased to see that East Anglia now has the lowest rate of unemployment of all the regions.

Mr. Kinnock: Does the Prime Minister recall that when she started raising interest rates last year, inflation was just over 4 per cent.? It is now just under 8 per cent. What has gone wrong?

The Prime Minister: The raising of interest rates will gradually work to choke inflation down. I am the first to say that what we regard as one of our less good performances was regarded by Labour as its best.

Mr. Kinnock: On present trends, what level of interest rate will have to be charged in order to reach the right hon. Lady's objective of zero inflation?

The Prime Minister: Those who wish for specific answers on interest rates can only be seeking to help the speculators.

Q4. **Mr. Ian Taylor:** To ask the Prime Minister if she will list her official engagements for Tuesday 4 April.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Taylor: I am sure that my right hon. Friend will join all Conservative Members in wishing NATO a happy 40th birthday. Will she note that we encourage her to hold further discussions with President Gorbachev during his visit about the need for further and deep cuts in conventional forces and chemical weapons on the Soviet side? Will she also note that a recent opinion poll has shown widespread support for steadfast British defence policies, and that the British Government do not need to go cap in hand to Moscow to find a defence policy?

The Prime Minister: I agree with my hon. Friend, and I think that most British people agree, that NATO has kept the peace successfully for 40 years. It is needed as much in the future as it was in the past. It is vital that we keep in step with America and Canada on NATO.

I agree that we must modernise our forces, including nuclear forces. NATO has already agreed that they must be modernised, on the basis that obsolete weapons do not deter. What is at issue is the precise timing of that

modernisation. I shall discuss that with Mr. Gorbavchev. The Russians have already modernised their short-range nuclear weapons.

Q5. **Mr. Vaz:** To ask the Prime Minister if she will list her official engagements for Tuesday 4 April.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Vaz: The Prime Minister will recall encouraging millions of people throughout the country to buy their own council homes. Will she now put the Government's money where her mouth is or, rather, was, and provide financial assistance to constituents of mine and other hon. Members who have taken her at her word, purchased their council houses and found them to be seriously defective? Will she support people such as my constituents on the Morton estate, or will she abandon them as she has abandoned millions of people who have been deceived by the Government's policies?

The Prime Minister: Well over 1 million people have purchased their council homes at a very substantial discount and I hope that more will take advantage of that opportunity. It is an opportunity which the Labour party fought against and which was provided by this Government.

Q7. **Mr. Oppenheim:** To ask the Prime Minister if she will list her official engagements for Tuesday 4 April.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Oppenheim: Will my right hon. Friend take time today to congratulate the designers, craftsmen and managers of Rolls-Royce, who have just won yet another huge order for aero-engines in the teeth of fierce world competition, this time for 20 Cathay Pacific Airbuses? Does this not show that British high technology products can and do sell on world markets?

The Prime Minister: Yes, I warmly congratulate Rolls-Royce on this excellent £1 billion order for engines for the Airbus and, of course, the order will also help British Aerospace. It is very good news and shows that British industry at its best can compete with the best in the world.

Mr. Robert Hughes: Will the Prime Minister have a word today with the Secretary of State for Transport about the disgraceful decision to hold up yet again the report on the Chinook disaster, apparently at the behest of the Boeing company? Does she accept that we must have absolute faith in the integrity of official reports into accidents, for the safety of the thousands of people who use helicopters in the North sea? Will she ask the Secretary of State to make a statement to the effect that he will publish that report in full without one comma or jot changed, in order to assure us that we have that integrity?

The Prime Minister: My right hon. Friend the Secretary of State for Transport is following the procedures laid down by Parliament in the Civil Aviation (Investigation of Accidents) Regulations 1983. Subject to any legal constraints, I expect the air accidents investigation branch report and the report of the review board to be published very shortly. The hon. Gentleman will know that publication of the reports before the contentions of the Boeing company are adequately considered would be against the regulations and could invite a conclusion that the publication might be regarded as prejudging the question of a rehearing. My right hon. Friend is following precisely the law as laid down by the House.

Q8. **Mr. Riddick:** To ask the Prime Minister if she will list her official engagements for Tuesday 4 April.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Riddick: Is my right hon. Friend aware that the KGB defector Major Levchenko, revealed that the spying activities of the KGB reached their peak during the years of detente in the 1970s? Can she confirm that KGB espionage activities—[HON. MEMBERS: "Reading."]

Mr. Speaker: Order. Give him a chance.

Mr. Riddick: Can my right hon. Friend confirm that KGB espionage activities are increasing now and have increased since President Gorbachev came to power and, indeed, since glasnost was introduced? *[Interruption.]*

Mr. Speaker: Order. It does not help the hon. Member.

Mr. Riddick: Is this not a clear demonstration that, despite Mr. Gorbachev's slick PR image, the West cannot afford to lower its guard?

The Prime Minister: As my hon. Friend is aware, we believe that defence matters do not depend on good intentions but on a sure and strong defence. We find no reduction the world over in the activities of the KGB.

Mr. Wareing: During the last football season there were 33 arrests associated with matches at Liverpool, 24 arrests at Everton and 38 at Manchester United. At Hampden Park, Glasgow, there were 152 arrests and at Ibrox Park, the home of Glasgow Rangers, there were 407 arrests. Yet it is the supporters of English clubs—*[Interruption.]*

Mr. Speaker: Order. Will the hon. Gentleman make his question brief?

Mr. Wareing: It is the supporters of English clubs who are to be penalised by the identity card system. *[Interruption.]* Will the Prime Minister tell us where the sense is in that?

The Prime Minister: I heard the statistics given by the hon. Gentleman, but the rest of his question was drowned. Last year in England and Wales as a whole there were about 6,000 arrests and it was, therefore, important for us to take action to bring in membership cards. We have done that.

House of Fraser

Mr. Speaker: Before calling upon the hon. Member for Dagenham (Mr. Gould) to ask a private notice question relating to the publication of the inspectors' report on the House of Fraser, I wish to make it clear that quotations from the text of the report would contravene our sub judice rules. *[Interruption.]* Order. An appeal on this matter is to be heard in the House of Lords on 10 April. I am aware that the court has varied an injunction so that our proceedings may be reported, but that does not relieve us of the obligation to respect our own rules, and the Chair will not allow the use of alleged texts of the report while questions on its publication remain sub judice.

3.32 pm

Mr. Bryan Gould (Dagenham)*(by private notice)*: To ask the Chancellor of the Duchy of Lancaster if he will make a statement on the publication of the DTI inspectors' report into the affairs of the House of Fraser.

The Chancellor of the Duchy of Lancaster and Minister of Trade and Industry (Mr. Anthony Newton): Inspectors were appointed to investigate the affairs of House of Fraser Holdings plc in April 1987. They reported to my right hon. and noble Friend on 23 July 1988. Their findings disclosed evidence of wrongdoing such that my right hon. and noble Friend felt it right to refer the report to the serious fraud office and the Director of Public Prosecutions. The prosecution authorities' inquiries are well advanced, and are proceeding as swiftly as possible under the superintendence of my right hon. and learned Friend the Attorney-General.

Our consistent view has been that publication of the report before those inquiries were completed would interfere with the principle that all citizens of this country are entitled to a fair trial of any criminal charges that may arise from it, and would prejudice the inquiries themselves. The Court of Appeal has unanimously agreed that it was reasonable for my right hon. and noble Friend to decide not to publish the report for the time being. The court's judgment is, however, the subject of a further appeal by Lonrho, which will be heard by the House of Lords next Monday.

In the meantime, as the House is aware, Lonrho is understood to have come into possession of a copy of the report on about 23 March, and *The Observer* newspaper, owned by Lonrho, published substantial extracts from it in a special edition on 30 March, coinciding with Lonrho's annual general meeting. Both Lonrho and *The Observer* are fully aware that only my right hon. and noble Friend has the lawful authority to publish the report; that Lonrho's copy was improperly given to it and improperly used by it; and that use by Lonrho and *The Observer* would amount to a grave breach of confidence and of Crown copyright and might prejudice next week's legal proceedings in the House of Lords.

For all these reasons, my right hon. and noble Friend sought and obtained an injunction on 30 March restraining *The Observer* and Lonrho from any further publication of the special edition. He is also seeking an order for the return of the remaining copies of the report, and urgent and thorough inquiries are being made to seek to establish how the report came into Lonhro's possession.

My right hon. and noble Friend has made it abundantly clear that the report will be published at the earliest possible moment consistent with the even-handed administration of justice. The first principle in this matter must be to safeguard the proper investigation of possible criminal charges and the fair conduct of any trial should such charges be brought. I cannot believe that anyone in this House would wish to undermine that principle, or encourage others to do so.

Mr. Gould: What conceivable purpose can now be served by a continued refusal to publish the report? Is it not clear that the report has already been substantially published, that its contents are known to all those involved and affected, and that, rather than allow further publication to take place piecemeal and by drip-feed, with only the public kept in the dark, it would be better to come clean now? Is it not also clear that the Government's excuses simply do not stand up? How do they square with the admission by counsel for the Attorney-General that publication would not prejudice criminal investigations? If there were truly any substance in the argument that a fair trial would be prejudiced, bearing in mind the fact that any such trial may be years away, why did that not occur to the High Court when it considered the question? Has the Secretary of State himself not prejudiced the issue already by his admission on the radio this morning that the report discloses serious wrongdoing?

Is not the real reason an attempt to hide from the public the fact that the investigation of important takeover bids was in the hands of officials and Ministers who were incompetent and whose slap-happy attitude was no match for those who were determined to lie to them? If the inspectors' conclusion is that that sort of muddle must not be allowed to occur again, how can it be avoided without the benefit of the report and its recommendations? What confidence can we have in a Government who, instead of making amends for spectacular incompetence by coming clean, prefer to compound their errors by further incompetence and an all-too-typical recourse to cover-up?

Mr. Newton: If there were any wish to cover up, my right hon. and noble Friend would not have referred the report to the serious fraud office within a matter of days of having received it. When the hon. Gentleman suggests that there is no question of prejudicing a fair trial because the High Court made a finding in that respect, it seems to me to call into question the whole basis of the way in which we administer justice, in that three judges in the Court of Appeal subsequently found differently. That is the position at the moment.

As to the issue of serious wrongdoing, it is absolutely clear that, if there had not been evidence of wrongdoing in the report, it would not have been necessary or right to refer it to the Serious Fraud Office. Lastly, the hon. Gentleman asked me what purpose was to be served in view of what has happened. I will tell him what purpose is to be served. It is to seek to protect the fair administration of justice and the rule of law in this country. The Government cannot be absolved from that, nor should the House wish to be absolved from that, by the irresponsible behaviour of those who published the report in the way that they did.

Mr. Ivan Lawrence (Burton): Does not my right hon. Friend agree that the prior publication of evidence, for no better reason than to sell a newspaper or to pursue a personal vendetta, should never be a substitute for the proper prosecution of persons who are alleged to have

committed criminal offences? Is it not disgraceful how often Opposition Members side with those arrogant portions of the media who seek to place themselves above the law of the land?

Mr. Newton: I very much agree with the general tenor of my hon. and learned Friend's remarks. I must say fairly and squarely to the Opposition Front Bench that I do not believe that they would wish to prejudice the administration of justice. I hope that they will consider carefully the extent to which they may do so.

Mr. Gerald Bermingham (St. Helens, South): Perhaps the Minister will be kind enough to explain to me why, if the trial or potential trial of the Al-Fayeds could be prejudiced by the publication of the report, the same argument was not used in the case of the Guinness scandal or in the case of Mr. Ryan?

Mr. Newton: The issues arising from such a report must be considered in the context of the circumstances of each report, and they have been so considered. The issue of prejudice does not relate merely to proceedings on criminal charges should they be brought, but also to the hampering of current inquiries. Only last week there were signs that the publication of the report might make it impossible for inquiries to continue.

Mr. Jonathan Aitken (Thanet, South): Will my right hon. Friend confirm that, under section 437 of the Companies Act 1985 the Secretary of State has an unfettered discretion to publish the report? If that is the case, does my right hon. Friend believe that it was wise for the noble Lord, Lord Young, to rely yesterday in the House of Lords on the statement that the prosecuting authorities would have to stop their inquiries if the report was published, when counsel for the Attorney-General said on the record in the Court of Appeal hearing that it was not true that prosecutions would have to be stopped as a result of publicity? Are we not in some confusion and in danger of entering into a second "Carry On, Spycatcher" saga?

Mr. Newton: The statement made by my right hon. and noble Friend in the House of Lords yesterday about the position of the prosecuting authorities was based on the latest statements which they had made to him and to the Department about what they thought would be the likely outcome of publication. I do not think that my right hon. and noble Friend can or should be absolved from taking that into account as a very important factor in exercising the discretion referred to by my hon. Friend.

Mr. Stuart Bell (Middlesbrough): Will the Chancellor of the Duchy not accept that there is a discrepancy between what he is telling the House today and what the noble Lord, Lord Young, told the House yesterday? The noble Lord made no reference to the prejudice to inquiries connected with criminal investigations; he simply said that there could not be a proper jury trial if the report was published. Is the Chancellor of the Duchy accountable to the House or to the Director of Public Prosecutions? Is the Chancellor telling the House that the report will not be published while criminal proceedings are pending, if the proceedings begin and if there are appeals? Is he telling the House that there is no prospect of forming a jury from all our citizens of jury age and status to hear the evidence in this case who have not read the report on the Fayeds' case?

Mr. Newton: I am saying to the House that it is not my right hon. and noble Friend's view that the report should be published in circumstances in which it could hamper inquiries, prevent inquiries being pursued or prejudice a fair trial following the outcome of those inquiries. That remains the position. With regard to the first part of the hon. Gentleman's question, I am afraid that he simply has not studied the statement made in the other place yesterday. My right hon. and noble Friend referred to the danger of inquiries being hampered and to the risk, at worst, that they might be brought to a halt by publication.

Mr. Richard Page (Hertfordshire, South-West): While one has to admire the determination of Mr. Rowland, does my right hon. Friend agree that as the noble Lord, Lord Young, has referred the matter to the serious fraud office, there is no intention of covering things up or putting them under the carpet? Does he also agree that to give in to the pressure to publish would set a precedent which others would follow when the Government's time scale does not suit their purpose?

Mr. Newton: Yes, I do, and I believe that that is the real issue which the House should address.

Mr. Charles Kennedy (Ross, Cromarty and Skye): Is it not ironic that a company which was once branded as the "unacceptable face of capitalism" has now, through its immense power and wealth, been able to further confirm what many people now regard to be the unacceptable face of the Government—a combination of shabby secrecy and downright inadequacy where the rigours of the marketplace are concerned? Far from hiding behind all the rhetoric about justice, is it not the case that, were it not for the fact that Lonrho could devote so many millions of pounds and call on its considerable influence and power in this country, many of the details would not have emerged in the first place? Where does individual justice in this country stand in that context?

Mr. Newton: The hon. Gentleman is simply not right to suggest that the details in this report will not at some stage emerge. The only issue is at what stage it is appropriate to publish a report in a way which is consistent with the basic principle of the fair administration of justice. If the hon. Gentleman does not adhere to that, I do not know what he is doing here.

Mr. Teddy Taylor (Southend, East): Will the Minister make it abundantly clear whether it is the intention of the Government to publish this report after the serious fraud office inquiries, which may be a few weeks, or the determination of any possible trials and appeals, which may be four or five years? Will the Minister also say, in view of the magnitude of the lies and deception referred to in the report, how he can possibly justify not referring this again to the Monopolies and Mergers Commission which was alone in having the right to recommend this investment? Finally, does he not think the points he makes about a fair trial undermine the very fair points the Government made, with the full support of this House, to Belgium and Eire, in exactly the contrary directions about Father Ryan?

Mr. Newton: My hon. Friend will be aware that my right hon. and noble Friend made a statement at the time that he decided not to refer the matter to the Monopolies and Mergers Commission and gave indications of why that

[Mr. Newton]

would not be appropriate. He also indicated, though, that it might be appropriate in due course for other steps to be taken in the light of the inspectors' report.

Mr. Brian Sedgemore (Hackney, South and Shoreditch): How does the Minister respond to the statement of Lord Justice Dillon that there is a public interest in knowing that the principal shareholders of the House of Fraser are fraudulent rogues, and a public interest in knowing how Ministers came to be deceived in 1985? Does the Minister intend to invite the Governor of the Bank of England to censure Kleinwort Benson for negligence, to invite the Law Society to censure Herbert Smith for incompetence, to invite Ministers to censure civil servants for naivety and to invite the Prime Minister to censure Ministers for negligence, incompetence and naivety?

Mr. Newton: The basic public interest in this matter is in the proper investigation of any offences such as the hon. Gentleman assumed had taken place, for proper decisions to be taken about whether criminal charges should be brought, and the proper hearing of those criminal charges should they be brought. That is what the Government are seeking to bring about.

Mr. Ian Gow (Eastbourne): Since this exceptionally well-researched and detailed report has been in the possession of the police and the Attorney-General for more than seven months, when may we expect a decision to be taken on whether or not there is to be a prosecution?

Mr. Newton: I cannot be absolutely sure about that. The inquiries are being undertaken jointly by the serious fraud office and the Director of Public Prosecutions, with the help of the Metropolitan police. It is well known that investigations of this kind can take a great amount of time. I am encouraged, however, by the evidence that already exists that the establishment of the serious fraud office has significantly speeded these things up by comparison with what would have happened in earlier periods.

Several Hon. Members *rose*——

Mr. Speaker: Order. I remind the House that this is a private notice question and we have a busy day ahead of us, with a Bill under a guillotine; I will therefore allow two more questions from either side.

Mr. D. N. Campbell-Savours (Workington): Is it not true that in 1976 Tiny Rowland and Lonrho went begging to the Department of Trade and Industry asking that the report on sanctions-busting and bribery in the case of Lonrho be not published? Why is it that the Lonrho broadsheet has refused to publish that particular information at this stage? Secondly, what business was it of the DTI inspectors to examine the family background of the Al-Fayeds? Surely their terms of reference only related to whether they had the money to purchase the store. Is it not true that, despite all the discussion in the Lonrho broadsheet, Mr. Tiny Rowland and Mr. Donald Trelford have not produced one shred of evidence to date that the money to buy the House of Fraser was not the property of the Al-Fayeds alone? They have not produced that evidence. Indeed the report that was published equally states that the inspectors were unable to establish what the facts were. Does the Minister agree that that is the case?

Mr. Newton: The first half of the hon. Gentleman's question should be addressed to Lonrho rather than to a Minister at the Dispatch Box. The rest of the hon. Gentleman's question—I understand why—clearly seeks to draw me into commenting on what the hon. Gentleman says are the contents of the report. He will understand that, for reasons inherent in my statement, I am not prepared to be drawn into such comments.

Sir Anthony Grant (Cambridgeshire, South-West): Is not the disturbing aspect of the affair not so much the unsavoury shenanigans about the ownership of a shop as the fact that it is yet another dismal example of dishonesty or gross negligence by the public servant who leaked the report? Does my right hon. Friend have the smallest hope that his inquiries will lead to the culprit?

Mr. Newton: The appropriate inquiries are well in train. I am afraid that I am not prepared to speculate about the timing or nature of the outcome.

Mr. Doug Hoyle (Warrington, North): The Chancellor talks about prejudice, but does he agree that the Secretary of State for Trade and Industry prejudiced the case by saying that the report contained evidence of wrongdoing? Will he stop hiding behind a smokescreen, publish and be damned, whatever may be the consequences for former Ministers or officials?

Mr. Newton: No, I do not for a moment accept that. As I said earlier, if it were not plain that the findings of the report show possible wrongdoing there would have been no need to refer it to the serious fraud office and the DPP in the first place. That is clear.

Mr. James Arbuthnot (Wanstead and Woodford): Is my right hon. Friend aware that the view of many, including myself, who read last week's special edition of *The Observer* is that it showed a surprising lack of objectiveness? Does he agree that, even on *The Observer's* own account, there was nothing in the report for the Monopolies and Mergers Commission, but there may have been something in it for the serious fraud office, and that is the department which is now considering it?

Mr. Newton: Yes, my hon. Friend makes a fair point.

Helicopter Crash (Report)

3.52 pm

Mr. Frank Doran (Aberdeen, South): I beg to ask leave to move the Adjournment of the House under Standing Order No. 20 for the purpose of discussing a specific, urgent and important matter, namely,

"the statement made by the Secretary of State for Transport or his Department yesterday that he intends to delay, at the request of the Boeing company, the publication of the report of the inquiry into the Chinook helicopter disaster".

In that disaster, 45 men were killed. It was the worst civil air disaster involving a helicopter and the delay in the publication of that report has caused extreme concern, particularly to those of my constituents with relatives who were involved in the disaster.

There has been no explanation for the delay in the publication of the report except the fact that Boeing has made its request because it appears to feel that it prejudices certain legal proceedings that are under way. I find that difficult to accept, for a number of reasons.

First, the majority of the facts in the case which were the subject of the investigation were canvassed in the Aberdeenshire court on the hearing of the fatal accident inquiry into the disaster in 1987. Secondly, the delay in publication prejudices the implementation of the report's findings. Some 30,000 men work in the North sea and travel to work by helicopter. If there are lessons to be learned, we want the report to be published so that those lessons can be implemented immediately.

Considerable anguish has been caused to relatives. I have spoken to one of those relatives, a constituent of mine, who lost her husband in the disaster. She is involved in legal action, both in this country and in the United States, against Boeing—together with all the other relatives who lost a loved one in the disaster. Those legal proceedings have caused considerable trauma. Part of the reason for the increase in that trauma is the failure to publish the report.

The publication date of 5 April has been known for many months, and legal proceedings have been further delayed as a result of the delay in the report's publication, causing considerable anguish. When I spoke to that lady this morning, she found it very difficult to believe that the only reason for non-publication is pressure from a multinational company. We have heard already today about the suppression of reports and of the concern that that causes to the House and to the country at large. This appears to be another example of pressure from a multinational causing delay.

We all appreciate that inquiries and reports must be respected, believed and accepted by the general public, and that their integrity is extremely important. In this case, pressure from a multinational company to delay publication of a report must lead us to question its integrity. For all those reasons, the matter is of sufficient importance and urgency for me to request the Adjournment of the House to debate the matter.

Mr. Speaker: The hon. Member for Aberdeen, South (Mr. Doran) asks leave to move the Adjournment of the House for the purpose of discussing a specific and important matter that he believes should have urgent consideration, namely,

"the delayed publication of the report of the inquiry into the Chinook helicopter crash in the Shetlands in November 1986.

I listened with great care to the hon. Gentleman. As he knows, my sole duty in considering an application under Standing Order No. 20 is to decide whether it should be given precedence over the business set down for this evening or for tomorrow. I regret that the matter raised does not meet the requirements of Standing Order No. 20, so I cannot submit his application to the House.

Point of Order

Mr. Dennis Skinner (Bolsover): On a point of order, Mr. Speaker. You will know that a new parliamentary building is being prepared across the road from the House. I wonder what jurisdiction you have in that respect, because it was reported to me that, in order to celebrate 40 years of NATO, somebody hung up a banner proclaiming

"Get out of NATO. No nukes here"

which I thought was pretty good for a start. I wondered whether you, Mr. Speaker, had authorised that banner to be hung up, or whether it has something to do with honouring Gorbachev's visit.

Mr. Speaker: I have a pretty good view from my residence.

Mr. Skinner: Did you see that banner, Mr. Speaker?

Mr. Speaker: No, I did not see it.

Re-Enfranchisement of the People

3.57 pm

Mr. Harry Barnes (Derbyshire, North-East): I beg to move,

That leave be given to bring in a Bill to restore a full franchise.

Signs that electoral registration is not as healthy as it ought to be come from three sources: first, an examination of recent returns from electoral registration officers; secondly, comments from the Office of Population Censuses and Surveys—although I shall mention only one of them now; thirdly, an assessment of the impact and purposes of the poll tax legislation. Those combined sources show that we are heading for a democratic and constitutional crisis over the state of the franchise.

As to the evidence from electoral returns, in Scotland —where the poll tax has been a serious issue since the 1987 general election, causing the Tories to suffer many crushing defeats in that election—there has been an alarming drop in electoral registration. In each year from 1979 to 1987, there was a steady increase in the size of the Scottish electorate, yet 62,000 names have disappeared from the registers since 1987. That includes a drop of 25,000 in Glasgow, or 4·4 per cent. in the number previously registered. The loss of electors in Scotland seems to have little to do with demographic factors such as the balance between the death of electors and new 18-year-old electors being added to the register.

Commenting on the loss of electors between 1987 and 1988, when there was a loss of 27,500 in Scotland, the Office of Population Censuses and Surveys, in its "Electoral Statistics", published in 1988, said:

"this does not appear to have arisen from demographic causes",

such as I have already mentioned. There has been little change in the number of 18-year-olds coming on to the register and no dramatic fall in the total population.

England and Wales have not yet been subjected to massive agitation on the poll tax but, with poll tax registration starting, that concern will dominate the coming county council and European elections. A drop in registration in England and Wales could follow. A recent MORI survey in Manchester showed that up to 10 per cent. of the people would refuse to register electorally as the poll tax and electoral registers are seen as linked, and are in fact linked. But even now, there could be something to hide about the 1989 electoral registration figures. Given that district council registration figures are to be published at the end of this month and constituency figures at the end of May, why can the House not be supplied with at least the district figures which are shortly to be published and which have been available locally since 15 February?

I raised this matter during business questions on 16 March and in a question for written answer on 28 February, when no information was supplied. It is also a matter that I have since pursued with the Leader of the House with no success. There are indications in areas such as Liverpool of serious worry about the number of people appearing on the electoral register, with perhaps as many as 10 per cent. having disappeared in the past year. This information is available and should be published and made available to the House so that hon. Members can examine its implications.

The main purpose of my Bill is to separate the poll tax register from the electoral register, making it illegal for poll tax registrars to make use of electoral registers. This will only partly overcome the problem that I have highlighted, for poll tax registrars and electoral registrars can be the same persons, carrying information from each register in their heads. Only a full repeal of the poll tax legislation, which would be a major money Bill, can remove the evil of the inevitable link between the poll tax register and the electoral register.

The whole aim and purpose of the poll tax has been to attempt to fiddle the democratic and constitutional structure of this country. It has pushed poorer people off the register and continues to do so. It is taxing people to qualify them to vote, something which we have not seen since universal franchise was established here in 1918 and 1928—although before those dates there were such things as 40-shilling freeholds in the nineteenth century. It will destroy local government and civil liberties and will manipulate local government election results. It contains a centralising power of an outrageous kind. It taxes people against the norms of all western democratic systems, which is itself an abuse of democratic and constitutional government.

It is utterly disgusting that forms filled in for electoral registration purposes should be used for purposes not included on those forms. That principle extends beyond the poll tax, so my Bill will also outlaw the sale of electoral registers for commercial purposes or for any reasons other than electoral purposes. Many people add notes to their electoral registration forms, asking for their names to be kept away from commercial interests, but there is nothing that a returning officer can do about such requests. The law should respect that wish for all people, without their needing to ask for a special dispensation.

Past Government policy on local government finance and the current poll tax legislation also hit at the funds available for electoral registration officers to conduct their essential work. My Bill will ensure that registration officers receive adequate back-up facilities in terms of canvassing provisions to contact potential voters and assist them to complete their electoral returns.

Further encouragement can be given by positive leading advertising campaigns for registration by the Home Office, and my Bill will provide for that. Let us compare the limited advertising poster campaigns and leafleting on electoral registration with the campaign being conducted by Abbey National to get people to vote on turning the company into a plc. Let us compare the Government's expenditure on advertising the poll tax, the Education Reform Act and numerous other measures with the amount spent on extending the franchise. Money is often spent on measures before they become law. Let us compare the advertising expenditure on privatisation—for instance, on softening up the market for water and electricity—with what we spend on encouraging people to have the right to vote. Should not advertising the franchise be given similar attention?

I ask all democrats to support by Bill, which seeks to establish a universal franchise as far as is currently possible. To achieve its full aim, however, another Bill will have to be added to it, for the repeal of the poll tax—and its time will come.

Question put and agreed to.

Bill ordered to be brought in by Mr. Harry Barnes, Mr. Martin Redmond, Mr. Max Madden, Mr. Eric S. Heffer,

Mr. Ken Livingstone, Mrs. Alice Mahon, Mr. Chris Mullin, Mr. Bernie Grant, Mr. Dennis Skinner, Mrs. Maria Fyfe, Mr. Jimmy Wray and Mr. Harry Cohen.

RE-ENFRANCHISEMENT OF THE PEOPLE

Mr. Harry Barnes accordingly presented a Bill to restore a full franchise: And the same was read the First time; and ordered to be read a Second time upon Friday 5 May and to be printed. [Bill 110.]

Orders of the Day

Water Bill

[3RD ALLOTTED DAY]

As amended (in the Standing Committee), considered

Clause 163

PAYMENTS TO EXISTING PENSION FUND

4.7 pm

The Parliamentary Under-Secretary of State for the Environment (Mr. Colin Moynihan): I beg to move amendment No. 89, in page 162, line 20, after 'who', insert—

'(a)'.

Mr. Speaker: With this we may take Government amendments Nos. 90 to 93.

Mr. Moynihan: The purpose of the first two amendments, Nos. 89 and 90, is to secure the future of pension payments of former officers or employees of the Water Research Centre, the Water Authorities Association, the Water Industry Training Association, British Water International Limited, the International Association on Water Pollution Research and Control and the International Water Supply Association, known collectively as "the admitted bodies".

As has already been announced, the water authorities superannuation fund will be administered from the transfer date by the National Rivers Authority, and this arrangement includes the second fund for the admitted bodies. The amendments proposed to clause 163 allow the Secretary of State to make orders designating the admitted bodies so that the powers and duties of the Secretary of State under that clause are extended to apply to their fund.

The purpose of the other three amendments in the group is to allow discretionary payments made by water authorities by analogy with pension payments and the unfunded pensions administered by the Severn-Trent water authority to be continued after privatisation of the water industry. These unfunded payments can be divided into three categories.

In addition to their obligations under the local government superannuation scheme, water authorities currently pay certain non-funded discretionary awards including gratuity awards, injury allowance, retirement compensation, added years pension enhancement, and a number of other benefits and associated pension increase payments to their own former employees and to employees of antecedent bodies.

They are also responsible for pensions and pension increase benefits to former National Water Council employees and board members and former water authority chairmen and members. These payments, except for a small proportion of non-funded discretionary awards, are administered by the Severn-Trent water authority and the cost recharged to each authority according to the incidence of payment or according to a statutory formula.

The second category is that of pension payments made directly by water authorities. Some pension payments are

[Mr. Moynihan]

made directly by water authorities, unlike those in the previous category which are administered by the Severn-Trent water authority, and the costs shared between authorities.

Then there is the important group of payments made by local authorities. Local authorities currently pay pensions increases, allowances and gratuities in respect of former employees whose employment functions were transferred to the water industry in 1974, and then recharge the cost to the water authorities.

Our objective in these amendments is to ensure that no pensioner is disadvantaged by the act of transfer of liability from a water authority to its successor company and that the responsibility for payment is clear both to the recipient and to the body which will be responsible for payment.

The amendments therefore provide broad powers to make regulations to encompass all people or classes of people in respect of whom such pensions and discretionary payments are made, and to impose a duty on the National Rivers Authority and on successor companies or nominated holding companies to continue to make payments awarded by water authorities.

Regulations which impose requirements on companies may be met only while the companies are wholly owned by the Crown. The administration for the first category of payments—that is, discretionary awards largely administered by Severn-Trent and unfunded pensions administered by Severn-Trent—will be transferred to the National Rivers Authority.

The amendments provide that the Secretary of State will be responsible for providing the funds, out of money supplied by Parliament, for payments made by the NRA, and the administration costs. In the other two categories —where local authorities make payments in respect of former employees and then recharge the cost to water authorities, and where water authorities are making pension payments directly to pensioners—the responsibilities for payment are clear to those concerned.

I see no reason to disturb those arrangements. On transfer date, those responsibilities will pass to the successor companies under schemes made under schedule 2 to the Bill. These amendments are designed to ensure that no pensioner is inadvertently disadvantaged by the transfer of liabilities.

Mr. Peter L. Pike (Burnley): The Minister is making the position clear for existing pensioners. Does he agree that it is equally important for the Bill to include provisions to ensure that existing and future employees enjoy the same protection? That will not be the position.

Mr. Moynihan: I disagree with the hon. Gentleman's conclusion. He wants the Government to introduce proposals which will secure pension arrangements for those who retire in the future as good as the current pension arrangements under the local government superannuation scheme. We have repeatedly given assurances that a mirror image scheme, which we discussed at length in Committee, will not be approved by the Secretary of State unless it gives proper effect to the Government's commitment to provide employees with the same benefits.

I think that the hon. Member for Burnley (Mr. Pike) would like these arrangements to have statutory backing for the future. We have made it clear that we do not believe that, in the context of privatisation, such statutory backing would be appropriate. It is via the trustees that we intend to pursue pension arrangements for the future. Given the commitment that I have given on behalf of the Secretary of State, I can absolutely assure the hon. Gentleman that the trustees will, almost by definition, have a duty to pensioners. They could be sued for breach of trust if they did not, through the mirror image schemes, provide for pensioners in the future the same position as is accorded under the current arrangements.

4.15 pm

Mr. Tim Boswell (Daventry): I appreciate that the debate on this point is going on a little bit, but may I ask my hon. Friend whether it is not the case that, from now, if any employee is at any time dissatisfied with his pension arrangements, it will be open to him, as a result of recent legislation, to take out a personal pension as an alternative? That is an important safeguard, and a further measure of what might be called comparative competition in this respect.

Mr. Moynihan: What my hon. Friend has said about comparative competition is an imaginative and accurate reflection. The possibility of opting out and joining a water plc scheme is very definitely there. What we are looking at today is the alternative for the employees who do not wish to opt out.

In Committee and on the Floor of the House, hon. Members have argued very strongly that mirror image schemes must provide employees with the same benefits. When the money resolution was being debated on the Floor of the House, we said that a substantial amount of money—a figure of up to £800 million was mentioned—may be necessary in order to meet the commitment that I have given today.

Amendment No. 91, to clause 183, is consequential. The clause provides the transfer date as the commencement date for schedule 23 generally. The amendment makes an exception of subordinate legislation, permitting it to be made in advance of the transfer date.

I very much hope that the clarification of what are detailed and technical amendments, and my responses to hon. Members who have intervened, have assisted the House. What we are debating are effectively peripheral pension arrangements, and I hope that the House will welcome the additional assurances that have been given.

Ms. Joan Walley (Stoke-on-Trent, North): Opposition Members believe that no pensioner should be disadvantaged as a result of this legislation. Taking at face value the particular changes that the Minister has outlined, we should not wish to quibble at all. I agree with my hon. Friend the Member for Burnley (Mr. Pike) that the certainties for pensioners should be applied equally to those people who are currently employed by water authorities.

What I want to know, specifically, is whether those people who have been transferred from the water authorities to the NRA will get exactly the same kind of treatment as other employees, given that, in respect of the

sale of shares in particular, they did not get the same treatment. I should welcome some clarification from the Minister on particular points concerning those people.

Mr. Pike: The amendments in this group are obviously very important. They affect the rights of existing pensioners, some of whom used to work for local authorities when those bodies were responsible for water services prior to reorganisation in 1974. Of course, there are pensioners who have retired since then, and there are people who have earned a lot of pension. We understand exactly what the Minister's amendments seek to do. They go some way towards clarifying the Bill as it was debated in Committee.

The Minister was absolutely right about the key part of my intervention a few moments ago. The crucial difference, of course, is the statutory protection for those people who currently work in the industry and for those who may come into it in the future. Certainly, the amendments do not go as far in that direction as we should like. It may be that the fall of the guillotine at 5.30 pm will make it impossible for us to reach an amendment in the next group. I hope that the Minister recognises that both Opposition Members and some Conservative Members are genuinely concerned about this matter, as are the employees in the industry.

Ministers have referred to the mirror image pension scheme. They are confident that the trustees will be able to protect employees, but many of us doubt whether that will happen. If the Ministers were right there would be no argument, but people who have worked for many years in the industry fear that, when the Bill becomes law, the agreements will be changed, that the documents that provide for future pension provision will not be so good as they are now and that there will be no mirror image pension scheme.

If the Secretary of State and the other Ministers really wanted a mirror image pension scheme to put in place, they could easily amend the Bill and introduce a statutory requirement that there should be such a scheme. The Government ought to be prepared to move in that direction because it would meet the fears of those who work in the industry. The Government need to go further than they have already gone if they are to gain the confidence of the workers in the industry.

The private water companies may prove to be the biggest cause for concern. There is no guarantee that employees will be able to become trustees of the pension schemes, although the trustees ultimately decide these matters. After privatisation, pensions and conditions of service will have to be negotiated between employers and trade unions on behalf of the employees. Ministers have given us many assurances during our debates. I was assured in Committee that the Government would not approve any scheme that did not meet our fears. Unless the Bill is amended to meet those fears, our predictions will be fulfilled. I hope, therefore, that the Government will be prepared to meet the genuine fears of the employees in the industry.

Mr. Richard Livsey (Brecon and Radnor): I welcome the amendments, particularly on behalf of former employees of the water authorities. In my constituency there are former employees of Severn-Trent and Welsh Water. I understand that the pension arrangements of employees of Severn-Trent are different from those of other authorities. I hope that the Minister will take them into account.

Mr. Moynihan: I am happy to give the confirmation that the hon. Member for Brecon and Radnor (Mr. Livsey) has sought. Those differences will be taken fully into account and will be mirrored—hence the phrase "mirror image". I was passed a number of pieces of paper during the speech of the hon. Member for Burnley (Mr. Pike). I am slightly concerned that the collective age of the admirable experts who have assisted us throughout the passage of the Bill may be closer to retirement age than the collective age of the Opposition Front Bench spokesman and myself. With a bit of luck, our collective ages are still short of retirement age. That, however, has not denied us the opportunity to study this subject in great depth and to be able to respond without notes to the important points that have been raised.

It is appropriate to place on record a little more detail about the mirror image scheme. I understand the concerns of the hon. Member for Burnley. That is why we have sought new provisions to give the hon. Gentleman and others who are concerned about the scheme not being enshrined in legislation further reassurance.

It has been suggested that the Government's commitment to the preservation of existing pension rights and the adoption of future changes in the local government superannuation scheme in the mirror image scheme would be best ensured, as the hon. Member for Burnley said, by statutory provision. I mentioned earlier that that view does not accord with the principles of privatisation and has not been part of privatisation legislation.

It is customary in the private sector for pension schemes to be safeguarded under trust deed by trustees. This, therefore, is the way in which the mirror image scheme will operate. It would be anomalous to require a small number of companies in the private sector to be subject to legislative requirements for the running of a pension scheme for only some of their employees. We have repeatedly given assurances that the mirror image scheme will not be approved by the Secretary of State unless it gives proper effect to the Government's commitment that it will provide employees with the same benefits, including full index-linking, with the same level of employees' contributions at the transfer date.

It has always been our intention that water authority employees' pension rights should be safeguarded. We now propose that further security for future rights will be provided by the terms of the trust deed. We have agreed with all the chairmen of the water authorities to provisions which will give particular reassurance. These are, first, that the trustees of the mirror image scheme should include at least two representatives of members; and secondly, that while there remain potential beneficiaries of the mirror image scheme, it should not be wound up or its benefits altered if any trustee objects. Representatives of members are more appropriate than representatives of employees, because there will come a time when there are no employees in the scheme. They will all have retired but they will still be members of the scheme drawing their benefits from it.

I am specifically not requiring trustees to be representatives of trade union members, but I am not excluding that possibility if they happen to be appropriate

[Mr. Moynihan]

representatives of members. I am sure that hon. Members will agree that a pension scheme operated in this way will provide satisfactory assurance to employees who have chosen to transfer to the mirror image scheme.

NRA employees will continue in the local government superannuation scheme as if nothing had happened. In other words, there will be complete continuity.

I hope I have answered the two major points that have been raised.

Amendment agreed to.

Amendments made: No. 90, in page 162, line 21,, at end insert

'or

(b) have ceased to be officers or employees of any person designated for the purposes of this paragraph by order made by the Secretary of State.

(1A) The Secretary of State shall not make an order designating a person for the purposes of subsection (1)(b) above unless that person appears to him to be a person whose activities at any time before the transfer date consisted in, or were connected with, the carrying out of any function which is transferred by this Act or which corresponds to any such function or to any other function under this Act; and the power to make such an order shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament.'.—*[Mr. Moynihan]*.

Clause 164

General restrictions on disclosure of information

Amendments made: No. 36, in page 164, line 15 at end insert

'or to any information exclusively of a statistical nature'.—

No. 41, in page 164, line 21, at end insert—

'(6) Subject to subsection (7) below, nothing in this section shall preclude the disclosure of information—

(a) if the disclosure is of information relating to a matter connected with the carrying out of the functions of a water undertaker or sewage undertaker and is made by one Minister of the Crown or government department to another; or

(b) if the disclosure is for the purpose of enabling or assisting any public or other authority for the time being designated for the purposes of this section by an order made by the Secretary of State to discharge any functions which are specified in the order.

(7) The power to make an order under subsection (6) above shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament; and where such an order designates an authority for the purposes of paragraph (b) of that subsection, the order may—

(a) impose conditions subject to which the disclosure of information is permitted by virtue of that paragraph; and

(b) otherwise restrict the circumstances in which disclosure is so permitted.'—*[Mr. Moynihan.]*

Clause 178

General interpretation

Mr. Moynihan: I beg to move amendment No. 58, in page 171, line 29, leave out 'alongside' and insert 'in the close vicinity of'.

Mr. Speaker: With this it will be convenient to discuss Government amendment No. 59.

Mr. Moynihan: The amendments meet a commitment that I gave my hon. Friend the Member for Gainsborough and Horncastle (Mr. Leigh) in Committee on 7 March. They make it clear that telecommunications apparatus for use solely in connection with the operation of undertakers' pipes may be laid not just alongside but generally in the close vicinity of pipes. Hon. Members who served on the Committee will no doubt recall our important debate there. I promised to look carefully at the point that my hon. Friend raised, not least because, as he pointed out, the water undertakers do not necessarily lay the equipment at the same time as the water main, and it is not necessarily very close. It may be as close as 2 m to the water main, but it may be as far away as five. As my hon. Friend mentioned, the problem with the original drafting of the Bill was that clause 178 made it clear that the equipment had to be placed alongside. We recognise that that is not necessarily in the interests of those who are placing the new telephone apparatus and who might want it to be above or underneath the main.

Amendment agreed to.

Amendment made: No. 59, in page 171, line 30, leave out 'alongside' and insert 'in the close vicinity of'.—*[Mr. Moynihan.]*

Clause 180

Local statutory provisions: consequential amendments etc

4.30 pm

Amendment made: No. 57, in page 177, line 14, at end insert—

'(3A) Nothing in any order under this section may abrogate or curtail the effect of so much of any local statutory provision as confers any right of way or confers on or preserves for the public—

(a) any right of enjoyment of air, exercise or recreation on land; or

(b) any right of access to land for the purposes of exercise or recreation.'.—*[Mr. Moynihan.]*

Clause 183

Short title, commencement and extent

Amendment made: No. 91, in page 179, line 1, after '23', insert

'except so far as relating to the making of subordinate legislation'.—*[Mr Moynihan.]*

Amendment made: No. 11—new schedule—

'Water Quality in Scotland

1. In the Water (Scotland) Act 1980, after section 76, there shall be inserted the following Part—

"Part VIA

Quality of Water

Duties of water authorities with respect to water quality.

76A.—(1) It shall be the duty of a water authority—

(a) when supplying water to any premises for domestic purposes to supply only water which is wholesome at the time of supply; and

(b) so far as reasonably practicable, to ensure, in relation to each source or combination of sources from which that authority supplies water to premises for domestic purposes, that there is, in general, no deterioration in the quality of the water which is supplied from time to time from that source or combination of sources.

(2) For the purposes of this section and section 76B below and subject to subsection (3) below, water supplied by a water authority to any premises shall not be regarded as unwholesome at the time of supply where it has ceased to be wholesome only after leaving the authority's pipes.

(3) For the purposes of this section where water supplied by a water authority to any premises would not otherwise be regarded as unwholesome at the time of supply, that water shall be regarded as unwholesome at that time if—

(a) it has ceased to be wholesome after leaving the authority's pipes but while in a pipe which is subject to water pressure from a main or which would be so subject but for the closing of some valve; and

(b) it has so ceased in consequence of the failure of the authority, before supplying the water, to take such steps as may be prescribed for the purpose of securing the elimination or reduction to a minimum of any prescribed risk that the water would cease to be wholesome after leaving the authority's pipes.

(4) The provisions of this section shall apply in relation to water which is supplied by a water authority whether or not the water is water which the authority is required to supply by virtue of any provision of this Act.

Regulations for preserving water quality

76B.—(1) The Secretary of State may by regulations require a water authority to take all steps as may be prescribed for the purpose of securing compliance with section 76A above; and, without prejudice to the generality of that power, regulations under this subsection may impose an obligation on a water authority—

(a) to take all such steps as may be prescribed for monitoring and recording whether the water which that authority supplies to premises for domestic purposes is wholesome at the time of supply;

(b) to take all such steps as may be prescribed for monitoring and recording the quality of the water from any source, or combination of sources, which that authority uses or is proposing to use for supplying water to any premises for domestic purposes;

(c) to ensure that a source which that authority is using or proposing to use for supplying water for domestic purposes is not so used until prescribed requirements for establishing the quality of water which may be supplied from that source have been complied with;

(d) to keep records of the localities within which all the premises supplied with water for domestic purposes by that authority are normally supplied from the same source or combination of sources;

(e) to comply with prescribed requirements with respect to the analysis of water samples or with respect to internal reporting or organisational arrangements.

(2) Without prejudice to subsection (1) above, the Secretary of State may by regulations make provision with respect to the use by water authorities, for the purposes of or in connection with the carrying out of their functions, of such processes and substances, and of products that contain or are made with such substances or materials, as he considers might affect the quality of any water; and, without prejudice to the generality of that power, regulations under this subsection may—

(a) forbid the use by water authorities of processes, substances and products which have not been approved under the regulations or which contravene the regulations;

(b) for the purpose of provision made by virtue of paragraph (a) above, require processes, substances and products used by water authorities to conform to such standards as may be prescribed by or approved under the regulations;

(c) impose such other requirements as may be prescribed with respect to the use by water authorities of prescribed processes, substances and products;

(d) provide for the giving, refusal and revocation, by prescribed persons, of approvals required for the purposes of the regulations, for such approvals to be capable of being made subject to such conditions as may be prescribed and for the modification and revocation of any such condition;

(e) impose obligations to furnish prescribed persons with information reasonably required by those persons for the purpose of carrying out functions under the regulations; and

(f) require prescribed charges to be paid to persons carrying out functions under the regulations.

(3) The Secretary of State may by regulations require a water authority—

(a) to publish information about the quality of water supplied for domestic purposes to any premises by that authority; and

(b) to provide information to prescribed persons about the quality of water so supplied.

(4) Regulations under subsection (3) above—

(a) shall prescribe both the information which is to be published or provided in pursuance of the regulations and the manner and circumstances in which it is to be published or provided;

(b) may require the provision of information by a water authority to any person to be free of charge or may authorise it to be subject to the payment by that person to the authority of a prescribed charge; and

(c) may impose such other conditions on the provision of information by a water authority to any person as may be prescribed.

Provision of water where piped supplies insufficient or unwholesome

76C.—(1) Where—

(a) it is not practicable at reasonable cost for a water authority, by supplying water in pipes, to provide or maintain such a supply of wholesome water to any particular premises in its limits of supply as (so far as those premises are concerned) is sufficient for domestic purposes;

(b) it is practicable at reasonable cost for the authority to provide such a supply to those premises otherwise than in pipes;

(c) the insufficiency or unwholesomeness of the supply of water for domestic purposes to those premises is such as to cause a danger to life or health; and

(d) the local authority in whose area those premises are situated notify the water authority of that danger and require the water authority to provide a supply otherwise than in pipes,

it shall be the duty of the water authority, for such period as may be required by that local authority, to provide any supply to those premises which it is practicable at reasonable cost to provide otherwise than in pipes and which it is required to provide by that local authority.

(2) Where under subsection (1) above a local authority require the provision by a water authority of a supply of water to any premises, that local authority—

(a) shall be liable to the water authority for any charges payable in respect of the provision of that supply; but

(b) shall have power to recover the whole or any part of any charges paid by virtue of this subsection from the owner or occupier of the premises to which the supply is provided.

(3) In this section references to the provision of a supply of water to any premises otherwise than in pipes shall have effect, in a case in which it is practicable at reasonable cost to provide a supply (whether or not in pipes) to a place within a reasonable distance of those premises, as including references to the provision of a supply to that place.

Enforcement of sections 76A to 76C

76D.—(1) This section applies to enforcement of the duties of water authorities under sections 76A and 76C(1) and under regulations made under section 76B.

(2) Without prejudice to its generality, section 11 above (power of Secretary of State to make a default order) shall have effect, subject to the following provisions of this section, for the enforcement by the Secretary of State of the duties referred to in subsection (1) above.

(3) The Secretary of State may make an order under subsection (2) of section 11 without having caused a local inquiry to be held into the matter.

(4) The Secretary of State shall not make an order under subsection (2) of section 11 if he is satisfied—

(a) that the failures complained of were of a trivial nature; or

(b) that the water authority have agreed to take and are taking all such steps as it appears to the Secretary of

State to be appropriate, for the time being, for them to take for the purpose of securing or facilitating compliance with these duties.

General functions of local authorities in relation to water quality

76E.—(1) It shall be the duty of every local authority to take all such steps as they consider appropriate for keeping themselves informed about the wholesomeness and sufficiency of water supplies provided to premises in their area, including every private supply to any such premises.

(2) It shall be the duty of a local authority to notify any water authority of anything appearing to the local authority to suggest—

(a) that any supply by that water authority of water for domestic purposes to any premises in the area of that local authority is, has been, or is likely to become unwholesome or (so far as any such premises are concerned) insufficient for those purposes;

(b) that the unwholesomeness or insufficiency of any such supply is, was or is likely to be such as to cause a danger to life or health; or

(c) that the duty imposed on that undertaker by virtue of section 76A(1)(b) above is being, has been or is likely to be so contravened as to affect any supply of water to premises in that area;

and it shall be the duty of a local authority to require the provision of a supply in pursuance of section 76C above whenever, in a case falling within paragraph (a) of subsection (1) of that section, it is satisfied, in relation to any premises in their area, as to the matters specified in paragraphs (b) and (c) of that subsection.

(3) Where a local authority have notified a water authority of any such matter as is mentioned in subsection (2) above, it shall be the duty of that local authority, if they are not satisfied that all such remedical action as is appropriate will be taken by the water authority, to inform the Secretary of State about the contents of the notification.

(4) It shall be the duty of a local authority to comply with any direction given by the Secretary of State to that local authority or to local authorities generally as to—

(a) the cases and circumstances in which they are or are not to exercise any of the powers conferred on them by this Part in relation to private supplies; and

(b) the manner in which those powers are to be exercised.

(5) The Secretary of State may by regulations make such provision, supplementing the provisions of this section, as he considers appropriate for—

(a) imposing duties and conferring powers on local authorities with respect to the acquisition of information about the quality and sufficiency of water supplies provided to premises in their areas; and

(b) regulating the performance of any duty imposed by or under this section.

(6) Without prejudice to the generality of subsection (5) above, regulations under that subsection may—

(a) prescribe the matters to be taken into account by a local authority in determining, for the purposes of subsection (1) above, what is appropriate;

(b) provide, for the purposes of the exercise or performance of any power or duty conferred or imposed on a local authority by or under this section, for such samples of water to be taken and analysed at such times and in such manner as may be prescribed;

(c) authorise local authorities to exercise or perform any such power or duty through prescribed persons;

(d) provide for the recovery by a local authority, from prescribed persons, of such amounts as may be prescribed in respect of expenses reasonably incurred by the authority in the exercise of any such power or the performance of any such duty.

REMEDIAL POWERS OF LOCAL AUTHORITIES IN RELATION TO PRIVATE SUPPLIES

76F.—(1) Subject to the following provisions of this section, where a local authority are satisfied in relation to any premises in their area which are supplied with water for domestic purposes by means of a private supply—

(a) that any water which is being, has been or is likely to be supplied for those purposes to those premises by means of that private supply is not, was not or, as the case may be, is not likely to be wholesome; or

(b) that that private supply is failing, has failed or is likely to fail to provide to any house on those premises such a supply of wholesome water as (so far as that house is concerned) is sufficient for domestic purposes,

the local authority may serve a notice in relation to that private supply on one or more of the relevant persons.

(2) A notice under this section in relation to a private supply of water to any premises shall—

(a) give particulars of the matters mentioned in subsection (1) above in respect of which the notice is served;

(b) specify the steps which, in the opinion of the local authority serving the notice, are required to be taken for ensuring that there is a supply of water to those premises which is both wholesome and (so far as any house on those premises is concerned) sufficient for domestic purposes;

(c) specify a period ending not less than 28 days after the day on which the notice is served within which any representations or objections with respect to the notice must be received by that local authority; and

(d) state the effect in relation to that notice of section 76G(2) and (3) below.

(3) Subject to section 76G below, where a local authority serve a notice under this section on any relevant person they may do one or more of the following, that is to say—

(a) by that notice designate as steps to be taken by the authority themselves such of the steps specified in the notice as they consider it appropriate to so designate;

(b) by that notice require that person, within such reasonable period as may be specified in the notice, to take one or more of the steps so specified;

(c) by that notice require that person, at such times as may be determined in accordance with provision contained in the notice, to make to another relevant person or to that authority such payments as may be so determined in respect of expenses reasonably incurred by that other person or that authority in taking any step specified in the notice;

(d) by that notice undertake from time to time to make such payments to that person as may be so determined in respect of expenses reasonably incurred by that person in taking any step specified in the notice.

(4) The power of a local authority to serve a notice under this section specifying the steps which are required to be taken in relation to any source from which a private supply is provided both to premises in the area of that authority and to premises in the area of another local authority shall be exercisable only where—

(a) the other authority consent to the service of the notice; or

(b) the authorities act jointly in exercising their respective powers under this section in relation to that source.

(5) The powers conferred by this section and section 76G below shall be so exercised in relation to a private supply of water to any premises where there is no house as to secure that no local authority are required to bear any of the expenses incurred (whether by the authority or by any other person) in taking any steps for ensuring that the supply is wholesome which are specified in any notice under this section.

(6) The steps that a relevant person may be required by a notice under this section to take in relation to any premises shall include—

(a) requiring a supply of water to be provided to those premises by a water authority or by any other person; and

(b) taking such steps for the purpose of securing that such a requirement is complied with, and of enabling such a supply to be so provided, as may be specified in the notice.

(7) For the purposes of this section and section 76G below the relevant persons, in relation to a private supply of water to any premises in the area of a local authority, are the owners and occupiers of those premises and (whether or not the source of the private supply is in that authority's area) the owners and occupiers of the premises where that source is situated and any other person who exercises powers of management or control in relation to that source.

Effect confirmation and variation of notice under section 76F

76G.—(1) Subject to subsection (2) below, a notice served by a local authority under section 76F above shall not take effect until the end of the period specified in the notice as the period within which representations or objections with respect to the notice must be received by that authority.

(2) Where any written representation or objection with respect to a notice by a local authority under section 76F above is received by the authority, before the end of the period specified in the notice, from a person on whom the notice was served, that notice shall not take effect unless—

(a) the notice is submitted by the authority to the Secretary of State and is confirmed by him either with or without modifications; or

(b) the representation or objection is withdrawn.

(3) If a local authority submit a notice under section 76F above to the Secretary of State for confirmation, the Secretary of State—

(a) shall consider whether the notice should be confirmed and whether, if it is confirmed, it should be confirmed with or without modifications;

(b) may, with respect to the matters specified in the notice or any proposed modification of it, direct the local authority to serve a notice under section 76F above, in such terms as may be specified in the direction, on any relevant person who has not previously been so served;

(c) may, for the purposes of paragraph (a) or (b) above—

(i) cause a local inquiry to be held; or

(ii) afford to the local authority and to every person who has made representations or objections with respect to the notice or a proposed direction under paragraph (b) above an opportunity of appearing before, and being heard by, a person appointed by the Secretary of State for the purpose;

and

(d) if he is satisfied that the person on whom any notice to be served in pursuance of a direction under paragraph (b) above has had a proper opportunity of having his representations or objections with respect to the proposal for the direction considered, dispense in relation to the notice so served with the provisions of subsections (1) and (2) above and of section 76F(2)(c) and (d) above.

(4) Where the Secretary of State confirms a notice under section 76F above (whether with or without modifications)

(a) he, or if he so directs, the local authority concerned shall serve notice of that confirmation on every person originally served with the notice under that section; and

(b) that notice shall take effect, with any modifications made by the Secretary of State, at such times as may be specified in the notice served under this subsection.

(5) Where any relevant person who is required by virtue of a notice under section 76F above to take any step in relation to any premises fails to take that step within the period specified in the notice, the authority which served the notice may, in accordance with any applicable provision having effect by virtue of section 76H below, take that step themselves.

(6) Where any step is taken by a local authority in relation to any premises by virtue of subsection (5) above—

(a) the authority may recover from the person who failed to take that step within the specified period any expenses reasonably incurred by the authority in taking that step; and

(b) for the purposes of any requirement under which payments are required to be made to that person by any person other than the authority, sums paid by virtue of paragraph (a) above in respect of the taking of any step shall be deemed to be expenses incurred in the taking of that step by the person who failed to take it.

(7) Nothing in this Act shall confer any right of action on any person in respect of any loss or damage sustained by that person in consequence of the failure by any other person to take any step specified in a notice under section 76F above; but any sum required to be paid to any person by virtue of any requirement or undertaking contained in such a notice shall be recoverable by that person from the person who is required to pay it.

(8) Any requirement which is imposed by virtue of a notice under section 76F above on the owner or occupier of any premises and is expressed to bind those premises in relation to the owners or occupiers from time to time shall bind successive owners or, as the case may be, occupiers of those premises; and section 65 above (power of local authority to make a charging order in respect of costs) shall apply to a requirement under section 64 above.

(9) Subject to subsection (10) below, a local authority may be notice served on any person modify or revoke the effect in relation to that person of any notice under section 76F above or this subsection (including a notice which has been confirmed, with or without modifications, by the Secretary of State).

(10) Section 76F(2)(c) and (d) and subsections (1) to (4) above shall apply, as they apply in relation to a notice under section 76F above, in relation to any notice served by a local authority on any person under subsection (9) above except where the notice—

(a) extends the period within which any step is required to be taken by that person; or

(b) discharges, postpones or abates any obligation of that person to make a payment to the local authority.

Incidental powers of local authorities

76H.—(1) Subject to subsection (5) below, a local authority may serve on any person a notice requiring him to furnish that authority, within a period or at times specified in the notice and in a form and manner so specified, with such information as is reasonably required by that authority for the purpose of exercising or performing any power or duty conferred or imposed on that authority by or under any of sections 76E to 76G above.

(2) Any person designated in writing for the purpose by any local authority may—

(a) enter any premises for the purpose, in relation to any private supply, of—

(i) determining whether, and if so in what manner, any power or duty conferred or imposed on that authority by or under any of sections 76E to 76G above should be exercised or performed; or

(ii) exercising any such power or performing any such duty;

(b) enter any premises to which a supply of water is provided by a water authority for the purpose, in relation to a supply so provided, of determining whether, and if so in what manner, such a power should be exercised or such a duty performed or of exercising such a power or performing such a duty; or

(c) carry out such inspections, measurements and tests on premises entered by that person or of articles found on any such premises, and take away such samples of water or of any land or articles, as the local authority—

(i) consider appropriate for the purposes of any such power or duty; and

(ii) have authorised that person to carry out or take away,

and the provisions of subsections (3) to (7) of section 38 shall apply to the right of entry given by this subsection to any person designated by a local authority as they apply to the right of entry of an authorised officer of a water authority.

(3) Entry into any premises shall not be demanded as of right by virtue of this section except—

(a) in an emergency, or

(b) at a reasonable time and after 24 hours' notice of the intended entry has been given to the occupier of the premises.

(4) The Secretary of State may by regulations make provision for restricting the information which may be required under subsection (1) above and for determining the form in which the information is to be so required.

(5) A person who fails without reasonable excuse to comply with the requirements of a notice served on him under subsection (1) above shall be guilty of an offence and liable on summary conviction to a fine not exceeding level 5 on the standard scale.

Standards of wholesomeness

76I.—(1) The Secretary of State may by regulations make provision that water that is supplied to any premises is or is not to be regarded as wholesome for the purposes of this Part if it satisfies or, as the case may be, fails to satisfy such requirements as may be prescribed.

(2) Without prejudice to the generality of subsection (1) above, regulations under this section may, for the purpose of determining the wholesomeness of any water—

(a) prescribe general requirements as to the purposes for which the water is to be suitable;

(b) prescribe specific requirements as to the substances that are to be present in or absent from the water and as to the concentrations of substances which are or are required to be present in the water;

(c) prescribe specific requirements as to other characteristics of the water;

(d) provide that the question whether prescribed requirements are satisfied may be determined by reference to such samples as may be prescribed;

(e) enable the Secretary of State to authorise such relaxations of and departures from the prescribed requirements (or from any of them) as may be prescribed, to make any such authorisation subject to such conditions as may be prescribed and to modify or revoke any such authorisation or condition; and

(f) enable the Secretary of State to authorise a local authority (either instead of the Secretary of State or concurrently with him) to exercise in relation to a private supply any power conferred on the Secretary of State by regulations made by virtue of paragraph (e) above.

Power to give effect to international obligations

76J. The Secretary of State may by regulations provide that the provisions of this Part shall have effect with such modifications as may be prescribed for the purpose of enabling Her Majesty's Government in the United Kingdom to give effect to—

(a) any Community obligations; or

(b) any international agreement to which the United Kingdom is for the time being a party.

Interpretation etc. of Part VIA.

76K.—(1) In this Part—

'analyse', in relation to any sample of land or water, includes subjecting the sample to a test of any description, and cognate expressions shall be construed accordingly;

'local authority' means an islands or district council;

'private supply' means, subject to subsection (2) below, a supply of water provided otherwise than by a water authority (including a supply provided for the purposes of the bottling of water) and cognate expressions shall be construed accordingly;

'substance' includes micro-organisms and any natural or artificial substance or other matter, whether it is in solid or liquid form or in the form of a gas or vapour.;

'wholesome' and cognate expressions shall be construed subject to the provisions of any regulations made under section 76I.

(2) For the purposes of any reference in this Part to a private supply, or to supplying water by means of a private supply, water shall be treated as supplied to any premises not only where it is supplied from outside those premises, but also where it is abstracted, for the purpose of being used or consumed on those premises, from a source which is situated on the premises themselves; and for the purposes of this subsection water shall be treated as used on any premises where it is bottled on those premises for use or consumption elsewhere.

(3) The rights conferred by virtue of this Part as against the owner or occupier of any premises shall be without prejudice to any rights and obligations, as between themselves, of the owner and occupier of the premises in question.'.'.—[*Mr. Moynihan.*]

Amendment made: No. 88—new schedule—

'CONTROL OF POLLUTION IN SCOTLAND

1. The Control of Pollution Act 1974 as it applies to Scotland is amended in accordance with the provisions of this Schedule.

2. In subsection (4) of section 4 (meaning of "land"), for the words "in a stream" there shall be substituted the words "in controlled waters".

3. In subsection (9) of section 11, for the words "relevant waters" there shall be substituted the words "controlled waters".

4. For sections 31 to 42 there shall be substituted the following sections—

General provisions

Waters to which Part II applies

30A.—(1) This part applies to any waters (in this Part referred to as 'controlled waters') of any of the following classes—

(a) relevant territorial waters, that is to say, subject to subsection (5) below, the waters which extend seaward for three miles from the baselines from which the breadth of the territorial sea adjacent to Scotland is measured;

(b) coastal waters, that is to say, any waters which are within the area which extends landward from those baselines as far as the limit of the highest tide or, in the case of the waters of any relevant river or watercourse, as far as the fresh-water limit of the river or watercourse, together with the waters of any enclosed dock which adjoins waters within that area;

(c) inland waters, that is to say, the waters of any relevant loch or pond or of so much of any relevant river or watercourse as is above the fresh-water limit:

(d) ground waters, that is to say, any waters contained in underground strata, or in—

(i) a well, borehole or similar work sunk into underground strata, including any adit or passage constructed in connection with the well, borehole or work for facilitating the collection of water in the well, borehole or work; or

(ii) any excavation into underground strata where the level of water in the excavation depends wholly or mainly on water entering it from the strata.

(2) The Secretary of State—

(a) shall deposit maps with each river purification authority showing what appear to him to be the fresh-water limits of every relevant river or watercourse in the area of that authority; and

(b) may from time to time, if he considers it appropriate to do so be reason of any change of what appears to him to be the fresh-water limit of any river or watercourse, deposit a map showing a revised limit for that river or watercourse;

and in subsection (1) above 'fresh-water limit', in relation to any river or watercourse, means the place for the time being shown as the fresh-water limit of that river or watercourse in the latest map deposited for that river or watercourse under this subsection.

(3) It shall be the duty of each river purification authority to keep any maps deposited with it under subsection (2) above available, at all reasonable times, for inspection by the public free of charge.

(4) in this section—

'miles' means international nautical miles of 1,852 metres;

'loch or pond' includes a reservoir of any description;

'relevant loch or pond' means (subject to subsection (5) below) any loch or pond which (whether it is natural or artificial or above or below ground) discharges into a relevant river or watercourse or into another loch or pond which is itself a relevant loch or pond;

'relevant river or watercourse' means any river or watercourse (including an underground river or watercourse and an artificial river or watercourse) which is neither a public sewer nor a sewer or drain which drains into a public sewer.

(5) The Secretary of State may by order provide—

(a) that any area of the territorial sea adjacent to Scotland is to be treated as if it were an area of relevant territorial waters for the purposes of this Part;

(b) that any loch or pond which does not discharge into a relevant river or watercourse or into a relevant loch or pond is to be treated for those purposes as a relevant loch or pond.

(6) The power of the Secretary of State to make an order under subsection (5) above shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament; and such an order may—

(a) contain such supplemental, consequential and transitional provision as the Secretary of State considers appropriate; and

(b) for the purposes of any provision made by virtue of paragraph (a) above, make different provision for different cases, including different provision in relation to different persons, circumstance or localities.

Classification of quality of waters

30B.—(1) The Secretary of State may, in relation to any description of controlled waters (being a description applying to some or all of the waters of a particular class or of two or more different classes), by regulations prescribe a system of classifying the quality of those waters according to criteria specified in the regulations.

(2) The criteria specified in regulations under this section in relation to any classification shall consist of one or more of the following, that is to say—

(a) general requirements as to the purposes for which the waters to which the classification is applied are to be suitable;

(b) specific requirements as to the substances that are to be present in or absent from the water and as to the concentrations of substances which are or are required to be present in the water;

(c) specific requirements as to other characteristics of those waters;

and for the purposes of any such classification regulations under this section may provide that the question whether prescribed requirements are satisfied may be determined by reference to such samples as may be prescribed.

Water quality objectives

30C.—(1) For the purpose of maintaining and improving the quality of controlled waters the Secretary of State may, by serving a notice on a river purification authority specifying—

(a) one or more of the classifications for the time being prescribed under section 30B above; and

(b) in relation to each specified classification, a date,

establish the water quality objectives for any waters within the area of that authority which are, or are included in, waters of a description prescribed for the purposes of that section.

(2) The water quality objectives for any waters to which a notice under this section relates shall be the satisfaction by those waters, on and at all times after each date specified in the notice, of the requirements which at the time of the notice were the requirements for the classification in relation to which that date is so specified.

(3) Where the Secretary of State has established water quality objectives under this section for any waters he may review objectives for those waters if—

(a) five years or more have elapsed since the service of the last notice under subsection (1) or (6) of this section to be served in respect of those waters; or

(b) the river purification authority on which that notice has been served, after consultation with such persons as it considers appropriate, requests a review;

and the Secretary of State shall not exercise his power to establish objectives for any waters by varying the existing objectives for those waters except in consequence of such a review.

(4) Where the Secretary of State proposes to exercise his power under this section to establish or vary the objectives for any waters in the area of a river purification authority he shall—

(a) give notice to that authority setting out his proposal and specifying the period (not being less than three months from the date of publication of the notice) within which representations with respect to the proposal may be made; and

(b) consider any representations which are duly made;

and if he decides, after considering any such representations, to exercise his power to establish or vary those objectives, he may do so either in accordance with the proposal contained in the notice or in accordance with that proposal as modified in such manner as he considers appropriate.

(5) A notice under subsection (4) above shall be given—

(a) by publishing the notice in such manner as the Secretary of State considers appropriate for bringing it to the attention of persons likely to be affected by it; and

(b) by serving a copy of the notice on the authority.

(6) If, on a review under this section or in consequence of any representations made following such a review for the purposes of subsection (4) above, the Secretary of State decides that the water quality objectives for any waters in the area of a river purification authority should remain unchanged, he shall serve notice of that decision on that authority.

General duties to achieve and maintain objectives etc.

30D.—(1) It shall be the duty of the Secretary of State and of each river purification authority to exercise the powers conferred on him or it by or under the following provisions of this Part or the provisions of the Rivers (Prevention of Pollution) (Scotland) Acts 1951 and 1965 in such manner as ensures, so far as it is practicable by the exercise of those powers to do so, that the water quality objectives specified for any waters in a notice under section 30C above are achieved at all times.

(2) It shall be the duty of each river purification authority, for the purposes of the carrying out of its functions under the following provisions of this Part or the provisions of the Rivers (Prevention of Pollution) (Scotland) Acts 1951 and 1965, to monitor the extent of pollution in controlled waters.

Control of entry of polluting matter and effluents into water

Control of pollution of rivers and coastal waters etc.

31.—(1) Subject to subsections (2) and (3) of this section, a person shall be guilty of an offence if he causes or knowingly permits—

(a) any poisonous, noxious or polluting matter to enter controlled waters; or

(b) any matter to enter any inland waters so as to tend (either directly or in combination with other matter which he or another person causes or permits to enter those waters) to impede the proper flow of the waters in a manner leading or likely to lead to a substantial aggravation of pollution due to other causes or of the consequences of such pollution; or

(c) any solid waste matter to enter controlled waters.

(2) A person shall not be guilty of an offence by virtue of the preceding subsection if—

(a) the entry in question is authorised by, or is a consequence of an act authorised by, a disposal licence or a consent given by the Secretary of State or a river purification authority in pursuance of this Act and the entry or act is in accordance with the conditions, if any, to which the licence or consent is subject; or

(b) the entry in question is authorised by, or is a consequence of an act authorised by—

(i) section 33 of the Water (Scotland) Act 1980 (which among other things relates to

temporary discharges by water authorities in connection with the construction of works) or any prescribed enactment, or

(ii) any provisions of a local Act or statutory order which expressly confers powers to discharge effluent into water, or

(iii) any licence granted under Part II of the Food and Environment Protection Act 1985; or

(c) the entry in question is caused or permitted in an emergency in order to avoid danger to the public and—

(i) he takes all such steps as are reasonably practicable in the circumstances for minimising the extent of the entry in question and of its polluting effects; and

(ii) as soon as reasonably practicable after the entry occurs, particulars of the entry are furnished to the river purification authority in whose area it occurs; or

(d) the matter in question is trade or sewage effluent discharged as mentioned in paragraph (a) of subsection (1) of section 32 or matter discharged as mentioned in paragraph (b) or (c) of that subsection and the entry in question is not from a vessel;

and a person shall not be guilty of an offence by virtue of the preceding subsection by reason only of his permitting water from an abandoned mine to enter controlled waters.

(3) A person shall not by virtue of paragraph (b) or (c) of subsection (1) of this section be guilty of an offence by reason of his depositing the solid refuse of a mine or quarry on any land so that it falls or is carried into inland waters if—

(a) he deposits the refuse on the land with the consent (which shall not be unreasonably withheld) of the river purification authority in whose area the land is situated; and

(b) no other site for the deposit is reasonably practicable; and

(c) he takes all reasonably practicable steps to prevent the refuse from entering those inland waters.

(4) Where it appears to the Secretary of State that, with a view to preventing poisonous, noxious or polluting matter from entering any controlled waters, it is appropriate to prohibit or restrict the carrying on in a particular area of activities which he considers are likely to result in pollution of the waters, then, subject to subsection (5) below, he may by regulations—

(a) designate that area; and

(b) provide that prescribed activities shall not be carried on at any place within the area except with the consent (which shall not be unreasonably withheld) of the river purification authority in whose area the place is situated and in accordance with any reasonable conditions to which the consent is subject;

(c) provide that a contravention of the regulations shall be an offence and prescribe the maximum penalty for the offence; and

(d) make provision for the imposition by river purification authorities of charges in respect of the consent mentioned in paragraph (b) above.

(5) It shall be the duty of the Secretary of State, before he makes any regulations under subsection (4) above—

(a) to publish in the Edinburgh Gazette and in at least one newspaper circulating in the area in question a copy of the proposed regulations and a notice specifying—

(i) a period of not less than twenty-eight days, beginning with the date on which the notice is first published, within which objections to the proposed regulations may be made, and

(ii) the person to whom such objections may be made; and

(b) to consider any objections to the proposed regulations which are made within that period and, if such an objection is so made by a prescribed person and is not withdrawn, to cause a local inquiry to be held in pursuance of section 96 of this Act with respect to the proposed regulations;

and the Secretary of State may, after considering any such objections as are mentioned in paragraph (b) of this subsection and the report of any person appointed to hold a local inquiry with respect to the proposed regulations, make the regulations either in the form in which a copy of them was published in pursuance of this subsection or in that form with such modifications as he considers appropriate.

(6) A river purification authority may by byelaws make such provision as the authority considers appropriate for prohibiting or regulating the washing or cleaning, in any controlled waters in its area, of things of a kind specified in the byelaws; and a person who contravenes any byelaws made by virtue of this subsection shall be guilty of an offence and liable on summary conviction to a fine not exceeding level 4 on the standard scale or such smaller sum as is specified in the byelaws.

(7) A person guilty of an offence by virtue of subsection (1) of this section shall be liable—

(a) on summary conviction, to imprisonment for a term not exceeding three months or a fine not exceeding the statutory maximum or both;

(b) on conviction on indictment, to imprisonment for a term not exceeding two years or a fine or both.

(8) The maximum penalty prescribed in pursuance of subsection (4) of this section shall not exceed the penalties specified in paragraphs (a) and (b) of the preceding subsection.

(9) In subsection (2) of this section—

"disposal licence" has the same meaning as in Part I of this Act;

"local Act" includes enactments in a public general Act which amend a local Act;

"statutory order" means an order, byelaw, scheme or award made under an Act of Parliament, including an order or scheme confirmed by Parliament or brought into operation in accordance with special parliamentary procedure.

Requirements to take precautions against pollution

31A.—(1) The Secretary of State may by regulations make provision—

(a) for prohibiting a person from having custody or control of any poisonous, noxious or polluting matter unless prescribed works and prescribed precautions and other steps have been carried out or take for the purpose of preventing the matter from entering controlled waters;

(b) for requiring a person who already has custody or control of, or makes use of, any such matter to carry out such works for that purpose as may be prescribed.

(2) Without prejudice to the generality of the power conferred by subsection (1) above, regulations under that subsection may—

(a) confer power on the river purification authorities—

(i) to determine for the purposes of the regulations the circumstances in which a person is required to carry out works or take any precautions or other steps; and

(ii) by notice to that person, to impose the requirement and to specify or describe the works, precautions or other steps which that person is required to carry out or take;

(b) provide for appeals to the Secretary of State against notices served by a river purification authority in pursuace of provision made by virtue of paragraph (a) above; and

(c) provide that a contravention of the regulations shall be an offence the penalty for which shall be—

(i) on summary conviction, imprisonment for a term not exceeding three months or to a fine not exceeding the statutory maximum or to both.

(ii) on conviction on indictment, to imprisonment for a term not exceeding two years or to a fine or to both.

Control of discharge of trade and sewage effluent etc. into rivers and coastal waters etc.

32.—(1) Subject to subsections (3) to (5) of this section, a person shall be guilty of an offence if he causes or knowingly permits—

(a) any trade effluent or sewage effluent to be discharged—

(i) into any controlled waters, or
(ii) from land in Scotland through a pipe into the sea out-side the seaward limits of controlled waters, or
(iii) from a building or from plant on to or into any land or into any waters of a loch or pond which are not

inland waters;

or

(b) any matter other than trade or sewage effluent to be discharged into controlled waters from a sewer as defined by section 59(1) of the Sewerage (Scotland) Act 1968 or from a drain as so defined; or
(c) any matter other than trade or sewage effluent to be discharged into controlled waters from a drain which a roads authority is obliged or entitled to keep open by virtue of section 51 of the Roads (Scotland) Act 1984, and in respect of which the river purification authority in whose area the discharge occurs has, not later than the beginning of the period of three months ending with the date of the discharge, served on the roads authority a notice stating that this paragraph is to apply to the drain,

unless the discharge is made with the consent in pursuance of section 34 of this Act of the river purification authority in whose area the discharge occurs (or, in a case falling within paragraph (a)(ii) of this subsection, of the river purification authority whose area includes the point at which the pipe passes or first passes into or under controlled waters from the sea outside them) and is in accordance with the conditions, if any, to which the consent is subject.

(2) Where any sewage effluent is discharged as mentioned in paragraph (a) of the preceding subsection from any works or sewer vested in a local authority and the authority did not cause or knowingly permit the discharge but was bound to receive into the works or sewer, either unconditionally or subject to conditions which were observed, matter included in the discharge, the authority shall be deemed for the purposes of that subsection to have caused the discharge.

(3) The Secretary of State may—

(a) by an order made before subsection (1) of this section comes into force provide that that subsection shall not, while the order is in force, apply to discharges which are of a kind or in an area specified in the order and for which, if this Act had not been passed, consent in pursuance of the Rivers (Prevention of Pollution) (Scotland) Acts 1951 and 1965 would not have been required;
(b) by order vary or revoke any order in force by virtue of the preceding paragraph;

and an order made by virtue of this subsection may require any river purification authority specified in the order to publish in a manner so specified such information about the order as is so specified.

(4) Subsection (1) of this section shall not apply to any discharge which—

(a) is from a vessel; or
(b) is authorised by a licence granted under Part II of the Food and Environment Protection Act 1985,

and a person shall not be guilty of an offence under subsection (1) if—

(i) the discharge is caused or permitted in an emergency in order to avoid danger to the public;
(ii) he takes all such steps as are reasonably practicable in the circumstances for minimising the extent of the discharge and of its polluting effects; and
(iii) as soon as reasonably practicable after the discharge occurs, particulars of the discharge are furnished to the river purification authority in whose area it occurs.

(5) A local authority shall not be guilty of an offence by virtue of subsection (1) of this section by reason only of the fact that a discharge from a sewer or works vested in the authority contravenes conditions of a consent relating to the discharge if—

(a) the contravention is attributable to a discharge which another person caused or permitted to be made into the sewer or works; and
(b) the authority either was not bound to receive the discharge into the sewer or works or was bound to receive it there subject to conditions but the conditions were not observed; and
(c) the authority could not reasonably have been expected to prevent the discharge into the sewer or works;

and a person shall not be guilty of such an offence in consequence of a discharge which he caused or permitted to be made into a sewer or works vested in local authority if the authority was bound to receive the discharge there either unconditionally or subject to conditions which were observed.

(6) In subsection (2) of this section and the preceding subsection, "local authority" means a local authority within the meaning of the Sewerage (Scotland) Act 1968.

(7) A person who is guilty of an offence by virtue of subsection (1) of this section shall be liable—

(a) on summary conviction, to imprisonment for a term not exceeding three months or a fine not exceeding the statutory maximum or both;
(b) on conviction on indictment, to imprisonment for a term not exceeding two years or a fine or both.

Control of sanitary appliances in vessels.

33.—(1) A river purification authority may by byelaws make such provision as the authority, considers appropriate for prohibiting or regulating the keeping or use, on any controlled waters in the area of the authority, of vessels of a kind specified in the byelaws which are provided with sanitary appliances; and a person who contravenes any byelaw made by virtue of this section shall be guilty of an offence.

(2) The Secretary of State may by order provide that any byelaws specified in the order which were made by virtue of section 25(1)(c) of the Rivers (Prevention of Pollution) (Scotland) Act 1951 (byelaws) shall have effect, with such modifications (if any) as are so specified, as if made by virtue of the preceding subsection.

(3) In this section "sanitary appliance" means a water closet or other prescribed appliance (except a sink, bath and a shower-bath) which is designed to permit polluting matter to pass into the water on which the vessel in question is for the time being situated.

(4) A person guilty of an offence by virtue of any of the preceding provisions of this section shall be liable on summary conviction to a fine of an amount not exceeding level 4 on the standard scale or such smaller sum as may be specified in the byelaws.

CONSENTS FOR DISCHARGES

Consents for discharges of trade and sewage effluent etc.

34.—(1) An application to a river purification authority for consent in pursuance of this section for discharges of any effluent or other matter shall be accompanied or supplemented by all such information as the authority may reasonably require; and the authority may if it thinks fit treat an application for consent for discharges at two or more places as separate applications for consent for discharges at each of those places.

(2) Subject to the following section, it shall be the duty of a river purification authority to which an application for consent is made in pursuance of this section—

(a) to give the consent either unconditionally or subject to conditions or to refuse it; and
(b) not to withhold the consent unreasonably;

and if within the period of three months beginning with the date when an application for consent is received by the authority, or within such longer period as may at any time be agreed upon in writing between the authority and the applicant, the authority has neither given nor refused the consent nor informed the applicant that the application has been transmitted to the Secretary of State in pursuance of the following section, the authority shall be deemed to have refused the consent.

(3) If it appears to the authority that a person has, without the authority's consent, caused or permitted matter to be discharged in its area in contravention of section 32(1) of this Act and that a similar contravention by that person is likely, the authority may if it thinks fit serve on him an instrument in writing giving its consent, subject to conditions specified in the instrument, for discharges of a kind so specified; but

consent given in pursuance of this subsection shall not relate to any discharge which occurred before the instrument giving the consent was served on the recipient of the instrument.

(4) The conditions subject to which the authority may give its consent in pursuance of this section shall be such reasonable conditions as the authority thinks fit; and without prejudice to the generality of the preceding provisions of this subsection those conditions my include reasonable conditions—

(a) as to the places at which the discharges to which the consent relates may be made and as to the design and construction of any outlets for the discharges;

(b) as to the nature, origin, composition, temperature, volume and rate of the discharges and as to the period during which the discharges may be made;

(c) as to the provision of facilities for taking samples of the matter discharged and in particular as to the provision, maintenance and use of manholes, inspection chambers, observation wells and bore-holes in connection with the discharges;

(d) as to the provision, maintenance and testing of meters for measuring the volume and rate of the discharges and apparatus for determining the nature, composition and temperature of the discharges;

(e) as to the keeping of records of the nature, origin, composition, temperature, volume and rate of the discharges and in particular of records of readings of meters and other recording apparatus provided in accordance with any other condition attached to the consent;

(f) as to the making of returns and the giving of other information to the authority about the nature, origin, composition, temperature, volume and rate of the discharges; and

(g) as to the steps to be taken, in relation to the discharges or by way of subjecting any substance likely to affect the description of matter discharged to treatment or any other process, for minimising the polluting effects of the discharges on any controlled waters;

and it is hereby declared that consent may be given in pursuance of this section subject to different conditions in respect of different periods.

(5) A person who, in an application for consent in pursuance of this section, makes any statement which he knows to be false in a material particular or recklessly makes any statement which is false in a material particular shall be guilty of an offence and liable on summary conviction to a fine not exceeding the statutory maximum or on conviction on indictment to a fine.

Reference to Secretary of State of certain applications for consent

35.—(1) The Secretary of State may, either in consequence of representations made to him or otherwise, direct a river purification authority to transmit to him for determination applications for consent in pursuance of the preceding section which are specified in the direction or are of a kind so specified, and it shall be the duty of the authority to comply with the direction and to inform each relevant applicant that his application has been transmitted to the Secretary of State.

(2) Before determining an application transmitted to him by a river purification authority in pursuance of this section the Secretary of State may if he thinks fit, and shall if a request to be heard with respect to the application is made to him in accordance with regulations by the applicant or the authority, cause a local inquiry to be held in pursuance of section 96 of this Act into the application or afford to the applicant and the authority an opportunity of appearing before and being heard by a person appointed by the Secretary of State for the purpose.

(3) Where in pursuance of the preceding subsection the Secretary of State affords to an applicant and a river purification authority an opportunity of appearing before and being heard by a person with respect to the application in question, it shall be the duty of the Secretary of State to afford an opportunity of appearing before and being heard by that person to any person who, in pursuance of subsection (1)(c) or (5) of the following section, has made representations relating to the application.

(4) It shall be the duty of the Secretary of State to determine an application transmitted to him by a river purification authority in pursuance of this section by directing the authority to refuse its consent in pursuance of the preceding section in consequence of the application or to give the consent either unconditionally or subject to such conditions as are specified in the direction, and it shall be the duty of the authority to comply with the direction.

Provisions supplementary to ss. 34 and 35

36.—(1) Where a river purification authority receives an application for consent in pursuance of section 34 of this Act or serves an instrument in pursuance of subsection (3) of that section, it shall be the duty of the authority, before deciding whether to give or refuse consent in pursuance of the application or, as the case may be, after serving the instrument—

(a) to publish in the prescribed form notice of the application or instrument in two successive weeks in a newspaper or newspapers circulating in—

(i) the area or areas in which the places are situated at which it is proposed in the application that the discharges should be made or, as the case may be, at which discharges are the subject of consent given by the instrument, and

(ii) the area or areas appearing to the authority to be in the vicinity of any controlled waters which the authority considers likely to be affected by the discharges,

and, not earlier than the day following that on which the first publication of the notice is completed in all relevant areas in pursuance of the preceding provisions of this paragraph, to publish such a notice in the Edinburgh Gazette;

(b) to send copies of the application or instrument to each local authority in whose area it is proposed in application that a discharge should be made or in whose area a discharge is the subject of consent given by the instrument and, in the case of an application or instrument relating to coastal waters, relevant territorial waters or an application relating to waters outside the seaward limits of relevant territorial waters, to the Secretary of State; and

(c) to consider any written representations relating to the application or instrument which are made to the authority by any person within the period of six weeks beginning with the date on which the notice of the application or instrument is published in the Edinburgh Gazette.

(2) For the purposes of subsection (1) above, "local authority" means a regional or district council, and any place at sea at which it is proposed in an application that a discharge should be made shall be treated as situated at the point on land nearest to that place.

(3) Where notice of an application is published by a river purification authority in pursuance of subsection (1)(a) of this section, the authority shall be entitled to recover the cost of publication from the applicant.

(4) A river purification authority shall be entitled to disregard the provisions of subsection (1) of this section in relation to an application (except so much of paragraph (b) of that subsection as requires copies of the application to be sent to the Secretary of State) if the authority proposes to give consent in pursuance of the application and considers that the discharges in question will have no appreciable effect on the water into which they are proposed to be made.

(5) The preceding provisions of this section shall have effect with prescribed modifications in relation to an application which is the subject of a direction in pursuance of subsection (1) of the preceding section.

(6) Where a river purification authority proposes to give consent in pursuance of section 34 of this Act in consequence of an application in respect of which representations have been made in pursuance of subsection (1)(c) of this section then—

(a) it shall be the duty of the authority to serve notice of the proposal on the person who made the representations and to include in the notice a statement of the effect of the following paragraph; and

(b) that person may, within the period of twenty-one days beginning with the day on which the notice of the proposal is served on him, request the Secretary of State in accordance with regulations to give a direction in pursuance of subsection (1) of the preceding section in respect of the application; and

(c) it shall be the duty of the authority not to give consent in consequence of the application before the expiration of that period and, if within that period the said person makes a request in pursuance of the preceding paragraph and serves notice of the request on the authority, not to give consent in pursuance of the application unless the Secretary of State has given notice to the authority that he declines to comply with the request;

and in calculating in the case of any application the period of three months mentioned in section 34(2) of this Act or a longer period there mentioned there shall be disregarded any period during which the authority to which the application was made is prohibited by virtue of paragraph (c) of this subsection from giving consent in consequence of the application.

(7) A consent for any discharges which is given in pursuance of section 34 of this Act is not limited to discharges by a particular person and accordingly extends to the discharges in question which are made by any person.

Revocation of consents and alteration and imposition of conditions.

37.—(1) It shall be the duty of a river purification authority by which a consent is given in pursuance of section 34 of this Act to review from time to time the consent and the conditions, if any, to which the consent is subject; and subject to the following section the authority may, by a notice served on the person making a discharge in pursuence of the consent, revoke the consent if it is reasonable to do so or make reasonable modifications of the said conditions or, in the case of an unconditional consent, provide that it shall be subject to reasonable conditions specified in the notice.

(2) Subject to the following section, the Secretary of State may—

(a) for the purpose of enabling Her Majesty's Government in the United Kingdom to give effect to any Community obligation or to any international agreement to which the United Kingdom is for the time being a party;

(b) for the protection of public health or of flora and fauna dependent on an aquatic environment; or

(c) in consequence of any representations made to him or otherwise,

direct a river purification authority to serve a notice in pursuance of the preceding subsection containing such provisions as are specified in the direction and it shall be the duty of the authority to comply with the direction; and if the authority fails to serve the notice within such period as the Secretary of State may allow he may serve the notice on behalf of the authority, and it is hereby declared that for the purposes of this Part of the Act a notice served on behalf of an authority by virtue of this subsection is served by the authority.

Restriction on variation and revocation of consent and of previous variation

38.—(1) Each instrument signifying the consent of a river purification authority in pursuance of section 34 of this Act shall specify a period during which no notice in pursuance of subsection (1) or (2)(c) of the preceding section is to be served in respect of the consent without the written agreement of a person making a discharge in pursuance of the consent; and the said period shall be a reasonable period of not less than two years beginning with the day on which the consent takes effect.

(2) Each notice served by a river purification authority in pursuance of subsection (1) or (2)(c) of the preceding section (except a notice which only revokes a consent or conditions) shall specify a period during which a subsequent notice in pursuance of that subsection which alters the effect of the first-mentioned notice is not to be served without the written agreement of a person making a discharge in pursuance of the consent to which the first-mentioned notice relates; and the said period shall be a reasonable period of not less than two years beginning with the day on which the first-mentioned notice is served.

(3) The authority shall be liable to pay compensation to any person in respect of any loss or damage sustained by that person as a result of the authority's compliance with a direction given in relation to any consent by virtue of section 37(2)(b) of this Act if—

(a) in complying with that direction the authority does anything which, apart from that direction, it would be precluded from doing by a restriction imposed under subsection (1) or (2) above; and

(b) the direction is not shown to have been in consequence of—

(i) a change of circumstances which could not reasonably have been foreseen at the beginning of the period to which the restriction relates; or

(ii) consideration by the Secretary of State of material information which was not reasonably available to the authority at the beginning of that period;

and in this paragraph information is material, in relation to a consent, if it relates to any discharge made or to be made by virtue of the consent, to the interaction of any such discharge with any other discharge or to the combined effect of the matter discharged and any other matter.

(4) A restriction imposed under subsection (1) or (2) of this section shall not prevent the service by the authority of a notice by virtue of section 37(1) or (2)(c) of this Act in respect of a consent given under section 34(3) of this Act if—

(a) the notice is served not more than three months after the beginning of the period specified in section 36(1)(c) of this Act for the making of representations with respect to the consent; and

(b) the authority or, as the case may be, the Secretary of State considers, in consequence of any representations received by it or him within that period, that it is appropriate for the notice to be served.

39.—(1) Any questions as to whether—

(a) a river purification authority has unreasonably withheld its consent in pursuance of section 31(3) or 34 of this Act or regulations made by virtue of section 31(4) of this Act or has given its consent in pursuance of the said section 34 or such regulations subject to conditions which are unreasonable; or

(b) a notice served in pursuance of section 37(1) of this Act contains terms (other than a term required by subsection (2) of the preceding section) which are unreasonable; or

(c) the period specified in any instrument or notice in pursuance of subsection (1) or (2) of the preceding section is unreasonable,

shall be determined for the purposes of this Part of this Act by the Secretary of State: but no question relating to a determination of the Secretary of State in pursuance of section 35(4) of this Act shall be referred to him in pursuance of this subsection and any such determination shall be final.

(2) Provision may be made by regulations as to the manner in which and the time within which a question may be referred or a request may be made in pursuance of the preceding provisions of this section and as to the procedure for dealing with such a reference or request.

(3) In any case where—

(a) a question as to whether a river purification authority has unreasonably withheld its consent in pursance of section 34 of this Act, or has given its consent in pursuance of that section subject to conditions which are unreasonable, is referred to the Secretary of State in pursuance of this section; and

(b) representations relating to the application for the consent in question were made to the authority in pursuance of section 36(1)(c) of this Act,

it shall be the duty of the Secretary of State, before he determines the question, to secure that the authority has served notice of the reference on the persons who made the representations and to take account of any further written representations relating to the application which are received by him from those persons within a prescribed period.

(4) Where a question is referred to the Secretary of State in pursuance of subsection (1) of this section and he determines that the consent in question was unreasonably withheld or that the conditions or terms or period in question are or is unreasonable, he shall give to the relevant river purification authority such a direction as he thinks fit with regard to the consent, conditions, terms or period and it shall be the duty of the authority to comply with the direction.

(5) the withholding by a river purification authority of such a consent as it is mentioned in subsection (1) of this section, the conditions subject to which such a consent is given and such terms and period as are so mentioned shall be treated as reasonable for the purposes of this Part of this Act until the contrary is determined in pursuance of subsection (1) of this section except that where a question as to the reasonableness of the conditions of a consent given in pursuance of regulations made by virtue of section 31(4) of this Act is referred to the Secretary of State in pursuance of this section the consent shall be treated for those purposes as unconditional while the reference is pending.

(6) At any stage of the proceedings on a reference to the Secretary of State in pursuance of this section he may, and shall if so directed by the Court of Session, state in the form of a special case for the decision of the court any question of law arising in those proceedings.

Transitional provisions relating to consents

40.—(1) Regulations may provide—

(a) for any consent for discharges which was given in pursuance of the Rivers (Prevention of Pollution) (Scotland) Acts 1951 and 1965 to have effect for any of the purposes of this Part of this Act as if given in pursuance of prescribed provisions of section 34 of this Act; and

(b) for any conditions to which such a consent was subject in pursuance of any of those enactments to have effect for any of those purposes as if attached to the consent in pursuance of prescribed provisions of this Part of this Act.

(2) Regulations may provide for the terms of a consent for an outlet which was given in pursuance of the rivers (Prevention of Pollution) (Scotland) Act 1951 and for conditions to which such a consent was subject in pursuance of that Act or which were imposed with respect to the outlet in pursuance of section 28(4) of that Act—

(a) to have effect, with or without modifications, for any of the purposes of this Part of this Act as if the terms or conditions were conditions attached to a consent given in pursuance of section 34 of this Act for discharges from the outlet; or

(b) to be treated, with or without modifications, for any of those purposes in such other manner as may be prescribed.

(3) An application for such a consent as is mentioned in subsection (1) of this section which is pending immediately before the relevant day shall be treated on and after that day as an application for consent in pursuance of section 34 of this Act which was made on the day on which it was actually made.

(4) Where an application for consent in pursuance of section 34 of this Act in respect of any discharge is duly made to a river purification authority before the relevant day and the discharge in question is not such as is mentioned in section 32(3)(a) of this Act and is substantially a continuation of a previous discharge which during the year ending with the 30th April 1974 was lawfully made without such consent as is so mentioned (any reduction of the temperature, volume or rate of the discharge as compared with that of the previous discharge being disregarded), the authority shall be deemed to have given unconditionally the consent applied for—

(a) until the authority actually gives the consent unconditionally; or

(b) if the authority decides to refuse consent or to give it subject to conditions, until the expiration of the period of three months beginning with the date when the authority serves on the applicant notice of the decision; or

(c) if during that period the applicant appeals to the Secretary of State against the decision in pursuance of the preceding section, until the determination of the appeal.

(5) Regulations may provide for any appeal which immediately before the relevant day is pending in pursuance of the Rivers (Prevention of Pollution) (Scotland) Acts 1951 and 1965 to be treated on and after that day as an appeal in pursuance of prescribed provisions of this Part of the Act.

(6) In this section "the relevant day" means the day when section 32(1) of this Act comes into force.

Ancillary provisions relating to control of discharges

Registers

41.—(1) It shall be the duty of river purification authorities to maintain in accordance with regulations, registers containing prescribed particulars of—

(a) any notices of water quality objectives or other notices served under section 30C above;

(b) applications for consents—

(i) made to the authorities in pursuance of this part of this Act;

(ii) sent to the Secretary of State in pursuance of section 34 of this Act (as modified by regulations made under section 55 of this Act);

(c) consents given in pursuance of any provision of this Part of this Act (except section 40(4)) and the conditions to which the consents are subject;

(d) samples—

(i) of effluent taken by the authorities in pursuance of section 19 of the Rivers (Prevention of Pollution) (Scotland) Act 1951;

(ii) of effluent taken by islands councils from discharges made by them in their own areas for the purposes of their functions relating to the pollution of controlled waters; and

(iii) of water taken by the authorities;

and information produced by analyses of the samples and the steps taken in consequence of the information;

(e) certificates issued in pursuance of the following section.

(2) It shall be the duty of a river purification authority—

(a) to secure that registers maintained by the authority in pursuance of the preceding subsection are, after such date as is prescribed with respect to the registers, open to inspection by the public free of charge at all reasonable hours; and

(b) to afford members of the public reasonable facilities for obtaining from the authority, on payment of reasonable charges, copies of entries in the register.

Power of Secretary of State to exempt applications, consents and conditions etc. from publicity.

42.—(1) If a person who proposes to make or has made an application to a river purification authority for any consent in pursuance of section 34 of this Act (hereafter in this subjection refered to as "the relevant application")—

(a) applies to the Secretary of State within a prescribed period for a certificate providing that section 36(1) of this Act and paragraphs (b) to (d) of subsection (1) of the preceding section shall not apply to the relevant application or to any consent given or conditions imposed in consequence of the relevant application or to any sample of effluent taken from a discharge for which consent is given in consequence of the relevant application or to information produced by analysis of such a sample; and

(b) satisfies the Secretary of State that it would—

(i) prejudice to an unreasonable degree some private interest by disclosing information about a trade secret, or

(ii) be contrary to the public interest,

if a certificate were not issued in pursuance of his application to the Secretary of State.

the Secretary of State may issue a certificate to that person providing that section 36(1) of this Act and those paragraphs shall not apply to such of the things mentioned in paragraph (a) of this subsection as are specified in the certificate.

(2) If a person who is making or propose to make a discharge which is the subject of a consent given in pursuance of the Rivers (Prevention of Pollution) (Scotland) Acts 1951 and 1965—

(a) applies to the Secretary of State for a certificate providing section shall not apply to the consent or any conditions to which the consent is subject or any sample of effluent taken from a discharge to which the consent relates or any information produced by analysis of such a sample; and

(b) satisfied the Secretary of State as mentioned in paragraph (c) of the preceding subsection,

the Secretary of State may issue a certificate to that person providing that the said subsection (1)(c) or (d) shall not apply to such of the things mentioned in paragraph (a) of this subsection as are specified in the certificate.".

5. For sections 46 to 51 there shall be substituted the following sections—

"*Operations by water authorities to remedy or forestall pollution of water.*

46.—(1) Where it appears to a river purification authority that any poisonous, noxious or polluting matter or any solid waste matter is likely to enter, or is or was present in, any controlled waters in its area, the authority may carry out in its area or elsewhere such operations as it considers appropriate—

(a) in a case where the matter appears likely to enter such waters, for the purpose of preventing it from doing so; and

(b) in a case where the matter appears to be or to have been present in such waters, for the purpose of removing or disposing of the matter or of remedying or mitigating any pollution caused by its presence in the waters or of restoring the waters (including the fauna and flora dependent on the aquatic environment of the waters), so far as it is reasonably practicable to do so, to the state in which they were immediately before the matter became present in the waters;

but nothing in this subsection empowers a river purification authority to impede or prevent the making of any discharge in pursuance of a consent given by any authority by virtue of section 34 of this Act.

(2) Where a river purification authority carries out any operations in pursuance of this section the authority shall, subject to the following subsection, be entitled to recover the costs of doing so from any persons who caused or knowingly permitted the matter in question to be present at the place from which it was likely in the opinion of the authority to enter the controlled waters or, as the case may be, to be present in the controlled waters.

(3) No such costs shall be payable by a person—

(a) in so far as he satisfies the court in which it is sought to recover the costs that the costs were incurred unnecessarily; or

(b) for any operations in respect of water from an abandoned mine which that person permitted to reach such a place as is mentioned in the preceding subsection or to enter the controlled waters.

(4) In determining the damage which a person has suffered in consequence of pollution in respect of which operations have been or may be carried out in pursuance of this section, account shall be taken of the extent to which it is shown that the damage has been reduced by operations in pursuance of this section and of the extent to which it is shown that the damage is likely to be so reduced.

Duty of authorities to deal with waste from vessels etc.

47.—(1) It shall be the duty of each river purification authority—

(a) to arrange for the collection and disposal of waste from vessels in its area which appears to the authority to need collection in consequence of section 33 of this Act; and

(b) to arrange for the provision of facilities for the washing out of prescribed appliances from vessels in its area.

(2) A river purification authority may arrange for the provision of facilities by way of water closets, urinals and wash basins for the use of persons from vessels in the authority's area.

(3) A port local authority constituted under Part X of the Public Health (Scotland) Act 1897 shall have power to make arrangements with a river purification authority for the purposes of any of the preceding provisions of this section.

Power of river purification authorities to exclude unregistered vessels from rivers etc.

48.—(1) Where it appears to a river purification authority to be appropriate to do so for the purpose of preventing the pollution of inland waters in its area, the authority may make byelaws providing that vessels shall not be on any such waters which are specified in the byelaws unless the vessels are registered by the authority in accordance with the byelaws or are exempted by the byelaws from registration; and a person who causes or knowingly permits a vessel to be on inland waters in contravention of byelaws made by virtue of this subsection shall be guilty of an offence and liable on summary conviction to a fine not exceeding level 5 on the standard scale or such smaller sum as may be specified in the byelaws.

(2) Byelaws made by a river purification authority in pursuance of the preceding subsection may authorise the authority to make reasonable charges in respect of the registration of vessels in pursuance of the byelaws; and no charges shall be payable, by persons in or from vessels registered by the authority in pursuance of the byelaws, in respect of the use by those persons of facilities provided in pursuance of the preceding section by or by arrangement with the authority.

Deposits and vegetation in rivers etc.

49.—(1) If without the consent of the relevant river purification authority, which shall not be unreasonably withheld,—

(a) a person removes from any part of the bottom, channel or bed of any inland waters a deposit accumulated by reason of any dam, weir or sluice holding back the waters and does so by causing the deposit to be carried away in suspension in the waters; or

(b) any substantial amount of vegetation cut or uprooted in any inland waters, or so near to any such waters that it falls into it, is allowed to remain in the waters by the wilful default of any person,

then, subject to the following subsection, that person shall be guilty of an offence and liable on summary conviction to a fine not exceeding level 4 on the standard scale.

(2) Nothing in paragraph (a) of the preceding subsection applies to anything done in the exercise of statutory powers conferred by or under any enactment relating to land drainage, flood prevention or navigation.

(3) Regulations may provide that any reference to inland waters in subsection (1) of this section shall be construed as including a reference to such coastal waters as are prescribed for the purposes of that subsection.

(4) Any question as to whether the consent of a river purification authority in pursuance of subsection (1) of this section is unreasonably withheld shall be determined by the Secretary of State; and any consent given in pursuance of section 24 of the Rivers (Prevention of Pollution) (Scotland) Act 1951 (which is superseded by this section) shall be treated for the purposes of this section as given in pursuance of this section.

Investigation of water pollution problems arising from closure of mines

50. Each river purification authority shall have power to carry out studies for the purposes of ascertaining—

(a) what problems relating to the pollution of controlled waters may arise or have arisen in consequence of the abandonment of any mine in its area or might arise if any such mine were abandoned; and

(b) what steps are likely to be appropriate for the purpose of dealing with the problems and what the cost of taking those steps would be.

Codes of good agricultural practice

51.—(1) The Secretary of State may by order made by statutory instrument approve any code of practice issued (whether by him or by another person) for the purpose of—

(a) giving practical guidance to persons engaged in agriculture with respect to activities that may affect controlled waters; and

(b) promoting what appear to him to be desirable practices by such persons for avoiding or minimising the pollution of any such waters,

and may at any time by such an order approve a modification of such a code or withdraw his approval of such a code or modification.

(2) A contravention of a code of practice for the time being approved under this section shall not of itself give rise to any criminal or civil liability, but a river purification authority shall take into account whether there has been or is likely to be any such contravention in determining when and how it should exercise any powers conferred on it by regulations under section 31A of this Act.

(3) The Secretary of State shall not make an order under this section unless he has first consulted the river purification authorities.".

6. For sections 53 to 56 there shall be substituted the following sections—

"*Charges in respect of certain discharges*

53.—(1) Where—

(a) an application is made to a river purification authority for a consent for the purposes of sections 31(3), 32 or 49 of this Act of for the modification of, or of the conditions of, any such consent;

(b) the authority gives a consent under section 34(3) of this Act or a consent for the purposes of section 31(3) or 49 of this Act; or

(c) a consent for the purposes of sections 31(3), 32 or 49 of this Act is for the time being in force,

the authority may require the payment to it of such charges as may be specified in or determined under a scheme made by it under this section.

(2) The persons who shall be liable to pay charges which are required to be paid by virtue of a scheme under this section shall be—

(a) in the case of a charge by virtue of subsection (1)(a) above, the person who makes the application;

(b) in the case of a charge by virtue of subsection (1)(b) above, any person who is authorised to do anything by virtue of the consent and on whom the instrument giving the consent is served, and

(c) in the case of a charge by virtue of subsection (1)(c) above, any person who makes a discharge in pursuance of the consent at any time during the period to which, in accordance with the scheme, the charge relates;

and provision made by a scheme for the purposes of paragraph (c) above may impose a single charge in respect of the whole period for which the consent is in force or separate charges in respect of different parts of that period or both such a single charge and such separate chages.

(3) An authority shall not make a scheme under this section unless its provisions have been approved by the Secretary of State; and the consent of the Treasury shall be required for the giving of such an approval.

(4) Before submitting a scheme under this section to the Secretary of State for his approval an authority shall, in such manner as it considers appropriate for bringing it to the attention of persons likely to be affected by it, publish a notice setting out its proposals and specifying the period within which representations with respect to the proposals may be made to the Secretary of State.

(5) Where any proposed scheme has been submitted to the Secretary of State for his approval, it shall be the duty of the Secretary of State, in determining whether or not to approve the scheme or to approve it subject to modifications—

(a) to consider any representations duly made to him; and

(b) to have regard to the matters specified in subsection (6) below.

(6) The matters mentioned in subsection (5)(b) above are—

(a) the need to ensure that the amount recovered by the authority by way of charges fixed by or under schemes under this section does not exceed, taking one year with another, such amount as appears to the Secretary of State to be reasonably attributable to the expenses incurred by the authority in carrying out its functions under sections 34 to 38 and 49 of this Act and otherwise in relation to discharges into controlled waters; and

(b) the need to ensure that no undue preference is shown, and that there is no undue discrimination, in the fixing of charges by or under the scheme.

(7) A scheme under this section may—

(a) make provision with respect to the times and methods of payment of the charges which are required to be paid by virtue of the scheme;

(b) make different provision for different cases, including different provision in relation to different persons, circumstances or localities; and

(c) contain supplemental, consequential and transitional provision for the purposes of the scheme;

and such a scheme may revoke or amend a previous scheme under this section.

(8) It shall be the duty of a river purification authority to take such steps as it considers appropriate for bringing the provisions of any scheme under this section which is for the time being in force to the attention of persons likely to be affected by them.

Directions to the river purification authority

54.—(1) Directions of a general or specific character may be given to each river purification authority by the Secretary of State with respect to the carrying out of its functions and it shall be the duty of each river purification authority to comply with any such direction.

(2) Without prejudice to the generality of the power conferred by subsection (1) of this section, directions under that subsection may include such directions as the Secretary of State considers appropriate in order to enable Her Majesty's Government in the United Kingdom to give effect to—

(a) any Community obligations; or

(b) any international agreement to which the United Kingdom is for the time being a party.

(3) Any power of the Secretary of State otherwise than by virtue of this section to give direction to a river purification authority shall be without prejudice to the power conferred by this section.

Supplemental

Discharges by islands councils

55.—(1) This part of this Act shall have effect with prescribed modifications in relation to discharges by an islands council in its area.

(2) Without prejudice to the generality of the powers to make regulation conferred by the preceding subsection, any regulations made in pursuance of that subsection may provide for consents required by islands councils for the purposes of this Part of this Act as modified by virtue of that subsection to be or be deemed to be given by the Secretary of State.

Interpretation etc. of Part II

56.—Except where the context otherwise requires, in this Part of this Act—

"agriculture" and "agricultural" have the same meanings as in the Agriculture (Scotland) Act 1948;

"coastal waters", "controlled waters", "ground waters", "inland waters" and "relevant territorial waters" have the meanings given by section 30A(1) above;

"effluent" means any liquid, including particles of matter and other substances in suspension in the liquid;

"sewage effluent" includes any effluent from the sewage disposal or sewerage works of a local authority within the meaning of the Sewerage (Scotland) Act 1968;

"trade effluent" includes any effluent which is discharged from premises used for carrying on any trade or industry, other than surface water and domestic sewage;

"underground strata" means strata subjacent to the surface of any land;

"water authority" means an authority established in accordance with section 3 of the Water (Scotland) Act 1980;

"watercourse" includes all rivers, streams, ditches, drains, cuts, culverts, dykes, sluices, sewers, and passages through which water flows except mains and other pipes which belong to the water authority or are used by a water authority or any other person for the purposes only of providing a supply of water to any premises.

(2) In this Part of this Act—

(a) any reference to the waters of any loch or pond or of any river or watercourse includes a reference to the bottom, channel or bed of any loch, pond, river or, as the case may be, watercourse which is for the time being dry; and

(b) any reference to water contained in underground strata is a reference to water so contained otherwise than in a sewer, pipe, reservoir, tank or other underground works constructed in any such strata.

(3) For the purposes of the definition of "trade effluent" in subsection (1) above any premises (whether on land or not) wholly or mainly used (whether for profit or not) for agricultural purposes or for the purposes of fish farming or for scientific research or experiment shall be deemed to be premises used for carrying on a trade.

(4) For the purposes of this Part of this Act the area of a river purification authority shall include all controlled waters off the coast of the area which is the authority's area apart from this subsection; and any question as to whether any place is included in the area of a river purification authority by virtue of this subsection shall be determined by the Secretary of State.

(5) For the purposes of this Part of this Act a notice imposing conditions with respect to discharges which was given by a river purification authority in pursuance of—

(a) section 28(4) of the Rivers (Prevention of Pollution) (Scotland) Act 1951; or

(b) section 1(5) of the Rivers (Prevention of Pollution) (Scotland) Act 1965,

shall be treated as having given the authority's consent in pursuance of the Act in question for those discharges subject to those conditions.

(6) Section 30(5) of this Act shall have effect in relation to this Part of this Act as if for any reference to Part I of this Act there were substituted a reference to this Part of this Act.

7. In subsection (1) of section 104 (orders and regulation), for the words "section 33(4), 44(5), 52, 53 or 109(2)" there shall be substituted the words "sections 44(5) and 109(2).". —*[Mr. Moynihan.]*

Schedule 1

The National Rivers Authority

Mr. Moynihan: I beg to move amendment No. 55, in page 186, line 23, after '(1)' insert

'The Authority shall be entitled to borrow in accordance with the following provisions of this paragraph but not otherwise.

(1A) Subject to sub-paragraph (1C) below'.

Mr. Speaker: With this it will be convenient to take Government amendment No. 56.

Mr. Moynihan: The amendments set out the circumstances in which it is proposed that the National Rivers Authority will be able to undertake borrowing in relation to its functions. Amendment No. 55 provides that the amount borrowed by the NRA under its temporary borrowing powers, for which paragraph 18 of the schedule already provides, will be subject to the authority's overall borrowing requirement. Amendment No. 56, which is the more significant of the amendments, would give the NRA the ability to undertake long-term borrowing to finance its flood defence functions in certain defined circumstances. It describes the mechanism by which loans would be made to the NRA for that purpose and sets out borrowing limits which would apply.

During discussion in Committee of the NRA's finances concern was expressed on both sides about the fact that the Bill did not provide for the NRA to have long-term borrowing powers in relation to flood defence work. In particular, concern was expressed in Committee about the funding arrangements for flood defence emergencies. As my hon. Friend the Member for Daventry (Mr. Boswell) said:

"Emergencies may arise which occasion emergency action and it is extremely difficult to budget or save for that in advance." [*Official Report, Standing Committee D*, 17 January 1989; c. 258.]

We have given careful consideration to the arguments that were put in Committee by my hon. Friends and, indeed, to representations received from those concerned with flood defence arrangements and to the views of the Opposition. While we remain firmly of the view, for reasons that I explained at length in Committee, that it is not necessary for the NRA to have long-term borrowing powers to deal with the normal run of flood defence work, we accept the argument that there are some circumstances in which it would be right for the NRA to have such powers.

Accordingly, amendment No. 56 provides the NRA with borrowing powers for use when it is faced with heavy expenditure for which it had been impossible to plan. We therefore do not expect that they will need to be used very often. Long-term borrowing under these powers would require the consent, as appropriate, of my right hon. Friend the Minister of Agriculture, Fisheries and Food or my right hon. Friend the Secretary of State for Wales, together with the approval of the Treasury. We intend that the use of these powers shall be limited to circumstances in which works are urgently needed to avoid the risk of serious flooding, and the flood defence committee cannot defer other planned work to provide the necessary finance.

Mr. Pike: This is an important amendment and, as the Minister said, the subject evoked much concern in Committee. Can he tell us how the £160 million limit was arrived at and what would happen if at some subsequent date the figure proved insufficient? Could it then be changed?

Mr. Moynihan: It is a figure which, after detailed consideration with the water authorities, we felt was a wise, indeed generous, one to cover such unexpected expenditure. There is no doubt that in the event of an appalling tragedy that required substantial expenditure we would need to come to the House anyway. The hon. Gentleman will recall that that matter was argued in Committee. If I recall rightly, one of the examples aired was of an extensive flood in East Anglia and the possibility of substantial expenditure being required. Clearly, that would require parliamentary approval either under the usual procedure or under an emergency procedure.

We think that after lengthy discussions the figures arrived at in the proposal are generous. I am sure that hon. Members recognise that long-term borrowing powers should more than adequately cover the points made by hon. Members when, often vociferously but mainly in a quiet and gentle manner, they expressed their concern about the arrangements for funding flood emergencies. I am confident that the amendments fully meet that concern, and that, with the addition of these powers, the National Rivers Authority will have the full range of powers that it needs to respond to any future flooding emergencies. They will ensure that flood defence committees will be able to carry out their vital work as effectively as they have carried it out in the past. They also provide a clear demonstration that we are determined to give the NRA all the powers that it needs to operate effectively.

Mr. Allan Roberts (Bootle): The Minister was right to say that the amendments are important. The Government recognised the strength of the case made by Opposition and Conservative Members in Committee when we debated the National Rivers Authority. The main amendment, No. 56, would allow the National Rivers Authority to borrow other than by way of a temporary loan from the Secretary of State or from the Minister of Agriculture, Fisheries and Food money for capital purposes in connection with flood defence. The amendments set up a system for such spending to be subject to review by the Comptroller and Auditor General and for reports and accounts to be laid before Parliament. We do not object to any of those things, but there are certain items missing from the amendments and the Opposition think that such items should have been included to take the amendments further and to provide for a much more comprehensive system of borrowing powers and freedom to borrow for the National Rivers Authority.

The borrowing is related only to the carrying out of flood defence functions and not to the environmental works that will be the responsibility of the National Rivers Authority and with which I shall shortly deal. As my hon. Friend the Member for Burnley (Mr. Pike) has said, sub-paragraph (1C) of amendment No. 56 limits the amount outstanding on the aggregate of loans to the NRA to

"£100 million or such greater sum, not exceeding £160 million, as the relevant Ministers may specify by order"

which is subject to affirmative resolution. It would be helpful to know the basis for these broad figures. The Minister touched on that, but I do not think that his answer to my hon. Friend the Member for Burnley was wholly satisfactory. Will the Government guarantee that all flood defence work likely to be considered desirable by the National Rivers Authority will fall within these limits? What provision will be made for updating the figures against inflation?

The fixing of a ceiling in primary legislation effectively constrains the developments in the capital programme of the National Rivers Authority even in the face of unforeseen requirements. Throughout the progress of the Bill when it was a matter of conforming to EC and environmental standards and of imposing controls that benefit the consumer, the Government left everything subject to the Secretary of State for the Environment who can determine the levels, the figures, the dates, the times and the expenditure as he sees fit. However, when it is a matter of setting expenditure and borrowing levels in the public sector the actual figures have been put down in the Bill by way of amendment and it will be difficult to get them changed. We should like to hear more about that.

The Government's proposals are inadequate in the light of the functions of the National Rivers Authority. We are concerned about how the authority will function and how it will be able to carry out the jobs now done by the water authorities that are being handed over to the NRA. Lord Crickhowell, who will be the chairman of the National Rivers Authority, said:

"Before I leave the subject of charges, I think I should make it absolutely clear that I see it as one of the priority objectives of the new National Rivers Authority to operate a slim, efficient, cost-conscious organisation. The National Rivers Authority will start with a problem. They will inherit existing structures, obligations and commitments to staff. These commitments must be honoured but clearly, as soon as it is in being, it will need to undertake a thorough review of what resources it needs to retain inhouse and what services it might over an appropriate time scale buy in from outside contractors."

We are concerned that if the National Rivers Authority is prevented from borrowing the money that it needs to do all the jobs and tasks that it is being given, and not just flood protection and defences, there will be much outside contracting. There will be an inadequate, slimmed-down authority, that has not got the resources, and will not have the borrowing power, to get on with the job that the majority of hon. Members want it to do.

The functions of the National Rivers Authority include water resource planning, licensing of abstraction and the monitoring of licences; there are no borrowing powers for those. Then there is environmental quality and pollution control. Perhaps the Government do not want the NRA to do effective work on environmental quality and pollution control lest it might deter people from buying into the private companies at the time of flotation. There are no borrowing for those functions. Nor are there borrowing powers for the maintenance, improvement and development of fisheries in inland waters, for conservation and recreation, or for the navigation responsibilities of three water authorities. Nor are there borrowing powers for some of the functions of Her Majesty's inspectorate of pollution that are being passed to the National Rivers Authority, or for research.

I have left to the end the question of sea defences. Sea defences and flood defences are similar. Why should sea defences be excluded and flood defences included? That is difficult to understand, especially as the funding for both is similar at the moment, in that the water authorities precept on the local authorities in the areas concerned, and the money eventually comes from rates. Perhaps the Government do not want to give borrowing powers for all the environmental activities that the National Rivers Authority will have to deal with, because they do not want rigorous enforcement imposed on a privatised industry. Perhaps the exclusion of sea defences was an oversight by the Government and they should have been included in the amendments.

The National Rivers Authority will be the only national body engaged in environmental control and monitoring water pollution, yet it is to be given only limited borrowing powers for just one of its functions. Of course, borrowing powers are not much good if the Department of the Environment via the Treasury, or the Treasury via the Department of the Environment, prevents the borrowing because the National Rivers Authority is in the public sector and the borrowing cannot go ahead because of public sector borrowing requirement restrictions, something that the Government have claimed they are getting away from by privatising the water industry. The only justification of substance that they have found for their privatisation proposal is that the privatised water industry will be free from PSBR restrictions. Of course, the water industry could be free from such restrictions without being privatised, and merely by a political decision of the Government.

The National Rivers Authority will remain in the public sector. All the environmentally essential functions of the authority will remain in the public sector and are not being freed from PSBR restrictions. The NRA is being emaciated at birth and strangled by lack of power before it even gets going. With the amendments, the Government

have taken a small, tentative step in the right direction. They should move amendments in the other place, if there is not time now, to include borrowing powers for all the functions of the National Rivers Authority. They should give an undertaking that they will release the authority from PSBR restrictions. That can be done in the public sector. British Nuclear Fuels is in the public sector and it does not suffer PSBR restrictions. That precedent could be followed for the water industry, as it will be when we have a Labour Government and we take it back into social ownership.

4.45 pm

We want to know how the borrowing is to be funded. When an organisation borrows it has to pay interest. Is borrowing to be funded by a precept on the local authorities in whose areas the flood defences are situated, or is it to be funded from general taxation? It is ironic that a Conservative Member mentioned comparative competition even in relation to pension schemes. One thing is certain, as is shown by the amendments on borrowing: the legislation will not introduce competition into the supply of water or the treatment and disposal of sewage. Comparative competition is a joke. There will be no competition.

It is amazing. We have in power a Government who are trying to introduce competition into the sale of beer and at the same time private monopolies into the sale of water. The Government will stand condemned because of the inadequacy of the legislation to protect the environment and their inadequate proposals for the National Rivers Authority which they have heralded as a great environmental step forward.

Mr. Malcolm Moss (Cambridgeshire, North-East): I represent a constituency which must be the most drainage-sensitive area in the United Kingdom, so my constituents are extremely pleased with the Government amendment. I want to take up a point made by the hon. Member for Bootle (Mr. Roberts) about flood defence functions. It is my understanding that, under the Land Drainage Act 1976 sea defences and flood protection of sea defences are in the same category as flood protection and land drainage in internal land areas.

Before the amendment was tabled, there was great concern in the Fens of East Anglia that necessary works might be put back or even deferred indefinitely because of the problems associated with raising finance to do necessary work. The problems arise fundamentally from the need to raise capital to meet emergencies and to do the necessary long-term work. There is an example at the moment at the development stage of Anglian Water for the constituency of Cambridgeshire, Nort-East—the middle and south level barrier banks and Ouse washes scheme. That work is being undertaken by the Great Ouse local land drainage committee. The scheme will cost about £20 million. The main elements will be constructed over a four year period, with expenditure of about £5 million per annum. That compares with the normal expenditure of the committee of an average of £3 million each year, so a colossal increase in expenditure is required.

The Ouse washes scheme is a repair of the magnificent drainage channels constructed by the Dutchman Vermuyden, in the 17th century. They have lasted well from that date, but they are in need of repair. Some seepage is taking place into surrounding farmland which hon. Members will be interested to know is 10 to 12 ft below the water level in the channels. Therefore, it is vital that the necessary remedial work is done on the banks.

If the Government had not come forward with the amendment, there would have been serious implications for the local community in raising the necessary finance. Normally such capital projects are financed by a precept on the county council rate. Under normal circumstances, without the amendment, the increase would have been 34·7 per cent. from 1 April this year. Without the borrowing powers, a further 40 per cent. increase would have been necessary during the period of construction. The effect of the precepts on the internal drainage boards is even more dramatic, because the impact falls on the boards which benefit from the schemes instead of being spread over a much larger area. Increases of up to 90 per cent. would have applied from 1 April this year and further increases of up to 80 per cent. during the period of a scheme's expenditure.

It is obvious that my constituents who pay county council rates and those in the vicinity of the Ouse-Wash banks who pay the necessary drainage rates to their local internal drainage boards are delighted with the Government's amendment. They believe that the amount specified in the amendment of up to £160 million will more than cover the needs of Cambridgeshire and the Fens to the end of this century and beyond. That money also includes provision for considerable flood protection work necessary on the east coast, particularly at Aldeburgh and further north in Norfolk.

The Government have listened carefully to representations from the farming community, from landowners and from my constituents. I know that representations have also been made by many of my hon. Friends and I am grateful to the Government for listening carefully to them and for producing the necessary amendment.

Mr. Dafydd Wigley (Caernarfon): I am pleased to welcome the amendment. As hon. Members have said, there was pressure in Standing Committee about this point. I was involved in those debates in Standing Committee because of the implications of this part of the Bill for my constituency, which suffers in many ways from problems of flooding.

The hon. Member for Bootle (Mr. Roberts) raised a point which the Minister must clarify. I had assumed that the amendment would cover the effects from the sea. The Minister would help us if he could confirm that when he replies. If the amendment covers flooding from rivers but not from the sea, there will be a ridiculous situation in some estuarial waters where water enters the area during storms from the sea and the river. In that situation there would have to be a demarcation between which water has caused what damage. There would also be questions about the necessary investment to repair that damage. The Glaslyn estuary near Porthmadog in my constituency has a cob which acts as the sea defence works. However, much of the flooding in that area is caused by water from Snowdonia moving down the river. The Minister may be aware of that example and he must consider it when he replies.

The amendment is welcome as far as it goes. It is unnecessary to build into the Bill the requirement for an amendment to primary legislation if in due course there needs to be a figure over and above £160 million. I cannot see the need for that.

[Mr. Dafydd Wigley]

An order before the House would be sufficient to raise the figure to the required level. If an order is to be brought before the House, the Government must introduce it and it must have the support of both Chambers. That must surely be sufficient sanction without the need to build in an amendment to primary legislation. I do not see the need for such rigidity in the Bill.

Mr. Pike: The hon. Gentleman is making a valid point. When we consider the approvals which must be secured from Ministers and Treasury, it is nonsense for the limit of £160 million to be included in the Bill, when Ministers must be convinced that that limit must be achieved. We must be able to achieve this more easily.

Mr. Wigley: Exactly. Perhaps the Government will consider whether this part of the Bill can be further amended in another place.

When the Minister responds, will he clarify the Department's responsibilities in Wales even when, at this late stage, the Bill is dripping its way to another place for further consideration?

Schedule 1 refers to

"the Secretary of State and the Minister".

In Wales the Secretary of State and the Minister are the same person. Will the Minister confirm that the Secretary of State for Wales will have responsibility for the whole of Wales, or does he have responsibility only for that part of Wales covered by the regional division of the NRA which is located in Wales? It would be helpful for the people outside this place who must work with this legislation if that point can be clarified. It is not entirely clear now.

Mr. Boswell: My hon. Friend the Minister has already referred to the modest part that I played in Standing Committee on this subject. Those hon. Members who served on the Committee will be aware that I made two speeches about this topic. I introduced an amendment and replied to it at some length. Having expressed my feelings rather strongly in Committee, it would be churlish of me if I did not immediately thank the Government for meeting my substantial concerns which reflected the concerns of many people who have the interests of land drainage at heart by introducing this amendment today.

Although it is inevitable that the Opposition must oppose, they were less than gracious in their welcome for the amendment and in the way in which they sought to use the amendment as a lever to move to further sunlit uplands of unlimited and extravagant Government expenditure.

We remember the economic doctrines espoused by the hon. Member for Bootle (Mr. Roberts) who must not be confused with the distinguished economist, Mr. Roger Bootle. The doctrine espoused by the hon. Member for Bootle was one of limitless Government expenditure, unbridled borrowing and the inevitable consequences. I can understand why the Government have seen fit to impose certain restrictions on the NRA's borrowing powers, even within the concessions that they have announced today.

Those of us with any experience of working in a Government Department and dealing with the Treasury must fully understand the difficulties of making a case for public spending and the absolutely essential role of the Treasury as the thin red line to curtail spending. I believe that the Government have probably got the balance about right in this amendment.

The Opposition expressed particular concern about the sum involved. It is significant that a sum of up to £160 million is not far away from one year's expenditure on land drainage by the existing water authorities. That is a generous and appropriate allocation.

The Opposition also question whether the amendment's scope should be extended beyond the emergency requirements of land drainage. At this stage I believe that that is not necessary. The hon. Member for Bootle did not make the point clearly enough that the bulk of NRA funding will come from grant aid which will be considered by the Treasury and debated in the estimates in this House. That is the proper way to run Government expenditure. I will not complain if the Government have not given us the whole loaf, when they have given us nine tenths of it.

I hope that the Government will pause and consider whether it would be better, as the hon. Member for Caernarfon (Mr. Wigley) suggested, to introduce an order-making power for flexibility. The last thing that Ministers want is to introduce primary legislation.

If the limit of £160 million needed to be breached for good reason, the last thing that they would want is a separate Bill. They would have to wait to tack the measure on to another Bill and there would be an unnecessary delay. The Government's readiness to listen to our arguments in Committee and their readiness to resist any mechanism which might add to delay, has caused them to introduce this amendment today. Let us have the right figure and the right mechanism to increase that figure if that is necessary in future.

5 pm

Mr. Livsey: One of the things one must welcome is that this amendment involves flood defences but, of course, flood defences only. One can just about remember crises as far back as 1953, when there was immense flooding on the east coast. The £168 million ceiling may be adequate in some senses, particularly perhaps in Cambridgeshire, but may not be adequate to cover the whole of England and Wales. That problem may need to be addressed in future. Will the Minister tell us whether this figure will be indexed over the years, or, indeed, as the hon. Member for Daventry (Mr. Boswell) just mentioned, whether there is at least a possibility of bringing in an order to update such a figure for future expenditure? The fact remains that this involves cash limits by the Treasury on the NRA.

A lot has been said by the Government during the course of the Bill about the gamekeeper-poacher aspect of the Bill. Effectively, this places restrictions on the gamekeeper, and we do not want a toothless environmental protection agency.

I believe that more flexibility beyond flood defences in the financing of the NRA is needed. Sea defences have already been mentioned, and I am sure the Minister will be clarifying that in his wind-up on these amendments.

There are extremely important aspects of funding, such as pollution; the environment; fisheries; and indeed, on the River Wyre, which runs through my constituency, navigation. The press release from the Department of the Environment of 15 March on the provisions made in this amendment indicated restrictions on borrowing powers for unplanned expenditure; at least, one could deduce that.

Really, loan finance is required for all capital expenditure on a planned basis, and I hope that amendments to this effect will be tabled in the other place to enable adequate funding of the NRA. I would like to test the Minister's attitude to capital as far as aspects other than flood defences are concerned, and see whether there is any flexibility in the Government's attitude towards this type of expenditure.

Mr. Moynihan: On the question of guarantees, the long-term borrowing under this amendment is of course for Government, so there is no question of the Government needing to guarantee it. On the subject of borrowing powers applying to sea defences, the arguments of the hon. Member (Mr. Livsey) were compelling. They are, of course, accurate; it would lead to a number of absurdities if distinction were drawn between sea defences and the problems of flooding from rivers. Sea defences are included.

Mr. Allan Roberts: It is not clear from the amendment. Will the Minister make sure that it is clear and that it does cover sea defences? If not, will he amend the amendment in the other place?

Mr. Moynihan: If further clarification of the words I have just spoken from this Dispatch Box is needed, of course we will seek to clarify that in the legislation. If that satisfies the hon. Member, I will move on to the next issue. I confirm that that is definitely the case, but we will look carefully to see whether any further action is required and, if necessary, bring forward proposals in another place.

As far as the overall funding is concerned, we have said repeatedly that the NRA will be fully funded by Exchequer grant in aid, covering all important areas of work which hon. Members on both sides of the House have mentioned this evening. Of course, they will also be funded by capital grants for flood defence and land drainage projects, as outlined in the financial memorandum at the front of the Bill. These sources of income will be complemented by the borrowing powers this amendment introduces. As I have said, we believe the limit on borrowing will be adequate for the time being. However, if at any time it needs to be raised, we will have to come back to the House.

I appreciate the points mentioned by hon. Members on the possibility of a simpler method to enable swift action. We do not anticipate that that will be necessary, but I will respond to hon. Members if I may have time to consider it. I hope that the House will forgive me for not being in a position to give a more comprehensive answer to that specific point this evening, but I give an assurance that, if we feel action is necessary, we will reflect and come back to the House, or possibly to the other place.

Mr. Allen McKay (Barnsley, West and Penistone): Is the Minister saying that, on the advent of the NRA, if it finds that the restrictions interfere with its capital planning programme, it could come back to the Department and the Minister will come back to the House to consider raising the ceiling?

Mr. Moynihan: That is right. We are very satisfied that £100 million is a generous limit to NRA borrowing. It can be increased over £160 million by order. We cannot conceive that it will need to be increased to that level, but the point the hon. Member makes is valid. At the moment, the limit could be increased over £160 million only by primary legislation.

I hope I have responded satisfactorily to hon. Members on both sides in saying that if, on reflection, we believe that that is not satisfactory and there could be a simpler way of doing so, we will see if it is workable. Given the very high limits we have looked at, after detailed discussion with the water authorities, we believe that it is accurate.

An important point was made by the hon. Member for Caernarfon (Mr. Wigley) about the Secretary of State's responsibility in Wales, a point to which I am delighted to try to respond, although I am not sure it will meet with his total approval. Suffice to say that for the moment the Secretary of State for Wales will be responsible for authorising loans applied for by the regional flood defence committee based in the area of Welsh Water. That will be the parameters within which he will work. He will not be authorising loans applied for elsewhere in Wales.

I am only sorry that I have not had the opportunity, when reflecting on the important points that the hon. Gentleman made, of actually seeing the Glaslyn estuary myself. I have always enjoyed the privilege and pleasure of going to see Wales, not least because the Wye valley is an important area for me, as I was educated in Monmouth. I am more than confident that the NRA is not only sufficiently financed but, with these powers, will be in a strong enough financial position to carry out the work he envisages.

Mr. Wigley: The point going through my mind was that work in the past has involved local authorities, but local authorities come entirely under the Secretary of State for Wales. The Minister is now saying that the responsibility of the Secretary of State is only in part of Wales, those parts of Wales which come under him for local government purposes, and that those parts which for water purposes come under the Secretary of State for the Environment will in fact come entirely under the Secretary of State for Environment as far as loan permission is concerned. At least we are clear, even if we do not agree.

Mr. Moynihan: I said in my initial response just now that I was not sure whether the hon. Member would be completely satisfied by my words, but the words I have placed on the record are accurate for the position at present.

I hope that that has adequately responded to the various points.

Amendment agreed to.

Amendment made: No. 56, in page 186, line 28, leave out sub-paragraph (2) and insert—

'(1B) Subject to sub-paragraph (1C) below, the authority may borrow, otherwise than by way of temporary loan, such sums in sterling from the Secretary of State or the Minister, as it may require for capital purposes in connection with the carrying out of its flood defence functions.

(1C) The aggregate amount outstanding in respect of the principal of sums borrowed under this paragraph by the Authority shall not at any time exceed £100 million or such greater sum, not exceeding £160 million, as the relevant Ministers may specify by order made by statutory instrument.

(1D) No order shall be made under sub-paragraph (1C) above unless a draft of the order has been laid before the House of Commons and has been approved by a resolution of that House.

(1E) In this paragraph "flood defence functions" has the same meaning as in paragraph 16 above.

Loans to the Authority

18A.—(1) The Secretary of State and the Minister shall each have power, with the approval of the Treasury, to lend any sums to the Authority which the Authority has power to borrow under paragraph 18(1B) above.

[Mr. Moynihan]

(2) Any loan made by the Secretary of State or the Minister under this paragraph shall be repaid to him at such times and by such methods, and interest on the loan shall be paid to him at such rates and at such times as the Secretary of State or, as the case may be, the Minister may with the approval of the Treasury from time to time determine.

(3) Any sums required by the Secretary of State or the Minister for making a loan under this paragraph shall be paid out of money provided by Parliament; and any sums received by the Secretary of State or the Minister in pursuance of sub-paragraph (2) above shall be paid into the Consolidated Fund.

(4) The Secretary of State and the Minister shall each—

(a) prepare in respect of each financial year an account of the sums lent by him to the Authority under this paragraph; and

(b) before the end of September in the following financial year send that account to the Comptroller and Auditor General;

and the form of the account and the manner of preparing it shall be such as the Treasury may direct.

(5) The Comptroller and Auditor General shall examine, certify and report on each account sent to him under this paragraph and shall lay copies of it and of his report before each House of Parliament.'.—*[Mr. Moynihan.]*

Schedule 2

SCHEMES PROVIDING FOR THE INITIAL TRANSFERS

Mr. Pike: I beg to move amendment No. 133, in page 190, line 2, leave out 'may' and insert 'shall'.

This is an important amendment which deals with a different aspect of pensions from that in the first group of amendments, which we welcome because they clarify the position and constitute a change from the proposals on Second Reading and in Committee. However, our amendment deals with an area about which we are not fully satisfied, and unless the Minister is prepared to move further we intend to have a Division on it.

Earlier the Minister made one or two helpful comments. He described the role of the trustees and said that two trustees would be representatives of members and would be part of the trust's governing body. He said that in some situations all trustees would need to agree before certain action was taken. Those were important and welcome announcements.

However, we are still not 100 per cent. convinced that once the water industry is privatised its employees will have the mirror image scheme with conditions as good as those to which they are currently entitled. We recognise that the Bill takes care of existing pensioners and safeguards pension rights earned to date. We welcome the progress that has been made in removing any ambiguity or doubt. However, we want to ensure that those working in the industry and those who may come into it will have a pension scheme that is at least as good as the existing one.

The Minister has said that he is worried about the number of schemes and whether they can be set up and administered in a proper way. Having served in different capacities on two pension funds before entering the House I recognise that this is a complex subject. I was an employee representative on the Philips staff pension fund, a very large fund, and an employer representative on the Lancashire county council superannuation fund.

The amendment may not be the best way to achieve what we are seeking, but I am sure that the Minister understands the spirit of it and I hope that he will at least say that if we do not divide the House the Government will move a little further and ensure that one pension fund is established to cover all employees within the privatised water industry, which will guarantee our objectives. If the Minister promises to bring forward an amendment in the other place, that may be acceptable.

Our amendment is simple. It changes the word "may" to "shall". However, as we all know, that is an important change. "May" is permissive and means that something may happen. Given the spirit in which the Government have responded today, I accept that that is what they intend, but that does not mean that it will happen. However, if our amendment were agreed to, the position would be clear because it removes all ambiguity. The Minister says that he does not believe that such a statutory requirement should be included in the Bill, while saying that that is the direction in which the Government wish to go. I find it difficult to understand why the Minister should say that, but is not prepared to put it in the Bill. It is a small area of difference.

On pensions, the difference between us is small and the Government should take the further step that the Opposition, employees in the industry and the trade unions representing them are seeking. It would not be a great step for them to accept the amendment, but it is an important one, and I hope that the Minister will respond positively.

5.15 pm

As there is now only a small difference between us on the pensions issue, it would be silly for the Government not to concede this final point. The Government have so many problems with other aspects of the Bill—we shall be debating those on Third Reading—that they should welcome the opportunity to eliminate one problem now. They say that they want the mirror image scheme, so why not put it in the Bill and remove this little problem?

The Opposition are rightly worried about protecting conditions of employment on privatisation. In the years to come pensions will be a matter of growing concern to many people. Twenty or thirty years ago many people did not regard company pensions as of great importance, but over the years there has been a considerable change of attitude. Pensions now are rightly viewed as an important part of any employment package.

I have served on the Standing Committees on many other privatisation Bills. Despite ministerial undertakings, pension issues have not been resolved to the satisfaction of employees. I well remember debates on the royal ordnance factories and the arguments about TUPE '81. Protection can be given up to the date of vesting and privatisation, but whatever the Minister says, if it is not in the Bill it is not worth the paper it is printed on. Decisions are not based on what is written in *Hansard*. If a matter goes to court, it is what is in the Bill that counts. The Minister knows that that is the important difference. He knows that if he wants to see a mirror image scheme he should go a little further and include the word "shall" in the Bill.

The Minister also knows that if some small pension schemes could not do exactly what the amendment seeks, he could easily say that the Government are prepared to come forward with a better proposal which will deal with the Opposition's points and give the necessary guarantees to the employees.

All that we are seeking in moving this simple but important amendment is to guarantee that employees

presently in the industry will have their future pension earnings protected, whether they be my daughters or the sons or daughters of other hon. Members. They should have the safeguard of a pension scheme that is at least as good as the existing scheme.

If that is what the Minister wants to see, let him accept the amendment or say that the Government will introduce an amendments in another place to give that guarantee. We believe that those working in the industry now and those who enter it in the years ahead are entitled to such protection.

Whatever the Minister may say or mean today will mean nothing if it is not guaranteed by the Bill which, when it becomes an Act, will be binding. I hope that the Minister will say, even at this late stage, that he is prepared to think again and accept the wisdom of moving in the direction that amendment No. 133 suggests.

Mr. Allen McKay: While Ministers may give assurances in good faith, there is always the possibility that their successors will go against those assurances. That has happened time and again. Consequently, we always seek, particularly in respect of pension matters, a provision in the Bill that backs a Minister's assurances and provides a positive commitment so that people who have worked in an industry for many years, as well as those who enter it in future, may be sure of an adequate pension.

I hope that the Minister will look favourably on amendment No. 133. It is not that we disbelieve the Minister or question his intentions, but within a very short time, Ministers change, and successors may view the pension aspect very differently. It is important to workers in the industry to have an assurance that their pension fund is in order and that their pensions are adequately protected. It has been said that workers could withdraw their money and transfer it to a private pension scheme. Unfortunately, private schemes depend on the performance of investments, with the result that the value of their pensions can reduce. Local government and water authority pension schemes do not reduce in value and are index-linked, whereas private schemes are not. By putting his assurances into the legislation, the Minister can ensure that pensions will retain the value that they have today, which is important to those concerned about their financial future.

I hope that the Minister will give favourable consideration to the amendment, or to any similar amendment that is presented in another place. If his assurances are written into the Bill, no one will be able to go against them later—which is something that no right hon. or hon. Member in any part of the House would wish to see happen.

Mr. Moynihan: The thrust of the speech of the hon. Member for Burnley (Mr. Pike) concerned pensions, but schedule 2 has nothing to do with pensions. It deals with transfer schemes.

The amendment requires that any transfer scheme made under schedule 2 must provide for all the detailed supplemental provisions set out in schedule 2(3)(2). The word "may" has been used to provide a very necessary element of flexibility in the supplemental arrangements. The drawing up of schemes of transfer will be a complex undertaking, and it would be ridiculous to require the schemes to provide for all the supplemental provisions set out in schedule 2(3)(2) irrespective of the particular circumstances.

One of the supplemental provisions, set out in paragraph (3)(2)(e), enables a transfer scheme to provide for continuity of employment. I expected that the debate would concentrate on that point. In Committee, my hon. and learned Friend the Minister for Water and Planning gave clear assurances about the rights of staff which I am happy to repeat. The contracts of existing water authority staff will be transferred either to the water services plcs or to the National Rivers Authority. The Secretary of State will not approve schemes of transfer made under schedule 2 unless they provide for continuity of employment. Having repeated that assurance, and taking into account the advantage that the Bill's existing wording provides in terms of necessary flexibility, I ask the House to reject the amendment.

On the specific points made by the hon. Member for Burnley, I repeat that the whole point of the mirror image schemes is to make certain that our objective of ensuring that no pensioner is disadvantaged by the act of transferring liability from a water authority to its successor company is achieved and that responsibility for payment is clear both to the recipient and to the body that will be responsible for it. An enormous number of factors will be taken into account in the deeds, including the responsibilities to be transferred to the NRA, gratuity awards, injury allowance, retirement compensation, pension enhancements, and pensions payable to former water authority chairmen and board members through determinations made by the Secretary of State. The question of what is to be in those deeds will be overwritten by our absolute determination that not one pensioner will be disadvantaged. I hope that that clarifies the position. It will probably not deter the hon. Member for Burnley from dividing the House, but I hope that the points I have made will dissuade him from doing so.

Ms. Walley: The Minister referred to the many general aspects to which the schedule refers, but we choose to concentrate on pensions because of our belief that pensions and the long-term interests of water authority employees are of paramount importance. We particularly want to focus attention on protecting employees' long-term interests and pension rights.

We are right to be concerned about the aspects raised by my hon. Friend the Member for Burnley (Mr. Pike). Some of the employees about whom we are speaking, when they retire, will have given a lifetime of public service to the water industry, and on reaching the end of their careers they are entitled to the same rights as those that they expected at the beginning of their careers. Some of the Government's proposals relate only to employees' short-term interests and do not properly safeguard pension rights.

The only way of ensuring that workers retain their existing pension rights is by incorporating adequate protection in the Bill. If that cannot be done this afternoon, I hope that the Minister will agree—as he has in respect of the costs of funding land drainage—to return at a later stage with a safeguard of the kind that the amendment seeks.

Just to concentrate on pensions, it is important to understand the present situation. I should like to clarify that, because most people in the water industry are

[Ms. Walley]

currently in the water authorities superannuation fund, which is exactly the same as the local authorities superannuation scheme. I do not want to suggest that absolutely everything about it was marvellous—I was lobbied only recently about the way in which women are discriminated against in one small part of the scheme when it comes to widowers' rights—but the point is that the benefits of the scheme are statutory, as is the scheme itself. There is also automatic index-linking of the pensions.

Earlier in the debate the Minister touched on what he referred to as peripheral matters relating to pensions which, in a way, pre-empted the debate that we are having now; but it is equally important that we concentrate on the basic aspects of pensions and index-linking which we would like to see.

5.30 pm

Last year, the water authorities wanted to set up their own pension schemes, linked to privatisation but technically separate. This particular scheme could have advantages in so far as it would not necessarily discriminate against women, but it is a trust-based scheme governed by trustees, so is not statutory. I was very interested in the comments that the Minister made earlier when he talked about mirror image schemes not having any place as a concept when it came to privatisation.

We do not accept that the trust schemes themselves can give exactly the kind of statutory backing that is required now and in the future. That is why we want this amendment changed. We are concerned that index-linking is not guaranteed. The Government now say that the people who go to the National Rivers Authority will be able to maintain their membership of the water authorities superannuation fund but that those who stay with the private companies must choose either to maintain the current accrued benefits, that is, frozen benefits, or transfer to the water authorities scheme, or that each water authority will set up a mirror image of the water authorities superannuation fund.

It is this latter mirror image scheme which concerns us. Any future improvements will not be guaranteed in this scheme and there is constant pressure to remove the elements of the water authorities superannuation fund which discriminate against women, which are likely to change in the not-too-distant future. In addition, the mirror image will be not statutory but trust-based. We ask why it cannot be enshrined in law. We are very concerned lest the trustees change their minds in the future. Although in debate on previous amendments the Minister mentioned that two out of six trustees would be members and also that if any trustees objected to the winding up of a trust fund it would not be wound up, we do not feel that those safeguards are sufficient to protect the long-term pension rights of people who have trusted that their pension rights would be safeguarded for as long as necessary.

One of the problems facing employees—this is something else connected with this amendment which the Minister might like to take up in another place—is that they are now having to choose which pension scheme is best suited to their needs; but people cannot yet make an informed decision because the proposals are still before Parliament, which may change certain features—I hope that we can indeed do so.

It is unfortunate, in view of all this, that the water authorities set a deadline of 31 March 1989, a date which has already passed, to enable employees to transfer to their scheme with pension rights safeguarded. They now say that they will not guarantee the transfer with all qualifying service as of right—that is, transfer on a year-to-year basis of pension payments. They will not say how much and on what terms previous service will count in pension assessment. In view of that, is there any hope that at this very late stage the Government will consider extending the 31 March deadline?

This is another of the amendments by which we would like to make absolutely certain that the present and future well-being of employees is enshrined in the legislation, particularly when it comes to safeguarding the pension rights of people who have been, are and will be employed in the water industry. It is for this reason that we tabled the amendment.

Question put, That the amendment be made:—

The House divided: Ayes 203, Noes 308.

Question accordingly negatived.

Schedule 4

Customer Service Committees

Amendment made: No. 96 in page 194, line 2, at end insert—

'Public access to meetings

7. In paragraph 1 of the Schedule to the Public Bodies (Admission to Meetings) Act 1960 (bodies to which Act applies in England and Wales), at the end there shall be inserted the following sub-paragraph—

"(i) customer service committees established and maintained under the Water Act 1989.";

and the functions of a customer service committee shall be regarded as public functions for the purposes of that Act.'.
—*[Miss Emma Nicholson.]*

Schedule 5

Transitional Provision on Termination of Appointments

Mr. Moynihan: I beg to move amendment No. 12, in page 198, line 9 leave out from 'provision' to end of line 11 and insert

'which corresponds in relation to any enactment mentioned in Schedule 23 to this Act to any provision made by that Schedule or makes similar provision in relation to any other enactment;'.

Schedule 5(6) enables the Secretary of State, in connection with the making of a replacement appointment or variation of area under clause 11, to make transitional provisions and savings, if he thinks it appropriate, by order. The paragraph as drafted allows any provision corresponding to one made in relation to the transfer date by schedule 23.

The purpose of this technical amendment is simply to broaden schedule 5(6) so that, following the making of a replacement appointment or variation of area, it will be possible to make transitional provisions which correspond not only to the provisions made in respect of the legislation mentioned in schedule 23 but also to other, for example future, legislation.

Amendment agreed to.

Schedule 8

Sewerage Functions

Mr. Edward Leigh (Gainsborough and Horncastle): I beg to move amendment No. 145, in page 208, line 9, at end insert—

'Rural Water Supplies and Sewerage Act 1944 (c. 26)

(1) In section 1(1) of the Rural Water Supplies and Sewerage Act 1944 (government contributions towards expenses of water authorities for the purposes of rural water supplies and sewerage) the words "subject to such conditions as the Treasury may determine," shall be omitted.

(2) For the words "may, in any case in which it appears to him to be desirable so to do, undertake to make a contribution" there shall be substituted the words "shall make a contribution of at least 50 per cent.".

(3) The words "provided that the Minister shall not undertake to make a contribution towards the expenses of making provision for the sewerage, or the disposal of the sewage, of a rural locality unless he is satisfied that the need for making the provision is due to anything done or proposed to be done, whether before or after the passing of this Act, to supply, or increase the supply of, water in pipes in that locality." shall be omitted.'.

As I represent a rural constituency, I am moving this probing amendment so that I may ask the Minister some questions which are of interest to those who live in rural areas.

At present, local Government meets about 50 per cent. of the cost of the schemes to which my amendment refers and I am wondering how much of present legislation is a legacy of the past. In 1989, sewerage services should be available in all areas, except in really isolated places where provision would be uneconomic. Under current requisition procedures, rural sewerage facilities are not being provided adequately, and it would seem that the Government should adopt a totally different approach to this issue.

When I raised the matter in Committee I said that, while the problem affected only about 5 per cent. of households, it was serious problem nevertheless. I am not suggesting the schemes should apply to isolated houses or hamlets, but, as I said in Committee, some quite large villages can be without sewerage schemes. For example, Wormley in Surrey is a semi-urban area with about 400 houses, and Claxby in my constituency is a relatively large village which has been campaigning for some time to have a sewerage scheme.

Under existing legislation, water authorities have a general duty to provide such a scheme, but the local authority must requisition the scheme. As the local authority pays about 50 per cent. of the cost, there is no incentive for the authority to do that. That results in much buck-passing among local authorities, water authorities and the Government, so that schemes of this type rarely come to light.

I do not suggest that my amendment is the only way forward or that the Government should necessarily pay as large a contribution as I suggest. I hope, however, that the Government will look into the problem which, while small in national terms, is important to rural communities.

Mr. Wigley: I support the amendmemt because the circumstances described by the hon. Member for Gainsborough and Horncastle (Mr. Leigh) obtain in many rural areas. They certainly do in mine, and I would not belittle scattered hamlets, which also have the right to modern facilities.

It is important for us to consider how financial assistance of the type that we are discussing will be available once the Bill becomes law. In that context, the amendment may not go far enough, but it would be a move in the right direction, and considering that it has been proposed by a Government Member, we in the Opposition should support it.

The hon. Gentleman described it as a probing amendment. I regard it as stronger than that. It should be added to the Bill; and if the Government say that it is too untidy as drafted, they could accept the principle involved in it and tidy it up in another place.

Mr. Moynihan: Clause 69 gives owners, occupiers and certain public bodies, including local authorities, the right to require a sewerage undertaker to provide a public sewer. The person requisitioning the sewer is required to pay over 12 years any difference between the charges for the use of the sewer and the cost incurred by the undertaker in providing it.

Rural sewerage grant is available under the Rural Water Supplies and Sewerage Act 1944 to reduce the cost which would otherwise fall on those requisitioning a public sewer. It is paid to the undertaker on condition that it is used to reduce the deficit payments required from the local authority or the owners and occupiers requisitioning schemes. The grant is paid at the rate of 35 per cent. of the eligible cost of a scheme or 35 per cent. of £3,310 per property served, whichever is the lower. In 1987-88, grant totalling £4 million was approved in respect of 68 sewerage schemes.

The purpose of amendment 145, as my hon. Friend the Member for Gainsborough and Horncastle (Mr. Leigh) pointed out, is to require the Secretary of State to pay grant at a rate of at least 50 per cent. of the cost of the works. I believe that it would be unfair and undesirable to increase the rate of grant in the way my hon. Friend suggests and to compel the Secretary of State to pay grant in all cases at a particular minimum level.

Mr. Wigley: Why?

Mr. Moynihan: Because it would favour those areas where provision of necessary first-time sewerage had been slow in comparison with areas where the water authority and the local authorities between them had made good progress. It would be undesirable because higher rates of grant would remove to some extent the financial discipline on both water undertakers and local authorities to ensure that requisitioned schemes were both justified and economically designed.

I hope that what I have said will reassure my hon. Friend about the arrangements and that he will agree to withdraw the amendment.

Mr. Leigh: I beg to ask leave to withdraw the amendment.

Hon. Members: No.

Madam Deputy Speaker (Miss Betty Boothroyd): In that case, I must put the Question.

Question put, That the amendment be made:—

The House divided: Ayes 172, Noes 310.

Question accordingly negatived.

It being after Six o'clock, MADAM DEPUTY SPEAKER *proceeded, pursuant to the Order [6 February] and the resolutions [21 March] to put forthwith the Questions on the remaining amendments moved by a member of the Government.*

Schedule 10

PROVISIONS RELATING TO METERS ETC.

Amendments made: No. 65, in page 214, line 52, at end insert—

'(1A) The power under sub-paragraph (1) to carry out works specified in sub-paragraph (2) below shall include power to carry out such works in a street; and the power conferred by virtue of sub-paragraph (1) (c) of paragraph 2 of Schedule 18 to this Act and sub-paragraphs (4) to (6), (8) and (9) of that paragraph and paragraph 3 of that Schedule shall apply in relation to the power conferred by this sub-paragraph as they apply in relation to the powers conferred by the said paragraph 2.'.

No. 66, in page 215, line 1, leave out 'sub-paragraph (1)' and insert

'sub-paragraphs (1) and (1A)'.

No. 67, in page 215, line 13, leave out 'on those premises'.

No. 68, in page 216, line 10, leave out 'on any premises'.

No. 69, in page 216, line 46, after 'above', insert 'on any premises'.

No. 70, in page 218, line 14, after 'works', insert 'on any premises'.—*[Mr. Ridley.]*

Schedule 12

AMENDMENTS OF THE WATER RESOURCES ACT 1963

Amendments made: No. 28, in page 230, line 25, at end insert—

'(3) In subsection (6) of that section, at the end there shall be inserted the words "and the quantity of water authorised to be abstracted from the strata in any period of twenty-four hours does not exceed twenty cubic metres in aggregate.".'.

No. 29, in page 233, line 5, at end insert—

'Section 131 of the 1963 Act

.—(1) In section 131 (2) (a) of the 1963 Act (licence in respect of waters owned or managed by the British Waterways Board), after "Act" there shall be inserted the words "and no person other than the Board or a person authorised for the purpose by the Board may be given a consent for the purposes of section 24 (1A) of this Act".'.—*[Mr. Ridley.]*

Schedule 14

AMENDMENTS OF THE LAND DRAINAGE ACT 1976

Amendments made: No. 49, in page 242, line 43, leave out 'by the Minister' and insert

'jointly by the Minister of Agriculture, Fisheries and Food and the Secretary of State'.

No. 50, in page 243, line 16, leave out 'by the Minister' and insert

'jointly by the Minister of Agriculture, Fisheries and Food and the Secretary of State'.—*[Mr. Ridley.]*

Schedule 16

TRANSFER OF FISHERIES FUNCTIONS TO THE AUTHORITY.

Amendments made: No. 4, in page 255, line 4, at end insert

'( ) In section 6(3) (definition of "unauthorised fixed engine"), at the end of paragraph (c) there shall be inserted the words "or

(d) a fixed engine which is placed and used by the National Rivers Authority with the consent of, or in accordance with a general authorisation given by, the Minister or the Secretary of State."'.

No. 5, in page 255, line 19, leave out from '(3)' to end of line 20 and insert

'for the words from "by", in the first place where it occurs, onwards three shall be substituted the words "on an application made to him by the National Rivers Authority, by order made by statutory instrument make provision in relation to an area defined by the order—

(a) for the imposition on the owners and occupiers of fisheries in that area of requirements to pay contributions to that Authority of such amounts as may be determined under the order in respect of the expenses of the carrying out in relation to that area of that Authority's functions with respect to fisheries;

(b) for such contributions to be paid or recovered in such manner and to be refundable in such circumstances as may be specified in or determined under the order;

(c) for the modification, in relation to the fisheries in that area, of any provisions of this Act relating to the regulation of fisheries or of any provisions of a local Act relating to any fishery in that area;

and an order under this subsection may contain such supplemental, consequential and transitional provision, including provision for the payment of compensation to persons injuriously affected by the order, as may appear to be necessary or expedient in connection with the other provisions of the order."'.—*[Mr. Ridley.]*

Schedule 18

POWERS WITH RESPECT TO THE LAYING AND MAINTENANCE OF PIPES ETC.

Amendments made: No. 71, in page 260, line 5, after '(4)' insert

'Without prejudice to paragraph 1 (1A) of Schedule 10 to this Act,'—

page 263, line 50, at end insert—

'(6A) Where, apart from this sub-paragraph, any person entitled to an interest in any land would be entitled under this paragraph to an amount of compensation in respect of any works, there shall be

deducted from that amount an amount equal to the amount by which the carrying out of the works has enhanced the value of any other land which—

(a) is contiguous or adjacent to that land; and

(b) is land to an interest in which that person is entitled in the same capacity.'.—*[Mr. Ridley.]*

Schedule 22

Minor and Consequential Amendments

Amendments made: No. 73, in page 290, line 41, at end insert—

'and, in paragraph 12(6), after the words "paragraph (b)" there shall be inserted the words "or paragraph (bb)".'.

No. 74, in page 291, line 31 after 'undertakers', insert 'or the National Rivers Authority'.

No. 75, in page 291, line 32, after 'undertakers', insert 'or the National Rivers Authority'.

No. 76, in page 291, line 34, after 'undertakers', insert 'or the National Rivers Authority'.

No. 42, in page 299, line 6, at end insert—

'The Water (Scotland) Act 1980 (c. 45)

50A. In section 31 of the Water (Scotland) Act 1980 (consultation with authorities in England) for the words "water authorities" there shall be substituted the words "water undertakers".'.

No. 6, in page 305, line 44, at end insert—

'(3) In paragraph 10(1)(b) of Schedule 5 to that Act (exemption for hereditaments subject to contributions under paragraph 1(a) of Schedule 3 to the Salmon and Freshwater Fisheries Act (1975), for the words from "paragraph 1(a)" onwards there shall be substituted the words "section 28(3)(a) of that Act.".".—*[Mr. Ridley.]*

Schedule 23

Transitional Provisions and Savings

Amendments made: No. 92, in page 306, line 11, at end insert—

'(2) The Secretary of State may by regulations provide for any liability which is—

(a) saved by virtue of this paragraph; and

(b) transferred in accordance with a scheme under Schedule 2 to this Act to a successor company,

to be transferred, at a time when that company is wholly owned by the Crown, to that company's nominated holding company.'.

No. 93, in page 306, line 18, at end insert—

'(2) The Secretary of State may by regulations make such transitional provisions and savings as he considers appropriate in relation to so much of any provision having effect immediately before the transfer date by or under any enactment as provides for or relates to the payment by a water authority of pensions, allowances or gratuities to or in respect of persons who have been—

(a) officers or employees of any person whose activities at any time before the transfer date appear to the Secretary of State to have consisted in, or to have been connected with, the carrying out of any function which is transferred by this Act or which corresponds to any such function or to any other function under this Act; or

(b) chairmen or members of any body whose activities at any such time so appear to the Secretary of State.

(3)Without prejudice to the generality of sub-paragraph (2) above or to any transfer in accordance with a scheme under Schedule 2 to this Act of any liability saved by regulations under that sub-paragraph such regulations may—

(a) subject to sub-paragraphs (4) and (5) below, impose requirements on the Authority, on any successor company or on the nominated holding company of any successor company;

(b) modify any such provision as is mentioned in sub-paragraph (2) above;

(c) in the case of regulations made after the transfer date, require provision contained in the regulations to be treated as if it came into force on that date.

(4) No requirement shall be imposed on any company by any regulations under sub-paragraph (2) above made after the company has ceased to be wholly owned by the Crown; but a company's ceasing to be wholly owned by the Crown shall not affect any requirement imposed on it by any regulations under that sub-paragraph made before the company ceased to be so wholly owned.

(5) It shall be the duty of the Secretary of State to pay the Authority out of money provided by Parliament all such sums as the Authority may require for fulfilling requirements imposed on it by regulations under sub-paragraph (2) above.

(6) The reference in sub-paragraph (2) above to the payment of pensions, allowances or gratuities includes a reference to the payment of compensation for loss of office or of any such compensation as is payable to or in respect of an officer or employee for any other reason.'.

No. 22, in page 310, line 37, leave out from beginning to 'in' in line 39 and insert—

'(4) On and after the transfer date subsection (6A) of section 70 of this Act shall apply, as it applies in relation to the sums mentioned in that subsection,'.

No. 60, in page 319, line 20, at end insert

'; and no licence may be granted by virtue of this paragraph in relation to any waters to which section 131 of the 1963 Act applies (waters owned or managed by the British Waterways Board) unless—

(a) the application for the licence was accompanied by the prescribed evidence that notice of the application was served on the British Waterways Board; and

(b) the Authority has considered any representations or objections made by that Board within the period of twenty-eight days beginning with the day on which the application was made or such longer period as the Authority may allow.'.

No. 77, in page 320, line 24, after 'sections', insert 'and Part II of the said Act of 1965'.

No. 30, in page 321, line 40, at end insert—

'. The repeal by this Act of the Drought Act 1976 shall not affect—

(a) any order under that Act which is in force immediately before the transfer date;

(b) any power to make an order under that Act on an application (whether made before, on or after that date) of which notice was given before that date; or

(c) the operation of the provisions of that Act in relation to any such order or application;

but, in relation to any time on or after that date, that Act and anything done under it shall have effect by virtue of this paragraph as if references to a water authority were references to the successor company of that water authority.'.

No. 7, in page 323, line 25, at end insert—

'(4) Nothing in this Act shall be construed as preventing so much of any order under section 28(3) of the Salmon and Freshwater Fisheries Act 1975 or of any licence under Part I of Schedule 3 to that Act as—

(a) is in force immediately before the transfer date; and

(b) has the effect for the purposes of section 6 of that Act (prohibition on placing and use of unauthorised fixed engines) of authorising the placing or use of any fixed engine,

from continuing to have that effect on and after that date.'.

No. 87, in page 327, line 33 at end insert—

'Transitory provision relating to rating

.—(1) In relation to the period beginning with the transfer date and ending with 31st March 1990, the provisions of section 31 of and Schedule 4 to the General Rate Act 1967 (valuation of water hereditaments) shall have effect—

(a) as if references in those provisions to any statutory water undertakers or to their undertaking included references to a water undertaker or to the undertaking of a water undertaker;

(b) as if the successor company of a water authority were the same person in law as the water company; and

(c) as if any hereditament which—

(i) is occupied on and after that date by the Authority; and

(ii) was occupied, immediately before that date, by a water authority for the purposes of their functions with respect to the supply of water, were a water hereditament occupied by that water authority's successor company for the purposes of the company's functions (as a water undertaker) with respect to the supply of water.

(2) Where any hereditament allocated to the Authority by a scheme under Schedule 2 to this Act will fall on and after the transfer date to be treated for the purposes of the provisions mentioned in sub-paragraph (1) above as occupied by a successor company, that scheme may require the Authority to make payments to the successor company, of such amounts and at such time as may be determined in accordance with the scheme, by way of contributions in respect of any liability of the successor company in consequence of those provisions.

(3) In relation to the period mentioned in sub-paragraph (1) above, section 43 of the said Act of 1967 (exemption of property of certain authorities) shall have effect, subject to that sub-paragraph, as if the references in that section to a water authority and to a drainage authority included references, respectively, to the Authority and to an internal drainage board.'.—*[Mr. Ridley.]*

Schedule 24

REPEALS

Amendments made: No. 8, in page 339, line 33, column 3, leave out '5,' and insert '1 to'.

No. 38, in page 346, leave out lines 26 to 30.—*[Mr. Ridley.]*

Order for Third Reading read.—*[Queen's Consent, on behalf of the Crown, and Prince of Wales's consent, on behalf of the Duchy of Cornwall, signified.]*

6.12 pm

The Secretary of State for the Environment (Mr. Nicholas Ridley): I beg to move, That the Bill be now read the Third time.

Out of the three days for the remaining stages of this Bill, the Opposition have chosen to use a quarter of the time on the Third Reading. On this occasion I think they were right: they completely failed to fault the Bill in Committee and the details were found to be correct. My hon. Friends, the two Ministers of State and the two Under-Secretaries of State, totally dominated the argument throughout the Committee stage. On Third Reading, we come back to the big issue of principle: the advantages of privatising the water supply and sewerage industries.

We had scare stories and diversionary tactics galore —everything from turnstiles on national park walks to my alleged row with my right hon. Friend the Prime Minister; from our proposals for price control for water companies that were alleged to be leading to huge monopoly price rises, to the cost of environmental improvements that the hon. Member for Copeland (Dr. Cunningham) alleged was due to privatisation. They were all nonsense—fictitious fig leaves to disguise the real reason for opposing the Bill: which is the lingering spirit of clause 4, the Labour party's antagonism to private enterprise, the pain and despair at seeing the Socialist state not only demolished but debunked in argument.

The hon. Member for Dewsbury (Mrs. Taylor) gave the game away a fortnight ago today when I intervened to ask her, if she wanted to see a major clean-up of our rivers, why she opposed the Bill? She did not have an answer, she fumbled and could only repeat her opposition to privatisation. The Committee stage has proved that there is no reason for opposing this Bill, other than the emotional one that somehow water is different, that it is vital to life, and is provided by the Almighty. I shall therefore spend a few minutes discussing that incontrovertible observation.

Yes, water is vital to life; but so is food, and housing and clothing, and many other things, too. Yet nobody suggests we should emulate the Russian system of collective farming and state food shops, which is the way the public sector provides for that staple of life which is food. Primitive man privatised food supplies, and so does civilised man. I will not attempt to answer for Ashdown man who has taken no part in the debates.

Nor do I recommend the Socialist clothing shops to those aspiring countrymen of ours who clearly prefer Marks and Spencer. Nor do I recommend the Socialist provision of state housing. Even the Labour party knows that people prefer home ownership. But clothing and housing are staples of life, far better provided—does anyone disagree?—by the private sector.

So what is so special about water? It is a natural monopoly, yes, but that is catered for in the regulatory arrangements that we are making. I would remind the House that it is not the water itself which we are proposing to privatise, but the impounding, piping, pumping, treatment, maintenance and billing of it—the industrial activity essential for its provision. Morever, we mortals dirty it. It has to be taken from our houses and purified, treated, pumped, piped and finally disposed of. Listening to Opposition Members, I sometimes think that they believe that it is the Tories who create sewage. I plead guilty to the fact that Tories do create 44 per cent. of it —our latest opinion poll rating—but that means that 40 per cent. is Labour, 12 per cent. Liberal/SDP and 4 per cent. do not know.

Mr. Paul Boateng (Brent, South): Will the Secretary of State reflect on the fact that 96 per cent. of those who took part in a recent opinion poll on water privatisation and who assist in the production of sewage were against his Government's proposals?

Mr. Ridley: I cannot accept that figure. The poll that I have quoted is the one the hon. Gentleman should bear in mind, instead of making such an unfelicitous intervention.

The fact is that 42,000 people are employed in the provision of our water and sewerage services. Unfortunately, the Almighty does not pay their wages; nor does He provide the capital for the massive increase in environmental standards which this Bill will usher in. That is why water is not free, and never can be.

The question is, how can this massive human enterprise be best motivated; and how can this large amount of other people's savings best be harnessed to the improvement works that everyone wants to see?

Mr. Anthony Beaumont-Dark (Birmingham, Selly Oak): Does my right hon. Friend accept that many of us agree with him that we dislike state monopolies, which is why many of us voted for much of the privatisation that has taken place throughout this Government's period in office? If I dislike state monopolies, which in the end are controlled by the State, why should I like private monopolies that in the end are often against the public interest? What is so good about a private monopoly and what is so awful about a state monopoly, as with water where people have nowhere else to go to, as there is only one supplier?

Mr. Ridley: I do not know whether my hon. Friend supported the Government when they privatised the airports, British Telecom and British Gas——

Mr. Beaumont-Dark: Yes.

Mr. Ridley: Those are all monopolies, too.

Mr. Beaumont-Dark: They are not.

Mr. Ridley: They are. There is no way of coming to London without going to Heathrow or Gatwick, which are both under the same ownership.

These are the questions that are relevant to the Bill and which the Opposition shirk. I shall give them the answers. The whole country knows that people work more effectively if there is every opportunity for them to better themselves by better performance. In the private sector, water managers, foremen and employers will profit from success, and I hope that they will own shares which will then rise in value as these people succeed. In the private sector, capital which is borrowed from the market or from shareholders will be invested with all the efficiency and skill that those who are responsible to their shareholders have to demonstrate. Moreover, that capital will not be rationed as it is in public sector industries: it will be allocated by the market, if a water company can show a proper rate of return.

We all know what happens with capital rationing in the state sector. Under the Opposition, capital spending was cut by a third, and investment in sewerage within that by a half. That is the albatross of which the Labour party will never be able to rid itself in these debates, and it continues powerfully to make the case for privatisation.

Mr. Nigel Spearing (Newham, South): Talking of capital and shares, will the right hon. Gentleman confirm something with which I charged him on Second Reading and which I believe still stands? This capital will be available for diversification virtually without limitation. It will be open to the worldwide capital market, and the water companies can be controlled, bought and sold on that market without the control of the Government. Will the Minister confirm that that is true?

Mr. Ridley: I was talking about loan capital, but I presume that the hon. Gentleman is referring to equity. I very much hope that the world loan markets will be available. That will mean that we can obtain the cheapest loan money for the environmental improvements that are required.

As to shares limitations, the hon. Gentleman knows perfectly well what we have said will be the position in relation to golden shares. He also knows perfectly well what we have said will be our policy towards mergers and monopolies. That policy was discussed in Committee, and I believe it to be right.

The hon. Member for Copeland (Dr. Cunningham) said a fortnight ago:

"I am willing to set out all the answers to all those questions in a speech which I shall be making in a few weeks time."

He is waiting until the debate is over before telling us his policy.

"I agree that these things will cost money, and a great deal of money, and that the British people will need to pay. I also believe, that, overwhelmingly, they are willing to pay. It is not necessary to sell off the nation's water resources to achieve these objectives."—[*Official Report*, 21 March 1989; Vol. 149, c.969.]

I agree with the first part, but it is necessary to sell off the nation's water resources to achieve these objectives.

The truth is, as Labour proved for us when in power, that the person who regulates an industry must be separate and different from the person who provides the service —hence the National Rivers Authority, which will be able to ensure proper standards without financial penalty to itself. It provides a far more satisfactory framework for setting national standards for the industry than has even been achieved while the industry has been owned by the public sector.

The Opposition have only to look at the proposals for customer service standards and price control, and for quality of drinking water, and at the framework for setting and achieving higher standards for river and coastal water. Those standards were never set, let alone achieved, when they were in office.

As a result of the Bill, standards will, for the first time, be clear, public, objective and measurable. The industry will have no option but to comply with them, because to do otherwise can lead to fines and, in the last analysis, to loss of appointment. When compliance cannot be achieved immediately, there will be a clear and explicit understanding of the steps to be taken to achieve compliance. The Bill is the biggest step forward for the environment since the time when the Opposition were only a gleam in Keir Hardie's eye. The creation of the NRA and the privatisation of the utilities is the only way to secure the environmental improvements to water quality and to the beaches and rivers that we all want. This will be coupled with a system of price regulation which will protect the consumer from exploitation by the monopoly.

Mr. A. J. Beith (Berwick-upon-Tweed): The Minister has spoken of the great price benefits for consumers of privatisation. Will he explain why the existing private statutory water companis have increased their prices by so much and attributed the increase to privatisation? Will he explain how it can be that his former hon. Friend Lord Elliott of Morpeth has told me in a letter that one of the three reasons for the 18·5 per cent. increase by the Newcastle and Gateshead water company is privatisation legislation, because it will change its financial regime from that of a statutory company to that of a plc? Surely the noble Lord is telling the truth?

Mr. Ridley: I do not accept for one moment that the reason for the increase in water companies' charges, which averages 22 per cent., is necessarily right and justified—I do not have the bill. Secondly, I am certain the increases have nothing to do with privatisation——

Mr. Beith: The companies say that they have.

Mr. Ridley: Without the powers in the Bill enabling the director general to examine the books and to set a limit on price rises, and to check that they are due to environmental improvements, how can anyone possibly say whether these prices rises were justified?

Secondly, there is no way in which the privately owned statutory water companies can be privatised, so the increases cannot be due to privatisation, whatever the noble Lord says.

Thirdly, it is true that the existing structure of control of dividends and of that which can be put to reserve has starved those private companies of equity capital and forcing them to rely far too much on loan capital. On the

basis of that analysis, they have been failing to renew their assets and get their acts right. They would inevitably have to make changes as a result of moving to a proper balance sheet structure.

Dr. John Cunningham (Copeland): Does the Secretary of State recall holding up the statutory water companies as paragons of virtue on Second Reading and describing them as examples of how the water industry should be managed, operated and run? Why, now that this has all blown up in his face, are the companies overwhelmingly, if not universally, blaming the Bill for large increases in water prices? Is he calling them dishonest? What has happened?

Mr. Ridley: What the hon. Gentleman said was not true; he should consult *Hansard* before making those accusations. I did not hold up the companies as paragons of financial virtue. I said that they had supplied water in the private sector to 25 per cent. of the population for many decades, and the hon. Gentleman had never noticed or objected.

Secondly, I made it clear that the environmental improvements and the change in capital structures required for this massive investment would apply to all water companies as well as the water authorities. I have never disguised for one moment that the effect of the environmental improvements which the whole House wants will be an increase in prices.

Mr. Allan Roberts: Will the Secretary of State give way?

Mr. Ridley: I have just given way to the hon. Gentleman's hon. Friend, but I shall give way for the last time.

Mr. Roberts: On what environmental improvements will the statutory water companies spend such large amounts after privatisation which they are not spending money on now—bearing in mind that they will still have no responsibility for sewage?

Mr. Ridley: I cannot tell the hon. Gentleman until the Director General of Water Supplies is in place—the hon. Gentleman voted against part II, which sets up the office of director general. How can anybody know how to regulate a price if there are not the powers to obtain the necessary information?

The attitude of the hon. Gentleman is absurd. He might like to know that the Director General of Water Services, whose appointment I announced today, will do more to promote efficiency and customer interest than was ever achieved when this monopoly was in the public sector.

So why do the Opposition oppose it? That is the question which the Opposition cannot answer and I will tell them why they cannot answer it. It is because at least one half of the Labour party have painfully, unhappily, belatedly come to realise that we are right. I quote from the second leak of the Labour party's policy in *The Times* of yesterday:

"Under proposals which will be fought by left-wing unions and politicians only British Telecom, of all the utilities privatised by the Conservatives, would be taken back into public ownership under a Labour government."

[Interruption.] Wait for it; the hon. Gentleman has a gem coming here.

"Instead, the gas, water and electricity industries would be subjected to a tighter regulatory framework than at present imposed on gas and Telecom. Plans to take permanent government stakes in strategic companies have also been shelved."

Since this Bill contains that tighter regulatory framework which they seek, the Opposition have conceded the principle both of part I and of part II of the Bill. There is nothing left for them to stand on. I rest my case there. There is no longer any reason for Labour Members to stay even until 10 o'clock. The Opposition are not going to vote against this—but I hope that my hon. Friends will stay on until 10 o'clock, just in case. I am happy to assure hon. Gentlemen that their own party policy, which I am sorry that they have not been told about, utterly supports the Bill. I therefore commend it to the House.

6.34 pm

Dr. Cunningham: The Secretary of State began with what appeared to be a joke when he described what had been happening in the Water Bill Committee for the last four months. He is either a victim of the Minister for Water and Planning's doctoring of the reports from the Department of the Environment or he simply has not been reading the newspapers during that time. If he blissfully believes that his ministerial colleagues have won all the arguments and convinced the British public of the effectiveness of his proposals he is living in cloud-cuckoo-land. Judging by the remainder of his speech, that is exactly where he has been for the last four months.

The Bill has been under scrutiny in debate since last December. It remains largely unchanged—that at least is true—but our fundamental criticisms remain, and public antipathy to the proposals continues to increase. The issues have been widely reported in the media and there has been huge public interest in our discussions. The response of the public, the press and the media generally has been overwhelmingly and heavily critical of the right hon. Gentleman's Bill. The Bill remains fundamentally weak, confused and, indeed, incoherent, and the ideas that he had cobbled together fell apart during examination in Committee.

That is not surprising. The Secretary of State began by trying to hide a bad idea by claiming bogus environmental advantages for his Bill, but those bogus claims sank in a sea of his own confusion.

Let us take the right hon. Gentleman's treatment of the pollution issue as a case in point. He said in parliamentary answers that he did not hold centrally information about pollution of our beaches. He could not tell us, he said, how many sewerage works discharged untreated raw sewage into the sea. The Secretary of State for Wales told us that the information was held centrally and he could provide it. That was on 14 March. On 22 March, the Secretary of State was able to tell the House that about 14 per cent. of sewage from England and Wales was discharged into the seas untreated. Miraculously, in two weeks, this information, which he said was not held centrally, had suddenly appeared.

Mr. Ridley *rose*——

Dr. Cunningham: In a moment. I am referring to the right hon. Gentleman's comments in column 1081 of the *Official Report* of Wednesday 22 March. The Prime Minister, in the meantime, goes on television and tells the British public that no untreated sewage is discharged into the seas around Britain.

[Dr. Cunningham]

Here we have the kind of confusion about these issues that is rampant in the Government. The Secretary of State for Wales contradicts the Secretary of State for the Environment; the Secretary of State for the Environment contradicts himself; and the Prime Minister contradicts everybody.

Mr. Ridley: The hon. Gentleman has made an awful mess of this one. The first question that he asked was how many outfalls there were in England. We do not have that information. Some of them are tiny. They do not have that information in Wales. That is the first point. When the hon. Gentleman asked a sensible question to which I had the answer—the 14 per cent.—I gave it to him immediately. He must not get mixed up between the two things.

Dr. Cunningham: The Secretary of State is further confused, because it was not I who asked the second question; it was another hon. Member. It is passing strange that the Secretary of State says that he does not know how many outfalls pass untreated sewage into the sea, but he can give a percentage figure of how much sewage goes untreated into the sea. How does he arrive at the calculation? How has he come to that conclusion?

The Secretary of State caused further confusion when he publicly abandoned his statutory duty to protect the environment by promising, on the record, that the cosseted private monopolies he wants to create would have immunity from prosecution if they polluted the water environment. The Secretary of State has tried to disguise the scale and nature of the problems by hiding the truth, as I have shown by the example I have just given. One week he cannot tell us the facts and the next week, when it suits his purpose, he has some facts.

Let us come to the issue of the land assets, which has been such a bone of contention throughout our discussions. We know that the potential development and sale of 500,000 acres of land is one of the sweeteners which the Secretary of State is pushing towards the City and purchasers. The Minister for Water and Planning made that clear in his letter of 6 February to Mr. Jack Jeffery of the statutory water companies, when he said that the water companies, after privatisation, should offset costs by "proceeds of asset sales"—in other words, by selling their land.

What is happening now, in anticipation of all this? I have here a copy of an advertisement by the Mid Southern water company explaining its reasons for increasing charges to its consumers. It says quite candidly that it had been seeking planning permission for some of its land and with such permission could have raised £1 million, which could have been used to offset price increases. Unhappily for the company—but happily for us and for the environment—planning permission was refused.

When we debated all these matters in committee we were told by the Under-Secretary and the Minister for Water and Planning on several occasions that there were some "good arguments here". The Secretary of State replied to these matters recently when he was in Thirlmere in Cumbria in the Lake district. He claimed in his statement that his proposals would protect our national heritage. A newspaper report said:

"The Council for National Parks said yesterday that Mr. Ridley's measures simply did not go far enough to be effective. While we are delighted that the water authorities will have to consult the National Parks, there is no requirement for them to take any notice whatever of what the parks say".

That is the limit of the safeguard about which the right hon. Gentleman has been boasting. The chairman of the council for the Protection of Rural England, Mr. David Astor, described the decision to leave the consultation over planning and development with private monopoly companies as "incredible". He said that it was

"opening the floodgates for unprecedented abuse and distortion."

Mr. Astor was speaking about planning and land development. That is the kind of confusion that the right hon. Gentleman is causing by his proposals for selling much of the national park areas.

Mr. Boswell: Will the hon. Gentleman tell us whether the private water undertakings will be able to take no notice of planning determinations by the national park authority? Secondly, in what respect are the safeguards offered by my right hon. Friend any less effective than those currently available to control the activities of public water undertakings?

Dr. Cunningham: The very fact of passing the undertakings into private monopoly hands is enough to emphasise that point. Of course private water undertakings will not be able to ignore the decisions of planning authorities. I spend much time talking to people who manage national parks because my constituency is in such a park. If the hon. Gentleman talked to such people he would know that the pressure on national parks is huge and in some cases is overwhelming the authorities. They feel that controls and oversight should be strengthened and not weakened as proposed in the Bill.

Mr. David Ashby (Leicestershire, North-West): Will the hon. Gentleman give way?

Dr. Cunningham: No.

Those arguments have been advanced not just by Opposition parties but by influential and well-informed organisations such as the Royal Society for the Protection of Birds, the Council for the Protection of Rural England, the National Trust, the Countryside Commission and the Ramblers Association. They all express concern similar to ours and it has all been contemptuously dismissed by Tory Members who just ploughed on and voted down amendment after amendment. All major attempts to strengthen environmental safeguards and to protect our heritage have been rejected by the Government and their supporters in Committee. Privatisation is at best irrelevant to enhanced environmental protection and at worst positively disastrous and damaging.

The Bill and Conservative intentions are a betrayal of water consumers, of every family and household in England and Wales. The Secretary of State says that consumers will be safeguarded and has been dismissive of statements by chairmen of statutory water companies. The West Kent water company was one of the first in the field with a price increase of 42 per cent. In its statement to consumers it says that half the price increase—21p in the pound—was to meet privatisation requirements.

The Eastbourne statutory water company issued a notice on 27 February. The chairman's statement said:

"The year 1988 has been significant for the effect of the Government's Policy of 'Privatisation' of the Water Industry and the very considerable increase in the work load placed on our staff, together with the considerable additional burden of

employing consultants, the cost of which is having to be met by our consumers, and which is likely to continue for some time. This additional cost is responsible for at least half of the increase in our charges from 1st January, 1989 and also partially responsible for the very considerable reduction in the surplus for 1988 compared with 1987. What is depressing is that I cannot foresee any worthwhile advantage to our consumers emanating from these Government proposals."

This year those consumers face an increase of 43 per cent. in their water charges as a result, in large measure, of the Secretary of State's proposals.

The chairman of the Eastbourne statutory water company continued:

"I have never disguised my opinion that Privatisation is completely unsuitable for the Water Industry and I am extremely disillusioned by the Government's disadvantageous treatment of Statutory Water Companies, particularly in preventing them achieving PLC status until well after the Water Authorities. Civil Service and Government protestations of their intention to provide 'a level playing field' are totally hypocritical. The playing field is just about as level as the North Face of the Eiger."

In December, the people running these organisations were being lauded in the Chamber as examples of the way in which the industry could and should be run.

What of Baroness Oppenheim-Barnes, a former Conservative Minister? Is she to be believed when the chairmen of statutory water companies are no longer to be believed? In a letter to me in February announcing the publication of a National Consumer Council book entitled "In the absence of competition", she said:

"As you will see my Council believes that the proposed regulatory framework for both water and electricity falls short of what is actually required."

The book says:

"If the consumer interest is to be protected in the water industry, some kind of national body for water consumers is essential."

We moved such an amendment in Committee but it was rejected by Ministers and Government Back Benchers. The book goes on:

"The proposals appear to be so complex as to raise serious doubts as to their viability."

The National Consumer Council criticises and condemns the right hon. Gentleman's proposals. The document of his own departmental working group, a copy of which I have here and which is headed "Department of the Environment, 3 March 1989"—the report of the joint privatisation regulation group; civil servants in the Department of the Environment—shows what is happening.

Page 2 says that the aim is to provide that the private monopolies

"are permitted to earn a reasonable return, the secondary duty to consumers means that lower rather than higher 'Ks' should always be set."

The secondary duty and not the primary duty is to consumers. That is what the right hon. Gentleman's civil servants area saying in private and it is quite different from what the right hon. Gentleman says in public.

Mr. Nicholas Baker (Dorset, North): The hon. Gentleman quoted the words of Mr. C. P. G. Turner, the chairman of the Eastbourne statutory water company. From what he read out, I understood Mr. Turner to be saying that he as the chairman of a statutory water company envied privatised water authorities and wanted his company to be in that position. He seemed to be envying the private companies and that is exactly contrary to the hon. Gentleman's point. Instead of dealing with the opinions of other people, will the hon. Gentleman tell us the position of the Labour party on this matter?

Dr. Cunningham: I will happily send the hon. Member for Dorset, North (Mr. Baker) a copy of the whole statement of the chairman of the Eastbourne water company and he can consider it for himself.

On page 3 of the internal document of the Secretary of State's Department, we read:

"On the basis of these figures, a real return for water and sewerage undertakers . . . of the order of 8 per cent. would seem appropriate."

Ministers are preparing to guarantee private monopolies a return of 8 per cent. That contrasts starkly with what the right hon. Gentleman says about local authorities running their direct labour organisations where he recommends a rate of return of 5 per cent. So it is 5 per cent. for local authorities' direct labour organisations while he is planning to arrange for 8 per cent. for private water monopolies. This is an interesting document. It gives a very different picture of events and discussions in private in the Department from what we had in Committee. It goes on to discuss cost pass through. Cost pass through is a little water pipe, a conduit of its own, which bypasses all the controls set to protect the consumer so that the cosseted private enterprise monopoly will be able to cost pass through straight to the consumer.

What does cost pass through mean? It is a euphemism for uncontrolled price increases which consumers will be unable to avoid. That is what is going on behind the scenes. The Secretary of State may deny it, but here is a copy of a document from his Department dated 3 March 1989 and headed: "A framework and procedures for K-setting".

The Minister for Water and Planning (Mr. Michael Howard): Why is the hon. Gentleman seeking to mislead the House? If he has studied the provisions of the Bill he ought to know that cost pass through is subject to the control of the Director General of Water Services, and that it is designed to deal only with unforeseeable matters, such as new regulatory requirements. Does the hon. Gentleman think that the companies should be in a position to meet the new regulatory requirements or not?

Dr. Cunningham: Of course they ought to be in a position to meet them. They will have to meet them. They will have no choice. At least, that is what the European Commission believes. I am not sure that the Secretary of State believes that from what he has been saying and the way he has been behaving.

What we need to know from the Government and from the Minister for Water and Planning, who will have the opportunity to tell us when he replies to the debate, is exactly how consumers will be protected from cost pass through. There is nothing in the Bill about it. There is no statutory safeguard in the legislation to protect consumers from cost pass through. Cost pass through will be used to cover a multitude of sins to enable private monopolies to load price increases on to consumers. That is what is proposed.

Mr. Howard: I know that the hon. Gentleman could not attend the Committee frequently. Has he heard of the Director General of Water Services? If he had heard of the Director General of Water Services he would know that

[Mr. Howard]

the cost pass through provisions are subject to regulation by the Director General of Water Services. Will the hon. Gentleman accept that?

Dr. Cunningham: I do not accept that. It is indicative of the depths to which the Minister stoops when he is in trouble. He knows that I attended the overwhelming majority of Committee sittings. He also knows that his right hon. Friend had not got the guts to go on the Committee at all. If we are trading attendances and attention to these matters, I can tell the Minister that his right hon. Friend the Secretary of State is nowhere in that argument because he did not even go on to the Committee. If that is the kind of argument that the Minister wants to have over the Dispatch Box, he is welcome to it. There was not a single attendance at the Committee by the Secretary of State.

Mr. Howard: He was not a member.

Dr. Cunningham: That is right; he was not a member. He refused to put himself up to be cross-examined about the mess. That is the record of the Secretary of State.

Mr. Ridley *rose*——

Dr. Cunningham: In view of all this, it is a pity that the Secretary of State has not departed, as I understood he was to do, from these proceedings to attend the christening of his grandson, which certainly I would have understood. His performance and that of the Minister of Water and Planning have not done much to enlighten the House or the public about this mess of legislation.

Mr. Ridley: I just wish to ask the hon. Gentleman if he would kindly reply to my hon. and learned Friend's question about whether he understood that the Director General of Water Services is enabled to deny cost pass through if he thinks that it is not justified. Will the hon. Gentleman withdraw his failure to understand the Bill, because he has got it wrong?

Dr. Cunningham: I do not withdraw anything. I do not accept that as the legislation stands, consumers will be adequately protected from cost pass through, and neither do Baroness Oppenheim-Barnes and many other people who are interested in the protection of consumers, as has been made abundantly clear over the last few weeks.

Major differences of opinion between the Government and the European Commission also remain over exemption from pollution law, water quality standards, timetables for essential investment and the scale of such investment. It is in Britain that the confused, inefficient and dogmatic Tory proposals will be rejected, if not in their Lordships' House or in the City, ultimately at elections. Obdurate Tory insistence on making water supply and sewage disposal an issue of private profit is anathema to the majority of British people.

Samuel Johnson, the 18th century satirist, had a very apt description for the Government and for Tory Back Benchers in his work, "The Vanity of Human Wishes":

"How rarely reason guides the stubborn choice, rules the bold hand, or prompts the suppliant voice; How nations sink, by darling schemes oppressed."

This idea is one of the Prime Minister's darling schemes and the British people will certainly be oppressed by it. The Government will ultimately sink and these proposals will sink with them.

I have been asked about our position and a leak in *The Times* which was news to me and was not the matter that I have been involved in discussing. I do not believe the quoted leak in *The Times*. I reiterate what I have said throughout the proceedings: water is the country's largest national and natural monopoly. It is the people's most fundamental resource, on which their health and well-being depend. We in the Labour party believe that this natural resource and the assets of the water industry should be publicly owned and controlled. They should be managed openly and efficiently in the public interest, and management should be democratically accountable at regional and national level. Unlike the Tories, we do not believe that an essential resource such as water should be managed and sold for private gain. For us, public health and hygiene are not matters which can be dealt with by market forces. We know that the overwhelming majority of the British people share our values and views in this matter. That is why we will vote against the Bill.

Several hon. Members *rose*—

Mr. Speaker: Order. In view of the large number of right hon. and hon. Members who wish to participate in the debate, I ask for brief contributions.

6.59 pm

Mr. Cranley Onslow (Woking): I will do my utmost to obey your injunction, Mr. Speaker. That excuses me from saying very much about the speech made by the hon. Member for Copeland (Dr. Cunningham) except to make two points. First, in my experience in the House or in Committee, bad temper is not a substitute for good argument. Secondly, it does not appear to me to follow, although it may follow for the hon. Member for Copeland, that there must be public ownership for public control. The hon. Gentleman should think a little more about the subject before he outlines Labour party policy on such matters in future.

I support the Bill, and I believe that most of my constituents do the same. My constituents have been fortunate enough over a great many years to draw their drinking water from private suppliers and I have never had any complaints about that. Given that the much vaunted percentage increases about which we have heard so much this evening will still keep the average household's water cost to about the same as the cost of a national daily newspaper each day, keeping things in proportion, I do not believe that there will be as many complaints about costs as we have been led to believe, particularly in view of the powers to control prices in future which are rightly embodied in the Bill.

I confess that I have received complaints about the drains, as have many of my colleagues. In my constituency complaints are directed against the Thames water authority, which is not a privately owned body. That authority is currently polluting the River Wey in my constituency in a most deplorable way. The local angling association shares my view about that.

In general I have no doubt that the fight against pollution will be made easier and more effective by the Bill. The duty to fight pollution will unmistakably be present,

as will the money. The Treasury will not be able to stop that money, there will be no unseemly wrangles in the Star Chamber and the IMF will be unable to prevent the necessary investment in water quality as it did during the days of the late unlamented Labour Government. That is an important distinction which we should not cease to emphasise. The plcs will be able to raise the funds that they need and in a few years we stand the excellent chance of having many more rivers to be proud of once again. That would not have happened if the Government had not introduced this Bill.

We must never forget human frailty, and we can never forecast it. It will remain possible, under this Bill or under any other legislation, for accidents, neglect or greed to create pollution in future just as they have done in the past. That means that the powers of inspection and enforcement which will be invested in the NRA will be absolutely vital. In its use of those powers, the NRA will have the support and active co-operation of anglers throughout the country, who, after all, spend more time than anyone else on river banks and are much the best inspectors of water quality in our rivers.

I am also glad to know that the public right to prosecute will remain in law. If that right is to be used properly, the law must be effective and help the public enforce their rights in addition to enforcement by the NRA.

My hon. and learned Friend the Minister for Water and Planning felt that my amendment No. 86 to clause 143 was unnecessary. He has written to several of my hon. Friends explaining his views. In his letter he states:

"The Bill as drafted already meets the requirements"

which the amendment seeks to achieve because—and I do not deny this—

"it will be open to anyone to bring a prosecution over the pollution of 'controlled waters' . . . including prosecutions for breaches of the conditions attached to consents granted by the National Rivers Authority for the discharge of trade and sewage effluent . . .

Second, the NRA as the body statutorily responsible for effluent discharge consents will have to use its powers under the clauses . . . to enter premises and sample effluent discharges in a systematic manner to ensure that the conditions of the consents are being met. Where a sample suggests that a consent requirement is being breached in a manner which could give grounds for prosecution, we would normally expect the NRA to start taking formal samples in accordance with Clause 143. But since the circumstances of each case will vary, it would be inappropriate to deny the Authority discretion as to whether this is appropriate in a particular case, and as to the number of occasions on which the taking of a formal sample is necessary. For that reason we could not support the particular amendment . . . But the Authority will have a clear obligation to take such number of formal samples as permits full and effective enforcement of the legislation, and the Secretary of State will have the power . . . to direct the Authority on how to discharge this obligation."

So far, so good. However, in my capacity as a member of the council of the Angler's Co-operative Association which has initiated several prosecutions in this area, I must say that we are by no means convinced that my hon. Friend the Minister is right.

Under the Control of Pollution Act 1974, provision was made to establish public registers of discharge analyses. The relevant section of that Act was implemented in July 1985, as my hon. Friend the Minister no doubt remembers. Since then, the Angler's Co-operative Association has used information from the registers to prosecute water authorities on three occasions. The authorities concerned were Thames and Anglian. On one of the occasions the Thames water authority was prosecuted on eight separate charges, to which it pleaded guilty, and on each of which it was fined £1,000. The outcome of the other cases was much the same.

At the moment, the ACA would like to take a similar action against a fish farmer on the Hampshire Avon. I believe the proprietors are the Radnor estates and the farm is in the constituency of my hon. Friend the Member for Salisbury (Mr. Key). I hope I will have his support when I make this point.

The public register shows that that fish farm is at times in breach of conditions. However, the Wessex water authority declines to prosecute the polluter. The ACA cannot prosecute because the samples taken by the water authority are only for monitoring purposes. Therefore, for that purpose, the register is not worth the paper that it is written on. We cannot launch a common law action because it would be necessary to trespass to obtain formal samples.

The Government claim that the right of private individuals to prosecute will remain. However, that right must be effective. In future, samples will be taken by the NRA and their validity may be challenged. However, more to the point, the NRA may lack the will to prosecute, as has been the case with the Wessex water authority.

Mr. Robert Key (Salisbury): My right hon. Friend knows that for many years we have both been keen to ensure the quality of the Hampshire Avon. If we look at this question very carefully, it seems to me that under the new arrangements the vital difference is that the evidence under the formal NRA sampling exercise can be subpoenaed by a third party. In those circumstances, the Angler's Co-operative Association could undertake a private prosecution under this Bill.

Mr. Onslow: I hope that my hon. Friend the Minister can confirm that my hon. Friend is right. However, the important point is to take the samples. That is the necessary step towards a successful prosecution. My amendment sought to place a duty on the authority to take the samples.

The situation is one where the anglers have their doubts about such matters. Lawyers, no doubt, see everything with greater certainty. However, the people who will be taking the samples will be the same people as today, and there is to our minds little guarantee, given that the NRA will have a discretion, that we can necessarily rely on getting samples of quality and type necessary for a successful prosecution. Whatever view other people may take of the chances of success at law, the ACA is not in the business of frivolous litigation and goes to court only when it has the evidence which will make it possible to win and it is confident that it will win. I should be grateful if my hon. Friend would touch on that point in his reply.

The Central Council for Physical Recreation also has reservations, and I expect my hon. Friend will have seen a letter sent to his hon. Friend the Member for Lewisham, East (Mr. Moynihan) by the CCPR on 22 March about the code of practice. Without going into that at length, I hope that my hon. Friend will be able to give the House some assurance on how the Secretary of State intends to ensure that water undertakers comply with the code of practice and the maintenance of existing recreations, which some people fear may be at risk. Of course, if we cannot get assurances tonight because of lack of time, there will be an

[Mr. Onslow]

opportunity to return to these matters in another place, and perhaps then the Government will explain why they found my amendment No. 80 so unattractive the other night.

I find it difficult to believe that the NRA does not want to be responsive or flexible and is not prepared to have the opportunity to delegate some of its powers, and I find it odd that there should be resistance to this from the Department without our necessarily being told what the view of the NRA is. In this legislation we are creating an important body, and we should spell out the duties we expect it to perform in this area, and on the question of abstraction, which also causes concern.

I am anxious, as I said, to be brief, and I have little more to say except to question the realism of the statements made by the hon. Member for Copeland about the assets of the water authorities and the extent to which they might be turned to private profit. I do not believe there is a prospect of mass asset-stripping or great areas of land being sold at a profit. However, I believe there is one asset nobody has so far identified which is capable of being exploited and which we should all wish to see exploited, and that is the physical access this industry enjoys to every property which it serves. That access does not, it seems to me, have to be used either to pipe water in or to pipe sewage out.

There is little doubt in my mind that an asset of that kind could be used in other ways of profit and value to the community. It is not impossible that it could be used in such a way as to provide competition in information business technology with British Telecom, and I think we might very well see new owners, enterprising people, taking an opportunity which has been available to our own companies for far too long without being noticed—though I suspect the French have noticed it. I hope entrepreneurs in our own country will take it up and that it will be used to the value of the customers of the water industry.

I have no doubt that this is a necessary Bill, and I believe that it should have the support of the House and of the country.

7.15 pm

Mr. Livsey: The Water Bill is the ultimate folly of a Government hell-bent on imposing their dogmatic will on a long-suffering British public. The time has long since passed when we can appeal with any sense of reason to members of the Government, whose misuse of their parliamentary majority is now virtually complete.

What does this Bill do? Part II replaces the 10 public monopolies in England and Wales with 10 private monopolies, the plcs, and they will indeed be ring-fenced in their own areas; in part I of the Bill a National Rivers Authority will be created, which will remain in the public sector. That is the basis of the Bill. The water so essential for life itself will not remain a public utility, even though the Government's Victorian predecessors thought that was right. Indeed, it was the Government's predecessors in my party who put the water industry into the public sector in the first place. Water, indeed, is essential for life itself, which makes it a natural public utility, yet it is not to remain a public utility.

Mr. John Marshall (Hendon, South): The hon. Gentleman implies that public ownership of water is necessary for the health of the nation and many other factors. Can he explain how people in other countries survive and prosper with private sector water?

Mr. Livsey: Taking the example of France, the price of water is four times higher in some parts of France than in others, and I cannot see that the people there entirely benefit from that situation.

Of course, the reasons why water should clearly remain in the public sector involve the health and social conditions of the people of this country. They should have clean, wholesome and affordable drinking water. Surely these are the basic objectives. The only tenable fallback position, if one could justify it, is the model of the current statutory water companies which presently operate in 25 per cent. of the water industry. They are closely controlled in the public interest and produce affordable water through ploughing back profits to help keep consumers' bills down.

Mr. Ashby *rose*——

Mr. Livsey: However, the Government have chosen to dismember them and to turn them into plcs instead, already with pre-privatisation increases of 30 to 50 per cent. in the price of water.

The environmental impact of privatisation will affect clean drinking water standards, the disposal of sewage, the cleanliness of beaches and continued access to the half million acres which the present water authorities own.

The Government's reasons for privatising water seem to rest on the following ideological formula. They say that the NRA will control pollution and improve standards; that private investment will bring more money into the industry to clean up drinking water and sewage disposal; that the industry will be freed; that more people will own shares; that the City wishes to invest in the industry, and that the industry will be better regulated.

The facts are that the NRA could be involved just as well as an environmental protection agency if water remained in the public sector. The problem is that the NRA will be under-funded. Indeed, a privatised water industry will only be attractive to the City and to investors if it is made financially attractive, and the only way of doing that is to make consumers pay more for their water than if the industry remained in the public sector. The soundest estimates indicate the price of water will double by 1992.

The other part of the equation is that valuable public assets, such as land, will have to be sold and access charged for. The taxpayer and the consumer will, of course, pay for this. Even if this is done, the City is unlikely to find water an attractive investment, because up to £6 billion will be required to clean up the industry; the maximum sale price is unlikely to be more than £10 billion, so what kind of deal is that for the City? The argument that the industry will be freed by disposing of its debt could equally apply if the water authorities' debts were written off now while the industry remained in the public sector. Our water bills would be a lot cheaper if that were done.

A Director General of Water Services, for regulation purposes, could just as easily have been installed if the industry remained in the public sector, so that argument is demolished too. The thesis that more people will own shares does not reflect recent experience, where it has been shown that most shares still tend to end up in the hands of relatively few people.

The Government have turned water privatisation on its head. They have decided, come what may, to privatise water and have then dug up convenient reasons to try to justify the unjustifiable.

Mr. Nicholas Baker: The hon. Gentleman made the interesting point that it was not necessary to privatise the water companies and he implied that it was perfectly possible for NRA to police water authorities maintained in the public sector. Has that proposition any basis in fact? Can the hon. Gentleman name any other area in our society where public bodies can adequately police each other? Is it not a fact that such bodies in the public sector get together cosily and the customer suffers in the end?

Mr. Livsey: The present pollution inspectorate of the water industry would fill the niche that the hon. Gentleman is describing.

The Secretary of State for Wales has said that he would like to see Welsh people owning Welsh Water shares. We would like to see that too. However, there is no sign that that will happen. On 21 March a grand three-helicopter tour of Wales was undertaken by representatives of such well-known Welsh banking forms as Smith Newcourt, Kleinwort Benson, Salamon Brothers, Alexander Lang and Scrimgeour, Cazenove and Company, Citicorp, County NatWest, Shrive Lehman and Company, Phillips and Drew and, just to sweeten the pill, the Cardiff stockbroking firm of Lyddon and Company.

Given the Secretary of State's penchant for public relations, it is strange that such an exercise by Welsh Water was not the subject of headlines in the Welsh media. Perhaps the subject was just a little too sensitive at that time since the Bill was being debated in the House at that moment. I hope that the bankers enjoyed the scenery—97,000 acres represents quite a lot of Wales and quite a lot of Welsh real estate. We know, too, that computers in Scottish banks are already programmed to print Water plc shares. What kind of pre-emption is that? The Bill has not yet completed its progress through the House.

The Government want the Bill to be a truimph of dogma over common sense. We know that water will become unaffordable for many of the poorest in society after privatisation. There is no way that the Government can deny that. There were 9,000 disconnections last year and there will surely be more in the future.

According to the opinion polls, water privatisation is opposed by 75 per cent. or more of the British people, including many Conservative supporters. Make no mistake about it, water privatisation will damage our health. Water privatisation will annexe public assets and give the taxpayers' investment to the wealthy. It will produce a private monopoly with no competition—inexcusable even by Tory standards.

Water privatisation will damage the environment and double the price of consumers' water, hitting the poorest in society. It will cost £842 million just to privatise water and the British people will pay that bill. It will be a poor investment because of its liabilities. Water privatisation will remove the last vestiges of local government democratic representation in the water industry. There will be no public accountability.

Water privatisation is a rotten measure by a Government who have gone several privatisations too far. They will surely pay the political price in the ballot box. God gave the water to the people and the Government are taking it away from them.

7.24 pm

Sir Giles Shaw (Pudsey): I do not want to follow the example of the Eisteddfod contribution of the hon. Member for Brecon and Radnor (Mr. Livsey), but I am prepared to tell my hon. and learned Friend the Minister for Water and Planning that I support the Bill and I have five reasons for doing so.

First, I must pay tribute to the history of the water industry through its many years of municipal undertaking. That is a proud heritage for those of us who represent northern seats where the fine reservoirs produced on the back of the woollen industry are still some of the greatest architectrural achievements of the 19th century. Municipal leadership was a fine contributor to the effectiveness of the British water industry for the first 50 or so years of this century.

There has been a dramatic change, because local authorities and local government have changed. The disappearance of the many utilities in favour of the mega-utilities and local government reorganisation made a fundamental difference to the municipal contact between water supply and the authorities. With that came high-pressure politics of a different kind and a substantial period of neglect for the water utilities. Water had to take its place among municipal priorities, and it was a pretty lowly place as one sees from the total neglect of the reassessment and renewal of assets.

With the development of local government reorganisation came the reorganisation of the water authorities as we have them today. I confess that I remain firmly of the view that the scale of the water authorities as presently constituted is a perfectly effective way of managing water resources. They have the geographical spread to enable the supplies to be most effectively managed. They measure the water cycle as their base. They provide services way beyond the reach of a local authority, even a large one. It is no use in Yorkshire looking back to municipalising the water industry on the basis of the three-county structure and the fourth county of Humberside and a little bit of Cleveland—all of which are within the catchment of the Yorkshire water authority. Municipalisation is not available as an alternative for discussion in the House, although it has played a major part in the handling of the water industry.

Water authorities are within the responsibility of the Department of the Environment, and the Secretary of State has powers to determine their capital allowances, pricing policies and most of the strategies and priorities that the individual authorities would wish to adopt. But we must never forget that they are 10 very different authorities. They are different geographically. They have different resource problems and resource management. They have a different pattern of demand and very different problems of foul water and sewage treatment. They have different demands and patterns of drainage.

That means that they inevitably have different capital demands. They have different priorities and rates of development. All depend on the whim of Government expenditure and Government control. It is that single fact which brings me to my first reason for believing that the

[Sir Giles Shaw]

Bill is right. Until the authorities get outwith the control of Government, they will not be able to manage and develop their assets on a long-term basis without intervention.

The case can be made for central control. In replying to an earlier debate, the hon. Member for Bootle (Mr. Roberts) made it clear that the next Labour Government would take the authorities back into what he loosely termed social ownership public control. But the case for bringing them back into public control by the Government is even thinner than that for going back to municipal control. Surely the water industry must now be recognised for what it is—a modern, effective, well-managed range of public utilities. It is a capital-intensive industry, operating scientifically controlled systems for the distribution of pure water, with a complicated computerised system for cleansing foul water by biological and chemical processes. In addition, it has a high standard of efficiency.

When one thinks that the water industry has had to contend with a rapid growth in demand not only from the ownership of houses and of the developments that that brings but from changes in industrial technologies that require huge uses of water, one would have to be remarkably complacent to argue that the water industry has sold the country short. It has not. It has managed to keep pace with domestic demand created by the washing machine, the car wash, and all the other demands made on the public water supply by domestic consumption, for a daily cost that currently averages 29p to 30p per household, not per person. For that cost to be regarded in 1989 as a significant impost for an amenity that, as the hon. Member for Brecon and Radnor was so keen to argue, is essential, irreplaceable and God-given, is absurd. A cost of 10p per day for each individual is far from high. No one can deny that the water industry has made that possible by its policy of developing new technologies and new effort.

The major argument for privatisation is that it will allow a major service industry that has long outlived its municipal founders and has outgrown its need for central Government constraints to take its place in the private sector. That is the main reason for the Bill, and it is why the Bill deserves, and will have, my support. I do not believe that the statutory water company is a relevant model to the scale of the water authorities, their regional basis, and the range of services that they currently provide. They are not a model for what a locally based statutory company can do. It must differ radically in its management skills and experience, and in the range of the assets that it can produce.

Mr. Nicholas Baker: My hon. Friend refers to the great record of water authorities in coping with increased demand arising from developments in certain parts of the country. Does he agree that a connection charge, which is now subject to discussion, would benefit privatised water companies in providing a good service to the consumer and ensure equity between existing consumers and the developers of new housing estates, which would be highly desirable and a fair innovation?

Sir Giles Shaw: I entirely support my hon. Friend. I was glad to note that in a recent speech my hon. and learned Friend the Minister for Water and Planning said that he was still looking for a way of putting such a provision into the Bill. I wish him well. I hope that he will not be put off by the fact that it will be difficult and that officials say that it is impossible. Good political leadership of the kind that I am sure my hon. and learned Friend can provide should see such a measure put in the Bill.

The second reason for privatisation is that it will allow the regional quality of water authorities to develop when they become plcs, providing an important opportunity for regionalisation to take a lead. The regions have their different needs and priorities, and I welcome the prospect of strong regional shareholdings in the regional plcs. I should like to see not only preferential treatment given in the flotation plans to employees and customers, as I am sure is my hon. and learned Friend's view, but a proportion of the stock made available only to regional investing markets, such as Birmingham, Newcastle and Leeds, so that we may ensure that there will be a placement of stock to the benefit of local institutions and companies. Until now, far too little attention has been paid in privatisation to the regional markets. We are presented with a classic opportunity to put that right.

Mr. Simon Hughes (Southwark and Bermondsey): The hon. Gentleman ignores the fact that proper representation of regional interests currently exists but with the Bill as it stands the probability is that, in future, the regions well represented will be foreign and not British. Is that not a valid criticism, and one which argues in favour of the current arrangement being retained?

Sir Giles Shaw: The hon. Gentleman will understand that there is a golden share, which is designed to prevent the development that he mentions. However, I agree with him in principle. I am not one who believes that the Battle of Britain was won on the motto "Per ardua ad Perrier". We should do what we can, by strengthening regional shareholdings, for example, to make it very difficult for French investors to obtain shareholdings in this country.

Ten separate regional businesses will be established, offering a unique and imaginative opportunity that I trust the Government will prosecute vigorously, so ensuring that at least one aspect of water privatisation will have much more public acceptability than at present.

The third reason for privatisation is that it will allow British water management and technology to compete across the world. It is an amazingly large market. In my brief time at the Department of the Environment, I took the first British water mission overseas. We went to the French Cameroons.

Mr. Robin Maxwell-Hyslop (Tiverton): And drank the water there?

Sir Giles Shaw: I recall that the president resigned the first day that I was there.

The French Cameroons desperately needed new technology, because its cities failed to comprehend that most of their population lived below the water level. The overseas market for British technology can be released only after the industry's privatisation. That is exactly what should be done. If we accept EC standards, as we are required to do, it should be recognised that our water industry has developed against a history of fast-flowing rivers for the transportation of drinking water as well as for the disposal of sewage and of foul water. The way in

which continental standards are to be applied seems to ignore our particular aquatic advantages, which we seek to retain.

The fourth reason for privatisation is that it fits extremely well into the Government's policies for its third term of office. Our first term was dedicated to containing inflation, restoring sensible economic policies, and releasing industry and commerce so that it could expand on the basis of competitive quality and price. Managements were given the power to manage, and unions were made accountable to their own members. In our second term, we took great advantage of the public sector by returning it to the private sector, and in industry and in housing there was a massive increase in capital ownership. We have substantially spread the benefits of ownership, and with that has come a greatly reduced demand for tax revenue. Now is the time, in the Government's third term, to tackle major social issues such as health, education, social provision and the environment.

The Government's environmental policies are epitomised by the Water Bill. Only now can we afford evironmental policies of that kind. The environment is one of the most expensive areas in which to legislate and in which to create change. The water environment in particular requires the massive release of resources and an unshackling from the controls that have been applied at a municipal or central Government level in the past. There will be changes in respect of conservation, access and sporting uses, and there will have to be better provision and more flexible policies.

There will undoubtedly be increased costs, in terms not only of the investment that is still required but of ensuring higher standards of river quality, drinking water quality, and of amenities. At a current daily cost of 29p to 30p per household, we are not paying enough for the range of services that we enjoy. I shall be very happy to see increases in water charges, if they bring with them the scale of benefits that I am sure that a new and environmentally sensitive policy will bring.

For something that is as important as water, we should be asking how its price per head compares with the other amenities that the British consumer enjoys. Is 10p per head per day enough? Is that a reasonable price to pay for four or five gallons of water per head? Should it be 12p or 15p? In relation to the cost of other amenities that the consumer currently enjoys, water is excessively cheap. [HON. MEMBERS: "Oh!"] Hon. Gentlemen may roar, and they are entitled to do that, but there is no doubt that water in this country is cheap and that we are perfectly entitled to say that, given the controls being placed on price by the National Rivers Authority and the director general, some increases will be essential and that we should not try to destroy those increases when they are proposed.

My fifth and final reason is that this has been a commitment that the Government have undertaken for a considerable time. We made it an election commitment the last time we went to the country. It is something which has been worked on for a long time. I am confident that now is the right time to proceed. But if we have confidence in the Bill, I am bound to say that we look to the Government for a further demonstration of their own confidence in the industry.

For example, I am not satisfied with merely a 51 per cent. hold on water privatisation. Why cannot it be 100 per cent., particularly as we now have provision for golden shares and so on? Why cannot 100 per cent. of the water equity be made available? Why confine it to 51 per cent.?

We must also ensure that in the way in which the National Rivers Authority and the director general control the private sector water companies there is a fair relationship between the two. I hope very much that the NRA will not be a large, central, bureaucratic body but will break down into regional authorities and that this regional representation will have a much closer link with the water plcs than is perhaps envisaged in the Bill. If that comes about, as we look to water privatisation being fulfilled, there will be a genuine meeting in the regions between the controllers and companies to see that both get a fair share of the hearing that is necessary before controls are implemented to the disadvantage of either.

All in all, water privatisation is a sensible measure. The Bill is a sensible way of taking it, and I wish it well.

Several Hon. Members *rose*——

Mr. Deputy Speaker (Mr. Harold Walker): Order. I remind the House that Mr. Speaker has appealed for brief speeches.

7.41 pm

Mr. Tom Pendry (Stalybridge and Hyde): I will adhere to Mr. Speaker's request for brevity. As one who represents a north-west constituency and is sponsored by the National Union of Public Employees, which has many thousands of members employed in the water industry, I share the view of my hon. Friend the Member for Copeland (Dr. Cunningham) that the Bill ensures that the people have to pay a high price for Tory dogma, because the Bill is part of an ideological crusade and has nothing whatever to do with water quality or efficiency.

After all, this labour-intensive industry has a pretty good productivity record. Productivity has risen by over 33 per cent. in the past decade, yet the cost to the consumer is, on average, six times cheaper than in West Germany and four times cheaper than in France.

Unlike the Member for Pudsey (Sir G. Shaw) I take great pride in the fact that we produce cheaper water. I hope that the *Pudsey Times* will pick up that bit of his speech to make it clear that he is in favour of higher prices for water. The water industry even exceeded the target rate of return on assets set by the Government last year by a factor of one third.

This is, therefore, an efficient industry, staffed by workers who care for it. So why must the Government meddle with it, force prices up, reduce pollution safeguards and introduce diseconomies of scale by more than doubling the number of water and sewerage authorities? On top of this is the attack on the workers in the industry themselves. I give one clear example—and I hope that the Minister of State is listening.

I was given an assurance in a written answer from the Under Secretary of State that workers would have the right to a pension scheme with the same benefits and contributions as at present. The Under-Secretary of State said:

"existing employees will have the right to remain in a pension scheme with the same benefits, and requiring the same contributions, as the Local Government Superannuation Scheme, of which they are members. Any provisions necessary to secure this position will be included in the legislation to privatise the water authorities."—[*Official Report*, 16 November 1987; Vol. 122, c. *417*.]

[Mr. Tom Pendry]

What do we find in the Bill? Water employees will be able either to keep their existing pension scheme when they move into a new private company or join a new and so-called "improved" scheme. The catch is that the old scheme will have its index-linked benefit removed and the new scheme will not replace it. For the Government to have refused to guarantee the pension benefits accumulated over decades by NUPE and other members is a disgrace. The Minister clearly misled me, the House and, more important, thousands of workers in the industry with that reply in November 1987. Perhaps the Minister, who is now looking to his officials, will tell us why he misled us all on that occasion.

It is clear what sort of water industry we shall be faced with, should this Bill be enacted. It will be one that skimps and muddles through at the expense, not only of consumers, but of water workers as well, because it is clear that the £250 million saved from index-linking will be used to sweeten privatisation.

The changes will be worst of all in the area that some of my colleagues and I represent in the north-west. My region has not only the oldest and most decrepit infrastructure in the country but by far the largest landholding. My constituents will doubly lose out, from a lack of investment and a loss of open land. Of the 150,000 acres of water company land, a substantial proportion is in or next to my own constituency. New, profit-motivated water companies will be under pressure to dispose of land which is declared non-operational. I have no doubt that as soon as water is privatised we shall see vast tracts of unspoilt land declared non-operational and sold for a large profit, a profit which will not be passed on to our constituents by way of cheaper water bills.

The Government claim that recreation will be safeguarded in this Bill, not least by the National Rivers Authority. This is the same National Rivers Authority that the Secretary of State has said should employ as few people as possible. How on earth can a small body with its hands tied keep tabs on pollution discharges, on water quality and on recreational use throughout the country?

It is not, perhaps, surprising that the Under-Secretary of State, the hon. Member for Lewisham, East (Mr. Moynihan) is connected with the Bill. After all, he is doing his level best to demolish our national sport of soccer with his ridiculous Football Spectators Bill. As has already been stated in Committee, I would not be surprised, if he has his way, to see turnstiles installed on country walks, cliffs fenced off for use by climbers with ID cards and reservoirs surrounded by barbed wire to stop people fishing. He really ought to listen to his former friends at the Central Council for Physical Recreation. They are particularly worried that their demands for statutory safeguards for recreation have been ignored, particularly in regard to the fate of the 190 reservoirs used for fishing and water sports. The Minister responsible for sport should be ashamed that he was unable to persuade his unsporting boss or bosses of the merits of the CCPR case.

The other place, however, may well come to our rescue, not for the first time, to stop this potentially damaging Bill becoming law. I believe that there is a case to be heard as to whether this Bill is hybrid. I hope that the Government will give considerable thought to that possibility, as will, I am sure, the House of Lords.

My own council of Tameside is investigating a possible loophole in the Bill. My authority has certain historic rights through the ownership of the lordship of the manor of Mottram in Longdendale, an area containing much water authority land. The ownership of this manor and its rights can be traced back to Henry VIII; the rights, which were reserved indefinitely in 1922, include fishing, grazing, wood collection and even turf cutting on the land. These historic rights, bequeathed to the people of the aera, surely cannot be usurped by a private water company. The land was originally removed from a Sir William Stanley, a knight of the area, who was found guilty of high treason. As one who does not believe in capital punishment, I would draw back from suggesting that the Secretary of State and his Ministers should encounter the same fate as Sir William for their part in this treasonable Bill, but they should and will get their come-uppance from the electorate. The Prime Minister, judging from her public utterances on the way in which this measure has been promoted by her Ministers, is only too well aware of that probability.

The Bill will continue to be opposed by Opposition Members as the dangerous, damaging nonsense that it is. More importantly, as every poll shows, it will be opposed by the millions of our electors who believe that water is essential to life itself and must remain a public service.

7.50 pm

Mr. Beaumont-Dark: This Bill is the most recent in a long line of privatisation measures. I agree with privatisation as a philosophy. I think that it is nonsense for the state to own assets for the sake of owning them. That becomes an ideology only when the assets can be sold and used for better purposes. Privatisation of, for instance, British Airways, British Telecom and the Trustee Savings Bank—and in due course, I hope, British Rail and British Coal—is, in my view, acceptable and fair. The sensible criterion applied to all our privatisations so far has been the existence of another source of supply—the existence of competition—and clearly competition will exist following the privatisations of British Coal and British Rail.

I did not understand the Minister—I often do not understand him, although I am sure that that is my loss—when he said that British Gas was a monopoly. Heating can be provided by oil, electricity or even Calor gas. The reason why I have voted for privatisation until now is that I dislike state monopolies, quite apart from not liking the state to tell anyone what he should or should not do. If I dislike state monopolies because they stand astride people's lives, I dislike private monopolies even more. Private sector involvement helps efficiency where there is competition, because a private person needs to make a profit to make investment in the service worth while.

Ministers speak of erecting walls. In the City, Chinese walls were proposed. I do not doubt Ministers' good faith, but private companies will attempt to climb such walls and even to demolish them, and in the main they will succeed. That is the spirit of the animal of free enterprise, and there is nothing wrong with it when competition is there to hold it in check.

With respect to the hon. Member for Brecon and Radnor (Mr. Livsey), it is not a good argument to say that water comes from Heaven. Unfortunately it does, usually on bank holidays, but that is not an argument for it remaining in the public domain. Water, as we all know,

must be treated, and it costs hundreds of millions of pounds before it reaches our tanks. If state monopolies are to be feared, I tremble before private monopolies. That is why I believe that the Government are wrong, although I have supported them on every privatisation issue until now.

Let me say in all seriousness that the water in Birmingham is not the Government's to sell. Back in the mid-1800s, Joe Chamberlain borrowed tens of millions of pounds because Birmingham's water was foetid, as was most water. By 1850 Birmingham had more direct sewerage and cleaner water than that great empire of the sun in Japan has today. Birmingham's ratepayers were put in hock so that the people could have good water. All the water that we have—in the Elan valley, and everywhere else in Wales—was paid for out of Birmingham ratepayers' money, freely negotiated.

I was chairman of finance when we were discussing what we would do when the Severn-Trent water authority was set up. It was agreed that we would go along with it, but that it would remain under local government control. Now, however, that agreement has been swept aside unilaterally, because we all know that Governments can do what they——

Mr. Ashby: Has my hon. Friend compared the colour of Birmingham's water with that of the water in, for example, London? Has he observed that the water in Birmingham is brown, and has been for about 120 years? That water is in the public sector. Is not the reason the lack of necessary investment over the years, and is that not why this Bill is such a good Bill? Has my hon. Friend not considered the people of Birmingham?

Mr. Beaumont-Dark: With the greatest respect, the only reason that I can think of for my hon. Friend's argument that Birmingham's water is brown is that he puts too much whisky in his water. It is patent nonsense. My hon. Friend may get away with conning juries, but he could not get away with conning the people of Birmingham in that way.

We agreed that, as long as it remained under proper control, we would go into the Severn-Trent. Now we are going to sell it off because the Government insist. Quite rightly, if they can get Bills through the House, Governments can do what they will. We feel, however, that much of the money invested at the expense of Birmingham ratepayers needs to be spent to combat some of the problems experienced by Birmingham, as by other cities. If the Government wish to be honest to people, they should recognise that—if cost inflation is taken into account—Birmingham is being robbed of over £500 million of ratepayers' money. That is an incontrovertible fact. This concern is not the Government's to sell. If they insist in bludgeoning such a Bill through the House, they should at least be honourable enough—as I know that they will be in the end—to ensure that Birmingham people at least get back what they invested.

I believe that the Bill is fundamentally flawed. It will be not only flawed but dishonoured if, having broken unilaterally an agreement reached in fairness, we proceed in this way. If the Birmingham ratepayers, who looked after Birmingham's people properly for more than 140 years, find that what we did in honour has been dishonoured by a subsequent Government, I do not think that they will understand—and nor will anyone else who appreciates the ethics of business.

8 pm

Mr. Gareth Wardell (Gower): This House is known throughout the world as the mother of parliaments. As Members, we cherish the example and traditions of our democracy that for centuries Britain has spread throughout the world. Yet today we are debating a Bill which is opposed by at least three quarters of the people of this country.

The polls show that at least three out of every four people oppose this sell-off of water, and nothing that the Government have said, from the time the proposals contained in the measure were first announced, has changed the public's position over the unsoundness of the step that is now being taken.

If the Government had any concern for the wishes of the people, the Bill would have been abandoned long ago. Instead, as the hon. Member for Brecon and Radnor (Mr. Livsey) pointed out, complacent in their majority in the House, they have chosen to abandon their responsibility for large sectors of public health and environmental protection inherent in the water industry.

Increasing water pollution in Britain is one of the major concerns of those of us who care about our environment and that of future generations. It is one of those few areas of environmental concern where we can, as a nation, clean up our own backyard without reference to, or co-operation with, other countries. Yet despite their professed concern, the Government have chosen to wash their hands of the responsibility for halting and reducing the gross pollution of our rivers and seas.

No matter how much the Government wriggle and postulate about public spending 15 or 20 years ago, it is a fact that, when the Government introduced external financial limits on the water industry in 1981 and subsequently, they deprived water authorities of the wherewithal to invest adequately in schemes to cope with the pressures of pollution of rivers and seas.

Britain's rivers, the first in the world to be polluted by effluent from sprawling towns and industries during the industrial revolution, governed only by laissez-faire light-handedness, were the first to be cleaned up by public spending and investment. Now they are being fouled again at an unprecedented rate.

About one tenth of our rivers have degenerated to class 3 and 4, being polluted or unable to sustain marine life. The number of cases of river pollution in England and Wales increased last year to 23,000, nearly double the 1982 figure. Obviously, when one third of the nation's drinking water is extracted from those rivers, there is an increased risk to public health, either from the water or from the additives that are put into it to make it safe to drink. Obviously, there is a danger to fish stocks and marine life. Obviously, our environmental heritage and facilities for water-based recreations are being limited.

The Government have responded by increasingly limiting the amount that local authorities can spend to deal with the problem. The Government have reduced their pollution inspectorate, cut funds and opportunities for research and failed to legislate to ensure that polluters pay for their actions.

Now that the EEC has stepped in and said that they must find £1·6 billion to obtain minimum standards of pollution control, the Government have designed a way of selling off that responsibility. The Government can find

[Mr. Gareth Wardell]

£10 billion to repay some of the national debt. They cannot—no, they will not—find £1·6 billion of investment to halt the decline in water quality that they have overseen.

This sell-off of responsibility will be subsidised by all of us. An industry independently valued at £27 billion will be disposed of for between £5 billion and £7 billion. What a gesture. How sweet it must be to operate on such a grand scale. On our behalf, a £20 billion discount is being given —that on behalf of 75 per cent. of the electorate who oppose it.

It is a pity that the grand scale obscures little, nitty-gritty problems that are inherent in the Bill and that would cost little to put right. They would certainly not cost billions of pounds. I refer, for example, to unadopted and unadoptable sewers.

Because the water authority criteria for adopting sewers, laid down in 1974, were allowed to differ from building regulation requirements; because developers were quick to maximise profit and slow to improve standards; and because local authorities were not empowered to enforce section 18 agreements on developers in planning permissions, hundreds of thousands of householders are left today with sewers serving their properties which are not, and which can never be, adopted, for example because pipes are too small or because they cross private land. Those householders face increasing costs to repair and maintain those sewers.

The Government were set for a blanket adoption of those sewers in the Bill, but they changed their mind. Now they appear to be saying that householders should have known about the problem and that, if they did not, their solicitor was negligent in not informing them. I gather that I should now advise my constituents—2,500 of them in one district authority alone in the area—that they should sue their solicitor. It promises to be interesting.

But the Government, set on their grand sell-off, have their mind on higher things. One is the NRA, which the Government claim is their passport to the greatness of the greens. The Government have established the NRA to monitor river and coastal pollution. It is ironic that they should have established it at a time when they will not have to provide the money to run it.

We are told that the NRA will monitor pollution and ensure that the polluter pays. I fail to see how that will be brought about. The legal maximum penalties for polluters, such as industry and farmers, are inadequate to the point of ridicule. Water authorities are virtually exempt from prosecution. Yet one in five of Britain's sewage works is breaking the law by discharging sub-standard waste into rivers. Untreated sewage leaks into rivers from 5,000 recorded sites. Storm overflows are exempt from all controls, yet in periods of heavy rainfall they deposit tons of untreated waste and sewage into seas and rivers.

The Bill allows water pics to maintain indefinitely their privilege of non-prosecution. Water authorities do not prosecute themselves. Once the Bill becomes law, the NRA will not be able to prosecute. The Government say that the water industry pollutes too often and on such a large scale that it would be unreasonable to expect it to stop. So much for the powers of the NRA. The NRA will be unable to do anything, other than complain, about this form of pollution.

It is reasonable for the public to expect that, when shareholders grab control of the water industry—when water charges increase to make up for the lack of past investment—those shareholders should have definite responsibilities for ending this scale of pollution.

I am cynical about this whole Bill. My cynicism derives from many many factors, but I will mention just one. For many years after the issue of the EC directive on bathing waters in 1976, the Department of the Environment defined a bathing beach in such a way that, in Wales for example, there was not a single bathing beach to which that directive could apply. My cynicism continues. Responsibility, as opposed to ideology, is not prominent in the Government's vocabulary, but it is understood that responsibility—or lack of it—is what this Bill is about. That is why three in four people oppose it. That is why we call on the Government, even now, to abandon these proposals and to allow common sense and the public interest to prevail.

8.11 pm

Mr. Robin Maxwell-Hyslop (Tiverton): At the last election I declared my opposition to proposals to nationalise—and I mean nationalise—the water and sewage disposal industry. We have heard a lot about privatisation, but it may be that some of my hon. Friends do not realise that this is the largest nationalisation measure that any Conservative Government will ever have passed.

When the question of privatising water was first mooted several years ago, I kept pointing out in the House that, unlike any of the other industries that were to be privatised —industries whose equity was vested in Ministers of the Crown—this one was not owned by the Government. This Bill, first of all, nationalises the entire water and sewage disposal industry, so all my colleagues who vote for the Third Reading tonight will be voting for the largest nationalisation measure ever offered to the House by any Conservative Government—and it is well that they should realise that. I certainly shall not be voting for it.

Privatisation only follows prior nationalisation under this measure. When I say that, it is not vested in any Minister. As has been pointed out already, in the representative case it was paid for in the first place by local authorities, or by combinations of local authorities, which raised the money by means of loans, and serviced those loans and repaid them by charges on the ratepayers—not just on the users of water and sewers. That was when the systems were owned by local authorities.

Of course, it is not true, as some facile hon. Members would have us believe, that water is in free supply—it most certainly is not. The cost of impounding it, the cost of pumping it, the cost of the distribution system, the cost of renewing old, inadequate and rotten distribution and sewerage systems, are immense, so a lot of investment is required to replace the rotten water supply systems and the inadequate and rotten sewerage systems. But we do not have to have this Bill in order to get the external financing limits that are necessary to do that. We do not have to have this Bill, lock, stock and barrel, in order to have a National Rivers Authority, with its functions; we could perfectly easily have had a Bill separating the functions of policing and inspection from the functions of supply and

distribution. That arrangement would most certainly have had me in the Division Lobby voting for it. It would have been an entirely sensible thing to do.

The greatest single benign characteristic of the Water Act 1973 was that it brought together the supply of water and the disposal of water after it had been used. The previous absurdity was that some authorities poured effluent, more or less—very often less, rather than more—purified, into rivers, and lower down the system other authorities extracted the water in order to supply it as allegedly fresh water. Of course it made sense to amalgamate those two functions. Unfortunately, what the 1973 Act did was make the poacher and the gamekeeper the same person—and that arrangement has never worked.

Anyone who lived through the torment of the pollution of the fresh water supply in north Cornwall, for instance, will know what I mean. I do not believe that the South West water authority prosecuted itself, although, quite rightly, it prosecutes others for polluting the public water supply. The NRA, if it is to be other than a laughing stock, will have to have ministerial sanction—not only sanction, but encouragement—to prosecute the water and sewerage authorities if they do not reach the necessary standards of purity. But how separate will the gamekeeper be from the poacher? In many areas the gamekeeper will not have his own laboratory for testing the water supply and the effluent, and will have to use the poacher's laboratory.

Mr. Boateng: We should have had the hon. Member on the Committee.

Mr. Maxwell-Hyslop: If I had been on the Committee the Bill might not have come out of it quite so quickly.

Of course those functions are different. I would not wish to say that water companies will set out to supply polluted water. Of course they will not, because, unlike the present system—under which, if the authority is sued, it is the consumers who pay—if a private owner is sued, it is the shareholders who will suffer. That is certainly benign.

I could have been persuaded to support this measure if all the revenue, all the receipts from the sale of these assets, were to be recycled into defraying the cost of meeting the purification standards for water and sewerage effluent, of cleaning up our beaches and of replacing the hundreds of thousands of miles of rotten water-pipes and sewerage pipes that are either rotten or of inadequate diameter. If the money had been recycled for those purposes the Bill could have had my reluctant support; but the fact is that it is not so. It is the consumers who will be charged with the cost of bringing sewage effluent treatment and of piping and disposal up to the standards rightly required by the EEC.

We ought not to need the EEC to tell us what the standards should be. For years, mincing up turds and putting them into the sea as processed sewage really was a public scandal—"macerated" was the word that was used. I once swam out in a bay—I may say that it was in a holiday resort—to what I thought was a line of fishing floats, until I reached it and found that it was not.

This Bill is a wasted opportunity. The opportunity could have been taken to set up a really effective National Rivers Authority to define the effluent standards and to enforce statutorily the separation of sewage from storm water disposal. It is unforgivable that sewage works should overflow when there is a heavy downpour. The two systems should be different.

Sir Charles Morrison (Devizes): Is it not correct that the control of pollution could be carried out more swiftly and perhaps more efficiently by Her Majesty's inspectorate of pollution, which is not of great age?

Mr. Maxwell-Hyslop: If the record of the alkali inspectorate had been such as to fill me with confidence, I might have found that an alluring suggestion. The case for setting up a new, independent inspectorate with its own testing facilities—not using those of some of the principal polluters—is very strong and unanswerable. That is what should have been in the Bill, instead of so much that is.

Again, how does one balance—the Bill does not do it for us—the needs of different sectors of the United Kingdom? In Devon, the population doubles in summer at the time when river flows are at their minimum. The cost of providing impounding facilities to avoid drought when there is a maximum inflow of people who are not normal ratepayers and minium river flows is immense. That cost falls upon the people who live there all the time and who derive less and less benefit from tourism as more and more people bring their holiday homes with them. Instead of staying in hotels or other permanent accommodation, more and more visitors arrive with caravans and tents, with the result that they spend very little, some of which would otherwise go towards the extra infrastructure costs.

Nobody but a fool provides a reservoir at a low level, with the result that all the water has to be pumped at hideous expense, if it can be placed much higher up where the water would flow by gravity. However, those who live in parts of the country to which other people like to go are told that reservoirs must not be put on the moors because that would spoil the view that visitors want to enjoy when they go on holiday. The people who say that do not, however, have to bear the additional expense of low-lying reservoirs from which all the water has to be pumped. There is no rectification of that issue in a Bill that is so large that it had to be printed in two physical parts because the staples would not go though it in one.

At 10 o'clock, which is not so very far ahead, I shall be in the No Lobby. Those are some of the reasons why.

8.23 pm

Mr. Wigley: I agree with many of the points that have been made by the hon. Member for Tiverton (Mr. Maxwell-Hyslop). The sea coast problems to which he referred are also faced by Wales. Wales also has to support a large population in summer and needs to have the capacity to supply it. Many of the additional costs that Wales has to face have to be borne in the south-west, too—in Devon in particular.

The hybridity of the Bill was referred to earlier. The hon. Member for Tiveton did a lot of work some years ago on the question of hybridity. Between now and further consideration of the Bill elsewhere I hope that he will have the opportunity to consider whether this is a hybrid Bill. If he did so, he would be doing the House a service. He might be able to find a means by which to deflect the Bill from its movement towards the statute book.

Mr. Maxwell-Hyslop: My dislike of monopolies is so great that I would not wish to have a monopoly in the detection and processing of hybridity.

Mr. Wigley: I think that many hon. Members could sit at the knee of the hon. Member for Tiverton and learn about the intrigues and the ins and outs of hybridity, which we should not go into in too great a detail now unless we can prove it. I wish that we could.

Wales did not vote for the Bill at the last election. Wales did not want it. It wants it even less now, the Bill having been subjected to weeks of debate in Committee. For once, Welsh Opposition Members were almost totally united, both in detail as well as in their general approach, in their opposition to the Bill. Week after week we put to the Government a central fallacy—the cost of water to the consumer. That point was not answered in Committee and it was not answered on Report.

The Government tried to get away with press propaganda in Wales. They suggested early in March that there would be a massive reduction in the price of water. In a debate in this Chamber on 1 March, the Under-Secretary of State for Wales told the House:

"Opposition Members may have a surprise coming to them because it is our intention to give the people of Wales every opportunity to take a stake in their own water company in a way that has not been possible before."—[*Official Report*, 1 March 1989; Vol. 148, c. 368.]

That does not feature in the Bill, and there has been no suggestion as to how it may come about. The people of Wales will not have a 25 per cent. reduction in the price of water, although Ministers tried to sell it in the Welsh press. The reduction was then disowned during earlier debates on Report. In fact, there will be a massive increase in the price of water. It will be on top of other increases in recent years.

During the last few days I have received a letter from someone who lives in the Aberdare area of Mid Glamorgan. This person pointed out that water rates have increased from £23 in 1981-82 to £107 in 1989-90—a fourfold increase. I prophesy, on the basis of what we were told in Committee, that the price of water will increase to about £250 by 1995. That is because there is a need, as everybody recognises, for considerable investment in the industry to improve standards. The Government argue that the only way to secure the resources that are necessary for the work that must be undertaken is to privatise the industry. The Opposition have argued time after time that the only way that capital funds can be attracted is by a massive increase in the price of water, an increase that would hit hard the poorest people in the community.

There is a danger with privatisation that, as private companies find that they do not have the resources to attract capital, the degree of capital investment will be inadequate. That will have an effect on pollution, of which we in Wales are conscious—pollution in the industrial areas and along our coastline. There is a real danger that there will be a reduction in the capital investment that is so much needed in order to meet EEC standards and those that we ought to have set many years ago.

In Committee we asked the Government to clarify the guarantees for shareholders, but the guillotine prevented discussion of amendments that would have led to a large slice of the shareholding going to consumers within the areas served by the private water companies and also to a slice of the shares going to the employees of the private water companies. The Government have made no such provision. Conservative Members who argue that the water industry will be answerable at regional level cannot guarantee that that will happen. Shareholdings will be subject to market fluctuations. Shares will be bought and sold in order to make a profit or a long-term return. They will not be bought and sold to guarantee that the private water companies are answerable to the regions that they serve.

The only way in which the finances of privatisation can add up is by the provision of a massive capital write-off of historic debt. If that debt is written off, why on earth was it not written off before, to bring down the water charges that people face? Perhaps for the only time during the passage of the Bill I want to disagree with the hon. Member for Brecon and Radnor (Mr. Livsey), who referred to the low disparity between charges in various parts of this country as compared with France. In fact, the average equated water rate in 1988-89 in Thames was 33p in the pound, in Severn-Trent 51p in the pound, in north-west England 59p in the pound—and in Wales, it was 108p in the pound. That is almost four times the rate in the Thames area. These charges are high and we are facing yet higher charges. If there is to be a capital write-off, why cannot there be one in the public sector?

The capital value of the Welsh water authority is £1,700 million, and if, as seems likely, it is to be sold off for £250 million or £300 million, why do not the Government go the whole way and enable water consumers in Wales to have the shareholding at a nominal cost, and then at least guarantee that there is answerability in Wales? The same formula could apply to the regions of England.

The other part of the Bill deals with the National Rivers Authority. All the Opposition parties argued in Committee that the Bill represents an unwanted and unwelcome centralisation of the Welsh water industry, with the establishment of the centralised form of the NRA. That is not to say that there was not a case for taking away powers from the plcs and giving them to the NRA, but they should not be given to a centralised body in London. That is to take away the powers that the Welsh water authority has over rivers. The version of the NRA in the Bill provides inadequate involvement for important groups who are concerned with rivers, such as anglers and other interest groups. There is also inadequate capital for the NRA, a subject that has already been touched on this evening.

No doubt other hon. Members have received the letter that I have from Professor Edwards, the chairman of the regional rivers division of the Welsh water authority. On 22 March he wrote pressing that the NRA should be allowed

"to have the benefit of long-term borrowing where this is necessary in order to carry out any of its statutory functions . . . the authority must have flexibility to use loan finance for all capital expenditure."

Some progress was made on the issue of flooding earlier tonight, but the general argument has not been dealt with —and this letter was sent by someone who is involved in its detail.

Many outside groups are unhappy with the Bill. The National Farmers Union of Wales has written:

"Farmers are deeply concerned at the lack of control over the ability of the proposed private water companies operating as monopolies to raise their charges, particularly in rural area where their costs are higher."

That was one of a number of concerns expressed to us by people who usually support the Conservatives and who are unhappy about these proposals.

Farmers and conservationists are fearful about clauses 7 and 9. Recreational bodies have fears about access to land—97,000 acres of it in Wales, forming a considerable part of the most beautiful areas there.

There are still no adequate safeguards, despite recent Government statements, against the dangers of selling off. There are fears among environmentalists about the Bill's effect on pollution, and among the poverty lobby about its effects on disconnection and compulsory metering. There are fears in Wales that we shall once again be at the end of the queue and that the Bill will do nothing to help solve our problems or to redress the problems that Welsh water consumers have faced over the years.

Although we have put an awful lot of time into it, the Bill leaves the House as unacceptable as it was back before Christmas. That is why my hon. Friends and I will most certainly vote against Third Reading.

8.33 pm

Mr. John Marshall (Hendon, South): I have listened with great interest to a number of speeches in this debate. The speech by the hon. Member for Brecon and Radnor (Mr. Livsey) led me to assume that the once great internationalists and Europeans among the Democrats have now become the arch-chauvinists. The hon. Gentleman attacked the French with a venom that seemed like the reincarnation of the first Lord Beaverbrook.

I listened with great interest to the speech of the hon. Member for Gower (Mr. Wardell). He complained about the quality of our water, the speed with which the Government reacted to the bathing-water directive, the quality of our rivers and the inadequate level of investment in the water industry. He seemed not to realise that every argument he put forward underlined, rather than undermined, the case for water privatisation. He is typical of many who oppose the Bill, those who continue to attack the consequences of the very status quo that they seek to defend. The hon. Gentleman seemed to forget that the problems of the water industry are the direct consequence of public ownership. His argument about the quality of our rivers was an argument for the National Rivers Authority.

The problems of the water industry are aggravated by inadequate capital investment. That is an argument that Opposition Members should well understand; it was the Labour Government who cut investment in the water industry. As long as the water industry remains in public ownership, it will receive inadequate capital investment. So long as it has to compete with schools, hospitals, roads and railways, it will be starved of the investment that it needs. Once the industry is in the private sector, it will be able to tap the market in the same way as Cable and Wireless has done so successfully—it has increased its capital expenditure dramatically.

I hope that, when my hon. and learned Friend finalises the details of the privatisation issue, he will give the privatised plcs a decent dowry, and that a substantial proportion of the money raised by privatisation will be used to improve the balance sheets of the plcs so that they can invest substantially in the capital expenditure that is so necessary.

We have heard from hon. Members such as my hon. Friend the Member for Birmingham, Selly Oak (Mr. Beaumont-Dark) about the problems of monopoly. He forgets that the water companies will be controlled much more effectively in the private sector than in the public sector. The experience of British Telcom and British Gas shows that. No Secretary of State for Energy ever managed to control Sir Denis Rooke——

Mr. Elliot Morley (Glanford and Scunthorpe): Why, since British Telecom has been in the private sector, has the number of complaints from domestic and commercial users increased dramatically?

Mr. Deputy Speaker: Order. Not on Third Reading of the Water Bill.

Mr. Marshall: I shall ignore that irrelevant and inaccurate interruption. My point about British Gas is that, when Sir Denis Rooke presided over a company in the public sector, Secretary of State after Secretary of State tried and failed to control him. Ofgas was the first body to control Sir Denis Rooke, and Oftel has worked, too——

Mr. Beith: But British Gas had to be referred to the Monopolies and Mergers Commission.

Mr. Marshall: The important thing is that privatisation worked, and it will work with the water industry too——

Mr. Boateng: It says here.

Mr. Marshall: I write my own speeches. I do not know what the hon. Gentleman does, but I know from having listened to him in Harare yesterday that he spoke for more than an hour when he was billed to speak for less than half an hour.

I welcome the possibility of water metering. The present system of charging for water is unfair. Why should the pensioner, consuming one third of the water consumed by her next-door neighbour, pay the same for that water? No one suggests that there should be a standard charge for electricity——

Mr. Boateng: Will the hon. Gentleman give way?

Mr. Marshall: As long as the hon. Gentleman is briefer than he was yesterday.

Mr. Boateng: Does the hon. Gentleman share my concern about the impact on the pensioner of the standing charge and will he urge the Secretary of State to amend this Bill in another place so that the pensioner is protected from the standing charge?

Mr. Marshall: I happen to believe that the pensioner, who will already benefit substantially under the community charge, should be a substantial beneficiary of water metering. A pensioner household consumes very much less water than households with three or four children and sometimes with three or four wage-earners. Why should pensioners, as they do under the present system, pay substantially the same amount for water when they are consuming much less of it?

I also believe that water metering would lead to much more economical use of water. When the right hon. Member for Birmingham, Small Heath (Mr. Howell) was "Minister for Drought" in those long-lost days of the Labour Government, he was able to persuade people suddenly to reduce their consumption of water dramatically. I believe that, if we had water meters, there would be no need for a minister for drought to persuade people to use less water; the price mechanism would do it for him. Why should people pay for large amounts of water when

[Mr. Marshall]

they are small consumers? It is surely much fairer that the pensioner and the single person should pay less than large households.

The Water Bill is a Bill for greater efficiency. No one can regard the water industry under public ownership as a paragon of efficiency. Under private ownership, the water industry's prices will be controlled. The only way in which water companies will be able to increase profits is by becoming more efficient. Surely that is an objective we should all applaud and approve.

I should like to ask the opponents of privatisation why it is that the Socialist President and Prime Minister of France have shown no enthusiasm for nationalising their water industry. The answer is simple: they understand that a water industry under private ownership is more likely to be efficient in providing the water the people need.

Recently I read a speech by the right hon. Member for Plymouth, Devonport (Dr. Owen) addressing the Scottish council of the SDP—I believe it is known as a cottage meeting. He said that the Water Bill was encouraging French companies to buy British water companies. He seemed to ignore the fact that there is a golden share to prevent the plcs from being acquired as soon as privatisation takes place. I was somewhat surprised to see the great former Foreign Secretary, the man who was the great European—[AN HON. MEMBER:"Who said he was great?"] He did; he was always telling us he was great. I was surpised to see him becoming the great chauvinist and the great opponent of the France.

I believe that this Bill will provide the capital to modernise the water industry, clean up our rivers and improve our beaches. It is in the interests of the consumer, the efficiency of the industry and the environment and it should be warmly welcomed.

8.44 pm

Mr. Nigel Spearing (Newham, South): I hope that the speech of the hon. Member for Hendon, South (Mr. Marshall) will be widely distributed, not only in Hendon but throughout the country, because it well illustrates many of the errors into which he and his hon. Friends have fallen, not least the Secretary of State, who I am very glad to see here. If I had the time, I would enlarge upon the point about the single user of water. We all use water for all sorts of purposes, and the single elderly pensioner requires cleanliness from everybody she meets and everyone who deals with food and the cleanliness of the community. Without pure, clean, cheap water public health would be at risk.

When the House was built it relied on privatised water. I think that the Chelsea water company supplied it. Unfortunately, at that stage, when that water was used it disappeared with all its contents into the river and it was not until the 1860s that the Metropolitan Board of Works built the Victoria embankment, largely for intercepting sewers, and we had drainage in London.

The Bill has three major aspects which so far have not featured largely in debates either in Committee or on Report. The first is that for the first time in history our foul water drainage and purification will be privatised. I believe that this is the first time that this has been tried anywhere in the world, but the Minister will correct me if I am wrong. Secondly, the private firms controlling foul water disposal will for the first time—after the golden share disappears—be controlled from outside the United Kingdom. Thirdly, these private firms will not be confined, as private water companies are at the moment, to the supply and disposal of water. They will be permitted to diversify. That is a point which the Secretary of State confirmed at the start of the debate when he kindly gave way to me.

I have in my hand a press release from Mr. Roy Watts, of the Thames water authority, dated 24 November. He talks about the future and says:

> "We shall also be able to move into new, non-regulated areas of activity at home and abroad, water related or not, for the benefit of future shareholders, and customers."

[Interruption.] I hear the Secretary of State—I think it was he—saying "Hear hear."

Those three features are, I believe, even more fundamental than the idea of private water supply, which has been largely the theme of Conservative Members. I believe that it is wholly contrary even to that Victorian virtue of collective activity in pursuit of public health, because no Victorian believed in private disposal and purification of water. That is what the Government are doing—largely, I believe, because of their ignorance of what all this means. They are also hiding from the public their real motives and the likely effects of the legislation.

Of course, the National Rivers Authority will be an improvement over what we have at the moment, but it could have been achieved without privatisation. I hope that the NRA will carry out the same model activity as the late lamented Thames Conservancy. We on the River Thames remember that body, which was set up in the middle of the Victorian era, and hope that the NRA will, through proper local consultation and balanced use of many types of water space, bring back the sort of administration that we enjoyed on the Thames many years ago, and which I hope will be recreated. But that has not been the theme of Conservative Members. We have had carbon copy speeches, of which the contribution of the hon. Member for Hendon, South was typical. They have said that there was no, or very little, public investment prior to 1979 and it had been inadequate and impossible post-1979, conveniently forgetting the past 10 years.

Both arguments are specious. The Government do not want to invest in public water supply and disposal. They do not believe in it because they do not believe in public service as a concept. There may be a few Conservative Members who believe in public service as a concept, but I do not believe that the Secretary of State does. Where public service has remained, instead of being given, even on a limited scale, quality, sustenance and high standards, it has been undermined in Bill after Bill, and regulation after regulation.

As an example of this—I am sorry that the right hon. Member for Woking (Mr. Onslow) is not here—the Government have removed local authority members from water authorities. How much more undemocratic can they get? I believe that that was done because originally they wanted to privatise water anyway and that was a step many years ago in that direction. It carries dogma beyond the limits of logic, common sense and political sagacity. Political sagacity is in short supply among Conservative Members and particularly at No. 10 Downing street.

I wonder what Alderman Roberts of Grantham would have said if it had been suggested that the purity and public health of Grantham would in future depend on a private

company whose area covered the whole of the east midlands and East Anglia, which had shares traded in Tokyo, New York and Frankfurt, which could perhaps be controlled from anywhere in the world, and which could be subject to a takeover bid by any multinational. I wonder what today's inhabitants of Grantham would think about that. I do not think that they know the full implications of the Bill, and that is one of the problems.

When the Secretary of State opened the debate he fairly and quite properly lauded private water suppliers. We in London know that our first private water supplies came from the great New River company. It collected water from springs in Amwell in Hertfordshire and brought it to London and sold it. It was very good water. It came from the chalk of Hertfordshire and was God-given. There was nothing wrong at that time—and, indeed, there is not now, in Tory terms—in the collection, impounding, piping purification, distribution and sale of pure water by private companies. That is carried on at the moment under due regulation, but the Bill does not continue that pattern. It destroys a pattern of statutory water companies which I do not support, but at least they worked in harmony with the municipal services for over a century. That will now go.

Not only has the London county council disappeared but the Greater London Council has disappeared with it. In my constituency that is of considerable significance in terms of health. Every drop of water which falls on the roofs, roads and pavements or comes from the baths, closets, factories, works or workplaces in north London is piped into my constituency to the Beckton purification works. From there it is pumped over 30 ft from the low-level to the high-level sewers before it is purified and goes into the Thames.

When I first became interested in politics my party chairman was a member of the London county council and was chairman of its rivers and drainage committee. At that time he was heavily involved in a huge capital programme of £20 million. That does not sound much now, but I assure Conservative Members that in the 1950s it was a great deal of money and it was spent on improving the northern and southern outfall works of the London county council. Nobody heard much about that. We did that in London for the disposal of water just as it was done in Birmingham for the supply of water, and we are to lose control even of our pumps and the equipment that deals with these matters in London.

The same loss will be suffered in the constituencies of every Conservative Member and that means that we shall be in the hands of managers such as Mr. Roy Watts. They will be cruising the world looking for worthwhile investments, perhaps in water or perhaps in other things. They will be sharks in an international sea. The plcs will be predatory in order to sustain their activities. In the end the Director General of Water Services will have to agree the necessary funds to keep water supplies going in London and every other part of the country. What collateral for any international speculator!

If the Bill goes through the other place substantially as it is now, we will have a sort of internationalisation or multinationalisation of our public health services. The House and the public may not yet have appreciated that. Ministers are in the Chamber. If I have said anything that is incorrect I shall gladly give way and allow them to correct me. The Bill reaches the low water mark of the limited and unacceptable philosophies of the Government. It pushes private ownership into areas where it is not only unwelcome but unworkable and in the end the public will not stand for that. It besmirches the sense of responsible citizenship which lurks within most Conservative voters. That is the reason for their present unease. If the Bill becomes an Act it will pollute the standards of public life throughout the nation in the way that polluted water poisons the body. In due course, but not first without weakening the body politic, the Bill and its works will be rejected because a reluctant and disbelieving public will not stomach it or the Government from whom it sprang.

8.54 pm

Sir Charles Morrison (Devizes): Most of the speeches so far have been aimed at the contents of the Bill. On the whole, I should like to look at it rather more politically. On reflection I have decided to vote in favour of Third Reading, but without enthusiasm, because I do not think that there is much, if anything, to be gained from an upheaval which will do no more, as my hon. Friend the Member for Tiverton (Mr. Maxwell-Hyslop) said, than turn public monopolies into private monopolies.

I know that the water plcs will enjoy the freedom to borrow in the market the capital that they need to invest and certainly a great deal of investment is needed. But existing water authorities could enjoy that freedom as the result of an administrative decision freeing them from the constraints of the public service borrowing requirement and the overall effect on the economy would be precisely the same.

I shall accede to the Chief Whip's request to support the Bill even though that means that I shall be acting contrary to the desires of Conservatives in my constituency. I emphasise the word "Conservatives". I could say all Conservatives or more certainly all Conservatives who have spoken to me about the Bill. I suspect that lurking somewhere in my constituency there is one or perhaps about 100 Conservatives who support the Bill. However, I must admit that I have not yet met them. That is of some concern to me but it may be a worry about 100 times greater for the Government because I doubt whether my constituents are unique.

My worries fall roughly into two sections. First, there are those who are worried about the National Rivers Authority. The objectives of those people and the objectives of the Government are not very different, but those people do not share the Government's optimism about the Bill's ability to achieve the Government's objectives. Obviously the proof of the pudding will be in the eating. As my right hon. Friend the Member for Woking (Mr. Onslow) said, there is much concern among anglers and others. Their concerns have not been adequately expressed because time for debate has been limited or non-existent. Therefore, I hope that the Government will listen with sympathy and with concessions in mind to the debate in another place in the knowledge that those who are worried about the NRA simply want to be more certain that it will live up to expectation.

The second section of people who are much more opposed to the Bill are the massive numbers who are concerned that they will have to face a major rise in prices. It is difficult to believe that they are totally wrong. The rise in prices may be the fault of the Labour Government, who cut investment in water, but the electorate now care little or nothing about that Labour Government. For some of

[Sir Charles Morrison]

us 10 years ago may seem like yesterday, but for the man in the street 10 years ago has disappeared into the mists of time, like the South Sea Bubble, the loss of the American colonies and other disasters. Therefore, I urge the Government to remember that, while the Whips may hold sway in the House, they have no influence in the country.

8.59 pm

Mr. Pike: The hon. Member for Devizes (Sir C. Morrison) would be better advised at least to abstain tonight, if he does not follow his conscience and vote against Third Reading. I do not believe that there is any reason why he should feel confident that the other House will take the necessary action to put right a Bill about which he has expressed strong reservations.

The Secretary of State opened the debate. He gave his reasons for believing that Government action was necessary to deal with the problems in the water industry. If he really believes that the position is as he stated, he should recognise that the present set-up for the industry results from the Water Act 1973, which was implemented by a Conservative Government. Changes were made by the Water Act 1983 which removed local authority representation from water authorities.

If I had been able to make an intervention in the Secretary of State's speech, I would have asked him if, in all honesty, he believed that the Minister who steered the 1973 Act through the House should still hold office in the Government as a member of the Cabinet if the legislation was as disastrous for the industry as the Secretary of State believes. If it has failed, surely the Minister who made that terrible blunder, in the Secretary of State's view, is not fit to hold office.

The hon. Member for Pudsey (Sir G. Shaw) thought that in the main we can be proud of the water industry, although there are problems. The Select Committee on the Environment drew attention to some of the problems when it inquired into rivers and estuaries in 1987. One result of that is the establishment of the National Rivers Authority. It has to be accepted that it was not the structure of the industry put through in the 1973 Act, which set up the river basin concept and the 10 authorities, that led to any failure. If there have been failings, they have resulted from lack of investment in the industry, which is directly the responsibility of Government.

On numerous occasions Ministers have quoted what happened during the Labour Government's period of office between 1974 and 1979 but they did not mention that the Conservative Government, who have been in office for almost 10 years—next month will see the tenth anniversary of them taking power—have had sufficient time to ensure that water quality is right, that the standard of rivers is improving and that sewage treatment is being carried out more effectively. All the necessary work might not have been completed, but if the Conservative Government had made proper investment over the past 10 years there would not be as many problems.

Only a few weeks ago in his Budget speech the Chancellor announced a surplus of £14 billion to £15 billion but still the Government have failed to invest the money necessary to deal with the problems. Investment is the key. If the Government had a mind to do so, they could retain the industry in the public sector. It does not have to be privatised.

The Secretary of State failed to recognise that the Labour party has not argued for the status quo or that no changes are necessary. We accept that some things need to be changed. We accept that the separation of the water functions from the regulatory body is a step in the right direction. However, at every stage of this Bill we have expressed our fears that in the end the NRA will not necessarily receive sufficient powers, staffing or resources to carry out its function. The Minister referred to the powers of the director general. We fear that the director general will not have the powers to deal with the regulatory functions provided for that position in the Bill.

Not only is there strong opposition to the Bill in this House, but water privatisation did not receive the support of the majority of voters at the last general election. Only one party during the last general election campaign was committed to privatising the water industry and that party did not receive the majority of votes from the people voting in that election. I accept that it received more votes than the Labour party, but if we include the votes for the other Opposition parties, there were far more votes against the water industry being privatised than there were in favour of it.

Opinion polls show that the public are still opposed to the privatisation of the water industry. This Bill will not deal with all the problems. At the end of the day, the legislation will fail because profit will become more important than dealing with the problems in the industry.

If the private sector had been able to yield a profit from water supply, instead of having 20 per cent. of the water supply in the private sector now, there would have been 100 per cent., because people would have invested in it and developed the system. The simple fact is that sewerage has always been a public service function because there is no profit in sewerage and there never will be.

If the hon. Member for Hendon, South (Mr. Marshall) believes that metering is a fair solution, he fails to recognise the penalties that will be imposed on people with large families, families with disabled people in them, and other families who face extra demands for water because of problems within the family.

I recognise that other hon. Members wish to speak so I will be brief. I believe very strongly that this Bill fails to tackle the problems. If the Government were willing to deal with the problems in the industry, there could be an effective regulatory body and an NRA. With proper investment for the industry and a willingness on the part of the Government, the problems could be dealt with. The public would have confidence that the public sector could solve the problems. The Government should change their minds and drop the Bill now.

9.7 pm

Mr. Alastair Goodlad (Eddisbury): I support the Third Reading. Over the years I have had the pleasure to be a member of many Standing Committees, but being a member of the Water Bill Committee gave me the most unalloyed pleasure. My hon. and learned Friend the Minister for Water and Planning and his team of Ministers comprehensively outplayed the Opposition in every

department of the game. They won all the arguments, not only because of the skill of their advocacy, but because of the inherent superiority of their case.

I was very interested to hear the remarks of the hon. Member for Copeland (Dr. Cunningham), who came down as unambiguously as I have ever heard any Opposition Front Bench spokesman come down in favour of renationalisation of the water industry. The Labour party has lost much of its empire, but it is re-finding a role, nationalisation. Clause 4 is what the Labour party is all about—the means of production, distribution and exchange.

My hon. Friend the Member for Tiverton (Mr. Maxwell-Hyslop) says that this is the biggest act of nationalisation ever done by the Conservative Government; if that be the case, perhaps the Opposition will follow us into the Lobby tonight.

This measure differs from any other denationalisation measure in so far as a quarter of the industry is already in private hands. I would like to talk briefly about the statutory water companies, which have supported the Government's proposals to transfer the water supply and sewerage operations of the water authorities into the private sector and have been involved in discussions with the Department for many months about the details. They have certan legitimate concerns about how their interests and those of their consumers and employees will be affected.

The areas of concern are, first, debt write-offs. The statutory water companies cannot be relieved of their present debt liability in the way water authorities can. Many of the water companies had very high gearing ratios and the adjustment of water authority debt to provide favourable gearing will inevitably cause statutory water companies to be less favourably regarded by financial institutions.

Secondly, there are the flotation terms. These might make investment in water service plcs a more attractive proposition than a statutory water company and could reduce the relative creditworthiness of the statutory water companies.

Thirdly, there are the differing financial regimes. The authorities and the companies have operated under different regimes approved by Parliament. In the case of the authorities, this has tended to produce low levels of borrowing and high charges, whereas with the statutory companies there have been high levels of borrowing and low charges. The rate of return is therefore very different, as is the level of charges under which the undertakings will enter price increase limitation regimes. Unless these differences are recognised, the ability of the statutory water companies to fund their businesses will be prejudiced, as they will be seen as less creditworthy than the privatised water authorities.

Their capital structure is unique. In addition to conventional debenture and loan stock borrowing, they are based on ordinary share capital, whose dividends historically have been subject to statutory limitation. The yields on these different categories of shares have offered virtually complete security as a result of the ability of the companies to levy rates on consumers reflecting the costs incurred. These shares were attractive to investors seeking fixed income securities offering franked income. The situation will now be totally changed, and it follows that the K-setting regime should recognise the need for the statutory water companies to establish a substantial equity base.

Fourthly, on takeovers, my right hon. Friend has announced that the privatised water authorities will be given a golden share to protect them during their fledgling years after the flotation. Although the statutory water companies are already in the private sector, the fledgling argument could also apply to them. They will have to adjust to a different financial and commercial regime; they will have to adjust to the requirements of the Director General of Water Services and the NRA and will have to carry out substantial capital works in order to comply with the requirements of the EC directive on water quality. The reasons for giving the privatised water authorities protection against takeover could equally be argued to apply to the statutory companies.

My right hon. Friend has also announced special MMC procedures in respect of mergers of water undertakings which have a gross asset value of more than £30 million to ensure the effective operation of comparative competition. However, I do not believe that the size of the operation is any guarantee of efficiency. Small undertakings can be just as efficient as large ones, and in some cases more so, and I do not think it is logical that the director general should be deprived of efficient comparators simply because they are small. This is certainly an argument for applying the MMC procedures to all undertakings.

I am aware that my right hon. Friend will have a discretion to refer small mergers, and I hope that he will occasionally be disposed to exercise it. As my hon. and learned Friend said in the debate on Report stage:

"to preserve all 39 water undertakers in independent ownership . . . would be to tend to freeze the existing pattern of ownership in the industry, and there is no reason to suppose that . . . is necessarily the best or most efficient."—[*Official Report*, 22 March 1989; Vol. 149, c. 1176.]

It is likely that in certain areas that course may be the most appropriate in circumstances of comparative competition. I hope that my right hon. Friend will bear in mind the fact that where there is no mandatory requirement to refer there may be a public interest in so doing.

These are matters to which there is no easy answer. I know that my hon. and learned Friend the Minister has listened carefully to the Water Authorities Association and the companies and that his officials have been extremely patient and helpful. I hope that during the remaining course of the Bill answers will be found to those problems and I wish the Bill a successful passage.

9.14 pm

Mr. Boateng: We have concentrated on Third Reading on two aspects of privatisation—the privatisation of environmental protection and amenities on the one hand and the privatisation of the collection of water and its distribution on the other. At the outset the Secretary of State reassured us that he did not intend to privatise the raindrops, only the places where those raindrops are collected or where water welled. We are supposed to give thanks for that much comfort.

I want to concentrate on one other aspect of privatisation—the privatisation of the public health facility that the public supply and distribution of water has traditionally sought to protect.

When we look at the formation of the water industry as we know it today, we see that our Victorian forefathers

[Mr. Boateng]

sought above all else to protect the nation's health. It is that self-same public health which the Opposition submit is at risk as a result of this act of privatisation.

The Secretary of State told us, in an insight that he had into Labour history—I would say a blighted insight—that the Bill was the single most important measure of environmental protection since the Labour party was a gleam in Keir Hardie's eye. That was the Secretary of State's analysis, which I want to take him up on. I want to look at a period in which the Labour party was a gleam in the young Keir Hardie's eye.

We heard from the hon. Member for Pudsey (Sir G. Shaw) of the situation in the French Cameroons. I know nothing of the French Cameroons, but I do know something of the Kingdom of Ashanti, where I was baptised, and I do know something of London, the city in which I was born.

I want to take the Secretary of State back to the 19th century, as he would have us do, and refer him to a letter in *The Times* of 11 February 1875 from a Mr. Humphry Sandwith of Wimbledon. What was it that created such a feeling of anxiety in Mr. Sandwith at that time? He begins his letter to the editor by reminding him of the great steps forward that were taken in water sanitation. He says:

"On the outbreak of the Ashantee War you did good service in the cause of sanitary reform on behalf of our negro fellow-subjects and a few unfortunate Englishmen who were condemned to linger in bad health or to die on that pestilential coast. You pointed out clearly that a bad climate was robbed of half its terrors if the inhabitants could command pure air and pure water".

I am bound to say that I take issue with Mr. Sandwith on his description of the Gold Coast as being a pestilential coast. I also take issue with him on the benefits to the people of the Gold Coast of the Ashanti war. My great grandfather fought on the losing side in that conflict. However, I am bound to say that as a result of his efforts and those of many of my ancestors, we were able to ensure that Ashanti became only a protectorate, not a colony. I know that many Conservative Members from the district commissioner brigade know full well the distinction between a colony and a protectorate. The battle was not completely without its victory.

The editor of *The Times* is taken to task on the impact of the state on that day in 1875 of drinking water and its supply to certain sections of our city. Mr. Sandwith says:

"I now venture to ask for your powerful aid, not on behalf of Africans, but of the unfortunate dwellers in the West-end of London, the peers, spiritual and temporal, the baronets, knights and esquires who inhabit the fashionable quarters of this singularly filthy and wealthy city."

His reference to a

"singularly filthy and wealthy city"

is redolent of certain aspects of the city in which we live today. He goes on:

"The immediate cause of my appeal is the following fact. At a large West-end club the drinking water supplied by a certain water company left such abundant deposits of mud in the cisterns that it was necessary frequently to clean them. I saw large cakes of this dried mud, which had a peculiarly offensive appearance; a portion of it was sent to an eminent analyst."

Under the Bill, which the Government seek to push through on Third Reading, the public will be obliged to rely on water companies themselves for analysis, but in those days at least that work was done by an independent analyst. The writer continues:

"He found it to consist of various unwholesome debris and of a considerable quantity of human excrement. Now, Sir, I ask, are the people of this city, are the wealthy and refined, as well as the poor and the helpless, content to go on drinking this repulsive mixture? A grand scheme is afloat to tunnel the Channel, millions are found to lend to Czars and Sultans; cannot London find money to bring us pure water from Wales?"

That was in the 19th century, when that correspondent to *The Times* felt it necessary to draw to the attention of the editor and the general public the consequences of privately owned and distributed water. His response was to suggest—as came to be the case—that the municipalities and the public interest be protected by bringing the supply and distribution of water under public control. That made sense then to our forefathers in Ashanti and in London.

The Secretary of State for the Environment—and we have done our research—does not appear to be a member of any London club, although no doubt he would count himself among the wealthy, if not the refined. It must be said that his hon. and learned Friend does belong to the Carlton. However, one would have thought that even out of concern for the wealthy and refined, for the members of London clubs—never mind the poor and oppressed for whom the Conservatives have never shown concern—and for public health, even at this late stage the Government would abandon this disastrous measure. In so doing, they would save themselves from the fate that Lord Rosebery pointed out lay in wait for any Government. He said:

"Water is one of those points which has wrecked a powerful government before now, and may wreck governments again."

We believe that the Bill will wreck the present Government, and that they will rue the day that they brought it to this House.

9.22 pm

Mr. Alistair Burt (Bury, North): When the history of this Bill is written, the contributions of the hon. Member for Brent, South (Mr. Boetang) throughout the Committee stage will be remembered as a delightfully irrelevant footnote. He has kept up that tradition right to the end, and I am sure that the whole House thanks him for his further eloquent but totally irrelevant contribution to the passage of our great Bill.

As we near the conclusion of this stage of the Bill, it is right that we should be as honest as possible—as we always are. My right hon. and hon. Friends recognise that it is a tricky Bill and one of whose merits it is difficult to convince the public. However, the public will ultimately be convinced of its value because it epitomises many of the things that the Government have striven to achieve over the years. The Government have taken upon their shoulders the mantle of the radical, belying the term Conservative that is part of the title of the party. We have been radical in respect of this issue.

The Government have also tackled, and not for the first time, sceptical public opinion. In this country, public opinion is innately conservative. Much needs to be changed that can only be challenged by the radical. We have also challenged the cosy presumption that public and state is best—and in some cases is all. That belief flies in the face of what people have often said, and flies in the face of that which people have often voted against. Nevertheless, it is something we have had to tackle.

In dealing with the objections of my own constituents, I have found that the more the Bill is explained to them,

and the more that matters are made clear, the more support the Bill generates. Many people are unaware that 25 per cent. of the country is already served by private water suppliers. Many people to whom I have spoken have been unaware that there is public regulation contained in the Bill to ensure quality—the National Rivers Authority, the Director General of Water Services. Many have been unaware of the failure of past investment which we have covered innumerable times, both in Committee and on the Floor of the House. It is important that some of the failures of previous Governments have not been well touched on by hon. Opposition Members tonight.

In dealing with people's concerns, we have been able to point to some encouraging things. We have recalled their concern about other measures carried out by the Government, principally gas and British Telecom. When the measures have been put through, opposition has fallen away and there has been encouragement of wider share ownership and wider participation by employees in their own industries. All these are things that the Government have tackled in many other areas in exactly the same way as they seek to tackle them in the water industry. There are areas where public concern has been very strong at the time that the measure has gone through Parliament but has faded away afterwards as the benefits have become clear.

When it comes to future benefits, I ask the Minister to comment on a couple of things when he replies to the debate. The first is the benefits that may come from the sale of expertise abroad. When private companies develop expertise in dealing with water in this country that technology will be available for use abroad. Why do we always assume that the French will come here and run our industry? Why do we not assume that people in this country will be able to export their expertise?

Perhaps the Minister should also mention the consumers' charter. Again, this is something which is often unknown to our constituents until we talk to them about it as a future benefit which they do not at present receive but which they will get from the way in which water will be supplied to them in future.

If there is one matter, in particular, which is inadequately dealt with at present and which the Minister may be able to clear up for the future, it is disconnections. The Minister is aware of the reservations felt that I and many on both sides of the House feel about the fact that at present a court order is not necessary before the water supply is disconnected. That should become the norm. I ask the Minister very strongly to consider this and see what the Director General of Water Services may make of such a code of practice if he could put it his way for consideration. That would be a very useful thing to do.

My constituents are particularly reassured when they think about the policies of hon. Members of the Opposition. When they think about some of the measures that we have introduced, they remember that the Opposition have caved in to our views on the sale of council housing, on the rights of the individual in trade unions, on renationalisation of many industries. They are encouraged that once again our views will hold sway and that once again the Opposition will cave in.

We believe that the measure will work. It must work. With these things in mind, opinion in the country will be convinced and the measure will be seen in future as a great success.

9.27 pm

Mr. Elliot Morley (Glanford and Scunthorpe): In my brief remarks I will not go over many of the views, well expressed in the course of the debate, about the mistaken assumption that taking a natural monopoly and putting it into the private sector will somehow improve quality standards and also protect consumers. I will just touch on the argument that those people who live alone will benefit from metering. It ignores the fact that, on the water boards' own figures in the trial areas where metering is taking place and where the standing charges have been applied, even a pensioner will pay significantly more under metering than at present. Those people who have more than one person in the house, who have young children or who care for an elderly relative, will pay a great deal more because of the greater amount of water that they will need. It is not very helpful for some hon. Members to suggest that water will be rationed because of its high costs and that that is a good thing in itself.

Something which has not so far been dealt with but which came up in Committee is the concern of people who have bought houses on estates where the sewers, laid by private contractors, are sub-standard, and will not be adopted by the local water authorities or private plcs, if and when they come in, will not adopt the sewerage systems. Incidentally, according to the argument of some Government Members, everything in the private sector is rosy, everything will be more efficient and better delivered. If that were the case, constituents of mine in Winchester avenue, Bottesford would not be suffering from sub-standard sewerage systems. Nor would those of the many hon. Members from all parts of the country who have raised similar problems.

Under the Bill the same people who laid those sub-standard sewerage systems will presumably be able to tender successfully to lay more such systems. The Bill does not protect quality standards. It represents yet another missed opportunity. It could have improved water quality, and protected conservation access and sites of special scientific interest. The Secretary of State has conceded a very small point on national parks: there will, he says, be consultation on the part of the privatised water companies. Nevertheless, they can still ignore the wishes of local people and the parks authorities, and proceed with developments that do no fit in with the areas in question.

Some hon. Members have argued strongly for tight regulation of prices. Such regulations will pose the risk that companies will resort to maximising their assets by capitalising those assets—in this instance, land, often of scientific importance and natural beauty. The Bill poses a danger to conservation, public health and water quality. It also represents a missed opportunity of dealing with private sewers and giving water companies powers to step into estates such as Winchester avenue, make good the damage and bill the people responsible, rather than giving them rights to tender for contracts to do the same again to the public system.

9.30 pm

Mrs. Ann Taylor (Dewsbury): The Minister of State found himself in rather a bad temper earlier—not for the first time, I would say. I do not intend to follow his example. I was, indeed, intending to start on a note of congratulation: the Secretary of State was absent for some of our debate this evening, and this time it was for a very

[Mrs. Ann Taylor]

good reason. He was attending the christening of his grandson—*[Interruption.]*—of his two grandchildren: I congratulate him doubly. I shall make the obvious comment: I trust that they were not christened with Perrier, which seems to be the Secretary of State's favourite.

This evening's debate has been interesting—despite being the culmination of many hours of discussion—not least because of the enlightening comment from the hon. Member for Hendon, South (Mr. Marshall) that water will be better in private hands because those who can afford it will be able to obtain the water that they need during a drought. That shows the market going to extremes.

A Third Reading debate is supposed to consider a Bill as it stands after Committee and Report stages. Considering the Government's attitude, however, it is not surprising that today's debate has been something of a repeat of the Second Reading debate in December. Throughout our proceedings, the Government have dug in their heels and refused to listen to reason or public opinion, or to take account of the practical considerations that formed the basis of our debates and amendments in Committee.

There are three basic reasons why we—and public opinion—oppose the Bill as it stands. The first is one of principle. When we talk about the water industry, we are talking about an industry that is vital to the individual health of each and every one of us. More than that, we are talking about the public health of the nation, and indeed the long-term health of future generations. That is one of the reasons why the public know the dangers of water privatisation better than the Government. They recognise that advances in water purity and the safe disposal of sewage have contributed more to improvements in health than many of the drugs and medicines that are given so much credit. Almost all of that has been done at public expense by public authorities—in the main by those bodies that the Government love to vilify, the local authorities.

The second reason why we opposed and still oppose the Bill is practical. Everyone knows, and we have always said, that investment is necessary to bring the industry up to scratch. We have had arguments about the level of investment under Labour and Conservative Governments, and I am happy to repeat them this evening. The facts are clear: the average level of investment under the last Labour Government was substantially higher than it has been under Conservative rule. Leaving that aside, and looking to the future, what is likely to produce more investment?

The Government argue that the private sector will provide more investment. Leaving aside the Chancellor of the Exchequer's comment that investment in the private sector will be more expensive—which must somewhat reduce the amount of investment that the industry will receive—will the private sector invest more to clean up our rivers, to tackle pollution, to clean up our beaches and to provide pure drinking water, free of aluminium and nitrates and, more expensive to achieve, free of lead?

What incentive will the private sector have to make that level of investment? What incentive will there be for the industry in private hands to invest an extra £1 billion to clean up the beaches an additional £3 billion to improve drinking water quality or an extra £9 billion to confirm with EEC directives? What extra return will investors receive from additional investment of that magnitude? Will the industry sell more water or dispose of more sewage? Of course it will not.

The return to the private investor will not be high enough unless the Government's flotation is done in such a way as to cheat the taxpayer and the consumer. Water authorities are supposed to be valuing their present assets and liabilities—not an easy task when, for example, the Yorkshire authority does not know the condition of 70 per cent. of its sewers and does not even know where 30 per cent of them are.

The sampling techniques which form that basis of the asset management plans which are being drawn up have been described to me by a statistician, consulted professionally about the issue, as nothing more than

"an attempt to obtain a statistical blessing on guesswork."

Anyone who buys into the industry will be buying a pig in a poke, which, on the basis of market forces, does not look that attractive. Indeed, the stockbrokers Seymour Pierce Butterfield Ltd. said in their report on the industry and privatisation:

"It is accepted that in terms of core operations, such as water supply, sewage treatment and disposal, growth is distinctly limited."

That does not sound an attractive proposition for the private investor. That, however, is the position before Government intervention. I say that because the one thing this so-called free market Government cannot do is let a privatisation of this kind flop. That is why they are busy interfering with and intervening in market forces, stacking the cards in favour of potential investors.

I am sure that we shall soon hear about proposals for debt write-off. The massive debts of the water industry will not be passed to the private sector. They will be met, as usual, by the taxpayer. We now have the Government's latest document for price-setting. That confirms what we discovered in Committee, which is that the initial round of price-fixing will be done by the Secretary of State and that the new regulator, the Director General of Water Services, will not be involved.

We heard today that the Secretary of State has appointed the first Director General of Water Services, the man who, according to the Government, will look after the interests of consumers. He is, the House will not be surprised to learn, a Treasury civil servant apparently with considerable experience of the rates of return of nationalised industries, but with no experience of looking after the interests of consumers.

That fits in with the Government's outlook generally, because when the first round of price-fixing takes place in the autumn, consumer representatives will not be consulted or have any input. Indeed, the document on price-fixing says:

"The primary duty will be to ensure that companies are able, in particular by securing reasonable returns on their capital, to finance the industry."

It goes on to say that subject to that duty will be a

"duty to ensure that the interests of customers are protected."

In other words, the duty to ensure the interests of customers, of consumers, is given only as a secondary duty, secondary to the job of securing reasonable returns on capital. That means that prices will be higher, investment costs will be passed directly to the consumer and, because the K factor in prices will reflect a basket of

charges, domestic consumers could end up subsidising industrial polluters. That is a long way from the principle that the polluter must pay.

The Government are interfering with market forces so that the industry will be more attractive to private investment. They are doing this in three ways. First, they are doing it with regard to debt write-off. We await the Minister's announcement, and if he does not intend to write off the debt, I hope that he will clarify the position by telling the House this evening that that is the case. The second way in which the Government intend to make this industry more attractive is by allowing higher prices once the industry is in the private sector, and by allowing cost pass through to the consumer. The third way in which they are making the industry attractive is by handing over to the private sector assets and powers that will inevitably be used against the public interest.

Looking again at the report of the stockbrokers and city analysts, one sees what they say of a private water industry:

"Low increases in earnings per share, limited potential for growth in dividends, and a semi-static market do not, at first sight, suggest an exciting investment. This is not a view, though, which is likely to be shared by a number of potential predators. Any company that could optimise the use of a water authority's client base by using it to expand the market for its existing products, perhaps in a related field, stands to benefit significantly. Companies in the chemical waste disposal and heavy construction sectors might find particular attractions in bidding for privatised water industries."

There we have a summary of what this Bill is all about. The words of the City analysts are "potential predators". They are the people who have their eyes on this industry; they are the people who will make most out of it once it goes into the private sector.

We do not want to see, and the public do not want to see, a water industry that is owned by chemical companies and construction companies, yet these are the very companies identified by the City analysts as most likely to be interested in buying into this industry. If water companies are to be owned by chemical companies, and then those water companies are to contract out the analysis work of the NRA, the NRA will become a farce. The likes of Mr. Court of South West Water will be well on their way to achieving their objective of outwitting the regulators, and the chemical companies, or other polluting companies, will be well on their way to ensuring that the polluter does not pay.

Of course, there is also the land issue. Of the land, the city analysts say:

"Water authorities with significant amounts of surplus land may well realise sizeable capital gains by selling it."

Of course, the new water plcs will be given that land when the industry is sold, so that they may realise those gains. To asset-strip and take the gain of the land values wherever possible is certainly the objective of those companies.

Another development has become clear—and I hope that the Minister will confirm the reports that have appeared in the press. It has become clear that the Government have decided to give important planning powers to the new water companies. These private companies will be able to decide whether a building development will have adequate water supply and sewerage facilities. How very convenient for the construction companies that buy up water companies and get 500,000 acres of land, much of it in areas of outstanding natural beauty. The construction companies will decide land values and where development should take place. That is one of the reasons why the French are interested.

If the price of the industry when flotation takes place is low enough and if enough bribes are given, the water industry will be sold. If that happens, the consequences will be with us for many years to come. Fortunately, the public realise what this is all about. The public, like the Opposition, want a water industry that is accountable not to the shareholder but to the consumer. That is why they want us to vote against the Bill.

9.45 pm

The Minister for Water and Planning (Mr. Michael Howard): One of the last points made by the hon. Member for Dewsbury (Mrs. Taylor) was typical of the Opposition's approach to the Bill. There is no truth whatever in her suggestion that the water companies will be given powers over development. The position will not change. The water companies will have a duty to provide infrastructure for development and they will have a right to be consulted, just as they have at the moment. That was an absolutely typical example of the way in which the Opposition have sought to mislead, exaggerate, scaremonger and play upon people's fears.

Mrs. Ann Taylor: Will the Minister give way?

Mr. Howard: No, I have already dealt with the hon. Lady's point.

The Bill has been discussed in Standing Committee and on the Floor of the House for over 187 hours. The last few hours have been as interesting as ever. I shall deal at the outset with another example of scaremongering by the hon. Member for Stalybridge and Hyde (Mr. Pendry). He suggested that, contrary to earlier assurances, workers in the industry will not be provided with a pension scheme that includes index-linking. That is not so. They will be entitled to terms, through the mirror image scheme, that will be exactly similar to those in the local government superannuation scheme. It will be at the same cost to employees and it will include index-linking. I hope that the hon. Gentleman will return to his sponsor, NUPE, and ask it to put the matter right and tell the truth to its members who are employees in the industry so that they are not misled.

In his interesting speech my hon. Friend the Member for Birmingham, Selly Oak (Mr. Beaumont-Dark) based his opposition to our proposals on what he saw as the lack of competition in the industry. With respect to my hon. Friend, I think that he exaggerated the competition that exists in the telecommunications and gas industries and underestimated the extent to which the Director General of Water Services will be able, by comparing the performance of different companies in the water industry, to ensure that the standards of the most efficient spread to the rest of the industry and that the customers of the industry benefit from the greater efficiency. I am confident that in due course he will see the merit of what we are suggesting.

My hon. Friend the Member for Bury, North (Mr. Burt) again expressed his fears about disconnections. He expressed those fears many times in Committee. We are still considering his suggestion that disconnections should take place only after a court order. However, we have decided that the disconnections code should be subject to

[Mr. Howard]

the approval of the director general. That was one of the points in which he was interested. My hon. Friend the Member for Eddisbury (Mr. Goodlad) raised a number of interesting points, which we shall look at carefully.

My right hon. Friend the Member for Woking (Mr. Onslow) and my hon. Friends the Members for Devizes (Sir C. Morrison) and for Tiverton (Mr. Maxwell-Hyslop) —whose speech I was sorry to miss—expressed concern about the strength of powers and the independence of the National Rivers Authority. We shall take care to ensure that the National Rivers Authority is an independent body and that is has the powers that are in the Bill for all to see, as well as the resources that it needs to do its job properly.

I say to my right hon. Friend the Member for Woking that the National Rivers Authority has the duties for which he pressed. We think it right that it should have a discretion when it comes to decide to what extent it is appropriate to take samples, but its duties will be supervised by the Secretary of State, who can issue directions to the authority and whose exercise of that supervisory power is itself subject to supervision in the courts.

The National Rivers Authority is in many ways the cornerstone of our proposals, and it has presented Opposition Members with something of a quandary. It is so obviously a good idea, and so obviously a body that is badly needed that even Opposition Members have found it difficult to attack. Sometimes they have taken refuge in attacking not the proposals contained in the Bill but the proposals contained in the arrangements which were previously proposed for the industry and which were withdrawn by my right hon. Friend the Secretary of State.

Perhaps the true attitude towards the National Rivers Authority was let slip—as the true attitude of the Opposition so often is—by the hon. Member for Bootle (Mr. Roberts) when he was winding up our debate on 22 March. The hon. Gentleman sneeringly and derisively referred to a description of the National Rivers Authority provided by my right hon. and noble Friend Lord Crickhowell, who will be its first chairman. Lord Crickhowell had referred to the need to operate

"a slim, efficient, cost conscious organisation".

To the hon. Gentleman and his hon. Friends that was a description worthy of derision. He would no doubt prefer a bloated, inefficient, extravagant organisation—an organisation of the kind which was so typical of the Opposition's years in government. Indeed, it was during those years that we saw the remarkable triple achievement of massive increases in water charges, massive increases in staff and a halving of capital investment in sewerage.

Mrs. Ann Taylor: On the specific point of the size and resources of the NRA, surely the Minister should support our earlier amendments which would have given the NRA sufficient resources and powers to do its job properly. If it is to be the slim organisation about which he spoke, that is why it has to contract out so much of its work back to the water plcs.

Mr. Howard: The hon. Lady has made that charge before; there is no substance to it. In eight of the 10 regions there will be no contracting out to laboratories. There will be no contracting out of sampling in any of the 10 regions and we shall respect the safeguards that the National Rivers Authority advisory committee has put forward to safeguard its independence.

Of course, when pressed about the undoubted achievements and advantages of the Bill, Opposition Members say—this is the kernel and crux of the argument —that it is not necessary in order to achieve these advantages for the industry to be transferred to the private sector. All these advantages can be achieved, they say, while keeping it in the public sector.

This is a straightforward proposition. It is, moreover, a proposition which can be tested. It can be tested against the record of the Labour party when in Government; it can be tested against the record of this Government. What the Opposition have never done is to make it clear which, if either, of these tests gives them any confidence that the argument which they advance is a sound one. That argument can hardly be said, even by Opposition Members, to survive the test of the industry's performance while their party was in government.

We know—the figures are incontrovertible—that capital investment in the industy fell by one third during the Opposition's period in Government. Investment in sewage and sewerage services fell by no less than one half. That fall continued during the period when the right hon. and noble Lord Callaghan of Cardiff was Prime Minister in an Administration in which the hon. Member for Copeland (Dr. Cunningham) served successively as parliamentary private secretary to the Prime Minister and as a Parliamentary Under-Secretary at the Department of Industry.

One might have expected that those cuts would have been marked by great heart searching on the part of the Government who were responsible for them. It might have been expected that the most anxious consideration would be given to the effects of those cuts on our rivers, on our bathing waters and on our water environment generally. I turned for enlightenment to the autobiography of Lord Callaghan, so aptly entitled "Time and Chance". I turned to the index of the book. Do we find there page after page of reference to anguished discussions on the future of the water industry, and on the effects on the industry of those cuts? I fear not.

I looked under water; there was not a single reference. I looked under sewage and sewerage services; not a single reference. So far from being accompanied by a gnashing of teeth or a wringing of hands, or indeed any realisation of the damage that was being done to our water environment, those cuts were made without any mention, without any regret, without any realisation of the enormous damage that they would do.

I thought that perhaps the then Prime Minister was too busy on grander matters to have concerned himself with these minutiae, and I was anxious to be fair to the Labour party, so I turned to the memoirs of Lord Barnet, who was Chief Secretary at the time. I looked in the index of his book for a reference to water; there was not a single one. *[Interruption.]*

Mr. Speaker: Order.

Mr. Howard: I looked under sewerage services; there was not a single reference. But, to be fair to the right hon. Gentleman and the Labour party, there were some references which were relevant to this subject. There were three—*[Interruption.]*

Mr. Speaker: Order.

Mr. Boateng: On a point of order, Mr. Speaker. Can it possibly be in order for this tour around the memoirs of previous distinguished members of the Labour party to be made at this stage of the Bill? Is it any more in order——

Mr. Speaker: Order. What is being said is in order.

Mr. Howard: This is a test of the policy which the Labour party is putting forward. I found three references of some relevance to this matter in the memoirs of Lord Barnet under the heading "Water workers strike spy". On page 169 of the book, under the evocative chapter heading "Gloom and doom", we read:

"There was unofficial action of a most damaging kind in the water industry, with many homes without water and elderly people having to use stand pipes."

That was what was happening in the water industry under the Labour party almost exactly 10 years ago.

If the Labour party's attitude does not pass that test, let me suggest another test to the Opposition. They can hardly say that they wish their policies to be subjected to a test of what has happened while the present Government have been in office. We say that matters have improved under the present Government, but——

Mr. Spearing: On a point of order, Mr. Speaker.

Mr. Speaker: Is it a point of order? Very well.

Mr. Spearing: Is it not a fact, Mr. Speaker, that the Third Reading debate is confined to the contents of the Bill?

Mr. Speaker: I think that the Minister is talking about the Bill.

Mr. Howard: What I am talking about is the policy which is at the heart of the Bill and the Labour party's opposition to that policy. Labour Members are advancing a policy which has consistently failed to give the people of this country the water environment to which they are entitled. It failed while the Labour party was in power and it has not done as well as it should have done while the present Government have been in power because the only way in which we can get the resources necessary to give this country the water environment it needs is by putting the industry in the private sector, and giving it access to private sector resources to enable it to operate with the efficiency which the private sector will provide. That is what the Bill provides. That is the only way in which we shall achieve the advantages that are so essential if we are to proceed with the clean-up of the water environment which all the people of our country wish to see.

The hon. Member for Copeland has repeatedly said that the Labour party will return the industry to the public sector. He does not seem to be in the confidence of his hon. Friend the Member for Dagenham (Mr. Gould) who keeps leaking to the newspapers the fact that the Labour party will not return the industry to the public sector. No doubt that is why the hon. Member for Copeland said that he was willing to set out all the answers to the questions that have been put. However, that will not be in this debate, but in a speech that he will make in a few weeks. He has not told the House the Opposition policy during our debates on the Bill but says that he will wait for a few weeks before doing so. That is a measure of the contempt with which the hon. Gentleman treats the House. I invite the House to treat the Opposition tactics on the Bill with similar contempt and to give the Bill the Third Reading it so eminently deserves.

Question put, That the Bill be now read the Third time:—

The House divided: Ayes 319, Noes 227.

Question accordingly agreed to.
Bill read the Third time, and passed.

BUSINESS OF THE HOUSE

Resolved,

That, at this day's sitting, the Ways and Means Motion may be proceeded with, though opposed, until any hour.—*[Mr. Garel-Jones.]*

Electricity Bill [Money] (No. 2)

Queen's recommendation having been signified—
Motion made and Question proposed,

That, for the purposes of any Act resulting from the Electricity Bill, it is expedient to authorise—

(1) the payment out of the National Loans Fund of any sums required by the Secretary of State for making loans to successor companies in England and Wales which are for the time being wholly owned by the Crown, so long as the aggregate of any amounts outstanding by way of principal in respect of such loans and sums issued out of the Consolidated Fund for fulfilling guarantees given by the Treasury in respect of sums borrowed by such companies from persons other than the Secretary of State shall not exceed £2,000 million;

(2) the payment out of the Consolidated Fund of any sums required by the Treasury for fulfilling guarantees given by them in respect of sums borrowed from persons other than the Secretary of State by successor companies in England and Wales which are for the time being wholly owned by the Crown.

In this resolution "successor company" has the same meaning as in Part II of that Act.—*[Mr. Norman Lamont.]*

10.18 pm

Mr. Bob Cryer (Bradford, South): I am very grateful to you, Mr. Speaker, for giving me the opportunity of raising a number of questions about this money resolution, because I think the procedures of the House are remiss in one or two circumstances. One is in examining statutory instruments and the other is in examining the enormous sums of money which this House authorises. I have a number of questions, which I hope the Minister is briefed to take account of. The first is that paragraph (1) of the money resolution suggests that the payment out of the national loans fund can be made to successive companies in England and Wales, for the time being wholly owned by the Crown, up to a total of £2 billion. That is an enormous sum of money and I would be pleased to learn the terms of that loan from the Minister.

I imagine that the purpose of this money resolution is to take account of questions that have arisen in Committee, because the first money resolution does not cover expenditure which the Government now feel is required. The expenditure that we are considering is of some £2,000 million by way of loan. Will that loan be open-ended? I imagine that it will be subject to the Treasury's consent. What terms and conditions will the Treasury lay down?

Can the Minister clarify the position? Is this a way of handing over up to £2,000 million to the corporations which are, for the time being, wholly owned by the Crown, before they are taken over by successor companies—in effect, handing over this enormous sum of taxpayers' money direct to the Government's cronies who will purchase the electricity generating companies?

I am wholly opposed to the privatisation of the electricity industry.

Mr. Denis Skinner (Bolsover): What sum are we talking about?

Mr. Cryer: We are not talking about a supplement of 2 per cent. or 3 per cent. to recipients of supplementary benefit; or the purchase of the House of Fraser. That could be bought three times with this amount. We are talking about £2,000 million.

Mr. Skinner: My hon. Friend is marginally wrong. The House of Fraser was not bought with real money. According to the report issued by the Department of

[Mr. Skinner]

Trade and Industry, which has not been released to the public, it was purchased through fraud and deceit with what it called funny money.

Mr. Cryer: I am grateful to my hon. Friend. The Government have been giving licence to such tactics in the City. The Secretary of State for Trade and Industry suggests that the report has been withheld from publication to avoid any difficulties in prosecution, but I think that it is because the Government want to cover the whole thing up. In this enterprise culture, large chunks of public assets are being taken from the public. The public are being robbed by this procedure. Assets are being taken from the citizenry and handed over to a clique of the Government's cronies. In those circumstances, it behoves Parliament to know exactly what conditions will be laid down for this loan of £2,000 million.

We have heard before from Department of Trade and Industry reports about loans from company directors to associated companies in which no time limits have been laid down for the repayment of loans. They have been open-ended. I want an assurance from the Government that the loans will be properly laid out, with arrangements for repayment. I want an assurance that we will not have another Blue Arrow situation, with virtually open-ended loans. I want an assurance that the taxpayer will not be left empty-handed as a result of the authorisation of this £2,000 million loan tonight.

I hope that the Minister can give me such an assurance. I am sure that he will agree that, in this enterprise culture, private firms must stand on their own feet and not be feather-bedded by loans of £2,000 million from the taxpayer. I take it that all the Government's cronies who are buying these companies are sturdy entrepreneurs who, if they were offered £2,000 million in loans from the taxpayer, would reject it as out of line with their philosophy.

Mr. Skinner: Some privatisation deals did not work out in the way that the Government anticipated. In the beginning—with British Gas, and so on—it was easy, but my hon. Friend will recall that in the case of British Petroleum, the Government underwrote the shares, with the result that the Kuwait Investment Office started buying most of BP. The Government became scared and said, "Just a minute. All of BP is being bought by people who are friends of the Al-Fayeds, who bought the House of Fraser." Consequently, the Government stepped in and asked, "Can we have those shares back? We shall give you more money to take them off your hands." It could be that the £2,000 million is only a tiny proportion of what might eventually materialise.

Mr. Cryer: My hon. Friend suggests that both the Government and private entrepreneurs can be greedy, unprincipled and unscrupulous. That takes my breath away. There is a suggestion that the Government are using £2,000 million of taxpayers' money when they claim that they are the guardian of the taxpayers' money. I want a complete and adequate explanation of why it is that that £2,000 million is needed.

I see the Chief Secretary to the Treasury sitting smugly on the Government Front Bench, apparently viewing with equanimity the disappearance of £2,000 million in loans in pursuit of privatisation. Yesterday, I visited one of the schools in my constituency where a temporary classroom in the schoolyard has been temporary so long that its plywood panels are warping off. That school has been waiting for a new classroom for two years, yet a £2,000 million loan cannot be found to improve schools across the length and breadth of the country. Nevertheless, £2,000 million can be found to facilitate the handing over of publicly owned assets to the Government's cronies. The Government's priorities need some explaining.

Mr. Skinner: The privatisation of electricity takes account of nuclear power. In order to sell off the nuclear ingredient, the Government have had to wrap it up in coal. It is ironic that the Government are running down the coal industry but cannot sell off nuclear shares on their own, but must cover them up with coal. Consequently, the Government may not be able to sell those shares as well as they thought. Many people will fight shy of buying nuclear shares, even if they are wrapped in coal. The Government need that £2,000 million because they are not sure how well they can sell those shares.

In charge is a Minister who could not even sell computers to the Conservative Party. They all broke down. The entire Tycom computer network serving the Tory constituency parties could not be made to operate, and the whole firm went bankrupt. One can understand why this latest measure is costing the country £2,000 million.

Mr. Cryer: I am grateful to my hon. Friend for his illuminating comments. He makes a relevant point. One questions whether that £2,000 million is a form of subsidy from a Government who oppose the principle of subsidies. As my hon. Friend says, the cost of nuclear power is enormous. The nation has been cheated. We were told by the overpaid decision makers in the electricity generating industry that nuclear power would be cheaper. It has turned out that that is not the case.

We cannot calculate the precise cost of decommissioning a nuclear power station, so we are faced with expenditure of several thousand million pounds just for decommissioning. The Secretary of State for Energy is here. If he has any hard facts that he can contribute to the discussion on the cost of decommissioning, I would be happy to hear his comments. But, of course, he has none: they are entirely unknown.

It may well be that the Minister wants this authorisation in order to hand over £2 billion to help the privatised industry to embark on the decommissioning process. I have been asking a few questions about decommissioning and the cost of running nuclear power stations, the cost of repairs and percentage availability; and it is a pretty appalling story. Yet the Government are proposing privatisation.

In view of Three Mile Island and the fact that the American nuclear power industry has not commissioned a new nuclear power generating plant since before Three Mile Island, because of the enormous cost of investment in nuclear power, it may well be that the sort of money that is being authorised here is to cushion the privatisation process and lure the shareholders into taking up the option the Government are providing. If they do not, the Government and, in particular, the Secretary of State for Energy, will be shown to be as dismal failures as we believe them to be and their policies the disaster that we know them to be.

Mr. John Maxton (Glasgow, Cathcart): My hon. Friend will be aware that, while this money resolution talks about £2,000 million, the Bill itself, particularly paragraph 88 of schedule 12, shows that the Secretary of State has the ability to write off any debt that is incurred up to the point of privatisation. This may not, therefore, be a £2,000 million loan at all; it may be a £2,000 million gift.

Mr. Cryer: That is a very interesting observation by my hon. Friend. I was coming to paragraph 88 of schedule 12 in a moment, but he has anticipated my remarks. There is, however, a second section of the resolution which refers to guarantees by the Treasury in respect of loans, and paragraph 88 of schedule 12 also impinges on this.

I should be very interested to learn from the Minister what sort of guarantees the Treasury will give. Will they be open-ended guarantees in which they hand over a guarantee against borrowing to the privatised companies through the successor companies? Will the successor companies carry with them from the companies which are, for the time being, under this resolution, wholly owned by the Crown, the Treasury guarantees in addition to the loans? Once the companies that are wholly owned by the Crown have been wound up and have disappeared, and once the successor companies have taken over, what is the position with regard to, first of all, loans under paragraph (1) of the resolution and, second, the guarantees under paragraph (2)?

We should be very wary of guarantees given by the Government on behalf of the taxpayers, because they amount to a guarantee that payment will be made by the taxpayers if there is a default on a repayment. That is surely something that we should look at. After all, when constituency Members like myself ask the Government for more money to provide better payments for people who are at the very poorest end of the scale, the Government say that they cannot afford it because it would cost another £10 million, £15 million or £20 million a year. So they cannot give family credit on a better basis or transitional payments for pensioners, which would be the guarantee after the cuts on 11 April last year—the new, savage cuts because the Government were short of money. They could not provide transitional payments very effectively.

One of my constituents, indeed, is still waiting for payment, having applied a year ago. It seems that, while the ordinary citizen has considerable difficulty in getting a few hundred quid out of the Government, a successor company may have its pockets lined with £2 billion-worth of loans and some guarantees as well.

It is not the first time that this has happened. British Leyland was sold off to British Aerospace—a company with assets worth some £750 million—for £150 million, and BAe was given £500 million to put in its pocket.

Mr. Skinner: They did it with Harland and Wolff, too.

Mr. Cryer: They have done exactly the same with Harland and Wolff.

Mr. Skinner: But not Sunderland.

Mr. Cryer: Not Sunderland. They are quite happy to see 2,000 workers there shoved on the scrapyard and into the dole queue.

It is worth pointing out that £2,000 million was put into British Leyland by successive Governments to retain jobs and an indigenous motor vehicle industry. It is important to raise such questions in the light of the £2,000 million mentioned in the resolution.

Mr. David Ashby (Leicestershire, North-West): Can the hon. Gentleman equate that with the £4 million a day that was poured into British Coal under the Labour Government?

Mr. Cryer: I have always thought that an economy should aim to provide the community at large with resources, including the provision of work. Between 1974 and 1979, the Labour Government used their best endeavours to provide work. During their 10 years in office, the present Government have never achieved the low level of unemployment that they inherited. It has been higher each year. The truth is that they do not care about shoving people on to the dole.

Mr. Skinner: When hon. Members start talking about subsidies, they cannot travel much further than the subsidies to the Common Market and the common agricultural policy. My hon. Friend knows a bit about that. He knows that £16 a week for every family in Britain goes in subsidy to prop up the West German farmers and the rest of them. We have now discovered that some £6,000 million-worth of fraud—three times as much as the figure in the resolution——

Mr. Deputy Speaker (Sir Paul Dean): Order. I am sure that the hon. Gentleman will not be deflected from the money resolution.

Mr. Skinner: When we talk about money and subsidies —like the £2,000 million referred to here as "loans"—let us think about what we could do with it to provide security for the railways and airports: the sort of security that the Prime Minister was given when she went up to Scarborough. If there was any left over, we could give it to the pensioners and the National Health Service.

Mr. Cryer: I am grateful to my hon. Friend for his contribution. There is a legitimate argument for subsidies to retain jobs. The present Government use that argument in Northern Ireland. Because, they say, it is an area of high unemployment and because there is strife and trouble there, Northern Ireland has the highest level of subsidy per job in the United Kingdom. The argument adduced by the hon. Member for Leicestershire, North-West (Mr. Ashby) that subsidy is somehow wrong is simply not based on facts. If I recall correctly, the hon. Gentleman is something of a Euro-fanatic. I am not absolutely sure, because many Tory Members are very similar: they are clones, and it is sometimes hard to distinguish one from another.

The £2,000 million-worth of loans and guarantees is not specified in the resolution, but payment may be made

"out of the Consolidated Fund for fulfilling guarantees given by the Treasury in respect of sums borrowed . . . from persons other than the Secretary of State".

So they are getting £2 billion-worth of loans from the Secretary of State and guarantees for loans from other institutions.

The Government, who are giving potential subsidies to their cronies whom they hope to persuade to buy the publicly funded electricity generating industry, have given between 1984 and 1987 a total of £4·7 billion to the Common Market, yet they claim to be against subsidies.

Local authorities go cap in hand trying to get back a tiny fraction of that sum, most of which, as my hon. Friend

[Mr. Cryer]

the Member for Bolsover (Mr. Skinner) pointed out, went to the farming community, including to cereal farmers in this country. When I see the serried ranks of the Tory party standing up and criticising farmers for receiving subsidies, then I will know that there has been a change of heart on their part.

Mr. Ashby: If the hon. Gentleman is not opposed to the provision of money to provide jobs, why is he opposing this Bill?

Mr. Cryer: Is the hon. Gentleman seriously suggesting that privatisation will create more jobs? The only jobs that this measure will create will be in the advertising agencies used by the Government, in the finance houses which facilitate the placing of shares and in the paper chase that will occur in the City, although the number of jobs so created will be but a fraction of the number of jobs that have been lost in the City. But no real jobs will be created in genuine services that ordinary people can use. Every privatisation has started with claims of rationalisation but has ended with more people being put on the dole.

Mr. Rhodri Morgan (Cardiff, West): I confirm what my hon. Friend says about job losses arising from privatisation. Indeed, 85 jobs have disappeared in the past week through a voluntary redundancy scheme at Aberthaw A and B power station, the main power station in south Wales.

Mr. Cryer: Society must provide an opportunity for people to train and improve and a chance for our young people to find jobs. The money that is being provided under this measure could be used, for example, to improve import facilities at docks so that cheap coal from South Africa, brought out of that country on the bloody backs of black miners——

Mr. Ashby: Oh, dear.

Mr. Cryer: It is all very well for Conservative Members to make such remarks, but, then, some of them will have been on free trips to Namibia and South Africa, paid for by the propaganda merchants in the South African Government.

We are concerned at the thought that the British Government have been deliberately planning to destroy village communities around the pits in every major region in this country as part of a planned vendetta against the coal industry and the NUM. The Government's cronies, who share their vindictive and nasty values, would not hesitate to import coal from anywhere that people are exploited if that would make the electricity generating industry what they call competitive. The publicly owned electricity generating industry is competitive and well organised. As a matter of fact, that was recognised in the 1920s: the standardised electricity generating system and the national grid were actually introduced by Conservative Governments, who recognised the virtue of public ownership.

Of course, this Government recognise the virtue of public ownership in the case of certain public services. For instance, they have not yet arranged to sell the Army off to Securicor. If the standard of competitive endeavour is good enough for the electricity industry, why not for the Royal Air Force? Why should not the RAF be sold off to British Midland and the Royal Navy to P and O? After all, P and O is one of the great heroes of the Conservative party, and it pours money into the Conservative coffers. Do not the Government think that that company could run the Navy better, or is it just that a public service provides a more effective and efficient defence of this country?

Mr. Skinner: My hon. Friend is moving into an area of privatisation based on what could happen next. He has referred to the armed forces. Is he aware that the Government have already made inroads into the police in that respect? They have introduced an element of privatisation in respect of people being transported from remand centres and so on. As a result, a police review that is given to every Member of Parliament—unlike the Department of Trade and Industry report on the selling off of Harrods—shows that the police are seething because they realise that this is a dilution of their jobs. Now the Police Federation is supposed to be taking——

Mr. Deputy Speaker: Order. I am sure that the hon. Member for Bradford, South (Mr. Cryer) will stick to the money resolution.

Mr. Cryer: I am very grateful to my hon. Friend the Member for Bolsover (Mr. Skinner) for illuminating the debate once again with a very apt comment. We are talking about £2,000 million in loans and, in addition, open-ended guarantees for loans from sources other than the Treasury. This is a very important matter.

Conservative Members claim that there is no particular virtue in public ownership. All that I am saying—in a very brief and reasonable way—by way of explanation, is that the Government are not selling off the Navy, the Army and the Air Force. That must be because they see virtue in public ownership of those forces. Labour Members say that public ownership is an important principle, and that it is a disgrace that public assets are being sold off and put beyond the control of this House.

Mr. Alex Salmond (Banff and Buchan): If the armed forces were put out for privatisation, or to competitive tendering, would the hon. Member care to speculate what the Government's attitude would be were the Red Army to put in the lowest tender?

Mr. Deputy Speaker: Order. I am sure that, again, the hon. Member for Bradford, South will not be tempted to answer a question which is well away from the money resolution.

Mr. Cryer: What I am concerned about, as you, Mr. Deputy Speaker, rightly imply, is this £2,000 million by way of loan that British citizens are handing over to some corporations wholly owned by the Crown. We want to know what will be done with this money when the successor companies take over and follow the evil pattern of this Government. The Government have announced that when an organisation is put out to tender, by and large it is sold to any comer. So my hon. Friend's illustration is very neat: if the Army were to be sold off, we could get Russian domination by another route. That is something that I did not think of when the Government spent £11,000 million on Trident nuclear weapons to deal with the very sort of domination that they could let in by the back door—by selling off the Army.

There is also the question of control. The Minister is making notes and civil servants are ready to provide him with additional information about the issues that we have raised. When the successor companies take over, all that will disappear. It will become a Treasury matter. Ministers will not have to sit here listening to speeches by me and other Opposition Members. Public accountability will be removed. That is wrong.

Even with a publicly owned electricity industry, the position is unsatisfactory. If we table parliamentary questions, we are told that they have been forwarded to the chairman of the CEGB, and we get a letter from a public relations merchant who says that nuclear power is not quite so expensive as it seems; it is just that we have been spending an enormous amount of money on it. That is not good enough, even in today's terms.

After privatisation we shall be unable to ask questions about the successor companies that are mentioned in the resolution. When loans are given not to the wholly owned corporation but to the successor companies, parliamentary questions about those companies will not be answered in full by Ministers. The purpose of successor companies is to remove public accountability. The spivs and crooks who rule in the City with such seedy generosity towards the Conservative party are thought by the Government to be fit people to take over this enormous industry that is so crucial to the people of this country. Townsend Thoresen directors may become directors of the successor companies. They could be steering the nuclear ship to Zeebrugge, with disastrous consequences for us all.

Mr. Frank Haynes (Ashfield): My hon. Friend will be aware that foreigners will be allowed to buy into our electricity industry. They too will enjoy this subsidy. Is my hon. Friend also aware that some of those foreigners could be put up as a front to buy into the industry? A foreign country that supported terrorism could end up in possession of a nuclear power station. How about that?

Mr. Cryer: I am alarmed about it. There have been lots of links between private enterprise companies and Colonel Gaddafi. My hon. Friend the Member for Bolsover will recall the vitriolic criticism that money was being collected in Libya for the miners. There was a torrent of abuse, yet the Government appear to be opening the door to Libyans to buy into the industry.

I make no distinction between British people and foreigners, but I am concerned about capitalists, wherever they come from, getting hold of a public asset. In the words of the people who sold shares in the 1956 bank rate leak scandal, it is anti-British and derogatory to sterling, but it makes sense to me. They are the people who wrap themselves in the Union Jack and sell Britain down the river, if they think that they can make more money out of it.

The Minister has some questions to answer about the resolution. I do not intend to take up too much time because I want to give the Minister time in which to respond to the debate. I remind the House that as this legislation continues down its slimy path through Parliament, its disreputable origins and aims mean that the opportunities for Members to ask these questions are diminishing all the time.

Mr. Malcolm Bruce (Gordon) *rose*——

10.54 pm

The Parliamentary Under-Secretary of State for Energy (Mr. Michael Spicer) *rose*——

Mr. Deputy Speaker (Sir Paul Dean): Mr. Michael Spicer.

Mr. Spicer: The hon. Member for Bradford, South (Mr. Cryer) has made his traditional money resolution speech for which he is in the process of making himself world famous——

Mr. Malcolm Bruce: On a point of order, Mr. Deputy Speaker. It is not customary to allow hon. Members who wish to speak to do so before the Minister speaks, so that he can answer their questions?

Mr. Deputy Speaker: The Minister has risen, and I have called him.

Mr. Spicer: As I understand it, I have only just over six minutes in which to answer the questions, to which the House deserves at least some sort of answer——

Mr. Malcolm Bruce: Further to the point of order, Mr. Deputy Speaker. I seek your ruling. I had understood that it was normal practice to allow hon. Members who rise to speak in a debate to be heard, and to call the Minister last——

Mr. Deputy Speaker: Order. The normal practice is that if a Minister rises, he is called by the Chair. The House must bear in mind the fact that time is now very limited.

Mr. Spicer: Perhaps I can help the hon. Member for Gordon (Mr. Bruce) by letting him intervene in my speech, although that will take some time out of it. I feel that, as the hon. Member for Bradford, South spoke for 40 minutes or so, I should give him the answer he is looking for.

The hon. Member for Bradford, South was right about one thing: the resolution enables the provision of an upper limit on the industry's borrowing of £2,000 million while it remains in the public sector. But I thought that the hon. Gentleman missed something. He talked about the Government giving the money away to their cronies, by which I imagine he meant ultimately the British people. That is his definition of privatisation, not mine.

The hon. Gentleman asked why the figure is £2,000 million. The best way to answer that is to remind him that the latest published figure for the industry's borrowings is £1·6 billion, so the £2 billion must be seen in that context. I cannot refrain from reminding hon. Members who served on the Standing Committee on the Electricity Bill that some of them had reservations at that stage about whether we had provided for adequate borrowing during the period before the industry is privatised.

Mr. Malcolm Bruce: The fundamental question to which the House is entitled to know the answer is what has happened since Second Reading to warrant the measure before the House. After Second Reading the House voted for a money resolution of £6 billion, although my party voted against it and will vote against this one. What has happened to justify the authorisation of £2 billion more borrowing in this short space of time?

Mr. Spicer: One of the things that has happened is that we have decided that the industry in England and Wales shall be able to borrow with Treasury guarantees. That is

[Mr. Spicer]

connected with the fact that we shall allow the industry to borrow short in order to re-finance the long-term borrowing that we shall insist it pays back. We shall discuss that under the ways and means motion.

Another aspect that was openly discussed in Committee, and to which I alerted it, is that as we approach the vesting of these companies, estimates of borrowing become much clearer. The moneys are comparable with existing borrowing levels. To answer the hon. Member for Bradford, South, the borrowing will be subject to Treasury consent. It will cease—the hon. Gentleman did not appear to take this on board—on flotation of the companies in the private sector. The Treasury guarantees, also covered by the resolution, will cease when the successor companies are floated.

I wanted to intervene to answer those specific points raised by the hon. Gentleman. There is nothing untoward about the money resolution. It provides for moneys absolutely in line with the present borrowing of the industry within the public sector. How the hon. Gentleman can make a 35 to 40-minute speech relating this to his prejudices about privatisation I am not quite sure, but I certainly wish to commend the resolution.

Question accordingly agreed to.

Resolved,

That, for the purposes of any Act resulting from the Electricity Bill, it is expedient to authorise—

(1) the payment out of the National Loans Fund of any sums required by the Secretary of State for making loans to successor companies in England and Wales which are for the time being wholly owned by the Crown, so long as the aggregate of any amounts outstanding by way of principal in respect of such loans and sums issued out of the Consolidated Fund for fulfilling guarantees given by the Treasury in respect of sums borrowed by such companies from persons other than the Secretary of State shall not exceed £2,000 million;

(2) the payment out of the Consolidated Fund of any sums required by the Treasury for fulfilling guarantees given by them in respect of sums borrowed from persons other than the Secretary of State by successor companies in England and Wales which are for the time being wholly owned by the Crown.

In this resolution "successor company" has the same meaning as in part II of that Act.

Electricity Bill [Ways and Means] (No. 2)

Motion made, and Question proposed,

That, for the purposes of any Act resulting from the Electricity Bill, it is expedient to authorise the giving of directions requiring the Electricity Council, the North of Scotland Hydro-Electric Board or the South of Scotland Electricity Board—

(a) to make payments to the Secretary of State in respect of advances made by him to the Council or Board;

(b) to make payments to the Treasury in respect of loans to the Council or Board made wholly or mainly in currencies other than sterling.—*[Mr. Michael Spicer.]*

11.11 pm

Mr. John Maxton (Glasgow, Cathcart): I shall be brief, but it seems astonishing that when we have already debated the Second Reading of the Electricity Bill, when we have been through the full Committee stage and when we are approaching the Report stage, we should have a new money resolution and a new Ways and Means resolution. If Labour Members had not been ready to ask questions, the Government were prepared to nod the motions through without any explanation.

I hope that it will not be the junior Minister from the Department of Energy who will reply to this debate but that it will be a Minister of State, Scottish Office. The Ways and Means resolution covers the Electricity Council, but it also covers the two Scottish boards. The money resolution did not cover the Scottish successor companies. I hope that a Minister will be forthcoming in explaining exactly what is going on—*[Interruption.]* I know that hon. Members who stand at the Bar do not like to listen to debates; perhaps it would be better if they were to leave the Chamber.

In his previous speech the Parliamentary Under-Secretary of State for Energy tried to suggest that the Ways and Means resolution was a follow-on from the money resolution. So far as I understood what he was saying, the money resolution provided for the loan of money to the companies and the Ways and Means resolution was giving the Government the means to take that money back at a later date.

If we read the money resolution we find, first, that it does not cover Scotland at all but covers only the English and Welsh successor companies, and secondly, that it refers to successor companies and to the money that will be lent to successor companies while they are owned wholly by the Secretary of State. The Ways and Means resolution is entirely about the Electricity Council, the North of Scotland Hydro-Electric Board and the South of Scotland electricity board. It does not refer at all to the successor companies. So far as I can see, it has no effect on the successor companies. I hope that a Minister will manage to explain exactly what is meant by that.

As I read the Ways and Means motion, it states that the Electricity Council, the North of Scotland Hydro-Electric Board and the South of Scotland electricity board will be required to repay loans made by the Secretary of State. Perhaps the Minister can explain what the second part of the motion relating to "currencies other than sterling" means. That requirement will presumably cease after 1 January 1990, when the boards and the Electricity Council will disappear and the successor companies take their places. What does the Minister mean by that? What moneys are to be repaid, to whom, and how much is involved?

11.15 pm

Mr. Malcolm Bruce (Gordon): This second motion relating to the Electricity Bill coming just before the Report stage underlines the extraordinary way in which the Bill is progressing through the House. The money resolution that we have just debated and this motion introduce significant changes which I find it hard to believe that the Government were not aware of when they brought the Bill before the House only a few weeks ago. The Ways and Means resolution raises a number of questions and requires clarification.

We have regrettably just approved a borrowing consent for an extra £2 billion and we are now asked to pass a Ways and Means resolution under which

"the Electricity Council, the North of Scotland Hydro-Electric Board or the South of Scotland Electricity Board"

can

"make payments to the Secretary of State in respect of advances made"

and also make them in relation to loans made

"in currencies other than sterling."

We are entitled to know what kind of loans we are talking about and their scale. What is the time scale of the loans and what are they for?

At the moment significant changes are occurring almost weekly in the industry which the Government are trying to privatise. The industry is moving the goal posts and the Government are running around in all directions, rather like headless chickens, trying to respond to those changes.

In Committee I made a suggestion, which did not command widespread support, that as the SSEB had 110 per cent. excess capacity, it could do worse than sell one of its power stations to a company in England—and I suggested Torness. I received a letter from the chief executive of the SSEB saying that my suggestion was outrageous and irresponsible and that the SSEB would need the capacity. However, last week the SSEB announced that it was to close Hunterston A prematurely because it could not find a market for the electricity that it generated.

Will the Minister tell us whether the moneys that are moving backwards and forwards, as described in the motion, relate to the extra early costs of decommissioning the Hunterston A power station which, until recently, the SSEB claimed had still a few years to run? I refer to that station to show how muddled and confused the industry is.

I notice that over the past few days there has been confusion in the west country. It appears that the Central Electricity Generating Board is applying to build a large new 1,200 MW pressurised water reactor generating station. However, it has cancelled an order for a coal-fired station in the same region.

One can question the legitimacy of applying to build one kind of power station, closing others down prematurely and arguing that we need extra capacity when the present capacity cannot actually be deployed. It is apparent that, even in the existing state of the market, there is over-capacity. Of course, with an imaginative Government pursuing an imaginative programme, we could use the existing capacity much more efficiently and have no need to build new power stations of any description.

The question the Minister has to address is whether the Ways and Means resolution is before the House because the dynamics of the industry are changing as we look at it. No doubt to some extent the Secretary of State, having proudly produced his package of inspired duopoly as a retort to the monopoly of previous privatisations, is finding that the composition of the industry that he is proposing to create in advance of privatisation is actually changing before the flotation date and that, consequently, the industry's financial requirements, the repayment zones, the deals it is doing and the currencies it is doing them in are all changing in the light of those new circumstances.

Over the next few days we shall have a detailed debate on the Report stage of the Electricity Bill and no doubt some of these issues can be discussed more fully then, but I think that the Government have shattered any confidence that they are in control of the Bill, because we have before us a clear indication that they are not in control and they are having to make major changes as the Bill goes through the House, Indeed, in a few weeks' time the Bill will no doubt come back from another place with even more unrecognisable amendments which have never even been debated in this place, because, we will be told, the circumstances have changed.

I hope that the Minister will be able to give some reasonable and satisfactory answers, and I hope that he will accept that we are now faced with an indication of a Government and a Department out of control of their legislation.

11.21 pm

Mr. Bob Cryer (Bradford, South): I would like to make a few brief remarks on the question of the giving of directions. The Ways and Means resolution authorises directions to be issued by a Minister to make payments to the Secretary of State and to make payments to the Treasury. Can the Minister tell us, for example, why it was not thought necessary to include statutory instruments in the legislation to give regulatory powers to the Minister? I say this because, if we take this at face value, the Minister can give any directions he chooses in relation to the money. The great virtue of the statutory instrument, whether using the negative procedure or, preferably, the affirmative procedure, is that it actually comes before this House.

As I understand it, these directions will simply be issued by the Minister. They will not be public documents. We shall not know what is going on. They will not be subject to any scrutiny or vote. The procedure of statutory instruments is lamentable enough in its accountability, but at least it exists. There is the opportunity for a prayer to be laid and for a debate to take place, albeit for an hour and a half, or, on the affirmative procedure, for a resolution approving the instrument to be tabled.

I do not think it is a very good procedure. If the Minister says, "It has been done before," frankly, I think that, with this Government, we should have a very close look at procedures, because there is the question, raised by a former Tory Lord Chancellor, of an elective dictatorship.

I am opposed to any Government receiving unqualified powers which place them outside the scrutiny of this place. The Minister has a duty to explain why it is necessary simply to have unqualified directions. He might argue, "Of course, this is to require money to be repaid, and surely the House should ensure that, to obtain money for the Treasury, whether in sterling or any obscure currencies such as European currency units"——

Mr. Dennis Skinner (Bolsover): It is not Euro-currency that is the problem, but money that comes from the Sultan of Brunei. If he wants to become involved he will want to use other foreign money and at the same time he will want to hide it. He will not want that fact disclosed by the people to whom he loans the money, who will act as purchasers, as in the case of Harrods. He will not want anybody to know that he is behind the deal.

Mr. Cryer: That is another aspect of the need for transparency, particularly in financial arrangements. If the resolution is passed, the Secretary of State will presumably have the power to give directions. Will they be by way of letter or published document? Will they have to be published in any paper anywhere at any time? Can they be questioned or refuted? For example, could the North of Scotland Hydro-Electric Board say that a direction was faulty because the amount of money contained in it was wrong? Does the Secretary of State have the right to demand a sum of money even though there is a dispute about the amount involved?

As the Minister knows, from time to time Departments get statutory instruments wrong. Sometimes they contain ambiguities or faults. Sometimes a Minister goes beyond his or her powers and a statutory instrument will come before the Scrutiny Committee to be corrected. But, as I understand it, there is no scrutiny of the directions that we are debating. I know that it will come as a shock to many hon. Members, but civil servants can make errors and Ministers can compound those by signing a bit of paper as it is pushed in front of them along with many other bits of paper, and then there is no possibility of challenge.

The Minister may say that any dispute could go to court, but that is a counsel of despair. Our legislation should be as clear as possible before it leaves this place. We should try by our best endeavours to exclude the possibility of resorting to the courts in order to rectify a mistake.

Through a statutory instrument a Minister has power to require repayment, setting out the terms and conditions of that repayment. It is open to scrutiny by the House and by the public bodies referred to in the resolution. That would be a better and more satisfactory procedure.

If the Minister says that we have always dealt with such matters in this way I can only reiterate what I said about an elective dictatorship. The fact that something has always been done in a particular way in this place is no substantial argument for saying that it should always be done in that way in the future. There are many virtues in many of our procedures, but there are also many defects, and this is one of them. Any opportunity to improve our methods should be taken.

This is a radical Government. This is the Government who undertake new procedures. *[Interruption.]* I am being ironic.

Mr. Skinner: That will not be clear in *Hansard.*

Mr. Cryer: That is the sort of claim that the Government make. My guess is that the Minister will use the old, traditional arguments to justify this legislation.

[Mr. Cryer]

The Government often claim—falsely—to adopt new methods and to take new initiatives. This measure is not good enough. We should have some accountability. That is one of the Government's Achille's heels. They do not like accountability. That is why they are not publishing the report from the Department of Trade and Industry on the takeover of Harrods. That is why they are keeping it covered up. I know that you, Mr. Deputy Speaker, share my concern that there should be transparency and accountability to the House, and I hope that the Minister will respond in that spirit.

11.29 pm

The Parliamentary Under-Secretary of State for Energy (Mr. Michael Spicer): In view of the three interventions I had better explain to the House exactly what the resolution does and particularly how, in answer to the hon. Member for Glasgow, Cathcart (Mr. Maxton), England and Wales are to be distinguished from Scotland.

When the new electricity companies move into the private sector it will no longer be appropriate—as the House will agree—for them to borrow for long-term purposes from the national loans fund or to enjoy interest rate benefits associated with Treasury guarantees and exchange cover on foreign currency borrowing. However, the Electricity Bill provides in clause 72 for lending from the national loans fund between vesting and flotation, and this is intended for short-term purposes.

Mr. George Foulkes (Carrick, Cumnock and Doon Valley): I am glad that the Minister made that clear.

Mr. Spicer: The hon. Gentleman says that he is glad I made that point clear. That is what my remarks are all about, and I hope to clarify other points as I go along.

Once in the private sector, the new companies will secure the debt finance they need from the sources that are open to the private sector generally—banks, institutions, and the money and capital markets, for example. The capital structures with which they will be established will take account of their future borrowing needs.

We believe that it is sensible that during the period when the new companies have been vested as plcs but are still publicly owned, they should start to deal with their financial requirements as much as possible as though they were already in the private sector—and despite the fact that they will still be able to borrow for short-term purposes from the national loans fund.

That means for the industry in England and Wales that present long-term debt provided from Government sources or with Government guarantee and exchange cover must be repaid by the transfer date. In the case of England and Wales, the present long-term loans are due to be repaid in instalments. By the end of December 1989 the Electricity Council's outstanding debt to the national loans fund will be £1,185 million, and its outstanding debt to foreign lenders £194 million. The new clause to which the resolution relates ensures that that outstanding debt will be prepaid by the transfer date.

In answer to the hon. Member for Cathcart, the position in respect of Scotland is substantially different. The Scottish boards' level of outstanding debt, both to the national loans fund and to foreign lenders, reflects the successive investments made in new operating plant, most recently at Torness. The restructuring of that debt will occur primarily after vesting day, as allowed for in clause 74 of the Bill—when sums owing to the national loans fund will be replaced by a combination of debentures, issued share capital and reserves. To make that process easier, the bulk of the outstanding debt to foreign lenders will be replaced, prior to vesting, by NLF debt.

Mr. Maxton: The Minister should make it clear to the House that clause 74 also gives the Government the power to write off a large amount of that debt, if they so wish.

Mr. Spicer: The hon. Gentleman has twice made that point to the House tonight. The companies' capital structure will of course be a matter for final consideration—and that applies to England and Wales as much as to Scotland. The companies' capital structures, debt to equity ratios and so on, will be addressed when the companies are formed. I have given the hon. Gentleman the answer for which he asked and I hope that the House feels able to accept the motion.

LAW OF PROPERTY (MISCELLANEOUS PROVISIONS) BILL *[LORDS]*

Order for Second Reading read.

Hon. Members: Object.

Bill to be read a Second time tomorrow.

Friendly Societies

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Kenneth Carlisle.]*

11.46 pm

Mr. Anthony Coombs (Wyre Forest): I am pleased to have this opportunity of raising the important subject of the role of friendly societies in encouraging savings, for which they have a long and respected tradition in this country, dating back over 400 years to the incorporation of the Carters in Leith in 1555. In 1973 they were defined as

"a society of good fellowship for the purpose of raising from time to time, by voluntary contributions, a stock or fund for mutual relief and maintenance of all and every member thereof, in old age, sickness and infirmity, and for the relief of widows and children of deceased members."

In encouraging thrift and responsibility and in promoting an active concern for others, particularly among the lower income groups in society, that description of 1793 adequately fits the active citizens of today whom the Government rightly wish to encourage.

Although the friendly societies have a valuable and increasing role to play in a social and financial context today, they face three major difficulties. First, the market for financial services is becoming more concentrated and larger scale. The localised and heterogeneous nature of the societies—whether they be dividing, deposit or Holloway societies—puts them at a disadvantage.

Secondly, the anachronistic legal status of friendly societies and the legal structure within which they operate, which basically dates back to Victorian legislation and, particularly before that, to 1793, has restricted the scope of their activities and their ability to respond to financial trends in the money markets.

Thirdly, the taxation and regulatory regime in which they work, and which they recognise to be necessary in most respects, is not sensitive to their character and the services that they provide. That is particularly the case in their developing a role which is complementary to the welfare state and not swamped by it.

The history of friendly societies gives an insight into the problems that they experience and into their potential. Before 1911, they were basically self-help organisations which mitigated the excesses of the workhouse and the Poor Law of 1834. By 1911, they had 6·6 million members. The great expansion took place after 1911 when, under the National Insurance Act, friendly societies were given approved society status, which meant that they retained their mutual insurance and contributory schemes and used those as a springboard for their own activities, as they took compulsory payments from taxpayers and made distributions to the sick. By 1945, they had 8·7 million members.

After 1945, despite the fact that Lord Beveridge wanted his reforms to leave room for voluntary action and a system that did not stifle opportunity, incentive or responsibility, as the system evolved, benefits were 30 per cent. above the levels recommended by Beveridge.

Their size and scope expanded rapidly, to the extent that, between 1950 and 1987, they increased by more than five and a half times social security benefits—from 4·7 per cent. to 11 per cent. of gross domestic product.

There was no direct role, as there had been prior to 1945, for friendly societies in administering the schemes, and inevitably, because of the size of the schemes, contributory insurance became that in name only, and the scheme was financed primarily by the general taxpayer. The effect of these changes was to erode the friendly societies' traditional market, and, more important, to erode the ethos of saving and of mutual help and mutual responsibility, which has sustained the societies for literally hundreds of years. Now, there are only 462 societies with 7 million members, and their numbers are declining.

It is ironic that over the last few years the greater provision and the good intentions of the welfare state have, in fact, increased the division between those who are financially sophisticated, who have higher incomes and are natural savers, and those who have low incomes, who are dependent upon the state, who, very often, are caught in the poverty trap and therefore have no particular incentive to save. Although there have been recent attempts, via social security legislation, to counteract such trends, I believe that the friendly societies have a principal role in bridging that social and economic gap.

The trends bolstering societies have been boosted by three further factors. First, there are the demographic changes that will take place over the next few years. I am thinking, in particular, of the increase in the elderly population from 9 million now to 10 million by the year 2000. Indeed, the number of very elderly people is likely to increase by 50 per cent., to 1·5 million, by the year 2000. Those changes will supplement the need for an addition to state retirement incomes via pensions and, indeed, the kind of annuities that have been provided by friendly societies.

Secondly, I believe that more people will want to arrange their affairs on a more localised, community basis and will react against the economies of scale that we have seen in the last few years. Thirdly, we have a desire to increase savings for economic reasons, given the fact that the savings ratio now is only 1·7 per cent. of disposable income—back to the 1949 levels—against 11 per cent. in 1985. Of course, it would be unrealistic to expect that all friendly societies will necessarily attempt to meet all these needs. Indeed, there has been an element of concentration already. The chief registrar, in his latest report, which came out about a month ago, said that 90 per cent. of total funds going into the friendly society movement is generated by 37 societies. The five largest are collecting societies that lack many characteristics of friendly societies in the strict sense but, nevertheless, support the arguments that the friendly societies liaison committee put forward.

On the other hand, one third of friendly societies are not actually taking any new business, and I believe that there will be an inevitable division between those that do a lot of taxable business in the mass market—I am thinking, for instance, of collecting societies, which collected some £190 million in contributions in 1987—and those smaller, more socially orientated, more traditional friendly societies, which concentrate on more philanthropic and local activities.

Nevertheless, in order to facilitate the adoption of these new roles, and given the speed and competitive pressure of financial markets at present, there are two areas of reform that need to be addressed urgently. The first is the need to widen the scope of the potential activities of friendly societies. The present scope, under schedule 1 to the Friendly Societies Act 1974, is outdated and, indeed, in many respects nonsensical. For instance, friendly societies can provide life policies for married couples, but not for couples who are living together; they can insure tools of the trade against fire, for the princely sum of £15, but not

against any other kind of loss; and they are prevented from writing any non-life assurance business, whether on an agency basis or direct.

Subject to the necessary regulations, I believe that the friendly societies ought to be allowed to manage, not merely to invest in their own unit trusts through subsidiaries and without sacrificing their mutual status. They ought to be able to set up their own personal equity plans. That would increase share ownership among the lower income sectors of society. They ought to be able to write their own reinsurance, especially on the risks of other societies. They ought to be able to engage in non-life assurance, at least on an agency basis, and they ought to be able to make loans to their members that are slightly greater than the present totally outdated level of £200. Finally, they ought to be treated consistently, by the Inland Revenue, in particular, as between the powers of those societies that are sui generis, rather than be discriminated against on the basis of when they were set up.

It is a sad fact that, while these powers are not available to friendly societies, some—like the Family Assurance Society—have already opted to go, with the consent of 75 per cent. of their members, for plc status or for mutual life office status, which will mean leaving the friendly societies movement and many of the advantages that that gives.

By widening the scope of services, they ought to be able to provide, through the friendly society movement, effective competition to other financial institutions and more effective and efficient services for their members. They ought to be able to increase their access to markets which at present are dominated by insurance companies and pension funds, particularly by those which corner the market by means of tied intermediaries. They get one and three quarter times the recommended commission rates and the disclosure rules for commission are not so rigorous for independent financial intermediaries, upon whom friendly societies have to rely.

Equally, however, it is unrealistic to think that every friendly society will wish to engage in this kind of activity. It is estimated that only the 40 largest will do so. Others will try to fulfil the more local social and philanthropic aims that are traditional in friendly societies. However, in order to do so—and this applies especially to those friendly societies that do not benefit from economies of scale because of their small size—it has been estimated that the financial burden of complying with the Financial Services Act will mean a 30 per cent. increase in annual costs. They have been deprived of a volunteer sales force because of the expertise now required by the Financial Services Act of those who sell financial products. Tax exemption of their products, particularly life assurance, has been crucial and, I believe, will become even more crucial for the small friendly societies, and for their big brothers, too.

It is a sad fact that, since 1987, for all societies, whether they do taxable business or not, the tax-exempt limit has been set at £9 per month per premium, which is just over £100 a year, and £750 for sums assured. That represents only four weeks' average wages now. Just before the war those same tax-exempt figures represented two years' average wages. Therefore the case for a substantial increase in the tax-exempt limits for friendly societies is very strong.

To increase tax-exempt limits is consistent with the tax relief available for occupational pension schemes or with the tax exemption that is available, up to certain limits, on certain national savings deposits or on the tax-free benefits available from investments in gilts, in certain circumstances. That contrasts strongly with the increase in this year's Finance Bill from £2,400 to £4,800 in the annual payments to personal equity plans, the proceeds of which can be tax-exempt and which, ironically, so many societies want to be able to market themselves.

It could be argued that organisations with quaint names such as the Nottingham Oddfellows, the Sons of Scotland Temperance or even the Hearts of Oak, and with the even quainter values of self-responsibility, thrift and mutual help, founded on their mainly Victorian origins, should either join the ranks of, or be absorbed by, the legions of financial supermarkets. That would be a mistake. Time will prove that, as organisations for the lower income groups, supplementing the provisions of the social security system and improving the incentives and opportunities for lower income groups within the welfare state, to save, and as organisations that cope sensitively with demographic changes in a local way, the friendly societies have an enormous contribution to make.

Given the constraints on legislative time, the societies do not expect an immediate commitment by the Minister to a new friendly societies Act—they appreciate how complicated and wide-ranging that would be. But they would like a commitment by the Government to the principle of a healthy friendly society movement. They would like to hear of the imminent arrival of a package of measures, including fiscal changes, that would help them fulfil their role of encouraging saving in Britain today.

12.2 am

The Economic Secretary to the Treasury (Mr. Peter Lilley): I congratulate my hon. Friend the Member for Wyre Forest (Mr. Coombs) on his success in securing this Adjournment debate and on his characteristic lucidity in explaining the role of the friendly societies and putting his case tonight. I found his analysis of the historic antecedents of the societies fascinating, as was his examination of the problems that they now face.

Friendly societies are an important part of our social and economic fabric. They have supporters in all parts of the House—sadly, those among the Opposition have not turned up—and enemies, as far as I know, in none. For that reason they are rarely the subject of debate in the House, and I welcome the opportunity which my hon. Friend has provided us with tonight to discuss and consider them further.

Friendly societies have a distinguished history of encouraging thrift and mutual self-help. That has changed as the years have gone by, and as my hon. Friend has said, their role has become more difficult in some ways and they have had to adapt to changing circumstances. There are signs that they are doing so. The Government have sought, without going as far as major new primary legislation, to help the societies to adjust to these conditions in a number of ways.

For example, we have implemented the European Commission life directive, and brought the solvency basis of the largest societies into line with that of the insurance companies, and removed restrictions on investments for authorised societies. I recognise that my hon Friend feels that the Financial Services Act 1986 placed considerable burdens on many societies, but it did enable the

[Mr. Peter Lilley]

establishment of an investor protection scheme, of which the societies with assets and members representing over 90 per cent. of those who benefit from the friendly society movement have taken advantage.

Finally, the Financial Services Act provided relief for small societies under the transitional provisions of schedule 15 to the Act, treating them as exempt if they decide to do no new regulated investment business or are already doing no new business.

The friendly societies' liaison committee published a memorandum last year which it sent me and with which my hon. Friend will be familiar. I met the committee in September to discuss it. It set out its case for a new friendly societies Act which would grant extended powers to those societies capable of exercising them. Like my hon. Friend, it requested a new tax regime that recognised the special status of friendly societies.

At my meeting with the liaison committee, I agreed to undertake a comprehensive study of the legislative framework of friendly societies. This is, as my hon. Friend recognised, a long and complex task, and it is still under way. Only when it is complete will the Government be able to decide whether and what new legislation is warranted and, more important, the priority it should be given in relation to other claims on parliamentary time.

It may assist the House in understanding the time taken to consider the friendly societies' proposals if I set out some details of the problems faced in preparing the report I commissioned.

First, the nature of friendly societies is such as to make the situation far from straightforward and simple. As my hon. Friend recognised, there is a restriction on the powers of societies in schedule 1 of the 1974 Act, which is essentially a consolidation of the legislation laid down in the 19th century. It is undoubtedly possible to amend and extend that in some ways analogous to those suggested by my hon. Friend. If one were to go further and try to give the societies powers to set up subsidiaries to undertake a number of activities that he and the liaison committee suggested the friendly societies ought to be allowed to undertake, that would mean a fundamental restructuring of the nature of friendly societies. At present they are not corporate bodies, and consequently they cannot possess subsidiaries. It would need a very fundamental change in the legislative nature of friendly societies to enable them to become corporate bodies and possess subsidiaries. That would be quite a daunting and difficult task, to say the least.

Of course, societies have the possibility at present to convert themselves into mutual insurance societies. My hon. Friend mentioned that one society was considering doing that, and a number of societies have done so in the past.

I am also looking into the supervision and regulation of friendly societies. The Government have in recent years revised the regulatory regime for banks, building societies and those conducting investment business. Investors expect and should receive reasonable protection for their savings. There is now a voluntary investor protection scheme in place and societies have in general responded well to becoming members. However, the regulatory regime for friendly societies has lagged behind that of other financial institutions.

The friendly societies movement has long provided encouragement to the small saver and those who are relatively poor. Although the amounts invested in friendly societies tend to be lower than many other forms of saving they nevertheless represent significant amounts for the individual. When I met the friendly societies liaison committee I told it that any extension of societies' powers would go hand in hand with an improved regulatory regime. I am sure it will accept this.

My hon. Friend also mentioned the tax position of friendly societies, as did the liaison committee. There is a distinction between the traditional social and philanthropic role of societies and their more commercial investment business. It is right that the latter should be taxed in broadly the same way as life offices. The current tax rules are therefore designed to favour the more traditional societies, writing longer-term policies for funeral expenses or retirement, as against more commercial societies selling 10-year endowment policies for pure investment purposes. The change in 1987—rather than 1984, as I think my hon. Friend said—from a limit on sum assured to premiums, setting that limit at £100, helped to secure that objective. The limit is kept under review but I see no need for an increase at present.

One measure that friendly societies have suggested in particular is that they should be able to issue tax-exempt policies up to an annual subscription equal to that for unit trusts within personal equity plans, and my hon. Friend endorsed that proposal. Since the improvements to PEPs in this year's Budget, that would entail raising the present £100 limit to £2,400 a year. As my right hon. Friend said, the essential purpose of the tax arrangements for personal equity plans and the changes he made in the Budget is to encourage and widen share ownership and strengthen popular capitalism. Therefore, there is no case for an increase in the £100 annual limit on tax-exempt life assurance policies because that would not be geared to achieving that widening of direct share ownership. In practice, it is likely to do little more than divert business from other forms of savings—including diverting it from PEPs and taxable life insurance.

A related issue is whether registered friendly societies should themselves be allowed to act as plan managers. I shall certainly bear this suggestion in mind when I look into the broader issues concerning the regulation and supervision of societies. As to whether any of the other tax provisions should be changed—for example, the rule that limits the extent to which friendly societies can issue new tax-exempt policies—the time to consider such issues will be when the regulation and supervision of societies have been settled. At that stage, the representations that my hon. Friend has made will, of course, weigh with me.

While I am on the subject of tax, I should mention that one type of policy which some friendly societies issue will benefit from the new tax relief for retired people announced by my right hon. Friend the Chancellor in the Budget. I am sure that friendly societies that offer such policies will welcome this relief and will market their policies more vigorously to those who can benefit.

The Budget also introduced changes in the taxation of life companies. Friendly societies which issue policies that are not tax-exempt may be concerned about the effect of the reforms of tax rules for life assurance proposed in the Budget. It is clearly appropriate that societies which carry on business of this nature should receive tax treatment

comparable with the mutual life assurance companies so that they will continue to compete for business on a broadly equivalent basis.

A policyholder with a typical society will benefit from the reduced rate for policyholders' income and gains as suggested by the liaison committee in its response to the Inland Revenue's consultative document on life assurance taxation. New policyholders will benefit from the abolition of life assurance policy duty. Such policyholders will be unlikely to be affected by the proposal to ring-fence pension business expenses, or by the measures that change the calculation of pension profits. The revised treatment for expenses of acquiring new life assurance business will lead to some acceleration of the payments against tax, but taken together with the reduction in tax rate, the effect is expected to be broadly neutral.

I know that there is much sympathy for the friendly society movement and a desire to see it continue to prosper and perform its essential role in encouraging savings and mutual self-help. My hon. Friend expressed those matters most eloquently. Many hon. Members would back my hon. Friend's call for speeding up the fostering of friendly societies but we must not try to do that more rapidly than may be possible. Rightly, my hon. Friend did not dwell on legislation, and you, Mr. Deputy Speaker, would not have permitted that in an Adjournment debate. I think that I have demonstrated that I am considering whether there is scope and need for legislation, and during the current review I shall certainly bear in mind my hon. Friend's interesting comments.

Question put and agreed to.

Adjourned accordingly at fourteen minutes past Twelve o'clock.

House of Commons

Wednesday 5 April 1989

The House met at half-past Two o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

Oral Answers to Questions

SCOTLAND

Caithness and Sutherland (Economy)

1. **Mr. Maclennan:** To ask the Secretary of State for Scotland whether he has received the commissioned reports on the economy of Caithness and Sutherland; and if he will make a statement.

The Minister of State, Scottish Office (Mr. Ian Lang): I have received the report by PIEDA—Planning, Industrial and Economic Development Advisers—on prospects for the Caithness economy. The report will be published by the Highlands and Islands Development Board next week.

Mr. Maclennan: As the severe economic disruption faced by Caithness and Sutherland is the direct result of the Government's decision last July, in which the Secretary of State for Scotland participated directly, does the Minister accept that the Scottish Office has a particular responsibility to identify and promote suitable Government office relocation in Caithness, which has shown itself to be suitable through the Atomic Energy Authority superannuation office? When does the Minister hope to announce special investment measures to offset the economic losses that have resulted from the Government's decision? Will he also recognise that that is needed to help the infrastructure and local efforts—*[Interruption.]*

Mr. Speaker: Order. Before the Minister answers, may I ask for brief questions as we are making very slow progress?

Mr. Lang: The Government certainly accept our responsibility to help the economy of the area to flourish. The closure of the fast reactor has been delayed until 1994 and that will enable measures to be taken. The hon. Gentleman will know that the HIDB, with a very substantial budget of more than £45 million, has set up a local project team and the Caithness steering group is looking at the area to see what can be done to assist the economy to recover and to flourish generally, as it is doing.

Mr. Dewar: Does the Minister accept that the Nirex proposals for a nuclear waste deep depository will provide no answer to the economic problems which might result from the phasing out of Dounreay? Will he note that the Labour party and the vast majority of Scots are implacably opposed to such a development by Nirex in Caithness?

Mr. Lang: I note the hon. Gentleman's and the Labour party's position. Nirex has proposed the Dounreay site as a possible area for geological investigation partly because there is a measure of local support in that area. If it were to go ahead, a number of jobs would certainly be created locally. However, the matter will proceed through the normal planning application procedure, as one would expect.

Mr. Salmond: The Nirex proposal for nuclear dumping is fiercely resisted throughout Scotland. If it is dependent on the measure of local support, will the Minister of State give a commitment that the Government will abide by the results of a local referendum on the proposal?

Mr. Lang: I can give the hon. Gentleman no such assurance. There are well tried and tested planning procedures which I am sure will be appropriate.

Council Properties

2. **Mr. Nicholas Bennett:** To ask the Secretary of State for Scotland if he will make a statement on the sale of council properties and any further measures he proposes to introduce to encourage tenants to buy their council properties.

The Secretary of State for Scotland (Mr. Malcolm Rifkind): Since April 1979 nearly 150,000 public sector houses in Scotland have been sold to sitting tenants. The Government keep under review the possibility of improving the opportunities for tenants to own their own homes.

Mr. Bennett: I welcome the increase in the number of owner-occupied houses in Scotland, but does my right hon. and learned Friend agree that the fact that only 44 per cent. of the population of Scotland own their own homes means that fewer people in Scotland have real financial independence? Will he do all that he can to increase the level to that in England and Wales?

Mr. Rifkind: The proportion in Scotland has increased from 31 per cent. to about 44 per cent. I am pleased to say that the level of interest in acquiring public sector homes is higher than ever, so Scotland is likely to approach a level comparable with the rest of the United Kingdom and other parts of western Europe in the not too distant future.

Mr. Lambie: If the right hon. and learned Gentleman really wishes to encourage tenants to purchase council property, why does he not take the advice of the Adam Smith Institute and increase the percentage rebate from 70 per cent. to 100 per cent?

Mr. Rifkind: I am as fascinated as I am sure the Adam Smith Institute will be to welcome the hon. Gentleman as a recruit to its cause. I sometimes find myself unable to be as enthusiastic as the hon. Gentleman clearly is about giving tenants extra rights to purchase their homes, which makes me slightly embarrassed about my position. In all seriousness, a concept of 100 per cent. rebates, which in practice means giving the houses away, has certain fundamental objections. Home ownership should be not only a right but a responsibility. [HON. MEMBERS: "Ah!"] It has never been part of the Government's objective to impose home ownership upon those who could not afford to maintain their homes. The fact that many tenants make

no contribution to their rent due to housing benefit should be taken into account. If the hon. Gentleman is arguing otherwise, I may have to think again.

Mr. Ernie Ross: What concern does the Secretary of State feel about the spate of panic buying that has broken out as a result of the changes in the forms of tenancy for council tenants—the "pick a landlord" scheme? Is he not concerned that many council house tenants are taking on a burden that they will be unable to bear in future, particularly with the massive increase in mortgage interest rates for which his Government are responsible?

Mr. Rifkind: By its irresponsible scaremongering, the Labour party has been partly responsible for the tremendous boost in applications to buy public sector houses.

Mr. Marlow: Would there not be some advantage in these matters being decided totally in Scotland in accordance with an amended version of the Scotland Bill proposed by Opposition Members—the amendment being that if Scotland were to decide its own housing policy, we would need no Scottish Members in this House to decide housing policy in England?

Mr. Rifkind: That is as may be, though some of us might not agree with my hon. Friend. This is proving to be a fascinating day. My hon. Friend the Member for Northampton, North (Mr. Marlow) is apparently in favour of Scotland's independence while the hon. Member for Cunninghame, South (Mr. Lambie) seems to be in favour of council house sales.

Geriatric Unit (Rutherglen)

3. **Mr. McAvoy:** To ask the Secretary of State for Scotland when the building of the geriatric unit at Rutherglen will start; and how long it is expected to take.

The Parliamentary Under-Secretary of State for Scotland (Mr. Michael Forsyth): This project has been held in abeyance by Greater Glasgow health board pending the outcome of its current strategy review of services for the elderly. I understand that the review is due to be completed within two months. Thereafter it will be considered by the board's policy and planning committee before a consultative document is issued.

Mr. McAvoy: I thank the Minister for his answer. He will recall that some time ago he gave me an assurance that the health board had said that it expected the review to be completed by spring this year. The Minister has now announced that the health board intends to delay for a further two months. Will he ensure that the health board completes the review and starts the process of building the unit in Rutherglen? The Minister understands the circumstances and appreciates the fact that all those living in Cambuslang and half of Rutherglen within my constituency have to go to Lanarkshire health board for geriatric services. That is intolerable and there should be no delay in attacking such circumstances.

Mr. Forsyth: I agree with the hon. Gentleman that the position in his constituency is unacceptable. He has a reasonable basis for complaint about the delays experienced and I am happy to give the undertaking that he seeks.

Mr. Foulkes: Does the Minister agree that an extra reason for pressing ahead with the geriatric unit in Rutherglen is to reduce the unplanned growth of nursing homes in Ayrshire? Is he aware that that is resulting in the migration of elderly people to those nursing homes and is contrary to all the best policy put forward by the Health Service, Age Concern and other organisations which believe that old people should be cared for in institutions, sheltered housing and other such facilities near their own homes? The unplanned growth of nursing homes in Ayrshire means that many buildings which were previously hotels are being—[HON. MEMBERS: "Give way."] There seems to be some barracking. I am having trouble with my own side.

Mr. Speaker: Order. I hope that the hon. Gentleman will try not to have any trouble with me and will be brief, please.

Mr. Foulkes: I will do my best, Mr. Speaker. Many of the buildings were previously hotels. That is undermining the position of the tourist industry in Ayrshire and we are ending up——

Mr. Speaker: Order. The hon. Gentleman has had a jolly good go.

Mr. Foulkes: We are ending up with a Costa Geriatrica which is wholly unwanted in our county.

Mr. Forsyth: I do not share the hon. Gentleman's prejudice against private nursing homes. They are able to attract people to Ayrshire because that is where people want to go. Conservative Members believe that facilities should reflect the priorities of patients, not of planners. In reply to the hon. Gentleman's recommendation about matters in Rutherglen, I must say that if the private sector is able to play a role in meeting needs there, I would be the first to welcome that.

Channel Tunnel (Job Prospects)

4. **Mr. Tom Clarke:** To ask the Secretary of State for Scotland when he next expects to meet the Scottish Development Agency to discuss job prospects for Scotland arising from the Channel tunnel project.

Mr. Rifkind: I will be meeting the agency board on 22 May to discuss a range of issues of mutual interest. If the agency wishes to discuss job prospects arising from the Channel tunnel at this meeting, or otherwise, I shall be glad to do so.

Mr. Clarke: Does the Secretary of State agree that if Scots are to experience a fair share of the jobs which may be available from 1992 and the Channel tunnel, investment in rail and road is absolutely essential? In particular, does he agree with the Freightliner working party about the enormous potential of the Coatbridge-Gartcosh location for the superfreight terminal, provided that there is adequate infrastructure—including a new junction from the M73 motorway—to make the project a success?

Mr. Rifkind: I am interested by what the hon. Gentleman says. British Rail is already considering sites, including Gartcosh, as part of the Channel Tunnel Act 1987 section 40 consultations and its plans will be published towards the end of this year. On roads, the Government are committed to improving the A74 to

motorway standard. That will make a crucial difference because it will integrate Scotland's motorway network with that of the rest of the United Kingdom.

Sir Russell Johnston: Does the Secretary of State agree that it would be in his own interests to respond positively to the question that has just been addressed to him and that if he did it might increase the number of Scottish Back Bench Tory Members present from one?

Mr. Rifkind: I am not certain of the relevance of the hon. Gentleman's question. Scottish Conservative Members have a considerably better voting record in the House than the hon. Gentleman or his hon. Friends.

Mr. Stern: Does my right hon. and learned Friend agree that there will be no job prospects in Scotland from the Channel tunnel so long as the railway unions are unable to control their old-fashioned Socialist members, as was the case on the London Underground this morning?

Mr. Rifkind: The encouraging sign for job prospects is that Scottish companies have already been extremely successful. More than 20 Scottish companies have been successful in winning contracts for the Channel tunnel, which represents orders of £65 million and 14 per cent. of all orders so far. Clearly, Scottish companies have been doing well in winning such a high proportion of overall orders in open competition.

Mr. Wilson: Does the Secretary of State recognise that there will be considerable disappointment at the blandness of his replies to the pertinent questions asked by my hon. Friends? Can he give any indication of Scottish Office involvement in planning for the Channel tunnel, including the crucial questions about the routes to be followed by rail links in the south? Is it not time that the Scottish Office broke its slumber on this and showed some recognition of the potentially enormous adverse consequences if there are not fast, direct links between the tunnel and Scotland?

Mr. Rifkind: For once, the hon. Gentleman seems to have written his supplementary questions before hearing the exchanges. He referred to the way in which I responded to questions from his hon. Friends, but there has been only one such question and I responded positively to it. We attach great importance to the link with the Channel tunnel being suitable for the requirements of Scotland and other parts of the United Kingdom. My hon. Friends and I have had several meetings with the chairman and other officials of British Rail and we are in close contact not only with British Rail but with the Department of Transport. I entirely endorse the view that it is crucial that the opportunities offered by the Channel tunnel should be available not just in the south of England, but to the rest of England, Scotland, Wales and the United Kingdom as a whole.

Council House Sales

5. **Mr. Knox:** To ask the Secretary of State for Scotland how many council houses have been sold to sitting tenants in Scotland since May 1979.

Lord James Douglas-Hamilton: Since April 1979 nearly 150,000 public sector houses in Scotland have been sold to sitting tenants. Included in that figure are more than 102,000 sales by local authorities.

Mr. Knox: What percentage of the council housing stock in Scotland has been sold to sitting tenants and if that figure is still significantly below that for England, what steps is my hon. Friend taking to increase the number of council houses in Scotland that are sold to tenants?

Lord James Douglas-Hamilton: Approximately 14·7 per cent. of the public sector housing stock has been sold since 1979. In England the figure is 19·5 per cent., but the figures for Scotland are escalating rapidly. In the third quarter of 1988 such sales were running at about 4,150 per month, which is 43 per cent. higher than the figures for the corresponding quarter of 1987. My hon. Friend will be encouraged to hear that the demand is constantly growing.

Mr. Ingram: If a private landlord takes over public sector housing stock and resells it to another private landlord, will sitting tenants retain the right to buy?

Lord James Douglas-Hamilton: It depends whether the hon. Gentleman is asking about tenants' choice or voluntary disposal. With voluntary disposals, a sitting tenant has the right to buy.

Mrs. Ray Michie: For those tenants who do not choose to buy their own house, will Scottish Homes guarantee their rights if they choose a new landlord and that landlord does not carry out his managerial responsibilities?

Lord James Douglas-Hamilton: Scottish Homes will certainly have a monitoring role which I expect it to take seriously.

Dr. Reid: Instead of striding to the Dispatch Box to boast about the number of council houses that he has sold off, would not the Minister do better to give us an abject apology for his shameful record on building them in the first place? Why does the Minister think that we have 30,000 homeless families in Scotland? Why are 192,000 families on waiting lists, on which they wait for an average of three years? Why have 40,000 families waited more than four or five years for a council house? Is it not because the Government's record shows a drop in council house building from 18,500 council houses in 1979 to 8,500 council house start-ups now? Is that not a shameful record for any Government?

Lord James Douglas-Hamilton: The hon. Gentleman anticipates the next question. His first comments were based on a fundamental misconception. I have not sold any council houses. All that the Government did was to provide a right to tenants under the Tenants' Rights, Etc. (Scotland) Act 1980 which included security of tenure. To their eternal shame, the Labour Opposition opposed that measure.

Homelessness

6. **Mr. Nigel Griffiths:** To ask the Secretary of State for Scotland what are the latest figures for homelessness in Scotland.

Lord James Douglas-Hamilton: Returns submitted by local authorities indicate that 9,000 households which applied under the homelessness legislation in 1987-88 were assessed by local authorities as being homeless. In 1986-87, the figure was 10,500.

Mr. Griffiths: Why has the Secretary of State washed his hands of homelessness, which has reached horrific

levels in Edinburgh and Scotland? If he does not do something about the problem soon, Edinburgh will get a reputation to match the worst of downtown New York.

Lord James Douglas-Hamilton: I am grateful to the hon. Gentleman for having given me notice of his supplementary question in the Edinburgh *Evening News* today which states:

"a row blew up during Scottish Questions in the Commons".

I am sorry to disappoint the hon. Gentleman, but I must advise him that the statutory responsibility for the homeless rests with local authorities. They are under a duty to ensure that accommodation is made available for those in priority need. The code of guidance issued by the Government makes it clear that where possible local authorities should secure accommodation for homeless young people at risk of exploitation. I am sure that the city from which we both come is doing that job and is taking its responsibilities seriously.

Mr. Norman Hogg: Is the Minister aware of the reply that I received from his hon. Friend the Minister of State about the number of council houses sold in the new towns and about the impact that that is having on homelessness in the five new towns? Will the Minister undertake, with the Minister of State, to initiate an inquiry into the fact that public sector building in the new towns is inadequate to meet the needs of the homeless persons there?

Lord James Douglas-Hamilton: Research has shown that when houses are sold to tenants the vast majority of tenants continue to live in them as owners, so it does not have a marked effect on the problems of waiting lists or homelessness. We are conducting research into homelessness and waiting lists which, though related, are separate subjects. We hope that the results of research into homelessness will be ready towards the end of this year, and that those in respect of waiting lists will be ready early next year.

Mr. Maxton: Among all the self-congratulation in which the Minister and his right hon. and learned Friend the Secretary of State have been indulging today, perhaps he will take some time to answer the question that was put to him by my hon. Friend the Member for Aberdeen, North (Mr. Hughes) and explain why homelessness in Scotland as a whole has risen by 77 per cent., in Aberdeen district council area by 200 per cent., and in Renfrew by 355 per cent. since 1983. Council house starts last June were only 11 per cent. of what they were in 1979 and mortgage repossessions in Scotland have risen by a staggering 686 per cent. since 1980. How does the Minister justify that in terms of the Government's housing policy in Scotland?

Lord James Douglas-Hamilton: If the hon. Gentleman wants to know the reasons for homelessness, there are a vast variety of them, including marital break-up, the incidence of single-parent families, and the many young people who leave home at an early stage. We have greatly increased resources to local authorities in Scotland this year. Their housing revenue account is no less than £474 million gross, which is £29 million more than it was last year, and 6·5 per cent. up on last year's figures. That will undoubtedly be of assistance to local authorities.

National Health Service

7. **Mr. David Marshall:** To ask the Secretary of State for Scotland what representations he has had from general practitioners in Scotland about the Government's plans to restructure the National Health Service.

Mr. Michael Forsyth: Following the publication of the Government's White Papers, "Promoting Better Health" and "Working For Patients—Caring for the 1990s", I wrote to all general medical practitioners in Scotland on 16 March asking for their views on a new contract. Those views are currently being received and studied.

Mr. Marshall: Is the Minister aware of the great health problems in the east end of Glasgow, with its high numbers of sick, poor, unemployed and elderly people? GPs there have worked hard for years to reduce the size of their lists. Why is the Minister forcing GPs back into the bad old days? Why is he forcing GPs to provide the cheapest treatment rather than the best treatment for patients? Can he guarantee that that will not happen and that he will alter his proposals accordingly?

Mr. Forsyth: I am happy to give the hon. Gentleman the guarantee that he seeks. It is certainly no part of our policy or of our proposals that the standards of primary care and service offered by general practitioners should in any way be reduced. There is much in our proposals to which doctors in inner-city areas, particularly deprived areas, should look forward with optimism. Doctors who continue to have the same list size but offer additional services concerned with preventive medicine, day surgery, and so on, will be able to maintain and enhance their incomes.

Mrs. Margaret Ewing: No doubt the Minister would find it embarrassing to give even an initial assessment of the negative responses that he has received. Members of Parliament are receiving copies of letters that were sent by GPs. I have not received one letter from GPs in my area showing broad support for the Government's proposals. Does the Minister accept that the general thrust of the GPs' responses shows that they predict a reversal of 40 years of service by the emphasis on capitation lists? It will be particularly difficult for women doctors, who are often employed on a part-time basis and have an important role to play in preventive medicine. Will the Minister give a commitment that he will not follow the Secretary of State for Health's example but will try to take the medical profession with him on any changes that are implemented?

Mr. Forsyth: With regard to the proposals to make the Health Service more responsive to the needs of the patients, the provisions in Scotland will be exactly the same as elsewhere in the United Kingdom. We have already given an undertaking that the contract for general practitioners will reflect the particular circumstances in Scotland. It is slightly surprising to find a Scottish nationalist Member arguing that the contract proposed for England will apply in Scotland. We hope to make an announcement shortly on our proposals for general practitioners in Scotland.

Mr. McKelvey: Does the Secretary of State agree that to date at least 191 medical practitioners in Ayrshire alone have written to him indicating their complete opposition to the plans in the White Paper "Working for Patients"? They state categorically that, instead of working for

patients, it will work against patients and that it is the beginning of the end of the National Health Service as we know it in Scotland.

Mr. Forsyth: I find it difficult to understand how the hon. Gentleman can argue that changes in the doctors' contract and in the method of delivery of service within the National Health Service that will result in an attack on waiting lists, in doctors being encouraged to give more emphasis to preventive medicine and to provide wider services should be seen as an attack on the National Health Service. Proposals that enable patients to change their doctor more easily or to ensure that their doctor is available to visit them at weekends and at night will be widely welcomed by patients and most doctors. The hon. Gentleman is right to say that doctors have expressed alarm, but doctors in Scotland would be wise to wait to see what is on offer before criticising proposals that they have not yet seen.

Mr. Galbraith: The problem is that doctors are aware of some of the proposals and they do not like them. Is the Minister aware that I have received copies of the hundreds of letters that he has received and that not one supports his proposals? Does he agree that one of the concerns in those representations is the list size, which is particular to Scotland? Has the Minister had any success in discussions with his counterparts in England and Wales to ensure that any proposals will take into account the special considerations of the list size in Scotland? Is he aware that we will not be dragged along on the coat tail of a huge list size forced on us to the detriment of doctors, patients and the community?

Mr. Forsyth: As the hon. Gentleman will know, we have had discussions with the Scottish General Medical Services Committee. As the doctors are organised and negotiate on a United Kingdom basis, they are not able to discuss the particular position in Scotland, but the Scottish Office and Ministers have been addressing that problem. The hon. Gentleman is mistaken about the letters that I have received. There is widespread support among doctors —*[Interruption.]* Almost all doctors, whether in general practice or in hospitals, support our proposals for medical audit and for putting more emphasis on preventive medicine. The hon. Gentleman said that there was no support at all. As usual, he is using simplistic slogans to attack a policy, when he and his party have no alternative other than to commit themselves to undo everything that the Government achieve.

Mr. Steel: Is the Minister aware that the general practitioners in my part of Scotland have written to him opposing those parts of the proposals that relate to general practice? They especially object to his blandishments to increase list sizes to the point where there would need to be group practices covering more than one town and thereby cutting the essential link between a community and its general practice. Will the Minister reconsider that proposal?

Mr. Forsyth: I had a very useful and helpful meeting with a number of doctors in the right hon. Gentleman's constituency, who welcomed the broad thrust of the proposals.—*[Interruption.]* Yes, they did. They expressed reservations about certain aspects of the contract that are currently under discussion. I do not believe that it is right for Opposition Members, who have obviously made no attempt to study the details of the proposals, to argue that there is not considerable agreement with what we are seeking to achieve. However, there is certainly argument about whether the methods that we are using are the most appropriate. That is why we have issued working papers and have entered into discussions with the medical profession.

Schools (Opting Out)

8. **Mr. Macdonald:** To ask the Secretary of State for Scotland what representations he has received concerning schools opting out in Scotland.

Mr. Rifkind: As at 4 April 85 representations had been received on the descriptive paper "Self-Governing Schools", which we published in December 1988. These have been made available on a public file.

Mr. Macdonald: Does the Secretary of State agree that one of the major objections to the concept of opt-out schools has come from parents and from groups who are concerned that such schools will no longer cater for children with special educational needs? Does he acknowledge the grounds for such concern and will he undertake, before the opting-out Bill leaves this House, to come forward with amendments that will ensure that opt-out schools will be unable, at any time in the future, to shift the responsibility for such children?

Mr. Rifkind: We all agree that schools that provide for special needs have a particular role in the community. The hon. Gentleman will be aware that my hon. Friend the Under-Secretary of State, my hon. Friend the Member for Stirling (Mr. Forsyth) has given assurances in Committee with regard to those schools that provide for special needs.

Mr. Allan Stewart: In the past there has been a great deal of interest in the question of Catholic single-sex schools. Does my right hon. and learned Friend agree that, recently, there have been positive expressions of interest from the Church of Scotland and from the Islamic community about using the new legislation? Would my right hon. and learned Friend or my hon. Friend the Minister be favourably disposed in principle, to a meeting with some of those interested at an appropriate time? On an equally positive note will my right hon. and learned Friend congratulate the Labour party on its recent conversion to the principle of parental majority?

Mr. Rifkind: I am always happy to congratulate the Labour party though, sadly, such occasions do not arise very often.

The basic principle to which the Government attach importance is the need to respond to the wishes of parents in the community and the right of parents to influence the kind of education that their children receive. That is a fundamental aspect of any democratic society and it is on that basis that we respond to initiatives that are occasionally brought before us.

Mr. McLeish: Is the Secretary of State aware of the comments by Mrs. Julie Collis of the Scottish Parent Teachers Council who said, in a recent edition of *The Times Educational Supplement* that the Government's handling of the Self-Governing Schools Etc. (Scotland) Bill had left parents breathless and that she found it

disgusting? Why is it that an organisation funded by the Government should feel so aggrieved about a major piece of legislation?

Mr. Rifkind: I read that extract from *The Times Educational Supplement*. I think that Mrs. Collis was concerned as to the pace of the consideration of the Bill in Committee. At the moment we are on clause 7 of the Bill, but according to the hon. Gentleman's press release issued earlier today, it appears that it is the desire of the Labour party that we should be on clauses 13 and 14 shortly. It looks as though the Labour party is anxious to make even quicker progress on this Bill than we are.

Development Agency

9. **Mr. Andrew Welsh:** To ask the Secretary of State for Scotland when he next intends to meet representatives of the Scottish Development Agency; and what matters he proposes to discuss.

Mr. Lang: I refer the hon. Gentleman to the answer that my right hon. and learned Friend gave a few moments ago to the hon. Member for Monklands, West (Mr. Clarke).

Mr. Welsh: Whatever organisational structures are chosen for Scottish Enterprise, will the Minister assure us that its strategic investment role will neither be diminished nor diluted? In the meantime, is it true that the Scottish Development Agency has lost between 15 and 20 per cent. of its staff and that the uncertainty regarding its future is causing a loss of morale and a loss of staff? That is bad for Scotland. When will the Minister take action on those matters?

Mr. Lang: We have given consideration to such matters as the strategic investment role of the Scottish Development Agency in the context of the submissions that we have received during the consultation period on Scottish Enterprise. Whatever the staff of the SDA may be doing in some parts of Scotland, they must be extremely busy in the hon. Gentleman's constituency because they have to consider the Arbroath project, the Carnoustie golf-related initiatives, the Perth area partnership, work in Brechin converting the Denburn works, the north Angus economic review and the Dundee waterfront project.

Mr. Robert Hughes: As the Secretary of State accepts the great importance of communications so that different parts of Scotland can benefit from the Channel tunnel, will he join me in deploring British Rail's resistance to the electrification of the east coast line between Aberdeen and Edinburgh? Will he encourage his right hon. and learned Friend the Secretary of State to put as much pressure on British Rail about this as did the Prime Minister about Kent, to make it change its mind as fast as possible?

Mr. Lang: That must be a commercial decision for British Rail, although I note the interest and concern felt in that part of Scotland about this matter. This is not a matter for the Scottish Development Agency.

Mr. Andy Stewart: Will my hon. Friend join me in welcoming the two recent reports which lavished praise on the Scottish economy? The Westminster bank said that it was the best in the United Kingdom, and the Fraser of Allander Institute said that it was performing in line with Tory philosophy.

Mr. Lang: My hon. Friend is absolutely right. He will have seen the recent index of production and construction, which showed that in the manufacturing, production and construction sectors, the Scottish economy is performing better than the rest of the United Kingdom.

Trunk Roads

10. **Mr. Home Robertson:** To ask the Secretary of State for Scotland if he will make a statement on his Department's review of trunk roads in the south of Scotland.

Lord James Douglas-Hamilton: The study by consultants "Routes South of Edinburgh" is in its final stages. When it has been completed and fully considered, which I expect will be in the summer, I intend to make a statement both about the report's conclusions and about our proposed way ahead.

Mr. Home Robertson: I thought that the Minister was going to say that it would be published in a special edition of *The Observer*. In view of the fact that Ministers feel so strongly about the unity of the United Kingdom, I shall draw the Minister's attention to the missing link on the main A1 road which is supposed to link Edinburgh—*[Interruption.]*—The hon. Member for Tayside, North (Mr. Walker) is not there either. In view of the increasing congestion on the dangerously inadequate single carriage way between Musselburgh and the English border, and onwards to Morpeth, in particular, as there were 283 injuries and 25 deaths over three years on the Scottish section of the A1, will the Minister undertake to begin the task of completing the A1 dual carriageway, both to save lives and to improve communications in Scotland and internationally?

Lord James Douglas-Hamilton: The casualty rates over the past three years which the hon. Gentleman mentioned have not been unduly high in comparison with those in other district council areas, although they are certainly a subject of grave concern. Dualling is one of the issues addressed by the "Routes South of Edinburgh" study, and accident rates on the present A1 will be fully taken into account. More immediately, a major junction improvement on the A1 at Haddington is planned as well as provision for crawler lanes on the A1 at Pencraig Hill, which will go ahead as soon as the statutory procedures have been completed and the finance is available.

Mr. Kirkwood: Does the Minister accept the crucial importance of the "Routes South of Edinburgh" review to the border region? When the study is published, will he undertake to meet representatives from the local authorities and Members of the House from East Lothian, the Borders and north Northumberland to consider the detail of that report? Can he cast any light on a report in the Newcastle *Journal* this Monday that a feasibility study by the Department of Transport was under way into a motorway link between Newcastle and Edinburgh?

Lord James Douglas-Hamilton: I made inquiries this morning and understand that the Lothian and Borders regional councils may already be involved in discussions with a group from seven English counties which are investigating the feasibility of a scheme incorporating private finance. The Scottish Office looks forward to being kept in touch with any findings that emerge. With regard

to the area of the hon. Member for Roxburgh and Berwickshire (Mr. Kirkwood), a £7·5 million A1 Tower to Dunglass diversion is planned. A bypass of Langholm on the A70 is under investigation, as well as the realignment of the carriageway from Ancrum House to Harrietfield on the A68. Therefore, a considerable amount of work is taking place.

Mr. Beggs: Can the Minister inform us whether his Department, during the review of trunk roads in the south of Scotland, has taken account of the importance to Northern Ireland hauliers of a good road service south from Cairnryan and Stranraer? Will he also bear in mind that although there are those who wish Northern Ireland to be linked with the Channel tunnel through Dublin, Dun Laoghaire and Holyhead, we in Northern Ireland wish to maintain our close Scottish links and have a proper through route through Stranraer and Cairnryan?

Lord James Douglas-Hamilton: I am certain that many hon. Members, including my hon. Friend the Minister of State, share the hon. Gentleman's concern. We see the M74 as the major roads priority of the 1990s, but after its upgrading the Euroroute to Stranraer and the A96 upgrading will be seen as equal next priorities.

Confederation of British Industry

11. **Mr. Oppenheim:** To ask the Secretary of State for Scotland when he last met the Confederation of British Industry, Scotland; and what matters were discussed.

Mr. Rifkind: I am in frequent touch with the Confederation of British Industry in Scotland on a range of matters affecting the Scottish economy. I look forward to a continuing exchange of views.

Mr. Oppenheim: Next time my right hon. and learned Friend meets the members of the CBI, will he discuss with them the excellent news of Rolls-Royce's recent substantial orders for aero engines to be put into Boeing and Airbus airlines? Is he aware that much of the work will be placed in Scottish factories? Does that not typify the increasingly bright outlook for the Scottish economy, which includes increased manufacturing output, manufacturing productivity and manufacturing employment but which seems to make Opposition Members extremely glum?

Mr. Rifkind: It is indeed extremely encouraging that Scottish industry is continuing to be so bullish in its order books, its exports and its expectations for further growth and employment. It is particularly welcome that the level of interest rates appears to be having even less effect in retarding the Scottish economy than in retarding the economy elsewhere in the United Kingdom.

Mr. Worthington: This morning the Secretary of State met leaders of the television industry in Scotland. Will he take serious account of their fears about the future of programme making within Scotland, in view of the Government's White Paper on broadcasting? Will he get together with the CBI and the Scottish Development Agency to ensure that the great opportunity for an expansion of this valuable industry of the future is taken, rather than allowing the centralisation—which seems likely—of programme making within the south-east of England or Los Angeles?

Mr. Rifkind: I agree with the hon. Gentleman about the importance of the industry in Scotland. It is particularly encouraging that at present Scotland contains a larger proportion of independent programme producers than any other part of the United Kingdom outside London. We want broadcasting to enable future further expansion of local programme production, and we also attach importance to the cultural diversity in Scotland which is reflected in the structure of broadcasting as well as in other forms of the media.

Mr. Malcolm Bruce: Does the Secretary of State acknowledge that the advent of the single market in 1992 makes improving the infrastructure for Scottish companies crucial? When he meets members of the CBI, will he ask whether they support the campaign to ensure that the electrification of the east coast line continues to Aberdeen, and that the Aberdeen-Inverness route—the A96, the most dangerous road in Scotland—is given the upgrading that is long overdue? Only in that way will visitors to the north of Scotland be able to take full advantage of the single market.

Mr. Rifkind: We all appreciate that. It was for precisely that reason that the present Government provided a dual carriageway from Perth to Aberdeen—and, indeed, the Inverurie bypass, on the very road to which the hon. Gentleman refers, is beginning construction at this moment. We attach considerable importance to the improvement of communications. The north-east, and Aberdeen in particular, is entitled to share the economic opportunities offered by 1992 with the rest of Scotland and the United Kingdom.

Mr. Favell: How do the Scottish CBI and others interested in free enterprise in Scotland view the threat to the Union posed by the Labour Party and other Opposition Members who are toying with the Scottish convention? With Socialism out of fashion in Moscow, Kiev and Leningrad, how do they view the possibility of Scotland becoming the last bastion of Socialism in Europe as the Opposition realises that they have no earthly chance in the rest of the United Kingdom?

Mr. Rifkind: My hon. Friend can take comfort from the fact that there has never been a majority in Scotland prepared to vote for Socialism. That, I think, is a point on which all parties in the House need to reflect. So far as the views of the CBI are concerned, I noticed that, only yesterday, Mr. Alistair Mair, the deputy chairman of the CBI in Scotland, indicated his belief that any break-up of the United Kingdom, or any major constitutional change, would impose new economic burdens on Scotland, which would deter investment and be contrary to our economic interests.

Childminders

12. **Mrs. Fyfe:** To ask the Secretary of State for Scotland whether he will make more funds available to the Scottish Vocational Education Council for the Training of Childminders.

Mr. Michael Forsyth: I have no plans to do so. The Government, through the rate support grant, have provided substantial resources, which have allowed local authorities to increase expenditure on services for the

under-fives from £19·5 million, in 1979-80, to £46·9 million, in 1987-88—an increase, in real terms, of 37 per cent.

Mrs. Fyfe: We all know that this Minister does not give the under-fives any priority, and, in view of what he is doing to the over-fives, that may be just as well. While we are waiting for progress on the training of childminders in sufficient quantities for people's needs, would the Minister advise working women to get together and arrange for one of them to look after the children while the rest go to work? I think that I had better warn the Minister that, in the advice that the Prime Minister gave a few months ago, she was inciting women to break the law.

Mr. Forsyth: The hon. Lady does the Government a great disservice. She should be aware that since 1979 the numbers of children attending nursery schools and classes has increased by 23 per cent. The numbers in various forms of day care have increased substantially, and almost 80 per cent. of three and four-year-olds are now the subject of pre-school provision. I had a letter the other day complaining about the two-year backlog in the registration of childminders by Strathclyde regional council, owing, I understand, to some industrial dispute. If the hon. Lady is particularly concerned about childminders, she might use her good offices with the Labour party to sort out that particular problem before coming to central Government.

Community Charge

14. **Mr. Canavan:** To ask the Secretary of State for Scotland what is his latest estimate of the number of people in Scotland who will not pay the poll tax.

Mr. Lang: We have made no estimate.

Mr. Canavan: I did not hear the Minister's reply, but what reply did the Secretary of State give to the Committee of Scottish Clearing Bankers, which has complained to him about being forced to arrest the bank accounts of customers who have refused to pay fines levied for their failure to register to pay the poll tax? Is it not clear from this, and from last Saturday's massive anti-poll tax demonstration involving about 30,000 people, that the opposition to the poll tax embraces not only the political majority in Scotland but many people from many different walks of life—people from sport, from the arts, community leaders, civic leaders, Church leaders, trade union leaders, and now, apparently, even the bankers? Is everyone out of step except our "Malcy"?

Mr. Lang: My answer to the hon. Gentleman's original question was that we had made no such estimate. So far as the other points that he raises are concerned, he chooses to forget how unpopular and how unfair domestic rates were. What we have introduced is a broader-based and fairer system of contributing to local government. If the hon. Gentleman decides to make a martyr of himself by not paying his community charge, he will be confronting not only the rule of law but the leader of his own party.

Dame Peggy Fenner: Will my hon. Friend, in order to give enormous cheer to the English local authorities, which will be embarking in the near future upon a register of people subject to the community charge, assure me that all those who marched in Scotland were part of a very small proportion of people who did not register? Can he quote the figure that I heard him mention on the radio concerning the number of people who have registered for the community charge?

Mr. Lang: I am happy to assure my hon. Friend that about 99 per cent. of the adult population in Scotland have registered. She may also like to know that most local authorities in Scotland have assumed that at least 95 per cent. of the adult population will pay the community charge.

Mr. Douglas: Will the Minister take time to reflect on the Chancellor of the Exchequer's view that tax remission for the elderly in terms of medical aid should not be means or needs-tested? Will he compare and contrast that with the severe disclosure on which people who are mentally impaired will have to embark in order to avoid payment of the poll tax?

Mr. Lang: The hon. Gentleman draws attention to the elderly. He may like to know that we estimate that about half the pensioner population in Scotland will be eligible for rebates of one form or another and that about 90 per cent. of the single pensioner population in Scotland will benefit as a result of the change from domestic rates to the community charge.

Mr. Harris: Is my hon. Friend able to give the House any information about how many right hon. and hon. Members who sit on the Opposition Benches have made public declarations about their intention to flout the law —*[Interruption.]*—in some cases against the specific advice of the leaders of their parties? Surely every hon. Member has a right to that information.

Mr. Lang: My hon. Friend will be aware that public declaration and private practice are often very different. However, I shall look with interest to see what action the Leader of the Opposition takes against any Opposition Front Bench Member who does not pay the community charge.

Mr. Dewar: Is the Minister not genuinely concerned about the confusion and chaos that surrounds the rebate system and about the fact that countless thousands of people have not yet lodged applications? Will he guarantee that, if necessary, the system will be altered to ensure that everyone who is genuinely entitled to a rebate will have it backdated to 1 April?

Mr. Lang: We are certainly concerned that anyone who is eligible for a rebate should get one. We calculate that about 30 per cent. of the adult population will be eligible for a rebate. Applications have been received from about two thirds of the likely number and they are being processed very quickly. I hope that the short-term problems that are being experienced by some local authorities will be resolved fairly quickly. However, the Department of Social Security has, exceptionally, granted a concession whereby, for up to 56 days from the due date, it will be possible to obtain a rebate.

Labour Statistics

15. **Mr. Harry Ewing:** To ask the Secretary of State for Scotland what was the level of unemployment in Scotland in April 1979 using the same method of calculating the figures as presently used.

Mr. Lang: In April 1979, seasonally adjusted unemployment in Scotland, on a basis consistent with the current coverage of the count, was 141,000. Since January 1987 seasonally adjusted unemployment in Scotland has fallen by over 87,000.

Mr. Ewing: Is it not true that in April 1979, using exactly the same method of calculation that the Government are using now, unemployment in Scotland was about 90,000? When does the Minister expect this deplorable Government to bring unemployment down to that kind of level?

Mr. Lang: The hon. Gentleman plainly did not listen to my answer. I gave him the figure of 141,000. I understand his anxiety that the unemployment figures when his Government left office should be reduced, because he will recall that the last Labour Government presided over a doubling of unemployment during their five years in office. This Government are now more accustomed to falling unemployment.

COSLA

16. **Mr. McAllion:** To ask the Secretary of State for Scotland when he next intends to meet representatives from the Convention of Scottish Local Authorities; and what matters will be discussed.

Mr. Rifkind: I have arranged to meet representatives of the Convention of Scottish Local Authorities on Friday 28 April to begin consultations on the revenue support grant settlement for 1990-91.

Mr. McAllion: Will the Secretary of State take that opportunity to discuss with COSLA the current round of competitive tendering and the fact that multinational companies such as Sitaclean and United Kingdom Waste have been showing an interest in picking up local authority contracts in Scotland? Will he explain to COSLA and to the rest of us how the awarding of contracts to multinational companies, whose headquarters are respectively in Paris and London, is an example of the Government devolving real power and control to the Scottish people?

Mr. Rifkind: Irrespective of whether a local authority or a company carries out the services, I presume that they will employ local people. Therefore the implications for employment are the same, irrespective of where the employer is based. The objective of competitive tendering is to ensure a good quality of service for the local community in order that the resources available can be used to the maximum benefit of the community.

Newbattle Abbey College

17. **Mr. Eadie:** To ask the Secretary of State for Scotland if he will list the individuals and organisations he consulted before making the decision to withdraw funding from Newbattle abbey college, Dalkeith, Midlothian.

Mr. Michael Forsyth: My right hon. and learned Friend consulted the governors and the trustees before his announcement on 9 March.

Mr. Eadie: Is the hon. Gentleman aware that his answer is not strictly correct? In the meeting with my hon. Friend the Member for Glasgow, Garscadden (Mr. Dewar) the Secretary of State confessed to us that the reason that he took the decision was because he was asked by the Scottish Education Department to take the decision; he never consulted anybody. Is it not deplorable that the Secretary of State is not prepared to come to the Despatch Box and defend his own decision? Will the hon. Gentleman convey to his right hon. and learned Friend that, if the argument is about finance, more time should be allowed to the college so that it can change from the present structure of financing to another?

Mr. Forsyth: My right hon. and learned Friend gave the governors of Newbattle 18 months' notice of his intention to withdraw grant. Hon. Members on the Opposition Benches were among those who argued that the local authorities and the trade unions would wish to support the college. In the event, the college governors found that they were able to get commitments of only some £30,000 from the local authorities and from trade union sources. This seems to endorse my right hon. and learned Friend's judgment that the type of education on offer at Newbattle is an anachronism and that the emphasis which we have placed on adult education, which has resulted in more than 6,000 people benefiting from adult education on a full-time basis in Scotland, is the correct way forward, compared with the 40 places on offer at Newbattle. I regret to say, therefore, that the governors looked for support and found that it was not forthcoming.

Points of Order

3.32 pm

Mr. George Robertson (Hamilton): On a point of order, Mr. Speaker. May I draw to your attention, and seek your advice on, something that the Prime Minister said to the House yesterday and that has considerable implications for the House?

In reply to a question put to her by the hon. Member for Inverness, Nairn and Lochaber (Sir R. Johnston), the Prime Minister said:

"The hon. Gentleman can read for himself the report of the secretary general to the United Nations Security Council".

She went on to say:

"he can also obtain for himself a copy of the Geneva protocols which were specifically agreed to by SWAPO. All those are public knowledge, and the hon. Gentleman can get them from the Library at any time."

The Prime Minister used documents yesterday to make an attack on one side in Namibia, that is, SWAPO, but the fact is that the secretary general's report to the United Nations Security Council was not publicly available yesterday when she said that it was. It was not in the House of Commons Library then and it is not in the Library now.

More seriously, the documents that she referred to as the "Geneva protocols", which led her to say in her answer,

"SWAPO committed itself to the Geneva accord under which it is required to stay north of the 16th parallel in Angola"—[*Official Report*, 4 April 1989; Vol. 150, c. 15.],

are not available. In *The Guardian* today, Cedric Thornberry, the assistant to the United Nations' special representative in Namibia, is quoted as saying:

"We have no official knowledge of that treaty and so far as I know it has never been published".

Yesterday the Prime Minister was fresh back from Namibia and chose to make a one-sided and partisan attack on SWAPO in a brief reply to a question without making the proper and full statement that the House expected. She did so by citing documents which were not, and in one case cannot be, in the public domain or in the House of Commons Library. This is an inexcusable way of treating the House.

In the face of escalating violence and deaths on Namibia's northern border, there is real concern in this country about the possible collapse of the peace plan, the danger of further killing which may well threaten British troops——

Mr. Speaker: Order. This is not a statement; the hon. Gentleman is raising a point of order with me. *[Interruption.]* Order. I am not responsible for what has been said by the Prime Minister. I will hear the rest of the point of order as long as it is brief.

Mr. Robertson: I am putting to you, Mr. Speaker, the very serious point that on a matter of acute importance to the House, to the country and to British troops serving in Namibia, the Prime Minister cited the existence of extremely important documents, telling us that they were in the House of Commons Library and were publicly available. The fact that they are not publicly available and are still not in the Library must be of genuine concern to all of us and to you.

The House expected the Prime Minister yesterday to come forward with at least some support for the United Nations secretary general in his efforts in Namibia and also possibly support for a British plan on the same lines as were applicable in Zimbabwe. However, we were faced only with partisan invective. As the Prime Minister cited documents that she said were available and were not, and that are important but are not in the public domain, will you, Mr. Speaker, seek to protect the House from such conduct and perhaps ask the Prime Minister for an explanation?

Mr. Speaker: I am not responsible for what is said at Question Time.

The Lord President of the Council and Leader of the House of Commons (Mr. John Wakeham): The hon. Gentleman went rather wide of the point of order. I have *Hansard* in front of me. My right hon. Friend the Prime Minister answered a question from my hon. Friend the Member for Skipton and Ripon (Mr. Curry), that was the principal answer. It was only in answer to a supplementary question that she referred to some documents. I understand that she was not correct in what she said and that the documents were not in the Library. I understand that arrangements are being made for copies of the agreement and the Geneva protocols to be placed in the Library this afternoon. It was a genuine mistake on the part of my right hon. Friend. I apologise to the House for any inconvenience that has occurred, but I understand that the documents will be put in the Library this afternoon.

Mr. Alan Williams (Swansea, West): Further to that point of order, Mr. Speaker——

Mr. Speaker: Order. I do not see how it can be a point of order to me. The Leader of the House has made a comment about the matter, but I will hear the right hon. Gentleman.

Mr. Williams: We have observed the increasing practice of the Prime Minister, in the middle of Prime Minister's questions, of making limited statements on which there can be no further questions, so using up valuable time. When the Prime Minister makes a mistake, why should she not observe the same rules as the rest of us? Instead of sending a messenger along to say, "Please, I am sorry, but as I am Prime Minister you will ignore it," why on earth does not the right hon. Lady have the guts to come here herself to say that she was wrong and that she misled the House?

Mr. Jeff Rooker (Birmingham, Perry Barr): On a point of order, Mr. Speaker. It is a different point of order on which I ask for your ruling. I will be brief. The point of order relates to your ruling yesterday in respect of the sub judice rule as it affects the Department of Trade and Industry report on the House of Fraser. I should like you to confirm that, although the sub judice rule applies during our deliberations at Question Time and on statements, it does not apply when the House of Commons or the other House is discussing legislation. When we are discussing the passage of Bills, where it is relevant, the sub judice rule does not apply. I seek your confirmation and guidance on that.

Mr. Speaker: I do not know about the other House, but I can confirm that that is so in this House.

Mr. Neil Hamilton (Tatton): Further to the first point of order, Mr. Speaker. I did not catch everything that the hon. Member for Hamilton (Mr. Robertson) said, but it sounded to me very much——

Mr. Speaker: Order. I do not think that there is anything that I can add to what the Leader of the House said.

Mr. Hamilton *rose*——

Mr. Speaker: In equity, I will hear the hon. Gentleman, but it must be a point of order for me to answer.

Mr. Hamilton: It sounded very much as though the Labour party is supporting the bunch of terrorists that is trying to sabotage the independence of Namibia.

Mr. Speaker: I think that we are off on an extension of Question Time.

Mr. Alex Salmond (Banff and Buchan): On a point of order Mr. Speaker. In the list of amendments to the Electricity Bill, amendment No. 169 has been incorrectly recorded as standing in my name——

Mr. Speaker: We shall deal with that when we come to the Bill.

Mr. Robert Hughes (Aberdeen, North): Further to the earlier point of order, Mr. Speaker, about the Prime Minister's answer yesterday. I am grateful to the Leader of the House for apologising for part of the mistake. Is he aware that there were further misleading statements? The Prime Minister said clearly that there was no provision for SWAPO bases inside the country. There are published documents that state the contrary. It is up to you, Mr. Speaker, on a matter as grave as this, with such tremendous issues at stake, to ensure that the Prime Minister, who returned from Namibia only two or three days ago, is compelled to come to the House and make a statement to withdraw the totally wrong allegations that she made against SWAPO.

Mr. Speaker: The House knows that I cannot be held responsible for what is said from the Dispatch Box or from the Back Benches. There will be other opportunities for hon. Members to raise the matter, doubtless even tomorrow.

Mr. Dennis Skinner (Bolsover): On a point of order, Mr. Speaker.

Mr. Speaker: Is it on a different matter?

Mr. Skinner: Yes, Mr. Speaker. As you will be aware, those responsible are still deliberating over the question of televising the House. In the meantime, we have to watch television programmes about politics and other matters. From what I gather, on Friday night, on Channel 4, there will be an interesting programme about the life and times of the Prime Minister and that it will suggest that Leon Brittan is reported as saying that Bernard Ingham and Charles Powell deliberately leaked the Solicitor-General's letter about Westland. If so, that confirms what my hon. Friend the Member for Hamilton (Mr. Robertson) said about the Prime Minister continually misleading the House. If that is the case, she should be brought here to explain.

Mr. Speaker: I do not know what the programme will say——

Mr. Skinner: I urge you to watch it, Mr. Speaker.

Mr. Speaker: I should like to watch it, but I shall be holding a constituency surgery.

Mr. Norman Buchan (Paisley, South): On a point of order, Mr. Speaker. I seek your help and guidance. Elements of war have broken out in relation to agreements by which we were bound. That is the situation in Namibia. There must be some means by which a responsible Minister can be made to come to the House to make a statement on that subject. Apart from the needs of the House, it is imperative that that is done for the sake of the issue that is involved. The Leader of the House is in his place. Can it be put to him, through you, Mr. Speaker, that a statement is required and should be made and the inaccurate statements about the situation withdrawn?

Mr. Speaker: An opportunity will arise at Prime Minister's Question Time tomorrow, if the House wishes to pursue the subject. There will also be business questions tomorrow. The Leader of the House will have heard what has been said, and doubtless there may be the possibility of the House debating the matter.

Mr. Paul Boateng (Brent, South): On a point of order, Mr. Speaker.

Mr. Speaker: Does the hon. Gentleman wish to raise a point of order on a different matter?

Mr. Boateng: Further to the response of the Leader of the House——

Mr. Speaker: Order. That is not a matter for me. We have a very busy day ahead and I suggest that we should now get on.

Mr. David Winnick (Walsall, North): On a point of order, Mr. Speaker. My point concerns the disciplining of a Member of the House. My hon. Friend the Member for Linlithgow (Mr. Dalyell) was banned from the House because of a remark that he made about the Prime Minister. If, however, it turns out that what he said was basically true—that the information was leaked on the direct instructions of the Prime Minister's press secretary and private secretary, which does not seem to be any longer in dispute as a result of what Sir Leon Brittan has said—then surely my hon. Friend was perfectly right——

Mr. Speaker: Order. I do not intend to be drawn into an argument about a programme that none of us has yet seen.

Mr. Tony Banks (Newham, North-West): On a point of order, Mr. Speaker.

STATUTORY INSTRUMENTS, &c.

Mr. Speaker: By leave of the House, I shall put together the Questions on the three motions relating to statutory instruments.

Ordered,

That the Food Protection (Emergency Prohibitions) (Sea Fish) Order 1989 (S.I., 1989, No. 529) be referred to a Standing Committee on Statutory Instruments, &c.

That the draft Advice and Assistance (Financial Conditions) (Scotland) Regulations 1989 be referred to a Standing Committee on Statutory Instruments, &c.

That the draft Civil Legal Aid (Financial Conditions) (Scotland) Regulations 1989 be referred to a Standing Committee on Statutory Instruments, &c.—*[Mr. Maclean.]*

WELSH AFFAIRS

Ordered,

That the matter of Housing in Wales, being a matter relating exclusively to Wales, be referred to the Welsh Grand Committee for its consideration.—*[Mr. Maclean.]*

Mr. Tony Banks: On a point of order, Mr. Speaker. I have been standing on my feet waiting to put a point of order.

Mr. Speaker: Order. The hon. Gentleman, who is a former Whip, knows that when Mr. Speaker is on his feet he must resume his seat. However, if he wishes to raise a point of order on a different matter, and if it will be helpful to us, I will take it.

Mr. Banks: We former Whips should stick together, Mr. Speaker.

I would like you to expound a little more, if you would, Mr. Speaker, on the question of the sub judice rule. I understood that sub judice was involved when a matter was before the court and that if we discussed the issue in the House we might prejudice the opinions of a jury. I do not understand how the sub judice rule applies to the DTI report on Lonrho and the Harrods takeover. It appears that we are talking about a report in which the Fayeds have been described as a bunch of liars——

Mr. Speaker: Order. We former Whips should certainly keep together. If the hon. Gentleman would like to have a private tutorial with me, I shall be very pleased to instruct him.

Unprescribed Spectacles (Health Warnings)

3.44 pm

Miss Ann Widdecombe (Maidstone): I beg to move,

That leave be given to bring in a Bill to make it compulsory to display health warnings where spectacles are sold without prescription.

Under the Health and Medicines Act 1988 it is legal for spectacles to be sold over the counter without a prescription. The practice is restricted to spectacles which have simple magnifying lenses to help people with reading difficulties. Nevertheless, it is likely to become extremely dangerous as it militates against the early discovery of eye disease.

It is common ground that a significant amount of eye disease such as glaucoma is discovered, entirely incidentally, during regular eye check-ups. Very often the patient has such a check-up because of deteriorating vision and ordinary reading difficulties, the eye test is carried out and quite apart from the vision defect the incipient disease is discovered. Under the new system, people between 40 and 50 who might normally expect their reading sight to deteriorate will, in effect, be able to prescribe their own spectacles without any eye check-up or any prescription by trying out various lenses until they reach the ones with which they are most comfortable.

I do not wish to prevent anyone from being able to buy cheap spectacles without the hassle of a test and a prescription, but people should be aware that by forfeiting the chance of an eye test and properly prescribed spectacles they run the risk of incipient disease remaining undiscovered. More seriously, some people have vision defects directly attributable to eye disease, but if they find spectacles which make reading more comfortable they may assume that those spectacles are right for them and the more serious causes of their vision defects will not be discovered. No two eyes are alike. When a person is prescribed spectacles by a practising optician, the specification for each lens is likely to differ, if only by an infinitesimal amount. Individuals prescribing their own spectacles are not likely to obtain that precise variation and thus are likely to be wearing spectacles which do not exactly suit their requirements.

Medical opinion seems to have gone into reverse and now says that no damage is done to adults' sight by wearing the wrong spectacles. If that is so, when the Government were deregulating the provision of frames, why were they so particular to keep the dispensing of lenses separate? I and other hon. Members raised those points during the proceedings on the Health and Medicines Bill and the then Minister promised that the Government would consider the possibility of displaying health warnings where spectacles are sold, warning people of the dangers of forgoing the eye test.

There is no reason to suppose that that would be remotely deleterious to those selling spectacles without prescription. The warning would not be against the spectacles themselves—it would simply stress that regular eye tests can prevent eye disease. No reputable dealer could have any possible objection to displaying such a warning on the counter where people are self-prescribing. Such people may be self-prescribing for the second or even the third time, which would suggest that for six years they have missed the opportunity to have regular eye

check-ups. Individuals would have a choice. They could buy the spectacles and forget the eye check-up, they could take notice of the warning and perhaps buy the spectacles but have the eye check-up anyway, or they could have the eye check-up and then obtain properly prescribed spectacles.

It is a well-established principle that where there is likely to be danger to an individual from any course of action, whether it be smoking or anything else, a warning is issued. We would greatly improve preventive eye medicine if, in conjunction with the deregulation of the provision of reading spectacles, warnings were issued about the relevance of the eye check for disease rather than simply the correction of vision defects.

I believe that the Bill is essential and is in no way in opposition to the spirit of the Health and Medicines Act 1988.

Question put and agreed to.

Bill ordered to be brought in by Miss Ann Widdecombe, Dame Jill Knight, Mr. David Blunkett, Mr. David Amess, Mr. D. N. Campbell-Savours, Mr. Robert G. Hughes, Mr. David Alton, and Mr. David Shaw.

UNPRESCRIBED SPECTACLES (HEALTH WARNINGS)

Miss Ann Widdecombe accordingly presented a Bill to make it compulsory to display health warnings where spectacles are sold without prescription: And the same was read the First time; and ordered to be read a Second time upon Friday 7 July and to be printed. [Bill 111.]

Orders of the Day

Electricity Bill

As amended (in the Standing Committee), considered. Ordered,

That the Bill be considered in the following order, namely, new Clauses, Clause 1, Schedule 1, Clause 2, Schedule 2, Clauses 3 to 9, Schedules 3 to 5, Clauses 10 to 22, Schedule 6, Clauses 23 to 29, Schedule 7, Clauses 30 to 33, Schedule 8, Clauses 34 and 35, Schedule 9, Clauses 36 to 64, Schedule 10, Clauses 65 to 83, Schedule 11, Clauses 84 to 90, Schedule 12, Clauses 91 to 94, Schedule 13, Clauses 95 to 104, Schedules 14 to 16, Clause 105, and new Schedules.—*[Mr. Michael Spicer.]*

New Clause 4

DISCHARGE ETC. OF CERTAIN ADVANCES AND LOANS MADE TO EXISTING BODIES

'.—(1) The following powers, namely—

(a) the power conferred on the Secretary of State by subsection (3) of section 2 of the Electricity and Gas Act 1963 to give directions as the repayment of advances made by him under that section to the Electricity Council; and

(b) the power conferred on the Secretary of State by subsection (2) of section 24 of the Electricity (Scotland) Act 1979 to give directions as to the repayment of advances made by him under that section to a Scottish Board,

shall include power to direct the Council or Board to discharge its liabilities in respect of any advance so made by a payment to him, on such date as is specified in the direction, of such amount as is so specified.

(2) The Treasury may direct the Electricity Council or a Scottish Board to do anything specified in the direction which is requisite or expedient for the purpose of securing the discharge, or the transfer to the Treasury, of the Council's or Board's liabilities in respect of any foreign currency loan made to the Council or Board.

(3) Where the liabilities of the Electricity Council or a Scottish Board in respect of any foreign currency loan made to the Council or Board are to be discharged (whether in pursuance of a direction under subsection (2) above or otherwise), the Treasury may direct that the amount to be paid to the Treasury by the Council or Board for the foreign currency required for the purpose of securing the discharge shall be such amount as is specified in the direction.

(4) Where the liabilities of the Electricity Council or a Scottish Board in respect of any foreign currency loan made to the Council or Board are to be transferred to the Treasury (whether in pursuance of a direction under subsection (2) above or otherwise), the Treasury may direct the Council or Board to pay the Treasury, on the date of the transfer, such amount as is specified in the direction.

(5) The amount specified in a direction under subsection (1), (3) or (4) above shall be the aggregate of the present values (calculated in such manner and by reference to such rate of interest as the Secretary of State with the approval of the Treasury or, as the case may be, the Treasury may determine) of—

(a) in the case of a direction under subsection (1), the payments which, if the Council's or Board's liabilities in respect of the advance were not discharged before the final date, would fall to be made to the Secretary of State in respect of the advance;

(b) in the case of a direction under subsection (3) or (4), the payments which, if the Council's or Board's liabilities in respect of the loan were not discharged or transferred before the final date, would fall to be made the Treasury under the relevant exchange cover agreement.

(6) The Secretary of State may direct the Electricity Council to exercise its powers under section 21 of the

Electricity Act 1957 in relation to any amount which falls to be paid by the Council in pursuance of a direction under subsection (1), (3) or (4) above in such manner as is specified in the direction under this subsection; and such a direction may in particular require contributions to be made by all or any of the Electricity Boards in England and Wales in such amounts as are specified in the direction.

(7) Any sums received by the Secretary of State in pursuance of a direction under subsection (1) above or by the Treasury in pursuance of a direction under subsection (4) above shall be paid into the National Loans Fund; and any sums received by the Treasury in pursuance of a direction under subsection (3) above shall be paid into the Exchange Equalisation Account.

(8) In this section—

"the final date", in relation to an advance or loan, means the date on which the final payment in respect of the advance or loan falls to be made;

"foreign currency" means a currency other than sterling;

"foreign currency loan" means a loan made wholly or mainly in a foreign currency;

"the relevant exchange cover agreement", in relation to a foreign currency loan, means the agreement made under section 1 of the Exchange Equalisation Account Act 1979 with respect to the payments falling to be made in respect of that loan.'.—*[Mr. Michael Spicer.]*

Brought up, and read the First time.

3.52 pm

The Parliamentary Under-Secretary of State for Energy (Mr. Michael Spicer): I beg to move, That the clause be read a Second time.

Mr. Speaker: With this it will be convenient to consider Government amendments Nos. 68 to 72.

Mr. Spicer: This new clause was the subject of the Ways and Means resolution we debated last night. Amendments Nos. 68 to 72, which are grouped with the new clause, relate to the money resolution which was also before the House last night.

In the case of England and Wales, it makes sense for all the long-term debt of the industry, including its foreign debt, to be repaid when the successor companies are set up. In that way, the companies can be properly structured financially in preparation for the private sector where their borrowing will no longer be protected and constrained by rules appropriate to the public sector.

Until flotation, while the companies remain in the public sector, they will be able to borrow for short-term purposes from the national loans fund under clause 72 and to have Treasury guarantees on market borrowing under the proposed amendment No. 68 to clause 73. That will cease when the companies are privatised.

In Scotland, where the debts of the industry are much larger than in England and Wales, the long-term debt will be converted into debentures, issued share capital and reserves after vesting.

During the debate on the money resolution I set out the need for amendments Nos. 69 to 72, which set the borrowing limits of the industry in England and Wales at £2,000 million. In the context of an industry with a turnover of £11 billion, that is by no means a large borrowing limit. It has to be seen in the context of present borrowing, which is about £1·6 billion.

The question of continued parliamentary scrutiny was raised in the debate last night, especially by the hon. Member for Bradford, South (Mr. Cryer). Under clause 73, each issue of a Treasury guarantee requires a written statement to be laid before both Houses of Parliament and, under clause 72, each financial year the Secretary of State will have to prepare an account of transactions from and to the national loans fund and will have to lay it before Parliament.

Mr. Kevin Barron (Rother Valley): We understand that that is the position under clauses 72 and 73. In relation to subsection (1) of new clause 4, it is likely that restructuring will go ahead before flotation and that the capital restructuring will be completed before then. Debts will be paid off in England and Wales.

The Minister referred to the debts of the Scottish industry, which were accumulated largely as a result of investment in nuclear electricity, especially at Torness, and said that those debts will be changed into a combination of debentures, issued share capital and reserves. How much will that cost the British taxpayer? It seems that, once again, the debts of nuclear power will be written off for it to go into the private sector.

On subsection (2), will the Minister confirm that foreign currency debts in England and Wales will be wholly paid off before the flotation of the companies and that Scotland will have the bulk of that debt paid off? What is the foreign currency debt of the Scottish industry, and how much of it will still be outstanding when the electricity industry is floated into the private sector?

Under subsection (6), the Electricity Council will be able to levy repayments of debt from the boards. Does the Minister envisage any disadvantage to the boards if that exercise takes place before the companies are floated? The boards in England and Wales differ in their economic structures and the consumers they supply. Does the Minister believe that any areas will be disadvantaged when the debts that the boards owe the Electricity Council are reclaimed?

Mr. Spicer: At the end of March, the Scottish boards had £1,591 million in outstanding debt to the national loans fund, £1,019 million outstanding in foreign borrowings and £500 million in short-term deposits. Those figures contrast with the position elsewhere. There is no disguising the fact that that is one reason why the Scottish companies must be treated differently from other companies with respect to the repayment of borrowings. For the English companies, that repayment will not be a difficult matter, as they have considerable deposits which could be used to finance the repayment of borrowings—at least in part.

I cannot answer directly the question about the exact nature of restructuring and it is not reasonable to expect the Government to do so. It is some time yet until the companies are floated, and that is the point at which the balance sheets and the financial structure of the companies should be laid out.

Mr. Barron: Will the Minister give way?

Mr. Spicer: I will, but I will answer the hon. Gentleman's question first about whether the area boards will be disadvantaged if their deposits are used for the repayment of debt. The answer is no. When we restructure the finances and balance sheets of the area board companies, which we shall do before flotation, we shall ensure that there is no disadvantage incurred in the way suggested—properly—by the hon. Gentleman. I can give him that assurance.

4 pm

Mr. Barron: The Minister says that the Government feel that it would be unreasonable and inconvenient for them to tell us exactly how the restructuring of the debt in Scotland will take place. Does he agree that the taxpayer should know exactly the amount that will be seen as a write-off? It cannot be unreasonable for us to hear the exact amount, even if it is given in percentage terms. Exactly how much will this cost the British taxpayer?

Mr. Spicer: Of course the exact cost to the British taxpayer will be known. In none of the privatisations with which I have been associated—I have been associated with several in recent years—have we come before Parliament with the financial restructuring until closer to the date of the privatisation. That programme is as yet not fixed, and when the time comes there will, of course, be a full disclosure of what, if any, write-offs will occur and any costs that there would therefore be to the public purse.

Question put and agreed to.

Clause read a Second time, and added to the Bill.

New Clause 5

ADDITIONAL TERMS OF SUPPLY

'. A public electricity supplier may require any person who requires a supply of electricity in pursuance of section 15(1) above to accept in respect of the supply—

(a) any restrictions which must be imposed for the purpose of enabling the supplier to comply with regulations under section 27 below; and

(b) any terms restricting any liability of the supplier for economic loss resulting from negligence which it is reasonable in all the circumstance for that person to be required to accept.'.—*[Mr. Michael Spicer.]*

Brought up, and read the First time.

Mr. Michael Spicer: I beg to move, That the clause be read a Second time.

Mr. Speaker: With this, it will be convenient to take Government amendments Nos. 12 to 14, 16, 17 to 21, and 26.

Mr. Spicer: New clause 5 allows the public electricity supplier to require anyone requesting a supply to accept certain additional terms on that supply. However, it will not weaken the obligation to supply electricity. That is because the new terms will apply only to two specific aspects of the supply. It is also because if there is any dispute over the terms of supply, the consumer will have the right to ask for an independent determination by the director under clause 21. Under amendment No. 13, which is in this group, the customer will be informed of that right.

The first of the contexts in which additional terms of supply will be permitted is in respect of safety. At present, the Bill does not allow the supplier to impose the restrictions necessary to allow him to comply with safety regulations. That could give rise to a potential anomaly. The supplier could be obliged to provide a supply under clause 15 although in doing so he would contravene the requirements of regulations made under clause 27 on safety. The new clause would therefore give the supplier the right to impose restrictions on the supply where necessary to enable him to comply with those safety regulations.

The second area in which terms could be imposed by the supplier under new clause 5 will ensure that consumers in general are provided with secure supplies without any need for expensive price increases. As the Bill stands, a consumer would have the right to take action for any losses suffered as a result of negligence. It is right that in general such a remedy should be available to consumers. We would expect suppliers to take out normal commercial insurance to cover that possibility. However, in some instances a couple of seconds of lost power could have highly significant effects, especially in these days when so such dependence is placed on computers. There could be little or no——

Mr. Dennis Skinner (Bolsover): The Minister should talk about computer breakdowns.

Mr. Spicer: I shall talk to the hon. Member for Bolsover (Mr. Skinner) afterwards to explain just how inaccurate was his intervention on this last night. I shall be happy to debate that matter with him if he wishes to intervene. I will not discuss it outside the Chamber—the hon. Gentleman often addresses us outside the Chamber—but I am happy to debate it inside the Chamber.

There might be little or no actual physical loss, but the economic consequences could be major, far outstripping the actual value of any supply lost. In cases in which the degree of sensitivity to the loss of supply is so much greater than normal, under the Bill as it stands the supplier would have to take on the role of insurer for the consumer involved. The costs of insurance in such cases are likely to be high and could be met only through increased charges to consumers as a whole. We do not believe that it is justified to require the mass of consumers to face increased charges because of the particular sensitivity to loss of supply of a very small number of consumers.

To avoid that outcome, the new clause would enable the public electricity suppliers to impose additional terms restricting liability for economic loss so far as it is reasonable in the circumstances to do so. The restriction of liability would not apply to physical loss or damage but only to economic loss, and only to the extent that the restriction was reasonable. Any dispute over a restriction would come within the provisions of clause 21, allowing for independent determination by the director.

In the light of that explanation, I am sure that the House will welcome the new clause for the protection that it affords for the safety of supply and for consumers generally.

The other Government amendments are drafting amendments or consequential on new clause 5, except for amendment No. 13, to which I have already referred, and amendments Nos. 16, 21 and 26. Amendment No. 16 meets the points raised in Committee and provides that whenever a supplier serves a notice requiring security from an existing consumer he must at the same time inform the consumer of his right to have any dispute over that security determined by the director.

Mr. A. J. Beith (Berwick-upon-Tweed) *indicated assent.*

Mr. Spicer: The hon. Member nods. That point was raised in Committee and the Government brought forward the amendment to meet our assurance.

Amendment No. 21 makes the continuation of an existing supply while any dispute affecting it is determined a matter for the director's discretion. Amendment No. 26 ensures that the director will be able to use his enforcement powers in respect of any breach of the provisions of new clause 5.

[Mr. Spicer]

I hope that the House will feel able to accept new clause 5 and the associated amendments.

Mr. Barron: It is strange that after weeks in Committee the Government have come forward on Report to add things to the hastily cooked-up piece of ideology known as the Electricity Bill. On Second Reading and in Committee there was a strong statement by the Government to the effect that the duty of supply will be as never before—that we shall get away from the 50-yard rule in terms of domestic dwellings, and so on, and that we shall have a better electricity supply than we had in the public sector for many decades. Moreover, we were told, if anything fails and the lights go out we shall be able to get compensation from the successor companies.

Now, however, it seems that that may not be the case. The successor companies may have told the Government what the cost had been to the public sector over the years and what it might be to the private sector if there were a loss of electricity, especially to sensitive users such as commerce or industry, or indeed to domestic premises.

The Minister has partly answered the question that I was about to put to him, but what does the new clause mean in relation to the regulations in clause 27? The Minister says that it is all to do with safety, and I accept that, but does it mean any change in the present position? What is the current relationship between the right of supply and any safety regulations which might be seen to interfere?

Paragraph (b) concerns interruption of supply and the restriction on a supplier's liability. What happens at present if there is a power cut in a sensitive area, perhaps in a high-tech or industrial company? What obligations do the current area boards have in relation to insurance and a consumer's right to claim from them if there has been a major loss? Will there be a change in the present procedure and, if so, why? Will the new successor boards be feather-bedded against the actual cost of failing to meet a demand of a consumer with whom they have contracted in one form or another? Those questions appear relevant and must be answered by the Minister.

We are now at the Report stage of a Bill which was supposed to be the best thing ever for electricity generation and supply. Yet every time we meet to discuss it we have to accept amendments and new clauses which apparently seek to protect the industry from the problems that will be caused by putting this public utility into the private sector.

Mr. Beith: The new clause and the series of amendments grouped with it include some useful improvements to the Bill. The Minister referred to the one that will enable the customer to know his rights. That is something for which we pressed in Committee and I am glad that it has been included. Looking at the position so far, the inclusion of the restriction on liability is necessary, but, if the debate goes a little further, I may be persuaded another way. However, taking the Bill as it stood, all the amendments and the new clause together, the right to supply is still not what it appears to be, primarily because of the financial implications involved.

It is all very well for someone to have a right to require an electricity board to supply electricity, but if the company can then turn round and say, "Yes, you have that right and we will exercise it, but the estimated cost is £2,500," that right does not amount to a row of beans. In my constituency, for example, charges of £115,000 for three properties, £200,000 for 10 properties and £3,906 for one property fewer than four miles from the centre of the town of Berwick have been quoted.

It is not merely that the companies in estimating the cost of providing the right to supply are likely to be very tough or demanding, but that they will argue that they have no right to in any way subsidise one consumer at the expense of others. Therefore, the amendments and the new clause will not be effective in the absence of any provision that would specifically allow and encourage the companies to meet the objective of providing electricity supplies throughout the country.

In this day and age it is surely a reasonable objective that wherever practically possible homes should have access to an electricity supply. If that were not so, the Government would not provide for the obligation to supply. Although they have not done so for gas, the Government consider it reasonable for every home to have a connection to the mains electricity supply. That will not be achieved, however, at the sort of prices being charged to remaining homes.

If those remaining homes had been in the North of Scotland Hydro-Electric Board area, up to now none of them would have had to pay more than £600. That in itself is quite a high charge, but at least the North of Scotland Hydro-Electric Board is backed by provisions that require it to have regard to the general development of the area and allow it to meet the cost of extending the electricity supply. The result is that in an area where many properties are more remote than they are in England, the level of connection of properties to the electricity supply is higher. Not many people realise that in the remotest Highlands of Scotland the proportion of properties connected to mains electricity is higher than in Northumberland, in Devon and in a number of other rural parts of Britain.

The time has surely come to clear up the remaining gaps in the electricity supply system, but the duty to supply as set out in the Bill and in the amendments is not sufficiently strong to do that. The Government could have made that duty stronger and they could have introduced amendments on the lines of the amendments that we introduced in Committee. Our amendments would have given the companies at least the opportunity, preferably the obligation, to continue the work of extending the electricity supply and to use some of the large funds that will be made available to them to do that. As it is, they will try to load on to every customer the cost of extending the supply and often that cost will be high.

4.15 pm

I am sorry to say that, despite the minor improvements in the new clause and associated amendments, a duty to supply will not be a reality for thousands of people in this country. They still have to manage without any electricity or they face the almost impossible task of trying to run two or three domestic appliances off a generator. As I told the Committee, anyone who has had the experience of trying to run a washing machine, a television and a few electric lights off a small generator on a dark winter's night knows that it is not much fun. That does not contribute to bringing up a family in reasonable conditions.

Farm workers, shepherds, and other people living and working in the countryside will have to put up with such a way of life for a great deal longer unless better provisions than those in the Bill are made.

Mr. Peter Hardy (Wentworth): The hon. Member for Berwick-upon-Tweed (Mr. Beith) spoke about minor improvements, but "mini-minor" improvements might be a better description.

In Committee we agreed with the hon. Gentleman about the problems of rural supply and I am sure that he shares my belief that there will not be a massive eagerness on the part of private generators to supply small-scale customers in our remote areas. The proposed improvements will not take us very far in that direction.

In common with my hon. Friend the Member for Rother Valley (Mr. Barron) I recall the ebullient and sweeping speech made by the Secretary of State on Second Reading. The central point of his speech was that we would have masses of competition, new suppliers, enormous improvement and dramatic change. I told the Secretary of State then that I did not think that he had read his own Bill because clause 15 hedges everything about to the point that the right hon. Gentleman's sweeping and ebullient claims are somewhat—*[Interruption.]* My hon. Friend the Member for Bolsover (Mr. Skinner) perhaps describes it more effectively than I would have done.

Mr. Rhodri Morgan (Cardiff, West): Spell it.

Mr. Hardy: I have no intention of spelling it. The comment made by my hon. Friend the Member for Bolsover was entirely justified if not entirely in place.

At the time of Second Reading the Secretary of State had not read clause 15. It is obvious that the claims that he then made and the posture that he adopted was hedged about to such an extent that his claims were questionable. To add further hedging with the new clause warrants further comment.

It is interesting that new clause 5(b) demonstrates that, at last, the Government accept that negligence is possible. It is a modest contribution to the Government's realisation that negligence is encountered from time to time. As the months pass we may see more examples of such negligence in the Bill and the subsequent privatisation.

I hope that we do not vote against the new clause, but it is worth putting on the record that, once again, it adds further contradictions to the claims made by the Secretary of State on Second Reading.

Mr. Frank Haynes (Ashfield): First, I welcome the Secretary of State who is in his place today. We really did not see a lot of him Upstairs in Committee when we did all the graft.

Mr. Michael Spicer: Come off it.

Mr. Haynes: I do not know why the junior Minister says, "Come off it." Is he protecting the Secretary of State? I am sure that the right hon. Gentleman can look after himself. We intend to argue about what the Government want to do about the privatisation of electricity and I hope that the junior Minister, who will reply at the end of the debate, will keep his mouth closed for a minute and listen to what is said instead of yatting away to his right hon. Friend at his side. That happens all the time, and it is wrong. Afterwards, some of these Ministers say that they do not remember what an hon. Member said, or what the Opposition said. Is it any wonder when they are sitting gas-bagging on the Treasury Bench? Ministers must listen to what is being said.

I remember the speech made by the Secretary of State on Second Reading about the dramatic changes that were going to take place. He also talked about something else —consumer rights. We talked about consumer rights in Committee and we know what sort of consumer rights that there will be. I experienced them not long ago in my constituency—under the present regime.

My hon. Friend for Rother Valley (Mr. Barron) talked about when power is cut off and the difficulties that the consumer will then face, but what about upsurges of power which can damage people's property—their washing machines, refrigerators, televisions and God knows what? When we were in Committee I did not hear the junior Minister describe how the consumer would be looked after if that happened. Consumers want to know exactly what help they will receive, and what rights they will have. It is all right for the Secretary of State to nod and say "yes" but we want real answers to these questions. What sort of compensation or help will consumers get when there is an upsurge of power—as happens all the time? Not long ago, I experienced that in my own constituency, in the wonderful little village of Selston.

I do not suppose that the Secretary of State knows anything about Selston. However, my hon. Friend the Member for Bolsover (Mr. Skinner) does, because his constituency is not far down the road and he lives not far away. He knows what a wonderful little place it is. A row of houses suffered an upsurge of power which affected a number of consumers. I took the matter up with the area board but, to start with, it did not want to know. Therefore, I went and banged on the door in the hope that I had the support of the Secretary of State for Energy. I sorted it out in the end—[HON. MEMBERS: "Well done."] I am talking about the little village of Selston, which is only a minute patch on the map of the United Kingdom.

Mr. Skinner: I wonder whether Selston is the village which had a unique system of paying electricity bills many years ago under the old regime. Meters were emptied and people would receive rebates. Some people put pit washers in the meter instead of two bob pieces and asked, "What happens if you put in more washers than there is rebate?" They were told that it would be left over until the next month. A new inspector arrived and stopped that practice. One of the fellows said, "He has broken custom and practice so I am refusing to allow this new regime to apply." His electricity supply was cut off and he went to his Member of Parliament and said, "Will you get my electricity restored?" His Member of Parliament said that he would try. The fellow said, "I have got four kids and no lights or telly—nothing." The Member of Parliament said, "I will give you some candles." The man said, "Don't bother. I'm connected up with him next door." Is that the same village?

Mr. Haynes: It is the same on Report as it was in Committee, where Conservative Members received an education about this sort of thing. I shall come to the point made by my hon. Friend the Member for Bolsover but I shall make an additional point. My hon. Friend is right. That is what used to happen. Those so-called coins, made in the blacksmith's shop, were really efficient at the job: they fitted exactly. Those people knew what they were

[Mr. Haynes]

doing. I do not know what those at the Treasury would have said if they had known that coins were being made for the meters on National Coal Board blacksmiths' premises. But the Secretary of State has cheated those people: they now have to put in a card rather than a coin, or so-called coin.

My hon. Friend the Member for Bolsover knows as well as I do that those coins can no longer be made because they have closed the damn pit. The Secretary of State laughs, but 1,100 people lost their jobs in that village when the Government closed the pit and stopped them from making those coins for the meter.

Mr. Skinner: Is not the moral of the story that the new owners of the electricity industry will have a double handful down in Selston and places like it? The Minister would do well to tell the potential purchasers about the trouble that they will have in collecting the money.

Mr. Haynes: That is one of the reasons why we have suggested to the Government that they should not privatise the industry. At present money is being poured into those people's pockets in massive tax reductions, but privatisation will bring real problems.

I am standing here, however, because I am concerned about the consumers. I am one of them. I live just down the road from the wonderful little village of Selston, in the constituency of Ashfield, in the beautiful county of Nottinghamshire. Even the Secretary of State is being given an education this afternoon. He was not in Committee very often to be educated, but his junior Minister was always there—and listened sometimes, although he did not give us the answers that we wanted.

I hope that we will be given an answer this afternoon. Will consumers really get their rights, or will they be robbed? Will they be taken for a ride by the so-called electricity experts who will move in and buy up our industry if the Government get away with this Bill and it becomes an Act? My fear is that under the Bill and the present Administration the consumer will not get a fair deal.

Mr. Michael Spicer: Mr. Deputy Speaker—[HON. MEMBERS: "Answer that lot."] I certainly will answer that lot, because it is easily answerable. First, however, let me reply to the hon. Member for Rother Valley (Mr. Barron). The hon. Gentleman asked what changes were being made to the present position. Existing safety regulations will apply. What has changed is that for the first time we are talking about consumers, who will have a right to supply. Whatever anyone says—for instance, the hon. Member for Berwick-upon-Tweed (Mr. Beith)—no one who lives more that 50 yd from a mains supply now has such a right. Of course supply is cost-related, but should the potential consumer feel that he has been overcharged he will for the first time have the right to appeal to the Director General of Electricity Supply.

The other change is that the obligation to supply has been switched to the electricity distribution company. That is one reason why we must ensure that the obligation relates to, and does not completely override, the need for safety regulations to apply.

I turn to the remarks of the hon. Member for Ashfield (Mr. Haynes), who is again behaving like a Whip, having gone all quiet on the Front Bench.

Mr. Haynes: I will not allow the Minister to provoke me. I have behaved myself in the Chamber—which is more than can be said of some hon. Members.

4.30 pm

Mr. Spicer: I apologise to the hon. Gentleman if I provoked him with my reference to his having gone quiet. I can see that that may have been a bit provocative. Let me "unprovoke" the hon. Gentleman by saying that he was not quiet a few moments ago. If I may say so, he was talking a lot of rubbish—and I hope that that does not provoke him. I have to say to him and to the hon. Member for Wentworth (Mr. Hardy)—perhaps, indeed, to all hon. Members—that, far from the Opposition having educated us in Committee, the process was rather the other way round, particularly in respect of the question of consumers. It is quite right that it should be so, because the whole of this Bill is dedicated to the consumer. That is precisely why we are changing the situation, and we have three days on Report to carry on the process of education.

Opposition Members must accept that at present there is a monopoly supplier who determines the costs, whatever those costs may be, and then passes them, without any checks or balances, straight through to the consumer, the person to whom we are addressing ourselves today.

Mr. Joseph Ashton (Bassetlaw): If this legislation is dedicated to the consumer, will the consumer be able to have a coin-operated meter on demand—something that is not possible at present?

Mr. Spicer: The Bill incorporates arrangements for prepayment—something that no current legislation does. So far as prepayment is concerned, there will be new rights for the consumer that is quite clear.

Mr. Ashton: Will the consumer have the right to ask for the installation of equipment that will enable him to pay by a method other than meeting a big bill after a three-months delay?

Mr. Spicer: Of course, all sorts of things have to be taken into account—for instance, theft and matters to do with security, which must modify what is being done.

At present there are no checks and balances for the consumer. That will be changed radically by this Bill. It is a fundamental point, and it is no bad thing that the hon. Members for Ashfield and for Wentworth have raised it in the context of consumers. It is well to establish firmly on the record again that this Bill changes the situation fundamentally. *[Interruption.]* The hon. Member for Sedgefield (Mr. Blair) says that prices will be put up. If he wishes to make that kind of comment from a sedentary position, he must tell me why. We know of many projects —20 at the moment, and I am sure that there are many others in the pipeline—whose cost structures are considerably below those of the CEGB, on average. Under the Bill, it will be possible to have new power stations and generating arrangements—something which, by the way, would not be possible or practicable in the present situation.

Far from what the hon. Gentleman has suggested, the pressure on prices will be downward. I agree that the key factor here is which system will do more to put pressure on prices. It is part of our case that the downward pressure will be far greater in the private sector, under the terms of this Bill, than would be the case were the present situation

to persist—for precisely the reasons I have already given: that the present system is one in which a monopoly supplier passes his costs, without any checks or balances, straight through to the consumer. That must be less good, from the point of view of pressure on prices, than the system that we are proposing.

Mr. Morgan: Will the Minister please explain what he means by downward pressure on prices from the 20 private sector projects? They are attracted to come into the industry only by the price increases that the Secretary of State announced in April 1987 and April 1988. Had the Secretary of State not imposed those price increases, which were double what the industry had asked for, the headroom would be nowhere near what the private sector generators need to attract them into the industry on a competitive basis.

Mr. Spicer: I have a great deal of respect for the hon. Gentleman because of his knowledge of the industry and the way in which he puts his questions, but he has missed the fundamental point that in a private and varied system it is possible to introduce greater efficiency. It is not necessarily the case that private sector generating companies require an artificially high price to be set to attract them into the industry. All that they want is the opportunity to do business. That is precisely what the Bill will give them.

Mr. Hardy: The Minister had not dealt with the exemptions to which I referred when I said that the Secretary of State's ebullience was definitely hedged. According to clause 16, the consumer may have the right to demand a supply, but the supplier has a certain right to refuse to supply.

According to clause 16(2)(a), a public electricity supplier will not be required to give a supply of electricity if

"he is prevented from doing so by circumstances not within his control; or"

if

"(c) it is not reasonable in all the circumstances for him to be required to do so."

Will those circumstances include the remote rural resident who has already been referred to in the debate?

Mr. Spicer: I have already made that point absolutely clear. I have also pointed out—I said earlier that it was the whole point of new clause 5—that certain conditions will be imposed, particularly when safety matters are involved. The supplier will have the right to specify under what conditions he is prepared to undertake the contract. However, those conditions must be reasonable and I have already referred to the kind of circumstances in which conditions could be imposed. We start from the basis of the right to supply. Only in the most extenuating circumstances where the test of reasonableness has been applied and where safety is concerned would the right to supply be modified.

Mr. William O'Brien (Normanton): Does the Bill provide any protection for consumers over standing charges? As there is to be competition throughout the country over electricity supplies, will there also be competition over standing charges? Will the fact that the supply network is to be a separate operation result in another standing charge? Water authorities will levy two standing charges. Does the Bill provide any protection so that customers——

Mr. Deputy Speaker (Mr. Harold Walker): Order. I find it difficult to understand the relationship between that point and the new clause.

Mr. Spicer: Standing charges will be essentially the same as they are now. However, the regulator will be able to determine whether the charges are excessive. That will be part of his duties.

Mr. Barron: I thank the Minister for answering my question about the scope of the regulations in terms of new clause 5. He said that there will be no change. However, he has avoided my question about paragraph (b). I shall ask it again so that he knows exactly what I am talking about.

Paragraph (b) refers to restricting the liability of the supplier for economic loss if he fails to supply electricity to a dwelling or to industry, commerce or hospitals. New clause 5 appears to contradict the speech of the Secretary of State for Energy. He referred to the compensation that would be made available to consumers if a public electricity supplier failed to supply electricity. That was incorporated in the White Paper and it was referred to on Second Reading and in Committee. However, it now appears to be suggested that in future consumers will have to insure against economic loss if there is a failure to supply electricity.

Will there be any change, as regards area boards, in the obligation that the area board now has compared with the obligation that the private sector will have because of the Bill? It is important that that point is answered. If there is to be a cushion, we can see that taking the industry into the private sector benefits the consumer not at all but perhaps says to him that he must insure, because the industry will be unable to ensure that there is a supply of electricity.

Mr. Ashton: The Minister has failed abysmally to answer the point made by my hon. Friend the Member for Ashfield (Mr. Haynes)—my hon. Friend made it in a jocular manner, but it is important—about poor consumers who have great difficulty in paying their bills and who for many years have sought an automatic right to a coin-operated slot meter or to a meter which takes some sort of plastic token which disintegrates when inserted. That is the only way in which any one-parent family or anyone on a low income can enjoy a system of "pay as you burn".

Under such a system, thousands of consumers have found that they can manage to survive without getting into debt simply because if the meter cuts off at 10 o'clock on a Thursday night they go to bed and put the kids to bed or they manage with some sort of food that needs no cooking. That is how they survive when they know that they are coming to the end of the week and the Giro has not yet come. Many of my constituents, in an area with 17 per cent. unemployment, come into that category.

The electricity boards—and, indeed, the gas boards—have always resisted pressure to go back to the old system of collecting from slot meters because they do not want the job. They argue that collectors from meters are often hit on the head when they are collecting, people know when they are coming round and meters can be broken into by local burglars, thus increasing theft. I suspect that the real reason is not the desire to reduce theft but an unwillingness to let consumers know how much they are consuming. They would prefer a system whereby we all get into debt for three months and until the bill comes in none of us knows how much it will be.

[Mr. Ashton]

I wish that someone would invent some sort of meter which poor people could stick on their mantelpiece and which would show them how fast it was going round and how much electricity they were consuming so that they could, for instance, turn off a bar of the fire. It would work the other way as well—at present old people often sit and shiver in winter, terrified to turn on another bar of the fire because they do not know how much electricity it will take.

Power is probably the only product that people consume first and find out the price later. No one would go into a restaurant, order a meal and only after eating it ask how much it cost. Yet we are expected to consume electricity and gas in that way.

Mr. Keith Mans (Wyre): Does the hon. Member agree with me that the area board statistics for the past three or four years, with their encouragement for pre-payment meters, plastic cards and other tokens, show that they are going in the direction that the hon. Member wishes and will continue to do so after privatisation?

Mr. Ashton: I am coming to that.

We are faced with the problem of people not knowing how much they have consumed until they have consumed it and then being faced with a big bill that they cannot pay. Instead of going down to the area office and explaining, they often let it drift.

The hon. Member for Wyre (Mr. Mans) referred to some sort of card. It costs £2 and one can check off how much has been used, but if the card expires on a Saturday or Sunday people cannot get down——

Mr. Mans *rose*——

Mr. Ashton: The hon. Gentleman can make his point afterwards. I am not giving way all the time. If the hon. Gentleman wants to speak, he can speak later.

Occasionally I have received a complaint from a person with a card that it has run out at the weekend and he cannot get a replacement from the local office. In my constituency the local office might be 10 miles away, at Mansfield or Doncaster. Even if he has the money, there may be no bus to take him there. There are other problems, too. *[Interruption.]* The hon. Member for Wyre should not be too impatient. We have three days on this Bill so it is no use him getting excited.

The problem will be solved if the person in difficulty can put a 50p piece into a slot. The fuel policy action group can confirm that in some cases, after reconnection of a supply, the meter has been rigged to go at such a speed that the person gets only half what he pays for because he has debts to pay off, so it becomes like a treadmill and the consumer is back to square one.

4.45 pm

There are difficult and complicated methods of paying debts, but none is as effective as the old system under private enterprise. I was a boy before the industry was nationalised. In the poor areas in Sheffield, where I lived, everyone had a slot meter. In many terrace houses not every room had electricity. Often the area board would say to a family, "We think that you can only afford electricity in three rooms." My grandmother did not have electricity upstairs, and in the kitchen she had an old gas lamp, because the area board thought that she would not be able to pay for more electricity. Nobody wants to go back to those days.

The private boards will find, like anyone else, that they will suffer bad debts. In the past the rest of us have paid for the bad debts. The authorities stick 2·5 per cent. on everybody's bill and we all pay. It is like the credit card companies which charge 27 per cent. interest because they have to cover for bad debts. With the nationalised industries, if there is a disconnection at least a Member of Parliament may raise the matter locally and exert pressure, or even ask a question in the House about the increasing number of disconnections. When the gas industry was sold off, disconnections rocketed—the people reading the meters were told to adopt a much tougher line—and exactly the same will happen with electricity. There will be a harder attitude to poor consumers who cannot pay their bills at the end of three months.

The Bill is not good enough. There is no protection for the poor one-parent family who cannot pay when suddenly faced with a bill for three months' electricity. The only protection is to give them the right to demand a "pay as you burn" system, but as yet there is no right for anyone to demand such a meter. I hope that the Minister can tell us that the Bill will include a provision to give that right to poor consumers.

Mr. Deputy Speaker: Before the Minister replies a second time, do any other hon. Members wish to take part in the debate? No.

Mr. Michael Spicer: Later amendments will address themselves specifically to the point which the hon. Member for Bassetlaw (Mr. Ashton) has raised. By way of a brief response, there will be a right to ask for prepayment meters if people want them. Far from disconnections going up, they are coming down dramatically. One reason is that people are getting prepayment meters. The hon. Gentleman referred to miscallibration of meters. In those circumstances there can be a direct appeal to the director general.

The hon. Gentleman raised the question of using cash rather than tokens. As my hon. Friend the Member for Wyre (Mr. Mans) mentioned, one reason for the move to prepayment systems, using tokens or cards, is precisely because they are more secure and cannot be robbed so easily. We will have a debate on the subject, but I can give the hon. Member for Bassetlaw those assurances on the questions that he raised on behalf of poorer consumers.

Mr. Mans: Does my hon. Friend agree that the hon. Member for Bassetlaw (Mr. Ashton) is living in the past? The type of prepayment meters now being fitted have a button on them to allow consumers £2 or £5 worth of free electricity which they pay for after the event. That gets over the problem that the hon. Gentleman suggested might arise for consumers.

Mr. Ashton: Will the Minister ask the boards to make that fact clear to the public in advertisements? I assure him that few members of the public know about it.

Mr. Spicer: It becomes a right, and with the latest technology the boards would do well to take the hon. Gentleman's advice and advertise it widely.

The hon. Member for Rother Valley (Mr. Barron) raised the question of liability, and one must ask what sort of consumers he had in mind. If the supply companies had

all the liability imposed on them, that would mean them having total insurance to cover all eventualities, and that would be extremely expensive. It would have to be paid for by other consumers in higher tariffs.

We say that there should be a test or reasonableness. We are making a distinction—that is what the new clause is about—between physical loss which is incurred through a breakdown in supply and which is fully insurable, and unreasonable economic loss—vast losses because of a temporary, perhaps few seconds' disruption of supply. For large computer companies or large companies owning computers—the type of consumer the new clause addresses—it would be surprising if they were not properly insured against such eventualities.

Mr. Barron: Will they be insured?

Mr. Spicer: I cannot speak for every company in the land. It would be surprising, first, if they were not properly insured and, secondly, if they did not have back-up systems, such as small generators, as a standby capacity. Most large computer users and manufacturers would have a standby capacity, and that is the type of company we are considering in this context.

Mr. Barron: What liability do the area boards have at present when eventualities of this type occur? Will companies have to insure differently in the future, or will liability be accepted by the boards?

Mr. Spicer: I will obtain the precise answer for the hon. Gentleman because I do not want to mislead him about the exact liability that the companies will have. We are talking about companies going into the private sector, where the issue of insurance will apply in the way I have described. But I will obtain for the hon. Gentleman the details of the precise status of the obligations and liabilities that are covered at present.

Question put and agreed to.

Clause read a Second time, and added to the Bill.

New Clause 6

Conditions for funding certain companies engaged in nuclear generation in Scotland

'.—(1) Without prejudice to section 7(1)(a) above, it may be a condition of a licence granted to a company ("the licence holder") that it shall from time to time provide any company to which subsection (2) below applies with such funds as may be determined by or under the condition in respect of such of that company's liabilities as may be so determined.

(2) This subsection applies to any company which—

(a) is deemed for the purposes of the Companies Act 1985 to be a subsidiary of the licence holder; or

(b) is a related company of the licence holder (as defined in paragraph 92 of Schedule 4 to that Act),

and is, at the time when the condition is imposed, engaged in the operation of a nuclear generating station in Scotland.

(3) Subsection (3) of section 7 above applies in respect of a condition included in a licence by virtue of this section as it applies in respect of a condition so included by virtue of subsection (1)(a) of that section.'.—*[Mr. Lang.]*

Brought up, and read the First time.

The Minister of State, Scottish Office (Mr. Ian Lang): I beg to move, That the clause be read a Second time.

Mr. Deputy Speaker: With this, it will be convenient to discuss Government amendments Nos. 5, 6, 7, 15 and 65.

Mr. Lang: The new clause relates to a technicality in the relationship between Scottish Nuclear Limited and its parent companies. It will enable a licence condition to be included in any licence or licences granted under the Bill requiring the licence holder to meet the liabilities of any subsidiary or related company operating a nuclear generating station in Scotland. The amendment applies only in Scotland, as it is only in Scotland that it is proposed that nuclear operations be conducted through a subsidiary company.

As hon. Members will be aware, it is a central part of the Government's proposals for restructuring the Scottish industry that there should be a separate company. The new clause will enable such a condition to be placed in the licences granted to the two electricity companies as successors to the Scottish boards to ensure that the liabilities of that subsidiary, Scottish Nuclear Limited, are met.

The long-term liabilities in question are those associated with the decommissioning of nuclear installations and the disposal of nuclear waste. Following privatisation, the nuclear stations in Scotland will be owned and operated by SNL, which is to be owned by the two electricity companies in proportion to their relative size.

SNL will be the nuclear site licensee and, as such, will be responsible for decommissioning the stations once generation has ceased. Such decommissioning is planned to take up to 100 years to complete. Financial provision will be made in the balance sheets of SNL and the parent companies against the long-term liabilities. The fact that financial provision is made in this way should ensure that funds are available to meet the long-term liabilities.

The clause covers a technicality which results from the subsidiary structure. As things stand, SNL, as a subsidiary company of the South of Scotland electricity company or a related company to the North of Scotland electricity company, would be unable to obtain funds from its parents without their agreement. While it is expected that the parents would agree, the Government recognise that it is prudent to ensure that there is a direct route to enforce the long-term liabilities against them.

Subsection (1) of the new clause provides for the inclusion of an appropriately drafted licence condition requiring the licence holder to provide such funds as may be determined by, or under the condition in respect of, the liabilities of a company specified in subsection (2). Subsection (2)(a) applies the clause to any company which, in terms of the Companies Act 1985, is a subsidiary of the licence holder; SNL will be a subsidiary of the south company by virtue of the fact that the south company holds more than half its equity share capital. Subsection (2)(b) applies the clause to any company which is a related company of the licence holder, defined in the Companies Act 1985 as meaning any body corporate in which the parent company holds, on a long-term basis, a qualifying capital interest for the purposes of securing a contribution to that company's own activities by the exercise of any control or influence arising from that interest.

Mr. George Foulkes (Carrick, Cumnock and Doon Valley): The Minister is speaking at a rapid pace about an issue which, in his initial remarks, he implied was merely technical but which is in fact of monumental importance.

He skipped rapidly over the point about SNL having responsibility for including in its accounts the costs of decommissioning any nuclear power stations that are closed. Will he explain precisely the position of Hunterston

[Mr. George Foulkes]

A? The decision to decommission having been made prior to privatisation, will the responsibility for decommissioning that station be inherited by SNL?

Mr. Lang: I said that the new clause was concerned with a technicality because, in essence, it is. The relationship between Scottish Nuclear Limited and its parent companies and the respective roles of the parents and SNL are important and major issues, but the clause is not directly concerned with that. It is concerned with the technical possibility that the parent companies might escape a liability incurred by their subsidiaries. The matter was raised in Committee and I am sure that Opposition Members will welcome this additional provision, which is made in case such a situation should arise.

The nuclear assets of Hunterston A will be transferred to SNL and my expectation—I will seek confirmation of this and if I am wrong I will write to the hon. Gentleman, or if the opportunity arises, correct myself later—is that Hunterston A would also form part of those nuclear assets and be transferred, notwithstanding that the decommissioning process, which may take 100 years, will already be under way.

Mr. Foulkes: The Minister is being helpful and has stated precisely that the nuclear assets of Hunterston A will be transferred to SNL. Do I assume that his reference to "assets" includes liabilities? In other words, may we assume that all aspects of Hunterston A—I am particularly concerned with the major liability of the cost of decommissioning—will be included in the liabilities of SNL and that all of that will be transferred to SNL? Perhaps the Minister has received a note on that by now.

Mr. Lang: I have indeed, and it confirms that I was correct in my assessment in reply to the hon. Gentleman's earlier intervention. Assets and liabilities will be transferred to SNL. The new clause is concerned with a technicality to ensure that the parent companies to SNL cannot escape their contribution to those liabilities. As I said, SNL is related to the north company on the basis described by the Companies Act 1985 from which I have quoted. In both cases, the new clause applies only to a company which, when the condition is imposed, is engaged in the operation of a nuclear generating station in Scotland.

Subsection (3) ensures that clause 7(3), which relates to the role of the director in relation to licence conditions, applies to any condition imposed by virtue of the new clause. The other amendments in the group are technical and I shall say something about them if the House wishes.

5 pm

Mr. Donald Dewar (Glasgow, Garscadden): The Minister has described new clause 6 as technical. I recognise that it builds in a safeguard to ensure that the parent company does not slough off some of its responsibilities in the sensitive subject with which the clause deals. However, it raises a number of interesting matters on which we are entitled to inquire, relating to the scale of funds which might be involved and which can be transferred under certain conditions of the licence if new clause 6 reaches the statute book.

There is no area where public interest and sensitivity is more marked than the nuclear subsidiary of the two privatised companies in Scotland. While I imagine that it will be common ground that it is unlikely that any new capacity will be provided and that any nuclear or non-nuclear power stations will be built in Scotland for a considerable time, as my hon. Friend the Member for Carrick, Cumnock and Doon Valley (Mr. Foulkes) has pointed out, there are on the horizon very substantial liabilities and charges which will be the subject of some of the financial transfers in the new clause. Perhaps it would be fair for the Minister to provide some details of the exact scale of the transfers, the size of the liabilities and how the nuclear subsidiary will operate.

I do not want to speak at great length about the accumulated debt, but the Minister will have heard the exchanges between my hon. Friend the Member for Rother Valley (Mr. Barron) and the Under-Secretary of State for Energy in the past hour or so. We are all aware of the fact that there is something like £2·7 billion of accumulated debt between the two Scottish boards. I was interested to hear the Under-Secretary of State giving a breakdown of that debt between the national loan fund and more than £1,000 million of foreign debt included in that overall total.

It is important to know as soon as possible exactly what will happen to that debt and how much will be written off as it is a matter of such pressing importance to the electricity industry. I recall the briefing given in December 1988 by Mr. Donald Miller, the chairman of the SSEB at Torness in which he made a statement that I am sure the Minister recalls. He said that the company could not be privatised

"unless the Government writes off a large part of the £2·2 billion debts it incurred in building them."

He was referring to the nuclear power stations.

I heard the Under-Secretary of State making it clear that he was a man of experience with many previous convictions in the privatisation campaign and that he did not think that it was yet time to reveal all, although he promised that sinister happening—a full disclosure—at some point. It is important that the Minister says something on the subject, particularly as I understand that a good deal of the foreign debt is with the European Investment bank. I am relying upon the expertise of some of my colleagues, but I understand that it is backed by Treasury exchange cover and by guarantees.

If I am right, the European Investment bank debt will be at a considerably lower rate of exchange than the going rate. If the European Investment bank debt is transferred to the Treasury before the transfer date, can we be sure that it will be at the same rate of interest and that there will be no disadvantage in terms of the new rates of interest to be charged on the substitute debt, as that will clearly affect the transfer of funds or the call upon those funds which we are discussing in new clause 6? Perhaps the Minister might quickly and simply deal with that when he replies.

Another aspect of that briefing—I almost said that notorious briefing because it was certainly much noticed—at Torness given by Mr. Donald Miller was that he made it clear that he had considerable doubts about the way in which the Government were approaching possible changes in Government policy, the variations in BNFL pricing policy and the impact that that could have on the balance sheet of the privatised companies. That will have a direct effect on new clause 6 and upon the calls on the parent company which it covers.

The House will be familiar with the fact that in the financial year 1987-88 the South of Scotland electricity board had a trading profit of £13 million which was dramatically transferred into a loss of £70 million simply because of the cost of transferring the Chapelcross power station—a very old, minor power station—to the Cumbria board. Of course a great deal will emerge about future possible transactions which must affect the extent to which new clause 6 is used and whether it is necessary at all and are therefore relevant to the debate.

The House will recall that the chairman of the SSEB made it very clear in December 1988 that in his view the company would be, "unsellable" unless he received "the ultimate insurance" on the possible costs and the escalating expense of decommissioning. He said that the assurances

"will have to besigned and sealed before one writes a prospectus—otherwise it will not be worth writing."

That was a very serious point to be made by someone who was about to become chairman of a private company approaching flotation.

It is clear that the solution to that problem will have a very far-reaching effect on the use that is made of new clause 6. I hope that the Minister will say something about that. A favourite jargon term often found in European debates is "transparency". I am in favour of transparency and knowing a little more about how the machinery will operate and what the implications will be. I say that in the light of what Mr. Miller said. I draw the Minister's attention to a story which appeared in *The Scotsman* on 8 March 1989 under the headline:

"Nuclear costs deal eases SSEB's sell-off doubts".

It went on:

"A secret agreement has been reached between Ministers and the South of Scotland Electricity Board which has removed one of the biggest question marks over the proposed privatisation of the Scottish power industry."

I cannot think of anything that will have a more direct effect upon the operation of new clause 6, and the amount of funding that will have to come from parent companies. We have an excellent opportunity relevant to the debate to get some information about that secret deal. It is particularly appropriate that the Minister of State should be at the Dispatch Box. It appears that he was the principal partner, together with Mr. Donald Miller, in the private discussions that the press tell us led to the deal.

The article says:

"Both the SSEB and the Scottish Office yesterday confirmed however, that an understanding has been reached in which Mr. Miller's doubts have been satisfied . . . the key element is understood to be assurances on the contracts which fix ceiling levels on the amount of any unforeseen rise in nuclear costs and in the contracts which will govern the relationship after privatisation with British Nuclear Fuels Limited."

It goes on to say:

"A senior Scottish Office source"—

I am always suspicious when I read those words. However, that senior Scottish Office figure said that there was

"still some way to go in the discussions before a firm announcement could be made but that the process involved 'dotting the Is and crossing the Ts.'"

I should like to hear from the Minister a little about the deal and what has happened. Clearly, it will have an important and direct impact upon the way in which new clause 6 will operate.

A particularly good example of the calls that may be made on new clause 6 is the issue to which my hon. Friend the Member for Carrick, Cumnock and Doon Valley referred in his intervention—the decommissioning of Hunterston A Magnox station. I do not want to debate the merits of that decision because it would be going wide of the new clause. However, we are entitled to ask for some information about the implications of the decision in terms of the calls that may be made on the parent company under the licence agreements that will presumably be written in if the new clause is placed on the statute book.

I do not know what the cost will be but an article dated 30 March 1989 in *Power in Europe*, which is published by the *Financial Times* and is a reputable and informed trade paper, points out:

"Hunterston A is the most efficient of the United Kingdom's Magnox stations, and is one of the most efficient nuclear units in the world, with a lifetime load factor of 82 per cent."

It goes on to point out:

"only minimum expenditure is expected to be required at Hunterston A in order to receive the Nuclear Installations Inspectorate's approval for continued operation in the 1990s."

There is little dispute about that as the background to what has now happened.

The view of the author of that article is particularly relevant and interesting in terms of new clause 6. He believes that the real reason for the closure is that the operating costs of all Magnox stations in the United Kingdom have increased markedly in recent years, particularly because of higher BNFL charges for the reprocessing of spent fuel. If that is so, and the arrangements between BNFL and the privatised companies continue unaltered, the implications for the transfer of funds to the nuclear subsidiary company, which are envisaged in the new clause, are bound to be significant.

Mr. Foulkes: I agree with my hon. Friend's suspicions about the words, "senior Scottish Office sources". When one reads the words, "senior Labour MP" one knows that if someone is quoted in that way, one is about to be stabbed in the back—*[Interruption.]* Well, anyone would give their name if they had something good to say.

My hon. Friend mentioned BNFL and its costs to the SSEB in relation to Hunterston A. BNFL has a private monopoly on the ability to provide reprocessing. Does that not illustrate beautifully the way in which the private monopolies, which have total control over the costs they charge, can have a grip on the consumer? That is the way the privatised electricity companies will have a grip on the consumer in relation to pricing.

Mr. Dewar: That is a fair comment. I do not want to follow my hon. Friend down that line but there are dangers and concerns. My hon. Friend's health seems to be remarkably good in view of the dangers he described of life in Parliament.

Mr. Foulkes: I was thinking about my hon. Friend the Member for Glasgow, Garscadden (Mr. Dewar).

Mr. Dewar: As always, I am touched.

I shall return to the thread of my argument. I was making an important point. It is an open secret and was the subject of specific comment when the Select Committee on Energy considered the matter. Evidence was given by Mr. Christopher Harding, chairman of BNFL. According to the article in *Power in Europe* he told the Select Committee that the "contract was unbreakable". That is the contract between the nuclear subsidiary whose fate we are discussing and BNFL. He said:

[Mr. Dewar]

"the contract was unbreakable; should the two utilities attempt to avoid reprocessing by long-term storage, for example, they would be obliged to pay BNFL the price of reprocessing anyway. It is, in effect, one of the biggest take-or-pay contracts in history."

Clearly, that will have a direct influence on what we are discussing now.

5.15 pm

I am entitled to ask the Minister if he can say whether that contract, in that remarkably inflexible state—almost a Leonine bargain—is still in place. If it is, the House should consider it in relation to the calls that are likely to be made under new clause 6.

Another point worth mentioning is that we are talking about the calls on funds to supply the nuclear subsidiary. No doubt nuclear expenditure will be linked to other types of generation and its availability. I do not want to transgress on your tolerance, Mr. Deputy Speaker, but it is important that the Minister mentions the SSEB's arrangements on coal burn. I say that because the state of coal burn and whether the agreement that has been negotiated over many years has been brought to a successful conclusion will inevitably affect the calls made under the new clause.

I do not want to strike a discordant note and I welcome the fact that the Minister intervened in the long-running negotiations and recognised that public interest was involved. However, I was saddened that we had to beat on his door for a couple of years without success and that an enormous amount of damage was done as a result of the delay and the Minister's refusal to do his duty.

We know that in principle an agreement for five years has been reached. Under the agreement the SSEB will take 2 million tonnes of coal a year. However, I understand that the last two years of the agreement are dependent on the use of the interconnector. That is a matter for speculation and concern. We do not know much about the details or whether Ministers are still completely satisfied that the deal will hold at this point. The Minister may wish to correct me and I would be glad to receive any details but there is nothing clear about the price. We have heard mention of 150p per gigajoule but we were told by the SSEB that it would have to receive 130p per gigajoule if it were to sell effectively into the interconnector. British Coal is said to be holding out for 180p per gigajoule.

Those are enormous variations. I unreservedly welcome the agreement in principle but I am concerned about the current state of play. I would be interested to know how much of the two million tonnes will be deep mined and how much will be opencast or whether there is any agreement on that. Those are all matters which, inevitably, affect the nuclear subsidiary and, therefore, the calls on the parent company's financial resources which may be made under new clause 6.

Another point, which is connected by the same logic to this debate, is what is happening about the interconnector. I raise this matter because I now read repeatedly in articles by well-informed journalists a suggestion that any sales by the Scottish private boards to the English distribution companies will come from nuclear base load electricity. The logic is that that is likely to find favour in the first-call system and may be more attractive and cheaper for clients south of the border. There is a real fear that the consumer will have to pay a price for that and that domestic costs will spiral. It is important for the Minister to say a few words about that. I am anxious to see the interconnector working and sales increasing, which might do something to reduce the calls on the parent companies' finances under the mechanism envisaged in new clause 6. We are entitled to some information from the Minister on those points.

I am conscious of the fact that several of my hon. Friends wish to catch your eye, Mr. Deputy Speaker, and I am also aware that there will be another debate on Scottish matters when we come to the next group of amendments, which are concerned with the regulatory machinery. I give fair notice to the Minister that we shall raise such matters as the 8 per cent. increase in prices. I hoped that such rises could have been prevented under a proper regulatory system. The electricity consultative councils have been left bravely, but vainly, trying to hold the line for the consumer interest in the dying days of this Government's stewardship. However, we shall be discussing that in our later debate and I do not wish to transgress at present.

I ask the Minister to address some of the important points. If he is asking us to endorse new clause 6, he cannot do so on the basis that it is simply a technical matter to be nodded onto the statute book in a perfunctory manner. He must give us some idea of the shape and scale of the calls likely to be made under the new machinery and he must try to deal with the important points I have raised, not because of a peculiar and idiosyncratic interest of my own, but because they are of fundamental importance to the industry and the consumer.

Mr. Malcolm Bruce (Gordon): It was interesting that the Minister tried to pass off new clause 6 as a technicality, when the very fact that it is necessary suggests that there is a rather more deep-seated problem, which has been touched on already by hon. Members and about which the Minister must come clean. The Minister has said, in effect, that the successor companies to the existing boards in Scotland will, under the Bill, inherit a liability—the requirement to own any nuclear subsidiary to which they are committed to provide funding, on a fairly open-ended basis. That means that the commercial judgment of the successor companies will be compromised by new clause 6. They would have some reason, if they are coming in with a fresh approach, to believe that the SSEB in particular has a record of profligate extravagance. It would not have been able to get away with such extravagance if it had been in the private sector.

The SSEB has been able to invest in providing 110 per cent. excess capacity in the Scottish generating system, which is way above any possible strategic or commercial requirement. That has been brought home in the past couple of weeks, as the hon. Member for Carrick, Cumnock and Doon Valley (Mr. Foulkes) remarked, by the announcement that the board is closing Hunterston A, the most efficient and consistently successful Magnox station, which still has a substantial effective life left. It is to be closed down for one reason—that the board cannot find, or foresee the possibility of finding, a market for the electricity that it produces.

That seems extraordinary, given that in the past couple of years a brand new nuclear power station has been opened on the other coast of Scotland. For a company to build a new power station and then to close down a smaller power station of a similar type and of proven efficiency suggests a complete lack of good commercial judgment

and an incredible degree of appalling forecasting. One must also consider that the massive Peterhead power station is operating consistently under capacity and the Inverkip was mothballed almost before it came on stream.

It is no wonder that the Scottish electricity industry is apprehensive about being exposed to market forces—if that were the Government's intention. It is not, and new clause 6 is a further indication of how ridiculous the Government's policy is on nuclear power and the operation of the market. It is, perhaps, appropriate to quote from *Energy Economics*, which, summarising Government policy on nuclear power, said:

"Privatisation has meant that the UK has discovered it does not after all need an active fast breeder research programme, nor pour vast sums into nuclear fusion; that nuclear power is not as economic as viable alternatives; that reprocessing is an expensive waste of time; that decommissioning is a vast problem."

That is the state of the nuclear industry, and all those factors specifically affect the industry in Scotland.

Consumers may ask how much cheaper electricity in Scotland might have been had we had an efficient electricity board producing close to the required capacity, rather than servicing the debt for a massive over-capacity. The Bill has already provided the SSEB with a £2·5 billion nuclear debt write-off. Mr. Donald Miller has said that that is not enough. Presumably, this "technical amendment" is designed to ensure that not only will the taxpayer have to contribute to the massive excess of nuclear capacity in Scotland, but that the consumer will continue thereafter to fund it through electricity prices.

The hon. Member for Glasgow, Garscadden (Mr. Dewar) made passing reference to the recent increase of 8·5 per cent. It is interesting to make the point that that increase is higher than that in England and Wales and higher than the rate of inflation—at least for this week, although inflation will no doubt catch up fairly soon. The point which has not been fully realised is that Scotland is now beginning the fairly rapid march from being the area of the United Kingdom that has enjoyed the cheapest electricity to being the area of the United Kingdom that will face the most expensive electricity as a direct result of this Bill. The electricity boards, while still in public ownership, are like the Welsh forwards, getting in their retaliation first. They are softening up the Scottish public to the idea that price increases in Scotland will move faster than in the rest of the United Kingdom.

Mr. Robert Maclennan: (Caithness and Sutherland): Can my hon. Friend explain the relationship between his earlier remarks about the over-investment by the SSEB in the nuclear industry and the fact that Scotland, as he has rightly described, has enjoyed much cheaper electricity than our neighbours south of the border?

Mr. Bruce: The answer to that is that Scotland has had the advantage of access to hydro power. I made the point on Hunterston A about the success of the SSEB's engineering capability compared to that of the Central Electricity Generating Board. I acknowledge freely that the SSEB has been more successful technically than the CEGB in the development of nuclear power. However, I repeat that there was no justification for building Torness. If that money had not been invested, we would not have had to close Hunterston A and electricity prices in Scotland could have been even lower than we have enjoyed. There is a combination of factors and I freely accept that the earlier efficiency of the nuclear industry, coupled with hydro prices, are the main explanation.

5.30 pm

However, having reached that position, the way forward that the SSEB is now pursuing should be questioned. I suggested in Committee that the Scottish electricity boards should at least consider selling Torness to an English user, lock stock and barrel—in other words, transfer the capacity. I accept that that is a contentious statement and that the South of Scotland electricity board is hardly likely to be keen on selling something of which it feels so technically proud. I am sure that hon. Members of all parties will recognise that it is legitimate to ask why we are closing an economic and apparently safe nuclear power station only two years after opening a new one. Surely the argument must be that we should never have built Torness in the first place but, having built it, might it not have been more sensible to have tried to sell Hunterston A so that its capacity could be used——

Mr. Jimmy Hood (Clydesdale): We are well aware that the hon. Gentleman made this point earlier in Committee. Indeed, I referred to it in Committee when, unfortunately, the hon. Gentleman had briefly left the Committee room. If we sell off Torness to the English market so that it provides low-base, low-cost electricity to England, where will we in Scotland find a market for exporting our still-excess electricity?

Mr. Bruce: The hon. Gentleman makes a fair point. We have massive excess capacity in Scotland for which the South of Scotland electricity board has admitted that it will not be able to find a market. Having invested in that capacity, hon. Members should address the way in which we can ensure, that it is used to the maximum benefit for both the Scottish consumer and the British taxpayer. Closing a station does not seem to give the maximum benefit for the money invested.

I accept that having reached our present position—I do not think that we should have got here—we are left with the problem of excess capacity. All that I am suggesting is that that course of action should be examined because there is no possibility of securing the future of the coal industry in Scotland, about which the hon. Member for Clydesdale (Mr. Hood) is so legitimately concerned, if we have massive excess capacity. If Torness turns out to be the SSEB's cheapest investment, the SSEB might argue left to its own devices, that having made that investment, it might well choose to close the coal capacity and substitute Torness. There is therefore an argument that taking Torness out of the equation would help to create the balance that would ensure the coal industry's future.

Mr. Deputy Speaker: Order. I hope that the hon. Gentleman will not pursue that point too far because we are going further and further away from the substance of new clause 6.

Mr. Bruce: I am grateful to you for putting me on the right track, Mr. Deputy Speaker. However, I hope that you will accept that costs relating to the continuing nuclear power industry are relevant to this new clause because the way in which those costs can be absorbed so as not to disadvantage the Scottish consumer is a point of real interest. The Government's new clause gives me cause for concern, because it means that, regardless of the

[Mr. Bruce]

commercial judgment of the successor companies, Scottish consumers will have to pay more and more towards the cost of servicing that excess capacity. That will be particularly true if we fail to find a market for it and I have not met many people who have confidence that we shall secure such a market.

It seems extraordinary that we should continue to fund the nuclear industry in Scotland and close a nuclear power station at a time when the Central Electricity Generating Board is applying for planning permission to build up to four more nuclear power stations. If there is a requirement for nuclear capacity to meet the non-fossil fuel argument —leaving aside the merits and demerits of that argument —surely the sensible thing is to ensure that before we build new power stations we organise the existing capacity to ensure that it is fully utilised. To close power stations——

Mr. Deputy Speaker: Order. The hon. Gentleman may be pre-empting a debate that is yet to come.

Mr. Bruce: I accept that constraint, Mr. Deputy Speaker, and shall be happy to raise the matter later in the debate.

When the Minister replies I hope that he will have taken on board the fact that suggesting that this is a technical amendment is not good enough. The question that the Minister must answer is, if the nuclear subsidiary is to receive, as of right, funding from its parent companies, which is what they will be post-privatisation, will that funding simply be the transfer of funds provided by the taxpayer through the provisions of what will then be the Electricity Act, or will they be funds over and above those funds, which can then be recovered from the consumer in the form of increased prices?

The Minister must accept that two sources of funds are provided for. One is the ability of the industry to raise revenue and the other is the up to £6 billion that has been provided from taxpayers towards the cost of what is the substantially nuclear debt of writing off the nuclear decommissioning costs.

In response to the hon. Member for Carrick, Cumnock and Doon Valley, the Minister has already suggested that decommissioning is included in the provision of Hunterston A. If that is the case, we are entitled to know how much of that cost will be met by the taxpayer and how much will be borne by Scottish consumers. If that is not made clear, the new clause will seem to be about securing additional charges on the Scottish consumer towards the cost of the nuclear industry on top of what the taxpayer will have to invest. That might put a rather different complexion on the intervention made by my hon. Friend the Member for Caithness and Sutherland (Mr. Maclennan) that the early investment in nuclear power may well have been beneficial to the consumer but from now on the Scottish consumer may find that he is paying through the nose. I should be grateful if the Minister could tell us exactly what the new clause means in that context.

Mr. Alexander Eadie (Midlothian): I am not as blasé about the cost structure of nuclear power or about its great advantages as the hon. Member for Gordon (Mr. Bruce). As you rightly said, Mr. Deputy Speaker, there is room for a debate so that we can get all the facts, figures and consequences of that. I repeat that I am not blasé about the great benefits——

Mr. Malcolm Bruce: Nor am I.

Mr. Eadie: Well, the hon. Gentleman appeared to be blasé in his speech. However, as you, Mr. Deputy Speaker, pointed out, the hon. Gentleman will have his opportunity later.

As my hon. Friend the Member for Glasgow, Garscadden (Mr. Dewar) said, the new clause affords us the opportunity to talk about the question of commercial judgment. Taxpayers' money is involved and we want some guidance and explanation from the Minister. When we are talking about commercial judgment we have great difficulty in even getting the Minister or his right hon. Friend the Secretary of State to come to the Dispatch Box to explain what is happening on coal burn in Scotland.

My hon. Friend the Member for Garscadden said that he thought that this debate would give the Minister the opportunity to give some information to the House about what is happening on the so-called agreement or understanding reached between the South of Scotland electricity board and British Coal. There can be no argument about it: the Secretary of State and his hon. Friends are responsible for the South of Scotland electricity board and for all the costs that are likely to be involved and, as my hon. Friend pointed out, billions rather than millions of pounds are involved in relation to SSEB debt. Commercial judgment must enter discussions about coal burn.

The Standing Orders would not permit me to go into all the details and arguments in favour of a greater coal industry in proportion to the nuclear power industry in Scotland. I hope that the Minister will not try to argue that nuclear power is much cheaper than coal. We have the figures: that argument is finished. It is now recognised that nuclear power is more expensive than coal. The Minister will probably argue that there are good, sound environmental reasons for nuclear power. We will later have an opportunity to challenge that argument.

Opposition Members are trying to extract from the Minister some information about what is happening to the coal burn agreement. He cannot stand back and say that it is a matter for commercial judgment, then put down a new clause involving not millions but billions of pounds, and ask the House to agree. We are entitled to an explanation. What is the agreement? How many millions of tonnes of coal are involved for the Scottish coal industry? As my hon. Friend the Member for Garscadden said, we want also to know what it involves in respect of opencast and deep mining.

I have a vested interest in the matter. There are two pits in my constituency. I hear of all the financial problems of the SSEB. A press release by British Coal states that it will not be 3·5 million tonnes and that it may be 2 million tonnes of coal. We want to know how much will be opencast and how much will be deep mined.

Mr. Deputy Speaker: Order. I hesitate to interrupt the hon. Gentleman, but I hope that he will not go too far down that road. The new clause specifically deals with funding relating to nuclear power stations.

Mr. Eadie: Thank you for your guidance, Mr. Deputy Speaker. However, as we are talking about moneys, and as the Scottish Office talked about exercising commercial judgment, Opposition Members have a right to challenge the Government's commercial judgment in introducing this new clause which, by implication, means that they will

be responsible for solving the SSEB's debt to the extent of billions of pounds. We were told that there were problems with the financing of British Coal, so we are entitled to question the Minister on how he can reconcile the commercial jugdments that he talked about with his proposal to solve the SSEB's debt to the extent of several billions of pounds.

The Secretary of State for Energy has been more forthcoming than the Scottish Office Minister. I give due credit to the right hon. Gentleman. He tried to be helpful, but I cannot say that about the Minister who is to reply to the debate. Like a parrot, he repeated that it is a matter for commercial judgment. As moneys are involved and as we are talking about commercial judgment and the commercial viability of the SSEB, we are entitled to hear the Minister explain the implications.

I should love to debate the matter in greater detail, but I do not want to stray too far. We are talking about moneys and the deep-mine coal industry and their implications in relation to the debt. I hope that the Minister will let us know what the coal burn really is and what the present stage of the negotiations is. He cannot say that he does not know. He has been in close contact with it and has said that he is responsible for the SSEB. He must know what is happening. The Minister's reply will be closely scrutinised by my hon. Friends. In deference to you, Mr. Deputy Speaker, I leave it at that, but we want information, and information we must get this evening.

Mr. Foulkes: I am not too sure how knowledgeable you are about the geography of Scotland, Mr. Deputy Speaker, but in case you are not fully aware, the Minister——

Mr. Deputy Speaker: Order. I inform the hon. Gentleman that I spent 18 months at royal naval air station Abbotsinch, HMS Sanderling at the end of the war.

5.45 pm

Mr. Foulkes: I am grateful for that information, Mr. Deputy Speaker. You will be fully aware that the Minister, the hon. Member for Galloway and Upper Nithsdale (Mr. Lang), represents a constituency which is contiguous with mine, Carrick, Cumnock and Doon Valley. The name of his constituency is almost as unwieldy as mine, but his constituency is equally as beautiful. We know him well, not only in the House but in the south-west of Scotland. When we think about the Minister, the two words that most commonly reach our lips are——

Mr. Brian Wilson (Cunninghame, North): Small majority.

Mr. Foulkes: No, not "small majority" but "smooth" and "bland". I am sure that you will agree, Mr. Deputy Speaker, that the Minister was very smooth and particularly bland in introducing the amendment in his usual low voice, quickly glossing over what he described as technicalities. As my hon. Friend the Member for Glasgow, Garscadden (Mr. Dewar) and I said, and as even the proportionally represented hon. Member for Gordon (Mr. Bruce) agreed—that is quite a spectrum of opinion to start with—the amendment has some substantial implications, and I wish to ask a few questions about them.

First, as the Minister said, the prime purpose is to ensure that the parent company cannot escape the liabilities of the subsidiary. But what about the other way round? I hope that the Minister will answer that question. New clause 6 seems to demonstrate that some aspects of the licence conditions are not intended to apply to subsidiary companies. For example, apart from generation and supply, licence conditions could be avoided by using a subsidiary company to perform certain tasks. I hope that the Minister will check that. If that were to be the case, it would be a worrying loophole, and I hope that the Minister will consider doing something about it. If there is no loophole, I hope that he will give an assurance to that effect.

Mr. Lang: I shall deal with that specific point now in a way which I hope will reassure the hon. Gentleman. If he reads the new clause, he will find that it is concerned solely with the activities of nuclear generating companies.

Mr. Foulkes: I am grateful for the Minister's intervention, but I am not totally reassured by it. There are still activities in which nuclear generating companies will be involved. By allocating tasks to a subsidiary company, the supply and generating companies could avoid their legal liability.

That is not a party political point. Therefore, it is in the public interest for hon. Members to be assured that the provision is watertight. I hope that the Minister will consider that.

Secondly, nuclear costs are a major matter. There is still uncertainty about nuclear debt, and there are provisions for write-off. We are suspicious about the position in Scotland. The huge, almost entirely nuclear, debt in Scotland of £2·7 billion is almost exactly the equivalent of what the Government might expect to get from the floatation of the companies. Therefore, there is a major incentive for the Government to use taxpayers' money to write off the debt. As usual in respect of privatisations, we are concerned about that matter. It is an abuse of taxpayers' money.

Opposition Members are concerned also about the other costs which, in the past and even at present, have been greatly underestimated. I refer to the two additional nuclear costs. One is the disposal of the waste and the second is the decommissioning of the power stations which are vital and central to the amendment.

I know that my hon. Friend the Member for Cunninghame, North (Mr. Wilson) has a particular constituency interest in the closure of Hunterston A and I will in no way trespass on his responsibility. I know that he is deeply concerned about employment in his constituency and the implications of its proposed closure. Some of my constituents work at Hunterston, so I share his concern. However, I have been suspicious about the entire episode. I shall use the phrase of the singer Max Bygraves, "I wanna tell you a story", about Hunterston A.

Mr. John Home Robertson (East Lothian): Will my hon. Friend sing it?

Mr. Foulkes: No, I certainly will not sing it. That would empty the Chamber even further.

I am sure that my hon. Friend the Member for Cunninghame, North, as I do, receives weekly reports from the South of Scotland electricity board about the operation of Hunterston A and Hunterston B. Those reports tell us who is visiting, who has had slide shows, and what incidents there have been. I must confess that they are scrupulous in defining and giving information about

[Mr. Foulkes]

incidents that have taken place. Those weekly reports were telling the success story of Hunterston A—how well it was doing, how efficient and marvellous it was, and what a long-term future it had. Then suddenly there was an announcement that the SSEB was to close it.

I waited then with anticipation for the next weekly report from the SSEB. Of course, it was a model of careful writing and one had to read between the lines to get to the truth. It was probably written by my old friend Tom James. Clearly, the stated reason for the closure of Hunterston A had nothing to do with the real reason, which is why I intervened earlier.

I accept completely and unreservedly the Minister's assurance that it is now the Government's intention to say that the costs of the decommissioning of Hunterston A must be taken on by Scottish Nuclear Limited. However, I also know Donald Miller. I have known him over the years as deputy chairman and as chairman. I know his persuasive power and the way he keeps on going. As my hon. Friend the Member for Midlothian (Mr. Eadie) said, he is like a tiger on the question of the coal contract with British Coal.

I have discussed with Donald Miller, too, the cost of decommissioning. He said that he believes that the cost of decommissioning is finite, it can be calculated, and that he has made an allowance for it. I confidently predict that he has it wrong. He has underestimated and the cost will be much greater. There has not been a full decommissioning of a Magnox power station in this country or elsewhere, and it must still be decided whether it will be dismantled piece by piece, whether it will be encased in concrete, or what will happen. All the options must be considered.

The cost of dealing with that decommissioning is a major problem. I predict that pressure will be put on the Government to get the taxpayer to take on board some, if not all, of the cost of decommissioning and other costs, too. I hope that the Government will stick to their guns and that it will not be the taxpayer who takes on that responsibility. As privatisation approaches and the Government realise the real cost, they will become increasingly worried about the burden around the necks of the companies soon to be privatised. The only explanation that I can envisage for the early closure of Hunterston A is that the Government are looking for some way of getting that debt taken on by the taxpayer and not taken on by the future private company.

My second point concerns the site at Chapeldonan in my constituency, which is a designated site that has been owned by the SSEB for more than a decade. The SSEB has said that it will build a nuclear power station there. It is a blight on the area around Girvan. At Girvan the development of the town is constrained on the west side by the sea and on the south and east sides by hills. The only place where housing and industry can be developed is to the north, but that site is owned by the SSEB and has been reserved for a nuclear power station. Over the past few years, Kyle and Carrick district council and myself as the local Member of Parliament——

Mr. Home Robertson: And Councillor Struan Stevenson.

Mr. Foulkes: As my hon. Friend said, Councillor Struan Stevenson, the ex-leader of the Conservative group on Kyle and Carrick district council, as well as the Labour councillors, have been anxious to get the SSEB to declare Chapeldonan surplus to requirements. It will not need another nuclear power station. The hon. Member for Gordon and my hon. Friend the Member for East Lothian (Mr. Home Robertson) know that Torness power station was not needed and that it provided capacity well in excess of demand. It will certainly not need Chapeldonan.

What I do not understand from the new clause is who will take over the ownership of the Chapeldonan site if it is not sold before privatisation. Will it be the SSEB, the new privatised company, or will it be its subsidiary? *[Interruption.]* The more my hon. Friend the Member for Glasgow, Pollok (Mr. Dunnachie) waves his finger, the longer I will take, because it distracts me. Or will ownership be taken over by Scottish Nuclear Limited?

That is an important issue and that is the reason why I wrote to Donald Miller at the SSEB saying that the only advantage of privatisation—it sticks in my gullet a little to say this—is that it has made the people who are generating and will generate power look seriously at the costs. My hon. Friend the Member for Midlothian has said that nuclear power is not cheap, as the Government previously pretended—it is more expensive—and they have now realised that. I hope that we shall reach the stage when the SSEB will say that the Chapeldonan site is no longer required and that it can be sold and used for much needed industry and housing developments in the Girvan area.

My fourth and penultimate point——

Mr. Wilson: My hon. Friend has missed the third point.

Mr. Foulkes: My third point was Chapeldonan. If my hon. Friend were able to count, I am sure that he would know that.

My fourth point is that Chapelcross near Annan is an anomaly. The Minister said that the legislation applies to power generation in Scotland, but in Chapelcross there will be the anomaly of a nuclear power station based in Scotland, but providing electricity for an electricity supply company based in England. I am not sure how the provisions of the new clause and some of the other Scottish provisions in the Bill will apply to that situation. Will they apply to the siting of the establishment or the siting of the company that owns and operates that establishment? The question of cross-border relationships is an important one.

What is interesting is that the SSEB suddenly decides to close Hunterston and that British Nuclear Fuels plc decides to replace Chapelcross. One begins to suspect in those circumstances that many strange things are going on and that other factors are involved, as I have already shown in the case of Hunterston. It is also interesting to consider the other factors relating to Chapelcross, such as the pressures arising from the requirement for the supply of plutonium for weapons as opposed to power generation. Tritium is also provided at the related plant at Chapelcross and there is intense pressure on Chapelcross because of America's shortage of tritium and the relative shortage of plutonium.

Those of us who live in the south-west of Scotland are a bit fed up as we are becoming surrounded by nuclear establishments which are of no benefit to the local inhabitants, including the Minister of State, who lives not far from me. Those establishments are creating additional hazards and problems for us.

6 pm

I am concerned about the Bill in general. I appreciate that the new clause is a belated attempt by the Government to patch up some of the difficulties, but it creates further difficulties. Today I have highlighted my suspicions and worries. I hope that the Minister will take the opportunity of this important debate to try to answer some of our concerns; otherwise we shall seek more occasions in the next few days, weeks and months to pursue our concerns until we get the answers, which are especially needed by the people of south-west Scotland.

Mr. Home Robertson: I share the views expressed by my hon. Friends the Members for Carrick, Cumnock and Doon Valley (Mr. Foulkes) and for Midlothian (Mr. Eadie) about the tough practices of the present chairman of the South of Scotland electricity board. Some might say that the chairman has used sharp practices to manage that board. It is tempting to consider that a privatised SSEB could not possibly behave as badly as the present board. One could cite a number of examples of such behaviour, such as the way in which the board has handled the coal contract. In my constituency we have the bizarre situation in which large quantities of coal, which have been shipped halfway around the world from China, are being burnt at Cockenzie power station when the necessary coal to feed the grid could easily be mined from the Scottish coalfields.

I wonder whether the nuclear subsidiaries will enjoy the same facilities as the present SSEB and get a year's holiday from the rates? The Minister will be aware of my correspondence with him about how the SSEB has managed to take advantage of the rather curious provisions dealing with the rating of public utilities. On 25 May 1988 in one of the famous press releases to which my hon. Friend the Member for Carrick, Cumnock and Doon Valley has drawn attention, the SSEB claimed credit for contributing electricity to the grid from Torness in my constituency. In July 1988 it confirmed that it was putting 682 MW into the national grid. On 1 October 1988, however, the SSEB signed a certificate and submitted it to the assessor of public utilities in Scotland to say that it was generating nil at Torness, and hey presto—that ensured that it avoided paying more than £1 million in rates for the coming year. That is one way to fix the books in preparation for the privatised regime.

Much has been said about the fact that Scotland has a substantial excess of generating capacity over its peak demand and it is relevant to understand the background to that. I am acutely aware of that extra capacity because it has arisen since the construction of Torness nuclear power station in my constituency. When the decision was taken to go ahead with the construction of that nuclear power station there were many predictions of increased demand for electricity. There was also a general acceptance of the bland assurances given over the years that nothing could go wrong at nuclear power stations. Since then, one or two accidents have raised doubts about their safety record. Of greater significance to this debate is our experience of 10 years of a Government who have run down British industry and reduced the demand for energy despite the fact that we have the capacity to produce energy efficiently in Scotland.

A graphic example of the rundown of industry was the closure of the Invergordon aluminium smelter. I understand that we now import more aluminium than Invergordon could ever have produced, but in allowing that smelter to close down the Government wrote off one part of the Hunterston power station. That is a curious way to manage our economy and our long-term energy policy.

Nuclear installations function in my constituency and in that of my hon. Friend the Member for Cunninghame, North (Mr. Wilson) and there is widespread public concern that those power stations must be run efficiently and safely. That concern will run through this debate.

Much has been said about the cost of decommissioning nuclear power stations, but we should also consider the obvious additional costs of running nuclear power stations to the high standards to which it is imperative that they keep if we are to avoid the sort of accidents that have occurred abroad and, indeed, in Britain. Apart from the ongoing cost of running a power station and the cost of decommissioning such a station, there is also the cost of insuring against accidents at nuclear power stations.

Perhaps the Minister will say what provision has been made for insuring the operators of nuclear power stations in Scotland against the consequences of accidents, large or small. Will the parent company or the subsidiary company be able to indemnify people who may be affected by the emission of radioactive material or as a result of a serious accident at a nuclear power station? The House will not be surprised to discover that that is a matter of considerable concern to my constituents in the Torness area following what happened at Windscale in 1957, at Three Mile Island and, more recently, at Chernobyl. Things can go wrong and massive disruption and massive costs can result.

It would be useful if the Minister could tell us how the operators of the nuclear power stations under the new regime will be able to ensure that such costs can be met in all circumstances. Will the Government insist that the operators idemnify the people affected?

Mr. Alex Salmond (Banff and Buchan): In the light of all that we now know about the development of the Torness power station, does the hon. Gentleman regret his original support for the project?

Mr. Home Robertson: Frankly, yes. In recent years I have put that on record several times. At the time when the decision was taken to construct Torness nuclear power station, there was increasing demand for electricity, there were credible forecasts of a need for a new generating capacity in Scotland and evidence was not publicly available, as it is now, of the possibility of serious accidents. Be that as it may, however, Torness nuclear power station has been built and commissioned and it would be absurd to try to turn the clock back now.

The people of East Lothian, Cunninghame, where Hunterston is located, and throughout Scotland are fighting to ensure that in the future the generating plants are operated safely to the highest possible standards. We must also ensure that we have the right economic climate to enable us to take advantage of the power potential in Scotland, whether that means the oil industry, the coal industry, hydro-electric power or nuclear power. Scotland has the capacity to be the power house not only for its own economy, but for the entire United Kingdom. What we require from the Government is the framework to make that possible.

Mr. David Winnick (Walsall, North): On a point of order, Mr. Deputy Speaker. Will there be a statement about Sir Leon Brittan who, when interviewed for

[Mr. David Winnick]

television, stated that the then Solicitor-General's letter was leaked on the express approval and authority of the Prime Minister's private secretary and press secretary, Mr. Bernard Ingham? There seems to be a contradiction between what the Prime Minister told the House and what Sir Leon Brittan has said on record. The integrity of the Prime Minister is at stake——

Mr. Deputy Speaker: Order. The hon. Gentleman has gone far enough. I have heard of no request for permission to make a statement to the House on that or any other matter.

Mr. Wilson: I should have been quite happy for my hon. Friend the Member for Walsall, North (Mr. Winnick) to proceed. I am sure that it would be gratifying for all Opposition Members if, at last, the chickens were coming home to roost for the Prime Minister's men. As far as the Prime Minister's Scottish men are concerned, once again we are having an important Scottish debate without the presence of one solitary Scottish Tory Member other than the Minister.

I do not wish to extend this debate long as it has already continued for longer than most of us expected. Although I am speaking from the Dispatch Box, the point that I wish to dwell on, while highly relevant to the new clause, relates particularly to a constituency issue of my own, to which reference has frequently been made in the debate—the proposed closure of Hunterston A nuclear power station in my constituency.

It is worth noting that the SSEB, in framing its announcement, was careful to talk of the "possible" closure of Hunterston A nuclear station, which is of the Magnox design and has been in operation for the past 25 years. I cannot help feeling—particularly when I look at the new clause—that Hunterston A and, by definition, the people who work there are caught up in a fairly high-powered game of poker in which the stakes played for are intricately involved with the privatisation of the electricity industry and what is to be done with the nuclear content. That is objectionable. The record of Hunterston A is second to none—it is the most efficient of the United Kingdom's Magnox stations. The record of its work force is also second to none, having given extremely loyal and diligent service for the past 25 years. I recently visited the Hunterston A station and was given absolutely no clue of any proposal to close it.

My hon. Friend the Member for Carrick, Cumnock and Doon Valley (Mr. Foulkes) was absolutely right—the announcement was completely unexpected. I believe, as does the work force, that the station is but a pawn in the privatisation game, the outcome of which is not yet known. The real reason for Hunterston's closure, we are led to believe, is the increase in its operating costs, due particularly to British Nuclear Fuels' imposition of higher charges for the reprocessing of spent fuel.

6.15 pm

The Minister, in his bland way, said that this was a technical matter and had nothing to do with the substance of electricity privatisation, but he has an obligation to say what considerations will be involved in the technical announcement contained in the new clause. The financial sums involved are truly enormous. The decommissioning of Hunterston A will probably cost about £250 million to £300 million. Despite the questions that have been posed and partially answered in this debate, I still want a clear-cut statement from the Minister when he sums up about who will carry the costs of the decommissioning and about the relationship between the timing of the announcement of the possible closure of Hunterston A and the passage of the Bill through the House.

The logical consequences of the position of Hunterston A go far beyond that station and my constituency. As we understand it, the SSEB's concern, as a result of the high costs being charged by BNFL, is not primarily with Hunterston A but with the two advanced gas-cooled reactor stations, Hunterston B and Torness. As my hon. Friend the Member for Glasgow, Garscadden (Mr. Dewar) pointed out, it appears from the evidence given to the Select Committee on Energy that the SSEB and its successor may be tied to a contract with BNFL which would impose exactly the same cost disadvantages on Hunterston B and Torness as those which led to the threatened premature closure of Hunterston A.

The Minister must say, within the context of new clause 6, whether the costs of decommissioning Hunterston B and Torness on account of a high-cost regime operated by BNFL can also be expected. He should say whether the story in *The Scotsman* of 8 March was founded in fact. Under an exclusive label, Chris McLaughlin reported that the tentative agreement reached between the SSEB and the Scottish Office was partly based on a review of the contracts that will govern the future relationship, after privatisation, with British Nuclear Fuels plc. Has a deal been made between the Government and BNFL on the relationship between the SSEB's successor and that company or is it possible, as predicted in the "Power in Europe" article published in the *Financial Times*, that continuing cost burdens will be imposed on Hunterston B and Torness in the form of high charges imposed by BNFL?

The Minister has a good opportunity today to take this matter out of the realms of journalistic theorising, leaked exclusives or the word of a "senior Scottish Office source" and give the House a definitive statement about the position. I need hardly say that the future of Hunterston B power station is of immense importance. It is of even greater importance to my constituency and that part of Scotland than Hunterston A, which may close within the next few years. As the Minister said earlier, we are talking about a decommissioning process which will continue for at least 100 years—150 years has been suggested to me as the time scale involved before the core reactor can be removed from the Hunterston A site. We are talking about a time far into the future, and about continuing costs and implications for the communities around Hunterston A.

I was surprised and disappointed that the announcement of this possible prospective closure should have come so unexpectedly, without rehearsal and with minimal notice to the work force and, so far, with so little information about the implications being given to the communities around Hunterston A. I want the relevant questions to be answered tonight. It is not good enough for the Minister to say that this is merely a technical clause. It carries on its back substantial financial and practical implications for Hunterston A in my constituency, for nuclear generation in Scotland and for electrical generation throughout Scotland. The Minister should take this opportunity to give us some answers.

Mr. Lang: On the small peg of this technical new clause it has been possible to hang quite a wide-ranging debate on the Scottish electricity industry, particularly in the context of nuclear energy, and I make no complaint about that. It has been a useful debate, in which a number of valid points have been made, with which I shall try to deal. One or two of the looser points may, of course, be picked up in our later debate.

I will refer first to a group of points which may be characterised as involving financial aspects such as debt and write-off, to which the hon. Member for Glasgow, Garscadden (Mr. Dewar) and others have referred. Listening to the hon. Member for Carrick, Cumnock and Doon Valley (Mr. Foulkes), I was struck by the feeling that when we talk about debt some Opposition Members seem automatically to think that we are talking about something disastrous and unsatisfactory which is the result of incompetence, profligacy or some kind of rake's progress arising from unprofitable trading. In fact, we are talking about debt that has been incurred deliberately for a specific purpose, is being re-serviced and will be repaid. Such debt is to provide for investment, and it is investment in assets that has put the Scottish industry in such a strong position as it faces up to privatisation.

It clearly makes sense for the successor companies to have continued access to the national loans fund while they are still wholly owned by the Crown in the period leading up to flotation. The current limit of £3 billion on the boards' borrowings will be maintained. The two Scottish boards currently have debts of around £2·8 billion, arising from successive investments in new plant, most recently at Torness. About £2·3 billion of the debt is incurred by the SSEB and about £500 million by the north board. That investment puts the industry in Scotland in a strong, healthy position to move into the private sector, and removes uncertainty about its prospects.

The hon. Member for Garscadden asked about the European Investment Bank borrowings and other debts. Those loans will be redeemed and converted into national loans fund debt, available at a rate of interest more attractive than from commercial sources. I expect the industry to be no worse off as a result in terms of the interest burden prior to capital restructuring.

We shall first establish the Scottish nuclear company on a wholly equity-funded basis in the ownership of the two Scottish electricity companies. We shall then go to establish an appropriate capital structure for those two plcs by converting some national loans fund debt into Government equity in the form of share capital and reserves. The rest will be converted into debentures. Such capital restructuring is an established business practice and will result in a combination of debentures, issued share capital and reserves which will replace the Scottish industry's extinguished liabilities pound for pound in the companies' books. In the meantime, the Government will continue to fund the industry's requirements for capital from the national loans fund.

We shall go on to dispose, on flotation, of part or all of the Government's equity by selling shares in the Scottish electricity companies. The amount that we obtain in proceeds will depend on market conditions at the time, and may or may not cover the nominal value of shareholders' funds invested in the business. What is important is that the shares on flotation are successfully marketed at a price above their nominal value. We shall choose the capital structure best calculated to maximise returns to the Exchequer and hence to the taxpayer.

Debt will not be written off in the sense of obliteration. Here I repeat a point that was discussed more than once in Committee—this measure will not discharge the obligation to repay. It is not like a bankruptcy or liquidation, in which payment is made in the form of only a few pence in the pound. In the establishment of the capital structure of the companies prior to flotation, debt will be replaced by a mixture of debt and equity geared to market requirements. The sums owed to the NLF will be replaced pound for pound by debentures, share capital and reserves.

The hon. Members for Garscadden and for Gordon (Mr. Bruce), and one or two others, asked whether the cost of decommissioning nuclear stations would be paid for by the consumer or by the taxpayer. I consider it entirely appropriate for the customers to pay the knows costs of generation, whether nuclear or otherwise, as they have already done in relation to Hunterston A, and the SSEB has made provisions for decommissioning and for waste disposal.

We recognise, of course, that long-term changes in costs should not be met in full by future consumers. That is why clause 90 and schedule 12 allow a Government contribution. We have consulted closely with Donald Miller and his colleagues in the nuclear industry about uncertainties associated with some aspects of nuclear back-end costs, and the concerns to which they may give rise following privatisation. The powers that we have taken in clause 90 and schedule 12 have been drafted in the light of those consultations and are designed specifically to provide a framework to meet those concerns. The chairman of the SSEB shares my confidence that the Scottish industry, including its substantial nuclear assets, can look forward to a bright commercial future. He has been closely involved in discussion of the proposals, and has recently indicated his satisfaction with the progress of negotiations, although clearly a number of points of detail remain to be resolved.

Mr. Dewar: Is the Minister saying that since the original consultation which led to the drafting of the Bill no further reassurances, agreements or guarantees have been given that are unknown to the House? Is he saying that there is nothing in the reports that have appeared in *The Scotsman* about further reassurances and undertakings on what he elegantly calls "back-end costs"?

Mr. Lang: I think that I can reassure the hon. Gentleman. We have continuing contacts at both official and, occasionally, ministerial level with the chairmen of both the north and the south boards. I had a meeting with both chairmen only last Friday, when they signed the agreement to replace the joint generation agreement. There has, however, been no secret deal, no special patched-up arrangement, that has not been made plain to the House or provided for in the Bill. Clause 90—which I seem to recall was clause 88 in an earlier version—has been in the Bill since its inception. Any suggestion of a private arrangement or hidden agenda is entirely misplaced.

Like the nuclear industry in the south, the Scottish industry already makes substantial provisions for decommissioning, waste disposal and other anticipated costs. At present, the SSEB has some £764 million

[Mr. Lang]

provided for in that context and further provision of about £58 million for short-term debts. It is significant that last year it was able to adapt without great difficulty to the changes resulting from Chapelcross and the increased costs that that brought, as well as the costs arising from a change in the reprocessing charges of BNFL.

The powers in the Bill provide a backstop whereby the Government can meet unexpected, uncontrollable and substantial cost escalations arising well after the relevant electricity has been consumed, which might impose an unwarranted burden on the industry's future. It is, however, the industry's responsibility to meet the full known costs of nuclear generation and to make appropriate recovery from today's consumers.

Mr. Wilson: I am sure that the Minister is as anxious as we are to get this firmly on the record. I quote again the report in *The Scotsman* of 8 March:

"Neither side was prepared to reveal details of the talks, but the key element is understood to be assurances on the contracts which fix ceiling levels on the amount of any unforeseen rises in nuclear costs and in the contracts which will govern the relationship after privatisation with British Nuclear Fuels Limited."

Is that true or false?

Mr. Lang: I am not answerable for what appears in *The Scotsman*. I am sure that Opposition Members find stories in *The Scotsman* with which they are familiar, and which they consider as inaccurate as some of the stories that I quote from that paper.

As I have said, the chairmen of the boards are in regular touch with our officials, and from time to time with Ministers. Matters concerning the boards are discussed, clarified and resolved. There has been no separate, secret deal or special arrangement—of the kind suggested by *The Scotsman*—in our negotiations. There has been nothing of that sort which is not already known by the House.

The hon. Member for East Lothian (Mr. Home Robertson) raised the subject of insurance. The industry makes provision for self-insurance against material damage—for example, to its stations—through its mutually owned subsidiary. On third party risk cover against accidents, the industry is required to insure itself for liabilities up to a certain level, which could obviously vary in the light of changing circumstances. Beyond that, under the nuclear legislation, the Government are liable up to a further threshold, and beyond that there is the possibility that Parliament could be asked to grant further cover and indemnity if that were considered necessary. The arrangement is similar to those prevailing throughout Europe and in the United States.

The hon. Member for Carrick, Cumnock and Doon Valley referred to Chapeldonan, and I understand his constituency interest in that location. Whether or not the next power station in the SSEB's area will be nuclear and, if so, when it will be built obviously depends on future growth and demand and on the relative costs of nuclear and other fuels. I think that it is a point of universal agreement—perhaps one of the few points of universal agreement—that at present there is very substantial over-capacity in the industry in Scotland. The building of another nuclear station in the immediate future, or even in the next few years, therefore seems unlikely.

6.30 pm

Identification of suitable sites for possible future power station development is a matter for the SSEB, and the Government have no power to instruct the board on its holding of land. In fact, the SSEB was unsuccessful in discussions to acquire land at Hunterston from the BSC, and, for the time being at least, that land is ruled out as a possible future site. The board intends to retain the land at Chapeldonan as a strategic option for possible future use. Its judgment is that surrendering the site could prejudice the future provision of economically priced electricity in Scotland. On the other hand, it has made it clear that, given changing circumstances, it would be willing to consider seriously any sympathetic development that might be proposed.

Mr. Foulkes: Surely the Minister agrees that this cannot go on for ever, that at some point the Government must decide whether a power station should be built or whether the land should be released for other purposes. The area is blighted, so no one will come forward with specific suggestions for development. Surely Ministers have an overriding responsibility to say to the electricity board, "Make up your mind—if you do not intend to use the land within the next five years, or even the next decade, you must release it for other purposes." Will the Minister give serious consideration to that suggestion?

Mr. Lang: It would be a mistake to put pressure on the company to make a decision. A decision taken too soon, under pressure of that kind, could be the wrong one. I think that the hon. Gentleman exaggerates the relevance and importance of the site to Girvan. It is an important and useful site, but it is not the only one available for the kind of development that the hon. Gentleman has in mind. Moreover, the board has said that, given changing circumstances, it would look sympathetically at the possibility of considering specific proposals put to it.

I was distinctly puzzled by some of the remarks of the hon. Member for Gordon (Mr. Bruce)—specifically, his reference to the profligate extravagance that had gone into the building and commissioning of Torness. As the decision to go ahead with Torness was one of the few valuable outcomes of the Lib-Lab pact, the hon. Gentleman must be castigating his own party as much as anyone else. I agree with him that Scotland has substantial excess capacity. One might argue about whether it is 110 per cent. or less, but I suggest that it is the result of nationalised industry planning and that once the industry is returned to the private sector we may look forward to a more positive and efficient planning approach and the avoidance of that kind of situation.

Mr. Malcolm Bruce: I wish to refer to a consumer point which was raised earlier. The Minister made no reference either to the Director General of Electricity Supply or to the shareholders of privatised companies. May we have an assurance that in the private sector the industry will take account of legitimate risks taken by the shareholders and that the companies will not be given carte blanche to pass on to the consumer the cost of their mistakes? The director general might well say, "You made a commercial decision and you made a mistake, so your shareholders and not the consumer must take the risk."

Mr. Lang: The hon. Gentleman is complaining of precisely the situation that we have now. Every wrong

decision taken by every electricity board or company in the past few years has been passed on and is being borne by the consumers, and quite a lot of mistakes have been made. Under the regulation arrangements and the activities of the director general, there will be a far more disciplined and competitively oriented approach, which will lead to a more efficient appraisal of the need for the commissioning of new power stations.

The hon. Gentleman's comparison between Hunterston A and Torness seemed to me to be wholly misplaced. I shall come in a moment to his specific point. At this stage, I should say that the proposition that Hunterston A should somehow have been kept open and that Torness should not have been built is extraordinary. Hunterston A is a very much smaller power station. It is now coming towards the end of its commercial life. It is reaching a stage where the economic considerations are becoming paramount. That is why closure was considered. The loss of generating capacity resulting from the closure of Hunterston A will be taken up by Torness not just on its normal design rating output, but on its higher-than-normal design rating output—in other words, because it is working more efficiently than the original design anticipated. The cost of decommissioning Hunterston A, like all the other foreseeable nuclear costs, is already being provided for within the accounts of the industry.

I accept that, from the point of view of the hon. Member for Cunninghame, North (Mr. Wilson), this is a constituency matter of great importance. As the decommissioning process goes ahead, there will clearly be a continuing need for a considerable number of workers. I hope, and expect, that the impact on the unemployment figures in that constituency will not be so substantial as some people fear. Torness, which is coming on stream, will be an efficient, clean and economical way of generating and delivering electricity.

The hon. Member for Caithness and Sutherland (Mr. Maclennan) revealed not only the split within the Social and Liberal Democratic party over nuclear matters, but also the inherent inaccuracy of the posture of the hon. Member for Gordon. The most absurd proposition of all to which the Liberal party and the Scottish National party have subscribed is that Torness should be sold. If that were done, we should be looking forward to an English company owning Torness and selling back to Scottish consumers electricity that had been generated in Scotland. That seems to me to be a quite extraordinary proposition.

I have not yet said anything about coal, which to some Members—indeed, to the whole House—is a matter of very considerable interest and concern. It is of particular concern to the hon. Member for Garscadden and to the hon. Member for Midlothian (Mr. Eadie), who raised the issue of coal burn. As the hon. Gentleman knows, the amount of coal burnt in Scotland for electricity generation is very much smaller than the amount burnt in England. Nevertheless, it seemed to my right hon. and learned Friend the Secretary of State for Scotland, and indeed to my right hon. Friend the Secretary of State for Energy, that a solution to the negotiations between the coal board and the South of Scotland electricity board could be achieved—a solution that would secure, in Scotland, the use of coal in substantial quantities for a considerable period.

As a result of the commercial negotiations between those two bodies, agreement has been reached on quantity and duration—2 million tonnes per year—but not yet on price. Price is an important component of any agreement, but we have made considerable progress in those negotiations. Of course, the duration of the contract is linked with the interconnector, which we may have an opportunity to debate further on the next group of amendments. I emphasise that the negotiations must be between the two boards, and must be conducted in a commercial manner. Only in that way can the best interests of the consumer be served.

As to whether the coal is to be opencast or deep-mined, that too must be a matter for the boards. At present something like half, or even more than half, of the coal mined in Scotland is open cast. That enables British Coal to sell more coal at a more competitive rate. The interests of the consumer and the interests of the industry in Scotland have to be taken very seriously into account. It would be quite wrong to force on British Coal and on the electricity board a solution based on coal priced higher than was necessary simply because it was all deep mined.

Mr. Eadie: I want to be perfectly clear about what the Minister is telling the House. In the course of his reply, he talked about commercial judgment and a commercial decision between the two parties. He said earlier that he and his right hon. and learned Friend the Secretary of State felt that there should be some sort of agreement and understanding. Is he saying that an agreement has been reached, but that some details have yet to be filled in and that the matter will be settled in the boardroom rather than in the courts? Can the Minister give the House an assurance on that point?

Mr. Lang: I cannot give the hon. Gentleman an assurance that matters will be settled in the boardroom rather than in the courts, since it is essentially a matter for the coal board and the electricity board. I am saying that progress has been made and that agreement has been reached on two important components of any deal. I hope very much—I believe that it is possible—that agreement will be reached on the third component. Certainly the pressure of the deadline of 31 March has now been lifted.

We have had a wide-ranging debate, hung on the peg of a narrow and essentially technical new clause. I was reassured that during the debate there was no criticism of the structure of the new clause, and I commend it to the House.

Question put and agreed to.

Clause read a Second time, and added to the Bill.

New Clause 2

Depute Director in Scotland

'There shall be a depute director general of electricity supply who shall carry out the functions of the Director in Scotland. He shall have his office in Scotland and shall be responsible to the Secretary of State of Scotland.'.—*[Mr. Dewar.]*

Brought up, and read the First time.

Mr. Dewar: I beg to move, That the clause be read a Second time.

Madam Deputy Speaker (Miss Betty Boothroyd): With this it will be convenient to discuss the following: New clause 15—*Director General of Electricity Supply*—

'There shall be appointed an Officer, to be known as the Scottish Director General of Electricity Supply, who shall be responsible to the Secretary of State for Scotland and shall

[Madam Deputy Speaker Miss Betty Boothroyd]

assume all of the functions of the Director as they relate to Scotland and to the activities of the Scottish electricity companies.'.

Amendment No. 153, in clause 62, page 46, line 13, at end add—

'(c) one which shall be designated as the Scottish export company which shall be wholly owned by the two Scottish electricity companies in (a) above and which shall have responsibility for selling any surplus electricity generated in Scotland.'.

Amendment No. 150, in clause 62, page 46, line 30, at end add—

'(6) The two Scottish Companies shall establish a Scottish Electricity Research Trust. They shall provide funds of not less than 5 per cent. on net profits. The Secretary of State in consultation with the Director shall appoint 10 Trustees who shall have the responsibility of administering the Trust. The Trust shall carry out or commission research into the environmental effects of supplying electricity in Scotland, alternative sources of electricity suitable to the terrain and climate of Scotland and the most economical use of electricity generated.'.

Mr. Dewar: I am aware of the fact that there is a lot of business to be done tonight. Therefore, I shall be extremely brief and I hope that the House will forgive me if I confine my remarks to new clause 2. Some of my hon. Friends may wish to refer to other matters that are dealt with in this group.

I shall deal with the comparatively simple proposition that Scotland should appoint a depute director general of electricity supply whose remit would be to look after Scottish interests. The new clause takes its form from our first preference—exhaustively debated in Committee, thanks to the efforts of my hon. Friend the Member for Glasgow, Cathcart (Mr. Maxton)—that Scotland should have a regulator. That was not accepted by the Government. As the matter was exhaustively debated, there is little point in returning to it. However, we invite the House to write into the Bill a safeguard that has been verbally given. It is common ground between me and the Minister that a Scottish official should work within the Director General of Electricity Supply's organisation, that he should be charged with responsibility for Scotland and that he should be based in Scotland. As that has been conceded, a provision ought to be included in the Bill to take account of that point. It is very much in that spirit that the new clause has been tabled.

The protection of the consumer and the proper regulation of the industry are matters of enormous sensitivity and importance. I hardly need to remind the Minister of that fact. We are handing over an industry in which, as Ministers have hurried to tell us, the competition will never be classic. A public utility is to be replaced by a private monopoly. In those circumstances, it is important that adequate protection for consumers should be provided and that the different structure of the Scottish industry should be taken fully into account.

That need has been dramatically highlighted during the last few weeks with the announcement of an 8 per cent. increase in Scottish electricity prices for the next financial year. That has already been heavily criticised. Mr. John Banham, the director general of the Confederation of British Industry, has referred to the Budget strategy being wrecked by the Government scoring inflationary own goals. He went on to say:

"It is all the more irritating to business when the rises are seen to be totally unnecessary."

He linked that reference particularly to the news about the price rises in Scotland. The case for strong regulation of the public interest is made by these events. I hope that the Minister will comment on the reasons for the increase. Such a comment is relevant since we are considering the kind of regulation that is needed and the need for the new clause.

I remind the Minister that Scotland has always been told that it has low-cost, competitive power, that it has made a big investment in nuclear power, that it is in a strong competitive position and that privatisation is good news for the consumer. There was no question about a non-fossil fuel obligation. That was an academic point in Scotland's case. It could look forward to a very much happier future, by implication, than that to which those south of the border could look forward because of the pressures there.

There is genuine puzzlement on this side of the House and in Scotland generally about that statement. The Minister made a big virtue of the fact that the return on capital expected of the electricity boards in Scotland would be 2·7 per cent., rising in 1988-89 to 2·8 per cent., while in England the return on assets, valued on the current cost basis, would be 4·75 per cent. Given that tremendous gap, it is extraordinary that Scotland should face a far more substantial increase than that which will be imposed south of the border.

It is a sad comment on this Government's bona fides that, during the last year, the electricity consultative councils have protested in the strongest possible terms about a wage settlement—which, in their view, is both inflationary and unnecessary—that is being inflicted on the Scottish people.

6.45 pm

The electricity consultative council for the north of Scotland has expressed "deep disappointment" over the rise. It said:

"Members have valiantly tried to persuade the board"—

that is the North of Scotland Hydro-Electric Board—

"to limit any increase on the standard domestic tariff."

However, they were unable to do so. I have in my hand the press release by the electricity consultative council for the south of Scotland. It refers to its disappointment about

"the continuing deterioration in comparative electricity prices in the area of the SSEB compared with those in England and Wales where the proposed increases average 6·5 per cent."

It goes on to say:

"The council was concerned about the possible effect of privatisation on SSEB costs and their impact on tariffs. There is continuing worry about interest charges associated with Torness and with the very substantial nuclear generating capacity in Scotland and concern about future nuclear charges in terms of fuel reprocessing and decommissioning."

The general pattern emerges of a substantial increase in charges—much higher than those in England—at a time when the preliminary advertisements for privatisation suggested the very opposite. It has been carried through in the teeth of strong opposition from the Government's own appointed consumer watchdogs. That makes the case for the new clause.

The Minister referred to the fact that, with the chairmen of the two boards, he took part in a little ceremony on 31 March when he commended the progress towards privatisation and witnessed the endorsement of certain operational agreements by the two boards. As I

look through the pious expressions of satisfaction that the Minister published in his Scottish Office press release, I cannot help but reflect on the fact that on 30 March—the day before—the 8 per cent. price increase had been announced. The Minister did not see fit to comment on or to explain why Scotland had to face such an increase. On the evidence that is available to us, we believe that the increase is unjustified. It is part of the price that we are being asked to pay for privatisation.

The Minister's performance has been completely unsatisfactory. He has let down his own consumer bodies —as they have made very clear. In those circumstances, consumer protection must be placed at the top of our agenda. We ought to insist on the new clause. It is not what we wanted originally, but it would provide some protection. The need for such a clause has been made doubly relevant by the sad news about prices during the past few weeks and also by the clearly perceived danger that standards will be allowed to slip and that vigilance will be dropped, given the potential for abuse that privatisation will provide.

Mr. Malcolm Bruce: Although I support new clause 2, I prefer new clause 15. The character of the Scottish industry is such that there ought to be a separate director for Scotland. However, the thrust of both new clauses suggests that Scotland's distinctive character should be recognised within the new arrangements.

As for the 8·5 per cent. price increase, I believe that Scotland has fallen down the crack as between the responsibility of a nationalised industry and an about-to-be-privatised industry. Any Minister who was doing his job properly by defending consumer interests —he is the only person with the power to do so—would have refused to allow an increase of that kind in advance of privatisation. The economic criteria do not justify it.

He should have been so embarrassed by it as to recognise that he must either resist the increase or explain it. He has done neither. We are worse served with no Scottish director and with such a Minister than we might have been had the situation been reversed. I cannot believe that if a Scottish director had been in place he would have allowed the increase to go through. He would certainly have investigated the matter thoroughly and, unless there was a legitimate reason for the increase, he would have told the electricity companies to think again.

The Minister knows perfectly well that I am not opposed to privatisation in principle. The structure of the industry as it stands is both uncompetitive and unresponsive to the consumer—these increases prove it —but all this reinforces my belief that we should restructure the industry in the public sector and prove that we can open it up to effective competition before we move it out of the public sector. The Minister has completely failed either to accept his responsibility to defend the consumers' interest or to ensure that, in privatisation, we are creating a structure in which the distinctive and different character of the Scottish industry is taken fully into account.

I know that other hon. Members wish to speak and I do not want to delay the House. I feel that the clauses are both appropriate and relevant, and I shall certainly support them.

Mr. Hood: In my speech on Second Reading I forecast that this Bill, along with the poll tax and the privatisation of health care and the water industry, would be one of the large nails in the Government's coffin at the next general election. I am pleased to say tonight, having sat through almost all the 156 hours of the Committee, that experience confirms my view that this is indeed the case. I am particularly pleased to see the Secretary of State in his place today.

My hon. Friend the Member for Ashfield (Mr. Haynes) counted the number of hours that the Secretary of State managed to put into the Committee; I am sure that the Secretary of State knows this but, in case he does not, he was there for 23 of the 156 hours. Never once, however, when he was there, or when the Under-Secretary of State —who looked so unconvincing throughout the whole of the Committee stage—was there, did he justify in any way the privatisation of the electricity supply industry.

The whole case is based on myths—the myths of the market, the choice of the consumer and, the one that takes the biscuit, the fact that electricity will be cheaper. At all these three hurdles the Government's argument fell flat on its face. When it came to Scotland, not only did the Government not have a case, not only were they weak, but they were pathetic.

In Committee we had five Scottish hon. Members, my hon. Friends the Members for Glasgow, Cathcart (Mr. Maxton) and for Glasgow, Rutherglen (Mr. McAvoy) and myself, representing Labour, and two from the Liberal Democrats, the hon. Member for Gordon (Mr. Bruce) and the hon. Member for Berwick-upon-Tweed (Mr. Beith). Some of us were interested to note that the Scottish National party was not represented on the Committee. We are informed that its members were offered a position on the Committee and refused it. That says a lot about their so-called rhetoric on the matter of their interest in the Scottish coal industry.

Mr. Salmond: The hon. Member for Clydesdale (Mr. Hood) has trailed his coat, but he does me less than justice. He must be aware that I spent a year on this matter in the Select Committee on Energy. After reading his speeches, and those by his hon. Friends in the Standing Committee, and seeing all the ammunition with which they were provided, I just wish that they had utilised the time a little better.

Mr. Hood: I am as little impressed by the absence of the hon. Member for Banff and Buchan (Mr. Salmond) from the Committee as by the comments that he has just made. His party is coming to be known as the "walk out, throw out or abstention" party.

The fear of hon. Members on the Opposition Benches is that privatisation of the electricity supply industry will spell the death of the Scottish coal industry, a fear which has not been dissipated by the news that we have heard tonight, when last week we were under the impression that an agreement had been made with the South of Scotland electricity board. That so-called agreement seems flimsier than ever. I am sorry that the Secretary of State for Scotland is not here. Certainly, the Secretary of State for Energy is here. The Minister took some of the credit—if that is the word for it—for getting the parties round the table. I do not believe that for one moment. I do not believe that the Secretary of State for Scotland did anything to get the parties round the table.

Far be it from me to cast any praise in the direction of the Secretary of State for Energy, but some of us on the Opposition Benches firmly believe that the impetus came

[Mr. Hood]

from the Secretary of State for Energy and not from the Secretary of State for Scotland. When the latter was criticised for his lack of action in Scotland, it was even worse than that—he should be criticised for his collaboration, because some of us believe that he was collaborating with the SSEB from day one of the dispute. This is no credit to him at all. He is becoming known as an enemy of Scotland and as a traitor to Scotland. Our history has seen many of those but the Secretary of State seems to be competing for the mantle of arch traitor to Scotland.

He is not on his own in competing for that mantle. I had occasion to intervene during a speech in Committee by his hon. Friend the Member for Tayside, North (Mr. Walker), who unfortunately is not with us tonight.

Mr. John Maxton (Glasgow, Cathcart): He is in Australia.

Mr. Hood: I do not know where he is. He was nick-named "Bill from Brazil" earlier, but he is not here tonight.

In Committee the hon. Member for Tayside, North said:

"It is essential that the United Kingdom takes advantage of all its natural resources, including the supply of energy. It is therefore in the best interests of the whole of the United Kingdom that Scotland's ability to pass its surplus energy resources to England where there is a demand, is an essential part of our future energy policy. Energy policy has to be United Kingdom policy, and—this is the point that I have been trying to make—as a Scot I find it disturbing when we hear language that is wrapping tartan round the Scots and asking for special privileges."

The hon. Member then went on to say:

"England has an unsatisfied demand. It is therefore in the best interests of the whole of the United Kingdom to have an adequate ability to transfer."

At this stage I intervened to point out to him:

"I am tempted to be impressed by the hon. Gentleman's desire to look after the interests of the United Kingdom. But is he aware that the Secretary of State has been negotiating with the French Government to import French energy into this country and that it will work against a United Kingdom country—Scotland?"

To this the hon. Gentleman responded:

"We have been negotiating with the French and anyone else who wants to buy our electricity. I am a believer in the market place. It makes sense to be able to transfer electricity both ways."

We had to remind the hon. Gentleman that the French were interested not in buying electricity but in selling it.

I am sorry to bore the House with these quotations but this will be the last. The hon. Member for Tayside, North went on to say:

"Opposition Members should study carefully what I have said"—

I can assure the House that we have done that—

"and they will see that my view is we must have a flat playing field so that throughout the United Kingdom there is an opportunity for all consumers to share in the strengths or weaknesses of the whole."—[*Official Report, Standing Committee E*, 23 February 1989; c. 1227.]

There we have it: the hon. Member from the Flat Earth Society, the hon. Member for Tayside, North.

Following on an albeit modest contribution from myself, the hon. Member later accused me of special pleading for the Scottish coal industry. He even accused me of using intemperate language, believe it or not. Hon. Members here, with perhaps one exception, would certainly not agree with such an accusation.

I certainly make a plea for common sense and not dogma, for compassion and not hostility, and for consensus not dictatorship. This Bill is all about the dogma of extremism, hostility to miners in mining communities and dictatorship over the Scottish people who do not want and will never want Toryism.

The case for the Scottish coal industry is set in concrete; it is sound on all grounds. We hear much about the problems of the environment. Scottish coal is low in sulphur—far lower than the coal that we are importing from South Africa, Columbia and China. We have vast untapped reserves. Scottish coal is cost-effective when compared with the high cost of power generated by nuclear energy.

7 pm

I have a particular interest in opencast mining because in my constituency I have the largest opencast development in the whole of Europe. Opencast has to be seen in Scotland for what it is and not as it is seen in England. Opencast and deep mining are under the same management in Scotland—British Coal (Scotland). Opencast must not be seen as a replacement for deep-mined coal, as the hon. Member for Bedfordshire, North (Sir T. Skeet) suggested in Committee, but as complementary to it.

May I anticipate the hostility to deep-mined coal by those who favour the expansion of opencast mining? The prices of deep-mined coal and opencast coal are aggregated. There is cross-subsidy, which I accept. One important ingredient is forgotten by the people who are hostile to deep-mined coal and who favour the expansion of opencast mining—the co-operation of local authorities in giving permission to develop opencast mines in areas where there would normally be hostility to it. There is a strong relationship between mining communities and local authorities which leads to support for opencast mining.

We have 400 years of coal reserves in Scotland. We prefer to develop those coal reserves rather than rely on importing coal or highly expensive nuclear power. We do not want privatisation of electricity in Scotland. It is obscene, nonsense and irrelevant to our power generation requirements. Amendment No. 153, tabled by myself and hon. Friends, would ensure an export market for Scottish-generated power. That is necessary for the future of Scotland as a country and an energy producer. We sat for almost 156 hours in Committee addressing that and many other issues.

On Second Reading I referred to the disgraceful spectacle of the Prime Minister tripping through the Lobbies in support of private ports Bills with what I termed as the "Botha boot boys" behind her. I forecast then the demise of Tory Members in constituencies including mining communities, especially in places like Nottingham. The Government are going down the spout with the privatisation of water. Electricity privatisation is another nail in their coffin. That is one funeral that I look forward to attending.

Mr. Salmond: I support new clause 15, which would lead to the establishment of a specific Scottish director general of electricity supply. I am disappointed at the retreat of the Labour party from the position that was

established by the Select Committee on Energy in favour of a Scottish director general which it supported in Committee. I do not think that a depute director general is adequate to serve the real needs of Scotland.

Mr. Maxton: In some way the hon. Gentleman is remarkably naive in the workings of the House. If the Labour party had put down exactly that new clause, I think I can give him the assurance, even if you would not, Madam Deputy Speaker, that it would not have been called.

Madam Deputy Speaker: Order. I give an assurance to all hon. Members that there is no new clause or amendment on the Amendment Paper that is not perfectly proper.

Mr. Salmond: I think that you have answered the point for me, Madam Deputy Speaker. May I point out to the hon. Member for Glasgow, Cathcart (Mr. Maxton) that new clause 15, which proposes exactly that, is on the Amendment Paper. In the absence of new clause 2, it would have been possible to vote on it. If the hon. Gentleman's argument is that we should propose only amendments or new clauses that are acceptable to the Government, that would limit substantially the ability of the Opposition to put forward amendments.

The argument against a deputy director general and against new clause 2 was made in Committee by the hon. Member for Cathcart. He said:

"I do not see how a dispute between a Scottish board and an English generating board or an area board or company about supply, generation and price will be settled. Will a deputy in Edinburgh, who is responsible to the Secretary of State for Scotland, be more responsible to the Secretary of State for Scotland than to his immediate boss, the director general sitting in London, whose primary responsibility will be to the licences that he has granted to the various English companies? To which one will he be responsible? Nothing in the Bill explains this."—[*Official Report, Standing Committee E*, 12 January 1989; c. 72.]

That is right. Nothing in the Bill explains it; of course, nothing in new clause 2 explains it either. I much prefer the position established in the Select Committee on Energy.

Mr. Thomas McAvoy (Glasgow, Rutherglen): Will the hon. Gentleman make it clear to the House whether the Scottish National party was offered a place on the Electricity Bill Committee and whether it refused to take that place—yes or no?

Mr. Salmond: As I have already pointed out in reply to the hon. Member for Clydesdale (Mr. Hood) a few moments ago, I spent a year on the Select Committee on Energy considering these very issues. I was surprised at the suggestion that the SNP was not interested in deep coal mining in Scotland. Yesterday I received a letter from the general secretary of the National Union of Mineworkers in Scotland thanking me for my efforts on its behalf in the Select Committee. The fact that there is no Scottish Labour Member on the Select Committee on Energy does not lead me to the conclusion that Scottish Labour Members are not interested in the coal mining industry or in energy issues in general.

I was making the point that I much prefer the position established by the Select Committee on Energy on the need for a Scottish director general of electricity supply. I am the only Scottish Member on the Select Committee on Energy. The majority of members are English Conservative Members, yet we reached a unanimous conclusion after a good deal of debate. In the report we said:

"we believe that Scotland's interests will best be served by the establishment of a separate Scottish Regulator, working closely with his English and Welsh counterpart, with regular interchanges of information and staff. The relationship between the Scottish Office and London Departments is an analogy. In this way the distinctive structure of the ESI in Scotland will be mirrored by a distinctive regulatory structure."

It is a remarkable feature of the position of the Scottish Office on the issue that it is not even willing to propose, for the benefit of the Scottish consumer, a level of protection that was insisted upon by English Conservatives on the Select Committee on Energy. It is remarkable that Scottish Office Ministers were not willing to make that point.

The arguments that the Select Committee considered in coming to our conclusion in favour of a separate Scottish director general were, first, that we recognised that within the Scottish structure of the proposed privatisation of electricity there would be no effective competition. Indeed, many would argue that within the English and Welsh structure there will be no effective competition. Certainly, with the duopoly that is proposed for Scotland—with territorial monopolies at any rate for tariff customers—there will be no genuine competition.

Hence the need for protection for Scottish consumers, who otherwise will be exploited by the private electricity companies which will succeed the SSEB and the Hydro Board. Our first point was to recognise the distinctive nature of the Scottish privatisation and of the Scottish electricity system, and the need for special protection for the Scottish consumer.

Secondly, we concluded that there would be occasions when the Scottish exporters of electricity would be in conflict with their English customers. Early on in the Select Committee deliberations, we received evidence from Mr. Harris of the east midlands board. He said that his board would prefer that the grid bought electricity collectively from the Scottish electricity companies because that would lower the price at which electricity would be bought. When we took evidence from Mr. Miller of the SSEB, he argued that tens of millions of pounds could be involved in that issue alone. Indeed, the Secretary of State for Scotland agreed, when giving evidence to the Select Committee that this was an important pricing issue.

If there is a conflict of interest between the Scottish producers of electricity and the English supply companies —the consumers of that electricity—how will a single director general divide his loyalties? Will he be in favour of Scottish producers or English consumers? Hence the importance of having, for the protection of Scottish consumers and Scottish producers of electricity, someone who will not owe his loyalty to a Director General of Electricity Supply located in London.

The third argument which impressed the Select Committee was in relation to the needs of the north of Scotland. We argued strongly in our report that it was not just a matter of a common tariff throughout the Hydro Board area; we had to consider also the need for subsidies for future connections. I see the hon. Member for the Western Isles (Mr. Macdonald) in his place. A pensioner couple in his constituency proved to be an excellent example of the need for protection in terms of connection charges for consumers in remote areas.

[Mr. Salmond]

That pensioner couple, on Lewis, were 35 yards from an electricity connection, yet the Hydro Board told them that it would cost them over £3,000, and that, I understand, was the second, revised—and hence lower—price that they were quoted. When the Secretary of State for Scotland appeared before the Select Committee, he seemed to take the view that that pensioner couple had situated their house in the wrong place. He appeared to say that it was their fault for not being nearer than 35 yards to the nearest power connection.

I accept that the legislation guarantees a price for anyone whose home is situated within 50 yards of a power connection. But that is a theoretical right for most consumers, certainly if we are to have charges of £3,000 or more for a 35-yard connection. The Select Committee took the view that, the needs of remote areas of Scotland were not satisfied by existing connection arrangements alone and we said that the development of such areas, with new houses and more people, would occur only if new connection charges were reasonable. That would be a key responsibility of a Scottish director general.

7.15 pm

In Standing Committee, the Minister of State argued that a single director general at United Kingdom level having a dual responsibility would not be a problem, even though he would be responsible both to the Secretary of State for Scotland and to the Secretary of State for Energy. The Minister of State argued that the Government spoke with one voice, claiming that both Secretaries of State spoke on behalf of the Government.

It was an interesting concept. Can we expect the two Secretaries of State to speak with one voice on these matters? That question was put to the test a few weeks later when, on 25 January, I questioned the Secretary of State for Energy about whether it was likely that the main office of the United Kingdom Director General of Electricity Supply would be located in Scotland. After conceding that he had not given the matter a great deal of thought, the right hon. Gentleman decided—off the cuff and in front of the Select Committee—that his answer should be no. I asked him why not, and he replied:

"Because we believe that he"—

the Director General of Electricity Supply—

"will have a duty to Scotland, but he will also have a duty to England and Wales, and that is far and away the biggest part of his job."

The right hon. Gentleman went on to use a phrase that he may now regret using. When I argued that the Select Committee might take a different view, he said that that was unlikely, and he described as "an eccentric notion" my argument that the director general's main office should be in Scotland.

The Secretary of State for Scotland appeared before the Select Committee a few weeks later, on 22 February. I thought that, as the two Ministers were said to speak with one voice on Government policy, it would be interesting to ask him similar questions. The Secretary of State for Scotland did not seem to believe that it was "an eccentric notion". He said that, on the contrary, it was not an issue on which the Government had reached a conclusion, and he added:

"It is not a word that I would have chosen"

when asked if my argument was an eccentric notion. The right hon. Gentleman seemed sympathetic to the idea of having the office located in Scotland, and I have subsequently been in correspondence with the Minister of State, who has assured me that the Government have an open mind on the issue.

We can see the fallacy of the contention that there is no problem in having dual responsibility, the belief that the director general can report, on the one hand, to the Secretary of State for Energy and, on the other, to the Secretary of State for Scotland. The Government argue that there is no difference between the views of the two Secretaries of State, but even on that issue, when questioned before the Select Committee, we saw a substantial difference of view.

In those circumstances and with the conflicts of interest that might arise in the electricity supply industry, all Members representing Scottish constituencies must wonder whose view will prevail. I have no doubt that it will be the view of the Secretary of State for Energy, and the Scottish Office will tag along behind and try to reconcile the position at a later date.

It was said earlier that the recent price increase of 8 per cent. announced for the Scottish electricity industry represents an outstanding example of why we need a Scottish director general with responsibility, power and authority to intervene on behalf of the interests of Scottish consumers. That is particularly important in view of the suggestion that somehow the deal that has been arrived at between British Coal and the SSEB might have been the cause of these price increases. I heard the Minister of State suggest on the radio a few days ago that that deal might have been responsible for such sharp price increases.

The figures show that his view is nonsense. In the last three years, there has been a 28 per cent. decline in the real price charged for coal supplies to the SSEB. Indeed, the price charged for coal is only a fraction of the SSEB's overall costs. In the same three years, according to evidence given to the Select Committee by the SSEB, there has been an unexpected increase, costing the SSEB £240 million, in the nuclear costs of fuel reprocessing, waste treatment and decommissioning.

If we had a Scottish director general in Scotland, nobody—not the Minister or the SSEB—would be allowed to get away with misleading explanations for an over-the-odds increase in electricity charges, such as giving the impression that a minor and declining part of the SSEB's costs can be held responsible for such an exceptional increase in charges. A Scottish director general is necessary so that Scottish consumers can be told the truth about their electricity bills and protected from unreasonable increases in future.

Everything about the legislation—the lack of competition and the vulnerability of Scottish consumers—surely leads us to the conclusion that Scottish consumers need the maximum protection in the privatised structure. That protection should be provided by a Scottish director general with the full authority and prestige of that position. He should be nobody's deputy, nobody's office boy, but a Scottish director general reporting to the Secretary of State for Scotland. I very much hope that we shall be able to vote on new clause 15.

Mr. McAvoy: I am well aware of the constraints of time. I only wish that previous contributors had paid some attention to them. I have no intention of dealing with any of the points raised by members of the Scottish National party. The comments of the hon. Member for Banff and

Buchan (Mr. Salmond) were counter-productive. When we agree about so much, his pejorative and speculative attacks invite response, and I am certainly not prepared to listen to his remarks without replying. The hon. Gentleman and other Members of his party make great play of trying to get on to Committees and interfering with the processes of the House, yet when they were offered a place on the Standing Committee considering the Electricity Bill they refused that opportunity. Having refused an opportunity to participate in the processes of the House, they have no credibility whatever when they try to disrupt those processes.

Opposition Members who took the opportunity to work on behalf of the people of Scotland repeatedly made the point that all logic and fairness pointed to the need for a separate Scottish director general. The Minister of State, Scottish Office, made great play about the unionist and separatist arguments, but every move that the Government make reinforces the sentiment that Scotland will not have a fair deal from England within the British structure. Paradoxically, the so-called Scottish Conservative and Unionist party is the main driving force in encouraging resentment against the union which the majority of Opposition Members favour.

The integrated monopoly status of the electricity industry in Scotland and the fact that the public monopoly is to become a private monopoly demonstrate the need for a separate Scottish director general. Within the set-up envisaged by the Government, there is no clear responsibility for the privatised Scottish industry. The Select Committee on Energy observed that Scotland is differe- . and there should have been a separate Bill. New clause 2 would at least ensure that there would be a director general for Scotland answerable to the Secretary of State for Scotland.

The pricing impact requires a strictly Scottish approach. Scottish consumers will pay a price based on United Kingdom average generating costs, not on Scottish generating costs which are lower. Because of the weather and climatic conditions, Scottish consumers already incur higher costs than elsewhere in the United Kingdom. My hon. Friend the Member for Glasgow, Cathcart (Mr. Maxton) said in Committee that Mr. Donald Miller, the chairman of the SSEB, was supporting a single United Kingdom director general. My hon. Friend rightly suggested that Mr. Miller's support was at least partly based on the hope that privatisation would be a vehicle for maximising profits for his privatised company, which presumably would result in extra payment to him personally.

There is a desperate need for a director general concerned directly with Scotland, especially when we consider what has happened before privatisation. The SSEB increased prices by 8 per cent.—a greater increase than in England and Wales, and more than was necessary to keep in line with inflation. That is what has happened under the direction of Mr. Miller without the benefits, as he would see them, of a privatised structure.

A further demonstration of the need for a Scottish director general is the ludicrous situation between SSEB and British Coal. A great deal has been said about that and some important points have been raised. If Mr. Miller seeks to minimise costs for the SSEB, perhaps he should reduce the legal costs incurred in such disputes. Conservative Members may say that the situation between the SSEB and British Coal shows that there is no need for a Scottish director general because two Scottish institutions are in dispute and the presence of the Secretary of State for Scotland did not prevent the development of such a damaging dispute. That is absolutely right. The Secretary of State's presence had no effect and the political world could not have an impact on the dispute because, disgracefully, the Secretary of State for Scotland did not see fit to intervene in a matter which was causing damage to Scotland. If we had a truly independent Scottish director general, it is inconceivable that he or she would not have intervened on behalf of the Scottish people.

The philosophy of privatisation is the free market and the survival of the fittest. The hon. Member for Banff and Buchan rightly mentioned that if there are commercial disputes between the Scottish producers and the English and Welsh consumers, according to the free market philosophy on which the privatisation is based, it is inevitable that England and Wales will have greater influence. According to the Government's philosophy, might is right, so England and Wales will have more voice and that will count against Scotland. That is the clear logic of the Government's privatisation policies. New clause 2 tries to protect Scottish interests from a Tory Government who have no support in Scotland for their Bill.

Mr. Calum Macdonald (Western Isles): In speaking in favour of new clause 2 I shall endeavour to keep my remarks as brief as possible by focusing on one part of Scotland and on one specific problem. I wish to focus on the Highlands and Islands of Scotland, covered by the North of Scotland Hydro-Electric Board, and the problem of ensuring the supply of electricity to remote areas of the Highlands and Islands at a reasonable cost.

The hon. Member for Gordon (Mr. Bruce) said that it might seem odd that the Highlands and Islands had a very high percentage of connections compared with other parts of the United Kingdom. Despite the remote locations of many of the properties, a great number of them have been connected over the years. That is due to the unique ethos that has governed the hydro-electric board since its inception and given it a determination to provide electricity to remote areas at a reasonable cost and to spread the costs, which would otherwise fall very hard upon particular individuals in remote areas, among consumers and taxpayers in the locality.

In recent years there has been a second factor to explain the wide extent of electricity connection in the Highlands and Islands—the availability of finance from the EEC through the European regional development fund, which has been channelled into the North of Scotland Hydro-Electric Board to enable it to connect people living in remote rural areas.

The Bill will do away with both factors which enable those living in remote areas to be connected to the electricity supply, because privatisation will do away with the private status of the North of Scotland Hydro-Electric Board and make it a privatised company. The board will thus lose access to the EEC money that it has had until now. I deeply regret that the Government have chosen to go ahead with the privatisation and did not take the step that they took in regard to the privatisation of Caledonian MacBrayne, which had a similar EEC financial status. When they realised that that finance would be lost, they abandoned their privatisation plans. I wish that the Government had taken the same route with the North of Scotland Hydro-Electric Board.

[Mr. Calum Macdonald]

I wish to put the case for my constituents. The hon. Member for Banff and Buchan (Mr. Salmond) has already mentioned the problems that they face, although he did not cite the worst examples to be found in my constituency of individuals requiring electricity and having to pay extraordinary and impossible sums to obtain it. In one community in my constituency, a household has been asked to pay £63,000 to receive an electricity supply—a sum that is clearly way beyond the means of the couple who occupy the house. In case the Minister thinks that a nouveau riche couple have moved into the Highlands and Islands, I will tell him that the couple lived there long before the hydro board was established. They have been bypassed by the age of electricity.

7.30 pm

Another significant case is that of Mr. MacDonald living in the village of Balallan. He did not choose to build a new house in an impossibly remote and inaccessible area. In fact, the new house is only 35 yards from the mains electricity supply at the edge of one of the largest villages in my constituency. Yet he is being asked to pay more than £3,000 for the privilege of receiving electricity. In Committee that case was put to the Minister very ably by my hon. Friend the Member for Makerfield (Mr. McCartney). The Minister's reply was that if Mr. MacDonald waited two or three years there might be a reduction in the price to £1,500 or so. As my constituent is 78 years old, that was not the most gracious of suggestions.

The publicity given to the case by various newspapers and by my hon. Friend the Member for Makerfield has stung the North of Scotland Hydro-Electric Board. It has actually produced a booklet relating to the case, which has been sent to every Scottish Member of Parliament and to every newspaper in Scotland, because it is so fearful of the adverse publicity that it has been receiving. That seems to suggest that the board at least has a guilty conscience.

The first thing that one sees in the booklet is a "Summary of Activity" which stretches over a year and a half, but it is clear that nothing was done by the board in that year and a half to help my constituents to receive their electricity. All that happened was that a series of letters were sent explaining why my constituents could not receive electricity. In letters to me, the chairman of the board has made it clear that after privatisation consumers in remote areas cannot expect to receive any help from the general body of consumers in relation to connection and supply. That statement shows the future facing remote areas after privatisation. The ability to receive electricity will depend how remote one is from the mains electricity supply and it will come down simply to ability to pay.

I have mentioned only a minority of cases in the Highlands and Islands, but hundreds of properties in the area face such obstacles. That is why I, my constituents and others fear the effects of the Bill.

Mr. Lang: The House would have had more sympathy with the hon. Member for Western Isles (Mr. Macdonald) if he had acknowledged that under the arrangements that we are introducing the successor company to the hydro board will be required to set a common tariff precisely to benefit his constituents. He might also have acknowledged the virtual completion by the industry, with Government and European assistance, of the supply network. He might have acknowledged the existence of the uneconomic rural development programme which the board has operated.

The hon. Member referred to the Balallan case. Although the sum of £3,100 may seem large, it is already £600 lower as a result of the negotiations with the board. Someone proposing to build a new house in such an area —we are not talking about an existing house—would take such a figure into account. Indeed, the applicants were told when they sought planning permission what the cost of supplying electricty would be. Therefore, the hon. Gentleman might have been more forthcoming on some of the details of the circumstances affecting the Western Isles and the consumption of electricity there.

The wording of proposed new clause 2 suggests that a deputy director general of electricity supply should be directly responsible to the Secretary of State for the regulation of the industry in Scotland. This would remove from the director general the duties which the Bill lays upon him in relation to Scotland and would effectively result in a separate regulator. New clause 15, proposed by the hon. Member for Banff and Buchan (Mr. Salmond) goes one step further and prescribes the appointment of a scottish director.

It is quite clear to us that neither case would be beneficial, since both new clauses ignore the fact that the Scottish companies will be competing in a British market. We are clear that two separate regulators would be inefficient; would fail adequately to monitor common carriage arrangements and fair trading practices across the border; and would lose the opportunity for yardstick comparisons across the whole British industry to bring out best practices and provide leverage for increased efficiency. Our proposal for a deputy director general in Scotland reporting direct to the director general, who in turn reports to the Secretary of State, ensures that the Scottish industry has the best of both worlds: a representative of the director general based in Scotland, but still part of a single regulatory regime. New clause 15 is therefore unnecessary as well as impracticable.

Neither do I see any need for the detailed structure of the director general's organisation to be set out in the Bill as new clause 2 suggests. The Bill rightly restricts itself to describing the functions and responsibility of the director general, as the regulator of the single British market. The director general will be appointed jointly by the Secretaries of State for Energy and for Scotland and be responsible to both Secretaries of State. There is no need for the Bill to provide for the details of the director general's office. The House is well aware of the categoric assurances it has been given on a number of occasions that the director general will have reporting to him a deputy director general based in Scotland. That arrangement is quite different and is preferable to the confused view set out in the new clause.

The hon. Member for Glasgow, Garscadden (Mr. Dewar) and others referred to prices. They made the mistake that all Socialists seem to make on such occasions. They assume that the Government decide what the prices should be. That may have been the case under the Labour Government, but it is not the case under this Government. Such matters are decided by the industry and, in determining tariffs, the industry must take account of a range of factors including cost structure and the need to make an adequate return on assets employed.

The tariff increase in Scotland in 1988-89—4·75 per cent.—was significantly lower than in England and Wales

where prices ranged in their increase from 7 per cent. to 12 per cent. The recently announced tariff increases in Scotland for this year of 8 per cent. from 1 April are slightly higher than in England and Wales but still lower than the average increases last year south of the border. The tariff increase in Scotland is greater this year than last, principally because of the effect of higher rates of inflation on operating costs generally, but also reflecting the higher than anticipated fuel costs—both nuclear and coal. Even with the latest increase, tariffs in Scotland are 9 per cent. lower in real terms than in 1982-83. One can compare that with the record of the last Labour Government, when tariffs rose by 20 per cent. in real terms.

Tariffs are primarily a matter for the boards to decide and in determining the level, they have to take into account a complex range of financial and operational factors, including the financial targets agreed with the Government. The financial target for 1989-90 is 2·7 per cent., set jointly to reflect the board's shared responsibility for nuclear generation. That holds the target at broadly the same level as it has been for the past two years.

There is no reason why tariffs should go up as a consequence of privatisation. Privatisation of the two companies will lead to increased efficiency and thus, in time, to lower prices. Competition in the broadest sense and private sector disciplines will put downward pressure on the costs that go into consumers' electricity bills. Where a monopoly will remain, prices to the consumer will be subject to strict and fair regulation and there will be downward pressure through the price condition. The restructuring proposals will create two companies satisfactorily balanced in terms of the mix of generating plant, spare capacity and forecast levels of profitability. Any tariff divergence will, therefore, relate substantially to the effectiveness of management decisions rather than simply to the structure.

The hon. Member for Clydesdale (Mr. Hood) referred to coal. I must point out to him that since we came to power, we have put over £1 billion a year in deficit and non-deficit grant into the coal industry. Nobody can say that we have not taken full account of our responsibilities in that regard. Equally, it is quite wrong to imagine that prices are uninfluenced by the price of coal. If the SSEB were forced to take coal at a high price, there would clearly be implications for the price of electricity.

The hon. Member for Banff and Buchan (Mr. Salmond) quoted the Select Committee on Energy on the question of a separate regulator, but he neglected to record the Select Committee's view that the arguments for and against a separate regulator were finely balanced. We feel that they are substantially weighted towards a single Great Britain regulator, but we took account of the Select Committee's arguments in reaching a conclusion. We also note with interest that both the boards in Scotland favour a single director general and that the electricity consultative council for the south of Scotland stated:

"Regulation in Scotland needs to be an integral part of the UK system of regulation while recognising the different circumstances of the industry in Scotland."

Mr. Salmond: Of course the Select Committee considered the arguments for and against carefully, but the conclusion it came to was for a separate Scottish regulator. The Minister has not yet answered the question why, given that he found other aspects of the Select Committee report so useful, he did not take that recommendation on board. Incidentally, the Select Committee had only one Scottish member.

Mr. Lang: We took account of the recommendations of the Select Committee, but we also took account of other viewpoints and aspects of the matter that were relevant and important in reaching the conclusion that I described a few moments ago. The new clause will do nothing for consumers in Scotland. Consumers in Scotland will derive benefits from the rights that the Bill will give them, the competition that will be introduced through the privatisation of the industry, the downward pressure of the regulator and the more efficient operation of the industry in the private sector. Those are the ways in which the rights of consumers will be best protected, so I urge the House to reject the new clause.

7.45 pm

Mr. Maxton: I shall be brief, as I am aware that the House wants to bring this debate to a conclusion.

I must say to the hon. Member for Banff and Buchan (Mr. Salmond) that the Labour party now accepts that every time a Scottish National Member speaks here, or anywhere else, his target is not the Government or the Conservative party, but the Labour party. The Scottish nationalists know that it is in their political interest to ensure the return of a Conservative Government rather than a Labour Government at the next general election. The Scottish nationalists are interested not in the people of Scotland, but only in their own cheap political ends. That is what the hon. Gentleman's speech was about.

We would prefer first not to have any privatisation of the electricity supply in Scotland. Our second preference is that there should be a wholly separate directorate and our third is new clause 2. We believe that only a separate Scottish director or one who is responsible to the Secretary of State for Scotland, whether a deputy or not, can ensure that the special needs of the Scottish industry and of the Scottish consumer are protected.

It is strange that just a week before the boards announced their price increases, for which the Minister disclaimed all responsibility, the Scottish Office, in the name of the Secretary of State, put out a release saying:

"The Secretary of State for Scotland has agreed a financial target for 1989-90 with the South of Scotland Electricity board and the North of Scotland Hydro-Electric Board."

It is beyond belief that the Minister can argue the he has no responsibility for the price increases when he is setting the financial targets for the boards. What the Minister has said differs strongly from what the chairman of the North of Scotland Hydro-Electric Board, Mr. Joughin, said when referring to the 8 per cent. price increase that his board was introducing. He said:

"These price increases are designed to ease the path towards privatisation."

Mr. Lang: The chairman of the North of Scotland Hydro-Electric Board claims that he was misquoted and that he did not say that.

Mr. Maxton: It is the easiest opt-out in the world to claim that one was misquoted. I am sure that all of us, at one time or another, have tried to claim that when we have said something that we regretted. I have spoken to Mr. Joughin and others and I am sure that his original remark was the correct view.

[Mr. Maxton]

We believe that the Scottish industry should never be privatised and that there should be a director who is responsible for it. We are not satisfied that assurances given by Tory Ministers mean anything in terms of final promises. I call on my hon. Friends to join me in voting for the new clause.

Question put, That the clause be read a Second time:—

The House divided: Ayes 205, Noes 266.

New Clause 3

British National Nuclear Corporation

'A Crown Company, the British National Nuclear Corporation, shall be formed in which the power stations of the United Kingdom will vest on a date to be appointed by the Secretary of State.'.—*[Sir Trevor Skeet.]*

Brought up, and read the First time.

Sir Trevor Skeet (Bedfordshire, North): I beg to move, That the clause be read a Second time.

Madam Deputy Speaker: With this, it will be convenient to consider the following: New clause 10—*The British Nuclear Company*—

'(1) The Secretary of State shall direct the generating board to place all its property, rights and liabilities relating to nuclear power in a company designated as the British Nuclear Company.

(2) The British Nuclear Company and all its property, rights and liabilities shall remain wholly owned by the Crown.'.

New clause 16—*Nuclear levy*—

'(1) It shall be the duty of the Director to publish annually and distribute to each of the Consumer Committees, a report showing the difference in that year between the price of electricity generated from fossil and non-fossil fuel.

(2) The Consumer Committees shall have a duty to publish the findings of the Director's report in a manner and form that may be easily understood by electricity consumers.'.

Amendment No. 148, in clause 30, page 24, line 13, leave out subsection (1) and insert—

'(1) The public electricity suppliers shall take steps to ensure that the mix of fuel sources and generation technologies available to them is adequate to ensure the long term security of supply to their customers.

(2) The Director and the Secretary of State shall have powers to require, from time to time, that the pubic electricity suppliers demonstrate to them that their policies in fulfilment of subsection (1) above are adequately contributing to the long term security of supply.'.

Amendment No. 147, in clause 30, page 24, line 14, after 'suppliers', insert

'and appropriate consumers' bodies including the consumer committees and independent consumer organisations.'.

Government amendments Nos. 31 to 34.

Amendment No. 160, in clause 61, page 45, line 8, at beginning insert

'save for the nuclear power stations for which the Secretary of State shall make proper and reasonable provision for retention in public ownership.'.

8 pm

Sir Trevor Skeet: I make it clear that all the power stations dealt with in the new clause are nuclear. Being well disposed to the nuclear industry, I am disturbed that steps

[Sir Trevor Skeet]

are now being taken to unsettle the industry. My experience has been that, for a good many years, particularly in respect of the nuclear waste repository which was scheduled for an area near my constituency, the public have not been ready for a transfer of nuclear assets to the private sector. The public have not had sufficient time or are reluctant to accept the risks inherent in nuclear power, particularly if it is outside the public sector. A Crown company could provide a high-quality assurance to a nervous public who still look to the state for the protection of the environment. I am certain that, in time, that attitude will change and that the nuclear sector will be fully privatised.

It is rather odd that the Opposition and myself will probably vote in the same Lobby tonight, but for entirely different reasons. I am pro-nuclear and Opposition Members are anti-nuclear and pro-coal. It is the irony of history that men of different persuasion must be honest and put forward the arguments. I propose to advance to the Secretary of State the arguments about why a serious mistake is being made in this Bill.

I pay tribute to the Secretary of State for being here tonight. After all, he has many obligations. Important personalities are in the United Kingdom at the moment, and he could be enjoying an important dinner elsewhere.

My first argument is that much of the industry will remain with the state following the passage of the Bill. The production of nuclear electricity and the fuel cycle that is dependent upon it, including the reprocessing and recycling of plutonium and uranium and the disposal of nuclear waste, should properly be retained in a single integrated company. I agree that that is not the CBI's view. At the moment, the whole industry is in the hands of the state and, subject to the passing of the Bill, the United Kingdom Atomic Energy Authority and British Nuclear Fuels plc will remain so. My simple argument is that we should keep all relevant parts of the industry together. It is logical and it makes commercial sense to do so.

Secondly, many of the obligations to the nuclear industry—for example, those in schedule 12 and civil third liability—remain with the state. The obligations arising under clause 90 and schedule 12, comprising subsidies from the revenue for nuclear storage, reprocessing, waste disposal and decommissioning, should be monitored and scrutinised within the state system until the regulatory authority establishes its competence. It is an entirely new body, and we have no idea of how it will behave or perform. Further, third party civil liability for serious accidents remains the responsibility of the Government. Due to its extent, that liability is virtually unassignable to the private sector. The extent of liability remains covered by the Paris and Brussels supplementary conventions, which are multinational agreements.

The House should recognise that the nuclear option is also expensive for a private company. For example, I refer to construction overruns. The 450 MW Dungeness B took about 18 years to complete and had a load factor of barely 1 per cent., compared with the average of Magnox stations of 79·7 per cent. Hartlepool took 19 years to complete, and Heysham 1 took 17 years to complete. It is possible that construction overruns for contemporary stations will be reduced if not eliminated. I am glad to say that the work of some of the more recent AGRs has been praiseworthy.

Planning inquiries are diabolically expensive—the Sizewell inquiry cost £20 million—but we can reduce it to £10 million apiece if the planning process can be simplified or rationalised. I stress that there is an increasing burden of BNFL reprocessing charges. They are escalating fast, well beyond the provisions made in schedule 12.

Another point which the House should bear in mind is that on-going research and development is an essential ingredient of modern technology, and limited expenditure or economising tend to be counter-productive.

Energy remains a long-term strategy. The risks of a change in technology are enormous. It is unlikely that the market will provide the necessary investment in the formative and unprofitable stages. That is at least the lesson to be derived from the development of nuclear power in France. With the eventual rundown of fossilised fuels, fission or fusion will probably become inevitable, and Her Majesty's Government should now be in a position to direct it, as a long-term strategy, undisturbed by short-term considerations.

Technology for the production of electricity may change dramatically in coming years, with extensive penalties for obsolescence, particularly in conventional thermal nuclear power. The fusion route, via the Torus model at Culham in Oxfordshire, could be abandoned in favour of the simpler Fleischmann-Pons process, using palladium electrodes at normal temperatures. It is certainly premature to make any judgment of that.

I emphasise to the Secretary of State that a more sympathetic approach towards the potential of the fast reactor for recycling reprocessed products and depleted uranium could substantially advance the energy yield of a given quantity of uranium. The THORP plant of BNFL makes sense only if it produces uranium and plutonium for recycling as fuels in fast reactors. It is regrettable that much of the research on that has been deferred or handed over to other nations to continue. Further research into magnetohydrodynamics could be valuable as a technology for converting thermal energy directly into electricity, thus avoiding the use of turbines.

The state cannot afford to be out of the race for the development of cheap fuels and, as we are in a technological sector—that is the nuclear industry—I maintain that it should be in state hands.

The nuclear element could seriously embarrass the flotation. The flotation of National Power could be jeopardised by the nuclear element unless funds and guarantees are lavished on the company to eliminate risk. Those, of course, could be repudiated by a Labour Government making the company's position intolerable. For example, should the regulatory system be altered—as happened in the United States in the late 1970s—and the utility is obliged to absorb costs that would normally flow through to the consumer, all orders for nuclear power stations could cease to be economic. We recognise that at some time there will be a change of Government. Heaven forbid that that occurs on the next occasion or the occasion after that, but we live in a democracy.

I suggest to the Minister that the retention of the nuclear industry in a company with a franchise to operate granted to National Power could enable a package of nuclear assets to be assembled—within, say, a decade of flotation, when many of the major problems would have been overcome—and then a subsequent disposal arranged. In other words, it would be possible to segregate out of the

present Bill the nuclear industry or the nuclear power complex and defer privatisation to a later date. I am not against its eventual privatisation.

I would further draw to the Secretary of State's attention to the fact that the obligation to build an additional four PWRs of more than 1,000 MW each could embarrass National Power subsequently. Although National Power is being mandated to build four additional PWR power stations of 1,175 MW capacity each, the trend is for the construction of smaller conventional plant and smaller nuclear power stations of 300 MW. The use of the safe integral reactor devised by the UKAEA, Rolls-Royce, Stone and Webster and Combustion Engineering is probably much the best illustration.

It is an interesting speculation whether the £6 billion programme upon which the Government now insist by building Sizewell B and C, Hinkley Point in Somerset and Wylfa in Anglesey could be abandoned if later National Power were to challenge the programme on economic grounds.

There is also a serious risk to the nuclear industry. New technology apart, Britain cannot afford a gradual rundown of the nuclear industry in the United Kingdom due to inaction, economic erosion or short-term energy market considerations. The price of fossil fuels will inevitably rise reversing the competition cycle. I say that because the coal lobby is having a great success at present because coal prices are low compared to what they were 10 or 15 years ago. That situation is likely to alter dramatically. In that case, all the tribute would go back to the nuclear side. There are also certain matters concerning carbon dioxide and sulphur dioxide that could cause nuclear power stations to be favoured.

8.15 pm

I will give an illustration of a lesson to be learnt from Sweden that appeared in the *Financial Times* on Thursday 22 February of this year. It said:

"Sweden faces the prospect of a doubling in the cost of its energy production as a result of the planned phasing-out of its nuclear power programme from 1995".

That is according to the country's state power authority's own estimates. That is rather significant. One cannot afford to ignore the possibility of that sort of thing happening.

The obligation for the generator to supply under earlier Acts is replaced by a series of contractual arrangements administered by the Director General of Electricity Supply, who in turn will monitor clause 30—that is the quota of non-fossil fuel electricity—and clause 31 on fossil fuel levy. The retention of a nuclear interest in a Crown company could facilitate and simplify those arrangements and more easily regulate the size of the nuclear industry.

I suggest to the Secretary of State that he bears this in mind. I understand that competition is the essence of the Bill under clause 3(1)(c) and that a broader basis of competition is now required. That could be effected with the emergence of at least three competing companies—National Power, PowerGen and British Nuclear. That development would not have to await the fruits of a decade of growth within the private sector.

Nuclear power could furnish the surplus capacity required to operate the privatised system. Both the Secretary of State and the director general are obliged under clause 3(1)(a) to keep the lights burning, which in turn implies the provision of significant reserve capacity to deal with shortfalls in electricity supply. Privatisation will require a much broader margin of capacity to operate the system than in a closely integrated structure. In the United States of America the figure is 33 per cent., in West Germany 50 per cent., and in Japan 49 per cent., as compared with about 20 per cent. in the United Kingdom. A Crown company would enable the Secretary of State to give a specific direction well in advance of likely shortages enabling the company and/or the nuclear industry to act as a "swing producer" for the system. The trouble with the contractual arrangements is that, although they may be subsequently litigated in the courts, they cannot guarantee immediate replacement or response, and a serious interruption in supply could occur. The citizens of New York have had some experience of that in recent years when their lights were extinguished.

It will be fairly obvious that to give a specific direction to any operator will be difficult under the Bill. Clauses 32 and 89 will take time to implement.

Mr. Ashton: It is clause 88, actually.

Sir Trevor Skeet: It is not clause 88, but clause 89. I shall correct the hon. Gentleman, who did not consider the Bill in Committee and therefore would not be expected to know very much about it.

Both clauses 32 and 89 will take time to administer and there may be procedural problems.

I do not want to take up too much of the House's time, but I must say that the idea of segregating the nuclear industry, temporarily at least, and keeping it in the state sector may appear to be an extraordinary idea to this side of the House, but there is a reason behind it.

Mr. Salmond: The hon. Gentleman should not bring his remarks to a close too quickly because the Opposition are an attentive audience. I hope that the hon. Gentleman will explain the relevance of his amendment to the Scottish nuclear industry, because he has spoken about the assets that will go the National Power. The hon. Gentleman correctly surmised at the start of his remarks that I am anopponent of the nuclear industry, but I recognise that technically the SSEB has a better track record than the CEGB. It is important for the hon. Gentleman to address his remarks and the relevance of his amendment to the Scottish nuclear assets.

Sir Trevor Skeet: I am obliged for that intervention, but the hon. Gentleman can make his own speech and I will make mine. The system prevailing in Scotland is rather different. How one approaches this matter rests on a question of understanding and judgment.

The CBI is thinking along exactly the same lines as myself as it has suggested that nuclear power stations should remain in state hands. The CBI and Opposition Members may have special motives for saying that—we all have different motives—but we are all searching for the truth. Some Labour Members cannot see the truth, but we are trying to prevent the Government from going straight ahead for the rocks and making problems for themselves. The Back-Bench Member can stand well back from the mountain and appreciate its height. Perhaps the Secretary of State, who is standing under the mountain, is in its shadow and cannot appreciate the height of the edifice. Therefore, it is up to us to point out some of the difficulties involved.

Because nuclear power was included in the Bill, probably against the advice of some of my right hon.

[Sir Trevor Skeet]

Friend's advisers, clauses 30 and 31 had to be introduced. They are hardly in line with market conditions, but one must attempt to reconcile the irreconcilable. Perhaps the Secretary of State has done that. Perhaps he has been able to box the compass in every way and achieve his purpose.

The success of Governments lies in the support that they command at a given time. Provided that they get their legislation through, it is years before the mistakes are noted. If the Conservative party is in power in the future, it will say that an error was made now which certain Back-Bench Members tried to avoid. On the other hand, if the Labour party is in power, it will move from crisis to crisis. It will be faced with so many crises to surmount, that it will be unable to establish the conditions that preceded those crises.

Mr. Ian Bruce (Dorset, South): Does my hon. Friend accept that the CEGB—or Big G as it will be known—will ring-fence the nuclear industry, which will use the support of the main board and its experience? Therefore, to a certain extent, we shall have a separate nuclear industry. I have discussed this with the deputy energy Minister of the Soviet Union who is currently visiting this country. He told me that the people in the Soviet Union are extremely unhappy that the manufacture of nuclear energy and its regulation are all one and the same rather than those functions being separate. It is far better for the Government to regulate and for someone else to manufacture the power.

Sir Trevor Skeet: Our system is such that if one gets rid of a nationalised industry—I am glad about that because I support privatisation—one puts in its place regulations galore. There are so many regulations that an industry can hardly move.

Obviously things will settle down in future, but one must decide whether to have a plethora of agreements, negotiated between companies, or a national system with a small focal point. I prefer the agreement system, which I have witnessed operating abroad. We must be careful of some of the arguments advanced by my hon. Friend the Member for Dorset, South (Mr. Bruce). Simply because the CEGB will ring-fence the nuclear industry does not mean that the industry will rid itself of liabilities. Such liabilities will be passed down, virtually into perpetuity.

When the nuclear industry experiences some of the additional costs passed on from British Nuclear Fuels from reprocessing and when, in the next 100 years, it encounters problems as a result of decommissioning—such problems are not apparent yet—it will be a good thing for it to be ring-fenced. Ultimately, however, the nuclear industry will remain responsible for the liabilities that may have been created. At a later stage those controlling the industry may have to go to the Government to say that the financial assistance laid down in schedule 12 is not great enough and that it must be increased by a separate Bill. Almost every year we have seen that happen with the coal industry as its borrowing power has increased. Exactly the same may happen with the nuclear industry, and we may end up giving it a vast subsidy to prevent it from going under. I am not suggesting that that will happen because the management is good and it will do its best.

As we pass through this period of great uncertainty, I would be much happier if we left the nuclear industry in the hands of the state. When we begin to understand and solve some of the problems, we will be able to go ahead and privatise and, on that occasion, the public will be behind us.

Mr. Tony Blair (Sedgefield): I congratulate the hon. Member for Bedfordshire, North (Sir T. Skeet) on moving his new clause. When he described the purpose of his clause as protecting the long-term future of energy policy he unerringly put his finger not only on the weakness of this part of the proposal, but on the entire privatisation proposal.

Our amendment No. 160 is similar to new clause 3 as it seeks to take the nuclear industry out of the privatisation process. New clause 16 would oblige the director to publish the details of the difference between fossil and non-fossil fuels. Our other amendments relate to diversity of supply.

Surely when we debate the privatisation of the nuclear industry we debate the most remarkable and inconsistent element of the Bill. The nuclear industry will be privatised, but be subject to no competition. It will be sent to market without market forces. The consumer will be under an obligation to buy a fixed amount of electricity from nuclear sources and, for the privilege of being shackled in that way, pay an additional special tax on his bill. This is not so much privatisation as a rather crude form of economic gerrymandering. The privatisation of the nuclear industry is the achilles heel of the Bill because only a Government whose mind was so gripped by doctrine that they had completely banished common sense could contemplate as hare-brained a scheme as the one that they are entering into now.

Mr. Mans *rose*——

Mr. Blair: I shall give way in a moment.

The Government's insistence on the privatisation of nuclear power has dictated the terms of the privatisation throughout. It has been the driving factor behind the privatisation proposals. The proposed structure of the industry means that we will have Big G and Little G—70 per cent. of power stations in one company. The Secretary of State admitted to the Select Committee that that proposed structure resulted from the proposal to privatise nuclear power.

The Bill contains a special nuclear quota designed to protect the nuclear industry from competitive pressures because it cannot cope with the market as it is. There will be a special levy or tax on consumers to pay for the new generation of nuclear power stations that private investors will not undertake. When it comes to the decommissioning of existing nuclear power stations the taxpayer will be asked to underwrite the risk of existing nuclear power stations even though the profit from the industry has passed into the private sector. In short we have all the disadvantages of the private sector without even the one benefit it can offer from market forces.

As a result of our debate on new clause 3 and associated new clauses and amendments, we appreciate the dilemma in which the Secretary of State has got himself—it is a fairly incompetent position in which he finds himself. As he attempts to tell investors that the nuclear industry is an industry that can be sold, he offends consumers, but, as he attempts to placate consumers, angry that the industry is

being sold with them guaranteeing the risk, he of course offends investors. For that reason there is a contradiction written into the Bill between the idea of privatisation and the reality of the special ring fence to be built around nuclear power.

We know—not from a leak that emanated involuntarily from the CEGB but from one that appeared in the *Financial Times* last November that seems to come directly from the CEGB rather than indirectly as did some of later leaks—that Mr. Baker now believes that the new PWR programme cannot be justified unless the costs are underwritten by the consumer. Similar statements were made by Mr. Miller in relation to the Scottish nuclear industry. Since the Government have introduced a nuclear quota, stipulating that a certain amount of power should be bought from nuclear sources, and since only National Power—at least in England and Wales—can build new nuclear stations—the Government have left themselves in a position where National Power can demand that the costs should be underwritten by the consumer. In the provisions that they have introduced, the Government have effectively acceded to that request.

8.30 pm

On report, we are now hearing about the idea of a nuclear tax to pay for the additional costs of nuclear power —in particular, for the new generation of nuclear power stations. My hon. Friends will remember that that tax was at first denied by the Secretary of State. Then we were told that it had existed all along. Finally, in Committee, we received an admission from the Minister that, at present, it amounts to about £500 million a year, which is about 10 per cent. extra on consumers' bills. Even if all went well, it would be down to only 3·5 per cent. or 4 per cent. on consumers' bills by the end of the century.

The Secretary of State must answer the following question. Once this levy has been introduced, once the new generation of PWRs starts to be built by the privatised industry, what will happen if, contrary to the hopes of Ministers, the costs of nuclear power are greater even than the 10 per cent. extra that they now place on consumers' bills? Is there any limit on the levy or tax that will be paid?

The answer is, of course, that there is no limit at all. As a result of the structure introduced by the Secretary of State, we will be obliged to pay this nuclear tax, or levy, irrespective of what it adds to consumers' bills. Although at one stage in the proceedings, he attempted to suggest that the position would be reviewed by the turn of the century and perhaps then the levy could be taken off, it is difficult to see that happening when the levy exists in order to build a new generation of power stations that will exist well into the next century. The Secretary of State has locked us into a system whereby we have effectively given an open-ended commitment to fund a new generation of nuclear power stations without any ability to subject that commitment to the consumers' considerations.

Mr. Mans: Does the hon. Gentleman agree that, as we discussed in Committee, the so-called, possible nuclear levy exists largely to cope with ongoing costs of existing nuclear reactors which will be there regardless of whether the nuclear industry is in the public or private sector? If he is suggesting that existing nuclear power stations should be shut down, the cost to the consumer would be greater rather than less.

Mr. Blair: We shall hear from the Secretary of State whether the nuclear levy is there to pay for existing nuclear power stations. I have a different recollection of our Committee proceedings. The question was put time and again to Ministers about whether the levy covered new nuclear power stations that he wants the industry to build. The Secretary of State will tell us—and no doubt the hon. Member for Wyre (Mr. Mans) will listen carefully—if it does not cover existing stations. I believe that the tax exists to fund the new nuclear PWRs.

We have learnt from the Hinkley inquiry that once privatisation takes effect, the key element on cost for this new generation of nuclear stations will be the rate of return on capital required by the private sector. The London Business School puts that figure at about 11 per cent., which is wildly uncompetitive with conventional fired stations. The evidence given to the Hinkley inquiry, which was not particularly contradicted even by the electricity board, was that once the generation of four stations which the Government want are up and running, that would add anything from £400 million to £800 million to people's bills.

Is it not fascinating to reflect on the distinction between the Government's case as presented at Sizewell and that presented at Hinkley. The world has finally been stood on its head at Hinkley. Rather than the building of new nuclear power stations being the justification of the nuclear quota, the Central Electricity Generating Board's evidence at Hinkley shows that the nuclear quota is now the justification for building the power station. The prime motive behind the building of Hinkley power station is said to be because they have introduced a quota system.

The question which the Government must answer—I know that my hon. Friend the Member for Midlothian (Mr. Eadie) has raised it—is why the nuclear industry should be singled out for special legislative protection. Why does that industry stand alone to ensure that the Government's beliefs are realised? In addition, the proceeds of sale will be reduced as a result of the inclusion of the nuclear industry—that is probably where the Secretary of State and I share common ground. The CBI says that many of the City analysts believe that the proceeds of sale will not be substantially—if at all—increased by the inclusion of the nuclear industry. All these complex and complicated structures are the result of the Government's insistence on privatisation.

The Government accept that all these difficulties exist but they say that that is the only way to privatise the industry. They have not yet taken on board in this debate the fundamental point that, if the industry cannot be marketed without guaranteeing the risk of investors—which makes a nonsense of the idea of putting it into the market—the answer is not to market it and not to privatise it in any shape or form. That is the logical conclusion of the Secretary of State's proposal, from which the Government run away.

New clause 16 is reasonable. It says that it will be for the director to publish the difference between non-fossil and fossil fuels. That is entirely right for this, if for no other reason. We are told that nuclear power is uneconomic. The Hinkley inquiry is fought on a basis that has nothing to do with the economic case for that nuclear power station. Many of my hon. Friends will remember that for years we were told that the justification for nuclear power was that it was economic, and that nuclear power stations would provide us with cheap electricity. Given that record within

[Mr. Blair]

the industry, surely it is reasonable—as we suggest in new clause 16—that, if anyone should scrutinise the difference between non-fossil and fossil fuels it should be the director rather than the industry.

Will the Secretary of State confirm—I have heard that this is so—that the area boards wish to set up an organisation in order to implement the levy? The boards are thinking along the lines of a purchasing agency contracted to them or run by them in order to collect the nuclear levy. We would find that utterly unacceptable. If this is to be done at all, it must be done subject to the proper independent judgment of the director, who can look after the interests of consumers. His objective eye should be on the proceedings so that consumers can see exactly what is happening.

The final amendment in the group deals with diversity. It sets itself modest and, in my view, reasonable objectives. It obliges the area boards to consider the issue of diversity, which is the only case that the Government have left for nuclear power, but gives them freedom of choice as to how they meet that obligation. I believe—and I think that many of my hon. Friends would share my belief—that diversity, the argument now advanced by the Government for the new generation of nuclear power, is merely the latest in a long line of excuses for preferring nuclear at the expense of coal. The amendment accepts diversity, but provides a way of achieving it that is neutral as between different sources of fuel and does not put nuclear in a special, privileged position not occupied by coal, oil, gas and other industries.

Mr. David Tredinnick (Bosworth): Has not coal occupied a special, privileged position for the past 30 years because the CEGB has paid more for it than has been really necessary?

Mr. Blair: Exactly the same case could be made about nuclear power. What is interesting about the comments of Mr. Baker in the draft that came—involuntarily—from his office is his letting the cat out of the bag in disclosing that we are already paying a premium for nuclear power. Whatever money may have been put into the coal industry, the hon. Gentleman's argument applies in spades to what has been put into the nuclear industry.

The point that is germane to our present consideration of privatisation is why nuclear is being treated differently from coal. Why is one being made subject to the full rigours of the market and the other not? I believe that the argument about diversity exposes a weakness at the heart of the Government's case. The diversity argument is a very particular type of argument. It is a public policy argument. It is not an argument about market forces or about competition; it is an argument about long-term energy policy. That is what diversity is really about.

On inspection, the only argument for the fossil fuel levy with which the Government are now left is one that refutes the case for privatisation, because it assumes that markets cannot govern energy policy but must yield to the public interest. We may differ on where that public interest lies, but the fact that the Government are now driven to rely on diversity makes us realise that they are driven to accept the impossibility of running an energy policy simply at the behest of the market.

That is the difference between us—not merely on the privatisation of nuclear power or on the question of diversity, but on the case for privatisation itself. That is why, like it or not, when we support the new clause we are supporting the case for a long-term energy policy. We are supporting the case for market forces not to rule that policy. Ultimately, we are putting forward the case against privatisation, which is not in the interests of consumers, energy policy or the country as a whole.

Mr. Mans: I wish to speak mostly about the nuclear power industry.

It is clear, probably to both sides of the House, that there is a need for a variety of sources of power, not just generation from fossil fuels. I believe that my hon. Friend the Member for Bedfordshire, North (Sir T. Skeet) would like an increase, if anything, in the amount of electricity generated by nuclear power, whereas I suspect that Opposition Members would like a reduction and would probably prefer the nuclear industry to wither on the vine as an alternative to fossil fuels in the medium and long term.

My hon. Friend gave a number of reasons for feeling that the nuclear sector should be kept public. He mentioned planning. Planning inquiries into nuclear power stations have indeed taken considerable amounts of time; for all we know, however, if we ever wanted to build a new fossil fuel power station in the future that, too, might result in a long drawn out planning inquiry. One thinks of the preliminary steps taken in relation to Fawley B, a new coal-fired power station which is not yet off the drawing board. Before the plan was scrapped it was already clear that the planning process might take as long as the Sizewell process, judging by the protests from that part of the country.

8.45 pm

At present, capital costs are higher for nuclear than for fossil fuel power stations, but the gap is narrowing due to the need to fit environmental devices to fossil fuel stations to meet the increasing demands of the environmental lobby in this country and elsewhere. While there is no doubt that fossil fuel power stations will continue to have an advantage in terms of capital costs, that advantage is bound to lessen in future.

My hon. Friend also made some relevant points about future investment in nuclear power and research and development. Interestingly, since the privatisation proposals were announced a number of new initiatives have been taken by those in the private sector, such as Rolls-Royce, getting together with American concerns such as Combustion Engineering to produce new schemes for nuclear power stations—perhaps, in some instances, smaller power stations. There is no evidence to suggest that, simply because of privatisation, research and development money will no longer be spent on developing nuclear generation of electricity. BNFL is already looking into feasibility studies on replacing the two Magnox stations at Calder Hall and Chapelcross, perhaps with a modified PWR design. That, too, is a private sector initiative and shows that there is a future for nuclear power in the private sector.

It is also worth mentioning that the running costs of nuclear power stations—as opposed to the capital costs—are certainly of the same order as those of fossil fuel power stations, if not cheaper.

Mr. Beith: The hon. Gentleman confused us all by suddenly referring to a series of power station proposals as

though they had emanated from the private sector rather than from the publicly owned nuclear sector. Will he clarify what he was talking about?

Mr. Mans: I cited Rolls-Royce as one private sector company—a privatised company, indeed—which is very much involved in discussing the production of smaller nuclear power stations, but that is just one example and there is already talk of similar plans in areas outside the CEGB. There is evidence that new initiatives are being taken as a result of the privatisation proposals.

One of the most significant points, mentioned only fleetingly in Committee, is that most of the nuclear power stations are right at the top of the merit order in which power stations are brought on line within the CEGB. That shows, if nothing else, that in purely running cost terms —as distinct from the capital costs of the new process—the generation of power by nuclear means is as cheap as fossil fuel generation. It shows that the nuclear industry has a future as an alternative means of generation in the private as well as the public sector. I therefore see no reason for it to be kept in the public sector.

I submit that in the future, with the increasing environmental restrictions on the generation of electrical power by fossil fuel means, nuclear energy will become a much more viable alternative. For that reason alone development should continue, and should continue in the private sector.

Mr. Malcolm Bruce: This debate is an interesting one, and the hon. Member for Bedfordshire, North (Sir T. Skeet) is to be congratulated on tabling his amendment, which is remarkably similar to one that I tabled at the same time—indicating that there is some common thinking even though, as I freely acknowledge, we approach the problem from totally different directions. *[Interruption.]* No, I do not disagree totally. That is not the point at all. I think that the hon. Gentleman and I agree on one thing—that the Government have got themselves into the rather ludicrous position of trying to advance the argument of rhetoric—bringing the electricity industry to market and then having to force a rig into the market to distort it. The hon. Member for Bedfordshire, North quite rightly says that this is a piece of nonsense. Why should not the Government operate more honestly, admit that there is a fix, take the nuclear industry out of their rhetoric, and leave the market to operate in the area of the electricity industry where it can more easily do so?

What I find interesting is that for 10 years of Conservative Government successive Secretaries of State have said, in effect, that the Government's policy on energy is not to have a policy. While the industry has been substantially in the public sector, there has been no policy, but now that it is to be privatised the Government have suddenly produced an energy policy—a policy which applies only to nuclear power. Nuclear power, we are told, is required for strategic reasons, but it is not fitted into a grand debate—we are not let into the inside thinking as to exactly what the Government's judgment of the strategy was. Certainly, it does not appear to have been produced by a radical reassessment of all energy options—weighing them up honestly and objectively, and then coming to a conclusion as to exactly where they might fit into a planned, or free market, or hybrid scenario.

We know perfectly well that from the outset the Government have begged every question, determined to have nuclear power. They knew that once they were committed to privatisation there was no possibility of making nuclear power stand up in the market place on its own merits, so they introduced this extraordinary Bill, which creates this distortion. Among means of generating electricity, nuclear power is given a unique, distorted and privileged position, which will disadvantage the consumer and other players in the electricity supply industry. That is why, on the question of nuclear power, the hon. Member for Bedfordshire, North came up with a view similar to that of my colleagues and myself.

I think that it was last year, when the privatisation process was put in motion, that the Secretary of State said that the case for nuclear power would have to make itself. However, it could not make itself and it has not made itself, so the Secretary of State has had to introduce a fix in the Bill to take account of the inability of nuclear power to make a case for itself.

A number of factors need to be addressed. First, those of us who have a different view of energy priorities are at least entitled to argue that if we were allowed to determine which particular sector should be given a specific advantage it would not be the nuclear sector. It might be conservation. Certainly conservation ought to be the highest priority of this country, and it is one issue on which the Government can take positive action and make things happen. There could have been a decision to increase the use of natural gas—a much cleaner fuel, of which there is a great deal in the North sea. We could have made a very useful bargain with our Scandinavian neighbours. That would have been of substantial benefit for our medium to long-term energy requirements are concerned. Those options could have been pursued, but the Government did not even allow them to be explored because they had their own priorities.

Mr. Hardy: The hon. Gentleman is making a very interesting point. Does he agree that the Department of Energy was in favour of the Sleipner deal but that, for reasons of international finance, and because of the need to avoid the sort of trade deficits to which we are becoming accustomed, the Treasury opposed it?

Mr. Bruce: I do not accept that. Perhaps the Treasury knew something then that has only come home to roost now. There is no doubt at all that British Gas and the Department of Energy, left to operate freely, would have gone for that system. Indeed, if we had gone in early enough, when BP first mooted it, there could have been substantial benefits to the whole United Kingdom, both economically and in terms of energy.

It is interesting that the Government have decided that in one part of the United Kingdom—Scotland—there will be a separate nuclear company. Admittedly, it will not be an independent company but a subsidiary of the Scottish electricity companies. Nevertheless, the separation of the nuclear industry has been acknowledged as something that is tidy, at least in Scotland. The Government are therefore being somewhat inconsistent in not accepting that England and Wales, or indeed the whole United Kingdom, might benefit from having a single nuclear company.

As the hon. Member for Bedfordshire, North indicated, the nuclear industry is facing a very uncertain future. It was quite interesting that the hon. Member, who is as strong and enthusiastic a supporter of nuclear power as I am an opponent of it, gave us a very substantial list of

[Mr. Bruce]

uncertainties, escalating costs, drawbacks and disadvantages. That that was from somebody who is in favour of the industry is an indication that serious questions have to be faced which the Government's Bill simply fails to address.

Certainly the cost has escalated. It has already been said today, and was said many times in Committee, that it is extraordinary that up to about two years ago we were told, in spite of the obvious information to the contrary, that nuclear power was the cheapest form of electricity available. Now we have been told that those of us who said that it was dear were right all along—that it was, and has been, the dearest form of electricity available. Throughout that time, those of us who said that it was expensive were told that we were entirely wrong. The consumer, in the Secretary of State's words, has been paying a nuclear levy —the high cost of nuclear power—all that time.

There are increasing problems for the nuclear power industry. First, the cost of reprocessing is rising at an unpredictable and rapid rate. Sellafield has been faced with threats of closure by the nuclear inspectorate because of its inability to meet acceptable safety and operating standards. A private industry which is dependent on reprocessing—that is bad enough, because it is expensive —also has to face the possibility of being totally paralysed if the only reprocessing facility in the country were closed down on safety grounds. The commercial risk of being bound into that system is clear. If I were asked to take that risk—as, indeed, I and all other members of the public are being asked—I should not want anything to do with it.

The problem of decommissioning is also creating uncertainty. That, too, is coming home to roost. The first nuclear power station is moving into its decommissioning phase. When we look back five years from now, I shall be interested to see what the actual cost of that decommissioning to date proved to be. The amount that we are told has been estimated and put aside is £300 million, but those who have been involved in decommissioning experiments in Canada have found that it costs many times that amount. Estimates suggest that the decommissioning of a significant nuclear power station may cost £2 billion—more than the cost, at current prices, of building one.

I accept that these are only ball park estimates by people who may not be totally unbiased, although the Canadians have had experience of decommissioning a nuclear power station. Nevertheless, it may prove to be substantially more expensive than has been budgeted for. The Bill provides for a substantial sum of money to be set aside for decommissioning, but the industry may find that the substantial amount of money to be advanced by the Government is inadequate. The industry faces considerable uncertainties, all of which could add substantially to the cost.

9 pm

The biggest problem of all that the industry will have to face is that of waste disposal. The costs and the practicalities of waste disposal cannot be fully quantified because no acceptable system for waste disposal has yet been devised. We must not take short cuts when dealing with waste disposal. It would be much better to store the waste on site in an area where it could be safely monitored than to transfer it to another site for reprocessing. The problem with nuclear energy is that, the more material one handles, the greater the volume of waste one creates. The industry must confront the problem, and the consumer and taxpayer will also have to face up to it. So must the shareholder. I hope that the Secretary of State acknowledges that.

We are told that the private sector is to be given the opportunity to exercise its commercial judgment in an uncertain market, and the Secretary of State tells us that it will do so far more efficiently than the public sector. However, shareholders are to be told that they will not have to take a risk. The Secretary of State should acknowledge that the shareholders will have to take a risk. The hon. Member for Bedfordshire, North referred to the fact that the regulatory system is likely to be changed. It will almost certainly be changed. It will have to be modified in the light of experience. As and when the political complexion of the Government changes, the regulatory system will undoubtedly be changed. At that point, taxpayers are unlikely to be interested in providing substantial compensation for electricity industry shareholders.

The hon. Member for Bedfordshire, North believes that at some unspecified time flotation may take place, but my proposal is the more honest way to deal with the industry. The Secretary of State's criticism of the over-centralisation of the Central Electricity Generating Board is legitimate, but it has been blurred by the need to create the fossil fuel levy, the non-fossil fuel quota and the nuclear levy. That has distorted the framework of the Bill. It would be in much better shape if at the outset the Government had taken the advice of the hon. Member for Bedfordshire, North, kept nuclear power in the public sector, argued that there were strategic reasons for keeping it there and considered how to privatise the rest of the industry, which I accept is much more open to normal market forces and competition.

Furthermore, I would not privatise the industry until I had proved that a genuinely competitive industry could be created. That would be possible in other parts of the electricity supply industry, but the Government are privatising an industry that has built into it a substantial financial drag—the nuclear power industry. The Government have tried to ring fence it against risk and the foreseeable escalating costs that the industry faces, but they have been unable to take all the uncertainties fully into account. They will therefore find the City and the market less than enthusiastic about privatisation because it has not been thought through and properly worked out. The Government have created a monster which will return to haunt them.

The Secretary of State for Energy (Mr. Cecil Parkinson): I hope that the House will not object if I intervene now to reply to the debate on the new clause and to speak to a number of Government amendments. After I have dealt with the new clause and spoken to the Government amendments, I shall listen to what is said about them and then reply to those comments.

The reasons for Government amendments Nos. 31 to 34 are straightforward. Under the present proposals, the nuclear obligation will be set once by order. We believe that that is too rigid. During the next 12 years, Magnox stations will be going off stream and PWRs will be coming on stream. However, it may not be possible to synchronise it so that, at any given moment, the amount of capacity

that is needed to meet the obligations is available. Therefore, we are amending clause 30 so that we place before the House orders that will recognise the practicalities. That does not represent any change of policy. Our intention is still to fix the obligation at 15 to 20 per cent., but we need flexibility for the reason that I mentioned. Power stations will be going out of commission while new ones are being built.

Another reason, which I believe the House will accept, is that we are aware that although we have set a non-fossil fuel obligation and wish to see renewables come on stream, at the moment there are no sources of renewable energy that could meet a significant part of that obligation. The distributors will be signing up to meet their obligations for non-fossil fuel.

We want to create a new tranche of capacity that is reserved exclusively for renewable sources of energy. We do not expect it to be very large between now and the year 2000. It will be between 200 and 600 MW. It is important to develop renewables. We want to have the right, therefore, to vary the order. There is no point in creating a non-fossil fuel obligation to be met by renewables if they do not exist. We want to have the right to modify the non-fossil fuel obligation to take into account the development of renewables and we shall be reserving a special tranche for that purpose. That is what the four amendments are designed to achieve.

I have listened with great interest to the debate. I mean no offence when I say that the arguments had a certain familiarity about them. We have been debating the subject at regular intervals for about three months. I shall repeat the Government's position. In particular, the hon. Member for Gordon (Mr. Bruce) grossly misrepresented the Government's position. The Government were elected on a commitment to maintain the nuclear power programme and to privatise the electricity supply industry. I have made it clear in every speech that I have made that we recognise that the non-fossil fuel obligation is a distortion of the market, but we believe that it is a worthwhile distortion, for these reasons.

We believe that security of supply is absolutely vital. We believe that diversity is the basis of security, and that has been my argument since the day I took office. I believe passionately that diversity of sources of energy is a vital part of ensuring the security of supply. In case there are hon. Members with short memories, may I say that we have had at least three major incidents in the past two decades which have underlined the value of nuclear—the two oil price explosions and the miners' strike.

Without nuclear during those three major incidents, this country's supplies of electricity would have been put at risk. I have said this before and I will repeat it because, although it annoys Opposition Members it is true: without nuclear during the miners' strike, Mr. Scargill would have won. So we believe that the case for diversity has been made three times and that it would be an irresponsible Government who did not learn from those experiences.

Mr. Blair: What about oil?

Mr. Parkinson: The hon. Member for Sedgefield (Mr. Blair) asks me to talk about oil and that is precisely the point that I am going to make now—the volatility of fossil fuel prices, even since this Bill was introduced. In the past six months the price of oil has moved from $12 a barrel to $20 a barrel, and there is no one who does not believe that in future oil prices will move gradually, inexorably and inevitably in one direction—upwards. So we need diversity of sources of supply to give us the necessary security.

We were elected on a promise to privatise and a promise to maintain a nuclear programme. We are determined to honour both those promises and also to make sure that those who benefit from diversity contribute to the cost; that is the reason for the non-fossil fuel obligation, which will enable us to meet both our commitments. It will enable us to privatise and it will maintain the nuclear programme.

Let me repeat once again a remark that I have made over and over again but which the hon. Member for Sedgefield simply cannot or will not understand. The non-fossil fuel obligation does not increase or decrease costs; it opens them up for public inspection. Now, for the first time, as a result of our proposals, the public is being told what nuclear costs are and it will have set out for it every year the difference, if there is one, between fossil fuel prices and prices of nuclear. So the Government are not in any way hiding the costs of nuclear. For the first time the public is being told what the costs of nuclear are.

Mr. Blair: The hon. Member for Bedfordshire, North (Sir T. Skeet) asserted that it was no part of the function of the nuclear levy or tax to cover the cost of the new pressurised water reactors. Does the Secretary of State agree with that?

Mr. Parkinson: I will deal with that point in my own good time. The point that I wish to make now is that nuclear costs are being incurred at present and that if, God forbid, we had a Labour Government tomorrow, the nuclear costs would continue to be incurred because we need the capacity that the present nuclear stations give us. So there would be no change with a change of Government, and the costs of nuclear would continue to be what they are—the costs.

What we are arranging to do is to expose those costs. So in 80 to 85 per cent., of the market we will have competition in the supply of electricity and in the 15 to 20 per cent. met by nuclear we will, for the first time, have transparency: people will know what they are paying for.

9.15 pm

What I find particularly puzzling about Opposition Members is that they continue to attack us for exposing the costs of nuclear and to defend a system which conceals them. At present, the cost of nuclear is wrapped up in the bulk supply tariff, and nobody knows precisely what it is.

Sir Trevor Skeet *rose*——

Mr. Parkinson: Whatever it is, every electricity user in this country pays it. It is being paid now and the fact that it becomes known and identified will neither increase nor decrease it.

Again, privatisation will not increase the nuclear component. In fact, ironically, for the first time the public is being consulted through Parliament about the level of nuclear provision. Were we not to have come forward with this Bill, it would have been declared CEGB policy to build four PWRS initially, with another five by 2003; so privatisation is not producing more nuclear power; it is exposing the costs of nuclear power and ensuring that the public, through Parliament, is consulted about the level of the nuclear obligation.

Sir Trevor Skeet *rose*——

Mr. Parkinson: The hon. Member for Sedgefield gives the impression that somehow or other privatisation has put nuclear in a privileged position. Privatisation has put the first four PWRS in a privileged position, but the rest of the programme will have to be settled on is own merits by Parliament. The system that the hon. Member for Sedgefield and the hon. Member for Gordon defend would have imposed on the country a huge nuclear programme, would have wrapped up the costs in the bulk supply tariff —the plans are already made—and the public would have had to accept them on its own cost-plus basis.

Mr. Blair *rose*——

Mr. Parkinson: That cost-plus basis is the basis on which the public has had to pay for nuclear from day one.

So here we have a position in which the Government are prepared to declare their commitment to nuclear, prepared to reveal and justify the costs and prepared for the first time to tell the public what they are. Opposition Members defend a system which imposes these things on the public without consultation.

Sir Trevor Skeet: The Secretary of State makes some very astute observations. May I ask him a simple question on costs? What is the difference in cost to the state with the nuclear industry inside and with the nuclear industry outside the state system?

Mr. Parkinson: I will explain in a moment why I believe that, although there are difficulties with nuclear—and I do not deny them—even with those difficulties the nuclear component is far better in the private sector and that the country will be far better off having it in the private sector.

Mr. Blair: I want to correct the Secretary of State on one point. It is the most extraordinary drivel to say that the electricity generating board would have insisted on the nuclear reactors and that somehow the things are now up for choice. The Government have already made the decision anyway; the inconsistency is having made the decision by giving the ring fence of nuclear power and then putting it in the private sector. The Secretary of State has said that the nuclear tax covers these four PWRs. Supposing that the hopes on cost are wrong and that we find that those PWRs are considerably more expensive than conventional plant. Is it not the case that under his proposals the consumer will pay the difference?

Mr. Parkinson: The consumer always pays the difference, as he does under the present system. The difference is that those costs will be exposed and the cost of the electricity will be exposed, and if the public does not like those costs it will have a choice about whether it will pursue a nuclear policy. I believe that it will. I believe that the arguments for nuclear will become stronger and are becoming stronger day by day.

I mentioned the volatility of fuel prices. We are now seeing a growing world awareness of the dangers of being over-reliant on fossil fuels. We know about the greenhouse effect, the acid rain effect, the generally polluting effect of fossil fuel-produced electricity. I believe that the arguments will move firmly in the direction of more nuclear in the years ahead. But nuclear will not be imposed on an unwilling country as it has been in the past, by Labour Governments in particular. In future, it will have to justify its existence, after the four PWRs that we are committed to helping the industry to build.

I repeat that it is not privatisation that is ring-fencing the nuclear programme for the first time. The nuclear programme has been imposed on the country by successive Governments and we are maintaining the existing level. We are not increasing that level and we are not reducing it; we are simply maintaining it.

My hon. Friend the Member for Bedfordshire, North (Sir T. Skeet), who wanted to keep the industry in the public sector, and the hon. Member for Sedgefield disagreed on just about everything else; there was not a single word in my hon. Friend's speech that the hon. Gentleman could really support. My hon. Friend suggested that keeping the industry in the public sector would help. I believe that that would be fundamentally wrong, and we have the experience of the past to prove it. The history of the British nuclear programme—a history in which the Labour party played a prominent part—is littered with appallingly wrong and bad decisions.

The AGR programme has been mentioned in the debate. We have heard a list of stations which were 18, 17 or 16 years late. That programme was imposed on the country by a Labour Government. They chose the wrong technology. They imposed it on industry. The programme was carried through in an appallingly incompetent fashion. There was a total lack of financial discipline and management.

Already, simply as a result of the threat of privatisation, we see a change in attitude. The CEGB is starting to drive hard bargains with its suppliers. Now that it is aware that it is no longer in a cost-plus position, the CEGB is talking to BNFL about not getting fixed price contracts and no longer being at the mercy of BNFL's cost-plus mentality. Why is the industry coming to see me to argue the case for help and protection? It is because it recognises for the first time that it will not be in a cost-plus position and that it will not be in the position, in which Labour Governments would leave it, and which it would be in if it were in the public sector, of being able to spend whatever it likes and passing the cost through. There is the beginning of financial discipline in an area where there has been none, and where there would be none if the programme stayed in the public sector.

Mr. Morgan: In the light of the disparaging remarks that the Secretary of State has just made about the AGR programme, if the CEGB and its successor company, National Power, were to propose not to operate the AGR stations that are coming on stream this year—Dungeness B, Heysham 2 and Hartlepool—and merely kept them in reserve so that they qualified under clause 30 as capacity available—if the nuclear levy could be reduced by not operating them but merely having them as reserve capacity —would the Secretary of State agree to that suggestion?

Mr. Parkinson: A very large sum of money has been spent on the AGR programme and we are now at the point of seeing improved performance from those stations. A substantial part of the expenditure has had to be written off, but it is now producing results, albeit 10 to 15 years late. Opposition Members ducked sharply when we pointed out that in one of those leaked documents, which were the only research that they seemed to do in Committee, the industry had announced that it would

have to write off £1,600 million of taxpayers' money because of the bad decisions taken exclusively by Labour Governments on the AGR programme.

We want to get the whole of the industry into the private sector. We want to get away from political influence and political impositions. We want to put the industry in the hands of commercial management. Even though there will be less competition in nuclear than we would wish, we believe that it will still be better managed, better off and more accountable if it is in the private sector.

We have heard some remarks about what the CBI wants. We have been told that the CBI wants a nuclear programme, that it wants it to stay in the public sector and then that it wants it to be floated off to create a competitive third force. My view is simple: what the CBI wants is the benefit of the security that comes from nuclear, but it does not want to make its contribution to the cost. Not only is the non-fossil fuel obligation a useful means of encouraging the development of the next generation of nuclear power stations but it is a way of ensuring that everybody who benefits from that diversity and security makes a contribution.

The hon. Member for Sedgefield asked how the system would work. I explained in Committee that there will be collective purchasing, through a company set up for that purpose, by all the area boards of the production from the nuclear stations. That production will be sold at the fossil fuel price to the area boards. If there is a difference and if the cost is higher than the selling price, that will become the levy, and that levy will be paid by all who use electricity. It will not be possible just to impose it on the domestic customer, which is what some people in industry argue for. The non-fossil fuel obligation will encourage the development of nuclear power stations but it will also ensure that the cost of those stations is fairly borne.

We believe that new clause 16 is unnecessary. It will be the director general who will compute the levy. It will be his job to decide the correct level of the levy and to publish it. It will also be the job of National Power separately to account for its nuclear production. That also for the first time will become transparent and people will know what they are paying for, but the director general will be part of the process of setting the levy; he will oversee it.

Amendment No. 148 proposes an interesting development. For the first time on behalf of the Opposition the hon. Member for Sedgefield recognised tonight the importance of diversity as a source of security, but in classic muddled Labour fashion. Having identified it as something desirable, they then make arrangements for it not to happen. They make a proposal for a vague system that encourages people to think about the possible benefits of diversity. We are not mealy-mouthed. We believe strongly that nuclear is the main source of diversity. As a result we are prepared to commit ourselves to justify our policies.

We noticed in Committee that the hon. Member for Sedgefield becomes remarkably coy if questions are addressed to him. When we ask him if he would close down the nuclear stations we get no answer. We point out to him that Cleveland Bridge is on the edge of his constituency and is very dependent on the nuclear programme; when we ask him if we may tell people there on his behalf that they will be out of a job, he looks coy, rushes off and talks to his journalist friends.

9.30 pm

When we got to questions of coal and Mr. Scargill, the hon. Member for Sedgefield handed over to his hon. Friend the Member for Rother Valley (Mr. Barron) and made arrangements not to be in the Committee Room, so he was not there while the arguments about coal took place. I was there, and I witnessed the hon. Member for Sedgefield achieve the impossible—of being present, but not in the Committee Room, for most of the time. *[Interruption.]* The hon. Gentleman is happy with his rhetoric and heated speeches, but we never find out in what he believes. We only know that he is opposed to privatisation, although we read in *The Times* that privatisation will stay and that the structure which we are putting in the private sector will remain for many years, because it will be a long time before there is a Labour Government. In any case, they would only tighten up the regulatory system. In other words, we hear a great deal about what is wrong with our proposals, but Opposition Members have no real plans for changing them. They would only regulate them a little, should they ever get the chance to do so.

We are asked, in connection with amendment No. 147, whether it would be appropriate for consumer committees to be involved in making the order setting the non-fossil fuel obligation. We believe that that is a matter for Government and Parliament—that it is for Government to make their proposals to the House, and we intend to do that. We do not think that local consumer committees would have a great deal to contribute to the setting of the non-fossil fuel obligation. That job is better done here in Parliament.

The House has had from the Opposition, and in particular from Labour Members, a typical piece of Labour escapism. They know full well that, in the nuclear programme we have, the nuclear stations owe much to policy decisions taken by them; they know that they cannot be closed; they know that we need them to ensure the security of the system; and they know the cost and object to the fact that we will expose the cost and argue the case for diversity instead of imposing it on an unwilling country. Nuclear has a great contribution to make. We are prepared to argue the case, to expose the cost and to have a transparent system.

I hope that my hon. Friend the Member for Bedfordshire, North will change his mind about pressing his new clause and that my hon. Friends will join me in exposing Opposition Members as a bunch of bogus no-hopers who have nothing to offer but criticism.

Mr. Ashton: We have just heard a remarkable speech from the Secretary of State. He began by saying that the Bill was designed to take the decisions out of politics and allow costings to be made without regard to political issues, but immediately went on to make a political speech, using the need for nuclear power to slap down the National Union of Mineworkers. Nothing has been said in the debate so far about the part played by gas turbines or about the new EEC regulations concerning the surplus of gas in the North sea and its use for generating electricity. That issue has immense ramifications for my constituency and in particular for West Burton B, the proposed coal-fired power station.

About two years ago the right hon. Gentleman who is now the Secretary of State for Wales, then Secretary of State for Energy, astonished the House one Question Time

[Mr. Ashton]

by saying that he would approve the building of a new coal-fired power station, West Burton B, close to West Burton A, in my constituency. The CEGB, which we had been lobbying for at least two years, said that it was keen to have that power station because planning permission for it had been agreed and it could be built quickly. It was pointed out that West Burton A already existed, that the roads and railway lines were there, that it would be handy for the river and that it would be close to the rich coalfields of Nottinghamshire. Indeed, the CEGB said in a publicity handout that it

"would be planned to be in operation by 1995. It would be a large station with a generating capacity of 1,800 megawatts. Decisions have to be made soon because it takes about five years to build a coal-fired power station."

The then Secretary of State for Energy made his announcement a month before the general election. There were marginal seats in Nottinghamshire, there had just been a coal strike and there was much conflict between the NUM and the Union of Democratic Mineworkers. Today, more than two years later, not a sod has been turned or a brick laid. We continue to have only promises.

That power station was expected to create 2,500 construction jobs during the five years that it would take to build it. In my constituency there is 17 per cent. male unemployment in Worksop. A further 600 jobs were to be created in running the power station and many more running the railways, building a new road and even supplying fish and chips to the canteen. It was said that West Burton B would be given priority by the CEGB. It would have preferred Fawley in Southampton, but there were objections there because of property values. As there were no objections to West Burton B, it was agreed that the plan should go full steam ahead. All the councils agreed to the planning regulations.

Every time I have tabled questions to the Secretary of State for Energy about why he has not given his approval, he has said that there have been delays with the local councils on planning regulations, but the local councils agreed 41 out of 42 planning regulations very rapidly. The remaining one was whether a minor road should be straightened out before or after the power station was built. There has been no delay in deciding planning conditions for the power station, but we are still awaiting a decision.

The power station would keep five pits open. It would burn anything up to 5 million tonnes of coal a year. In Nottinghamshire, where the UDM supported the Conservatives throughout the miners' strike, the Conservative majority for the hon. Member for Sherwood (Mr. Stewart), who is not in his place tonight, went up from 600 to 4,500 and the majority of my hon. Friend the Member for Mansfield (Mr. Meale) fell to 56. UDM members were promised continually that they would be looked after by the Conservative Government, and the promises continued until the last general election, but when it came to delivering those promises nothing happened. Since then there has been nothing but delay.

In desperation, I turned to the CEGB and asked Lord Marshall of Goring, "Do you intend to build the power station? Where do we go from here?" He wrote me a very friendly letter:

"Dear Joe . . . It is no longer our decision whether or not to go ahead with West Burton. There is excess gas in the North Sea and the EEC Regulations have now changed so that it is permissible to burn gas to make electricity . . . the options now include building coal stations or to build plant with combined cycles of gas turbines with steam turbines. At the moment I really have no idea what choice the Area Boards will make. In my opinion it is the answer to this question that will determine the future of the West Burton project, and the hesitation you see is not due to our final discussions on planning matters.

The Area Boards must give us a decision about the Fawley coal-fired station within the next few weeks, but it is only fair and realistic for me to tell you that I do not think we will get a decision from them concerning West Burton until a later date."

So the whole project is back in limbo. We were told that if there were a bad winter in 1992, the CEGB would have to have power cuts because it would not have sufficient capacity to meet demand. That was the urgency for West Burton B. Everyone knew that the Government did not want a coal-fired power station and would have preferred a nuclear power station, but they knew that it would take two or three years to get planning permission for another Sizewell or nuclear power station and there was already planning permission for West Burton.

So why is there a delay? I will tell the Secretary of State why I think there is a delay and I hope that he will come clean and tell us the real reason. I think that he does not want to saddle the new buyers of the electricity industry with a £1,000 million debt for the new coal-fired power station. He knows as well as we do that under the old nationalised industry, the CEGB used to run at 80 or 85 per cent. of capacity. It could not afford to run any higher or faster than that because if there had been power cuts because it was too close to capacity there would have been a political uproar and an outcry against the Government's mismanagement of a nationalised industry. But when the industry is sold off the private people can run it at 99 per cent. If there are power cuts and they have not provided enough capacity, they either import more from France to take the place of Fawley power station or say, "Hard lines, there will have to be cuts in consumption or electricity will go off at peak periods." They will be able to get away with that because the industry will be privately owned. New clause 16, which shows the difference in the price of electricity, must therefore be implemented.

Another factor may be that the buyers of the industry want a coal-fired power station but do not want such a power station burning coal at the present price. If they can delay the building of the power station for five or 10 years and in the meantime two new ports are built on the Humber—there is a Bill before the House dealing with that —they will be able to import cheap coal from South Africa, China, South America, Poland or elsewhere. That would make it more profitable. By that time, more pits in Nottinghamshire and south Yorkshire will have closed. That is probably the reason for the delay. The costings will be done again on the basis of cheap imported coal rather than whether, on present costings, coal is cheaper than nuclear power.

The Library research document says that clause 16 is most important. It offers a private supplier an escape if there is a power cut caused by circumstances "not within his control". That means that a heavy snowfall or excessive cold could be circumstances "not within his control" and there could be power cuts which might be disastrous for anybody dealing with a frozen food factory or freezers in houses. Yet in such circumstances the private supplier would be protected.

Mr. Jonathan Sayeed (Bristol, East): The hon. Gentleman subscribes to the conspiracy theory as to why something has not happened, but could it not be that the generating authority is looking at combined steam and gas generation as it is likely to be cheap and much cleaner?

Mr. Ashton: That is the latest proposal as a result of EEC regulations. However, as Lord Marshall said, it is no longer his decision. When the Bill is enacted and the industry is privatised, as it will be in a few months, everybody can wash his hands of it and say, "It is nothing to do with me." For two years, the ball has been kicked from the Secretary of State to the CEGB and the local councils have been blamed. If the power station were to be built, five pits would be kept open. That power station should now be 2ft high and due for completion in 1992.

There is a financial consideration and many jobs are involved. We are talking about the future of the pits and of the area, but we cannot get a decision from the Secretary of State. He will not nod his head and say, "Go ahead." He wants to delay until after the Bill is enacted and the new ports are sucking in cheap coal. If he cannot give us an answer at the end of the debate, I hope that he will agree to meet a delegation from my local council and the coalfield community so that we can sit round a table and thrash this out rather than having to debate it in the House.

Mr. Michael Irvine (Ipswich): It was startling enough to hear my hon. Friend the Member for Bedfordshire, North (Sir T. Skeet) advocating retaining the nuclear element of the power generating industry in public ownership, but it was even more startling to hear some of the arguments that he put forward in favour of that proposition. I heard him saying, for example, that one of the key arguments in favour of retaining the nuclear element of the electricity generating industry in public ownership was the fact that in constructing nuclear power stations, cost and time overruns were frequently encountered. He mentioned Hartlepool power station, which took 19 years to build, as an example. I can trump that by mentioning Dungeness B, which took 20 years to build. My hon. Friend drew from this conclusion that the nuclear element of the power generating industry should be retained in public ownership.

9.45 pm

I draw the diametrically opposite conclusion—that it is about time such things stopped. No private industry could possibly countenance such cost or time overruns. State corporations can and do tolerate such inefficiency. It is about time that that was put to an end and I am glad that the Bill will do so.

While listening to my right hon. Friend the Secretary of State, I noticed that there were 12 Labour Members sitting opposite him. Of those 12, no fewer than 10 represent coal mining constituencies. I looked across the Chamber and my eyes encountered the steely glare of my old adversary, the hon. Member for Ashfield (Mr. Haynes), a miner himself for many years and an official of the National Union of Mineworkers. I looked along the Bench and saw the hon. Members for Rother Valley (Mr. Barron) and for Sedgefield (Mr. Blair) and behind them the hon. Members for Pontefract and Castleford (Mr. Lofthouse), for Bassetlaw (Mr. Ashton), for Midlothian (Mr. Eadie), for Rhondda (Mr. Rogers), for Wentworth (Mr. Hardy) and for Hemsworth (Mr. Buckley).

Mr. Allan Rogers (Rhondda): Whom do you represent?

Mr. Irvine: I represent 68,000 consumers in Ipswich.

Another hon. Member who was present then, but who is not here now, was the hon. Member for Barnsley, Central (Mr. Illsley). He had the distinction of being the chief administration officer of the National Union of Mineworkers form 1984 to 1987. In Committee, I called him the high priest of the mining interest and that was a fair description.

I make no criticism. Those Opposition Members are right to be here to represent their constituencies and to put forward the case for the coal mining industry. But we should remember that they have that particular vested interest at heart and that the case that they put forward, very properly, is the case of that particular vested interest. It is interesting to compare the scale of their turnout with the overall turnout of Labour Members.

Mr. Haynes: I am going to deal with you.

Mr. Irvine: I heard something of a threatening remark pass across the Chamber.

Mr. Speaker: Order. I hope that it was not an unparliamentary threatening remark.

Mr. Irvine: In my judgment, it was near the borderline, but probably not quite over it.

In his speech earlier, the hon. Member for Sedgefield asked why the nuclear industry has been singled out for special treatment. I can give him one very good answer, which is at the heart of the case made by my right hon. Friend the Secretary of State. Having a nuclear-generated element in the power industry means that there is that much greater diversity of supply. The hon. Member for Sedgefield said that the argument about diversity of supply was the only case that the Government had left. He said it in a derisory and mocking manner. Whether or not it is the only case is immaterial because it is a very good case and goes right to the heart of the Bill.

My right hon. Friend the Secretary of State made the point that oil was subject to rapid price swings. He mentioned how, in the six months since the Bill first started on its way through the legislative processes, the price of oil had risen $12 a barrel to nearly $20 a barrel. That is a significant argument against relying too much on oil as a source of generating energy.

Coal has been just as erratic and dangerous a source of supply. During the past 20 years the generation of electricity in this country has been threatened by major strikes three times. The last one in particular was a highly politically motivated strike. The generation of electricity was threatened in 1972, again in 1974 and most crucially in 1984-85.

Therefore, it is entirely right and proper that while giving market forces due rein and producing the efficiency and the benefits that market forces can bring the Government should, in a very undogmatic, pragmatic and common-sense way, treat the nuclear element of the industry as a special case. It is absolutely right that it should be treated as a special case because it will add to the diversity of our electricity supply. Greater diversity of supply ultimately means greater security of supply.

Mr. Eadie: I understand that the hon. Member for Ipswich (Mr. Irvine) made the same speech in Committee.

[Mr. Eadie]

Probably the only good thing about it was the advertisement that he gave to my hon. Friends' assiduous attendance during the debate.

I find it strange that the debate seems to have developed into an advertisement for nuclear power. I found it a bit rich when the Secretary of State decided to intervene to rubbish existing British nuclear technology and came out in favour of the PWR. We in this country have never had a PWR. As I have said before, we are building an American-British bastard version of a PWR, which has not yet worked. When we are talking about efficient technology and advertising nuclear power, I advise the House to look back at the history of nuclear power in all countries because when there is a new nuclear generator and a new generation——

Mr. Sayeed *rose——*

Mr. Eadie: If the hon. Gentleman will allow me, I should like to continue.

When there is a new nuclear generator, there is always trouble to start with. That will be the history of this exercise.

Mr. Mans *rose——*

Mr. Eadie: Perhaps the hon. Gentleman will allow me to finish my point. I have only just started my speech.

I thought it a bit rich of the Secretary of State to rubbish British nuclear technology when we are taking the Westinghouse American type. They decided not to build any more, so it is a bit rich to put that defence.

I am trying to say that the debate has become a general advertisement for nuclear power. Just last week I read that the Government are so confident about nuclear power and thermal nuclear power that they propose to spend £20 million advertising it. It reminds me of the old ditty that I heard as a boy. It went something like this.

"The codfish lays a million eggs, the hen lays only one,
but the codfish doesn't cackle when its little stunt is done.
The artful hen we praise, the codfish we despise,
but every thinking man will agree it pays to advertise."

The right hon. Gentleman proposes to spend £20 million advertising a deficient case.

Mr. Sayeed: Will the hon. Gentleman give way?

Mr. Eadie: I want to make my speech, but I will give way. The hon. Gentleman has not been present for the whole debate.

Mr. Sayeed: The hon. Gentleman is quite right. I have not been here during the whole debate. However, if I remember correctly, the hon. Gentleman said that we had never built a PWR. Every nuclear submarine operating from and built by this country has a PWR at the heart of its generating system. They have worked safely for many decades. The hon. Gentleman should not forget that PWRs are effective and safe.

Mr. Eadie: Whatever qualifications the hon. Gentleman may have, he has no qualification in engineering.

Mr. Sayeed: That is quite wrong.

Mr. Eadie: I am astonished. I do not know where the hon. Gentleman got his qualification. He is talking about a little nuclear reactor in a submarine and comparing it with building a big thermal nuclear power station. It defies analogy. If the hon. Gentleman were to make that suggestion in an institute of engineering, he would be laughed out of the place. I should not have given way to the hon. Gentleman.

My old adversary, the hon. Member for Bedfordshire, North (Sir T. Skeet), introduced this debate. I have great admiration for the hon. Gentleman. He is always diligent. Whether or not we agree with him, he always spends time and energy on his speeches. He has been here during the debate. The fact that he is absent now is no criticism. He has been present since 3.30 this afternoon. Perhaps he is having a cup of tea. In the course of the argument that he was trying to build, he said that he was searching for the truth. It is a search not for the truth but for the blarney stone. The hon. Gentleman used phrases such as, "Let us have temporary public ownership for a few years, at least until the difficulties have been overcome." He is pro-nuclear and anti-coal. I should have thought that someone of his experience who is pro-nuclear would understand the technical problems of nuclear power in the United States of America and in this country. The problems will not go away in three years.

The hon. Gentleman said also that the public are not ready. I cannot understand why the public are not ready. Perhaps they find it unacceptable that they have been asked to pay a high cost for this Bill. The hon. Gentleman considers that the Bill is in a state of crisis. New clause 3 could have a different title. It could probably be called the "Saving of the Privatisation of the Electricity Supply Bill". The hon. Gentleman was not confident that the Bill would succeed unless we had public ownership, as he described it, of the nuclear section.

We have talked about the nuclear tax. My hon. Friend the Member for Sedgefield (Mr. Blair), the shadow Secretary of State for Energy, made his contribution in Committee and has made great play of that tax. I know that to some extent that has worried the Government, because it is getting home to the general public that, despite what the Secretary of State for Energy has said, they are paying a tax for nuclear power. It is what we describe as a blatant preference for nuclear power.

The coal industry has been brought into the debate, but what have been the arguments in favour of nuclear power?

It being Ten o'clock, the debate stood adjourned.

Ordered,

That at this day's sitting, the Electricity Bill may be proceeded with, though opposed, until any hour.—*[Mr. Chapman.]*

Question again proposed, That the clause be read a Second time.

Mr. Eadie: All the arguments in favour of nuclear power have been torpedoed to some extent in the debate and at the various inquiries held. Two of the main arguments in favour of nuclear power were that it was environmentally more acceptable and that it was cheaper than coal, but we know that that is not true. The chairman of British Coal has said—I do not know where he obtained his figures, and various figures have been quoted in the debate—that there is evidence that in the immediate future the gap would be as high as 40 per cent. between coal and nuclear power. To some extent, therefore, the price argument has also been torpedoed.

It has been argued that environmentally coal is a very dirty pollutant, but that argument has also been destroyed to some extent. On a worldwide basis, coal is responsible

for about 15 per cent. of pollution, but in Britain it is responsible for half of 1 per cent. Hon. Members who talk about dirty coal and its polluting effects should put the matter into perspective. When I led a delegation from the miners' parliamentary group to meet the Secretary of State for Energy, one of the points that we made was that it was time that he stood up and defended coal. He is a custodian of the coal industry. It is rubbish to make out that coal is the main pollutant in this country. The right hon. Gentleman knows that that is not factually true. As the sponsoring Minister, he has a responsibility to defend the coal industry.

Mr. Michael Stern (Bristol, North-West) *rose*——

Mr. Eadie: I will give way to the hon. Gentleman as he has been here for most of the debate.

Mr. Stern: I have been listening to the hon. Gentleman with some incredulity. Does he agree that of the fossil fuels that are burned, coal is the greatest pollutant? In fact, if we are talking about atmospheric pollution, will he agree that however little—according to his statistics—coal contributes to atmospheric pollution, nuclear power contributes nothing?

Mr. Eadie: I shall come to that aspect. I begin to wonder when the debate will end, because the hon. Gentleman has tempted me. Incidentally, his figures are wrong and he should look at them again. I have looked up the figures. I have already given the main pollutants. Coal contributes 15 per cent. to the carbon dioxide elements of the greenhouse effect, gas contributes 6 per cent. and oil, primarily for transport, contributes 16 per cent., so coal is not the main pollutant. The hon. Gentleman should obtain the figures from the Library. He will then be able to inform the House that coal is not the main pollutant.

Mr. Stern: Will the hon. Gentleman give way?

Mr. Eadie: The hon. Gentleman has had his opportunity and another hon. Member wishes to intervene.

Mr. Ian Bruce: The hon. Gentleman referred to pollution from the coal industry. He will be aware that the amount of nuclear radiation that comes from coal ash is far in excess of anything emitted from a nuclear power station. If the nuclear installations inspectorate visited a coal-fired station it would close it down if the same rules were applied as it applies to the nuclear industry. The hon. Gentleman mentioned 15 per cent. of pollution coming from coal-fired stations, but he did not answer the question put by my hon. Friend the Member for Bristol, North-West (Mr. Stern) about the amount of pollution from nuclear stations.

Mr. Eadie: Again, it was a mistake to give way. The hon. Gentleman must look up the facts if he wishes to pursue such an argument. I hope that when the hon. Gentleman makes his speech he will give the source of his evidence as it is not factually correct.

We cannot draw a comparison between the environmental effects of the coal and the nuclear industry because they are not in the same race. Nuclear power is unforgiving technology, as we know from Three Mile Island, Chernobyl and Windscale. We are told how good thermal nuclear power is and how well the Westinghouse PWR works, but some hon. Members know that in the United States not one such reactor has been built since 1974. When I was last in the States I was told that no one had any intention of building another such reactor because they were publicly unacceptable. Incidentally, I was also told that no one would build a PWR similar to the ones that we propose to build because they are technologically out of date.

The Secretary of State referred to security of supply. I have made many speeches in this House on that and coal must be considered in that context. Every station should strive to achieve security of supply.

We know that the oilfields of the North sea are now past their best. In the 1990s, production will decrease by 1 million barrels per day. Today it has already been said that in the 1990s the price of oil will escalate and that OPEC will be in a position to dominate the price of oil. In the 1970s we carried an annual burden of £5 billion due to the import of oil. Incidentally, since the Government took office 10 years ago, they have enjoyed £76 billion in oil revenues as a consequence of North sea production. On the latest available figures—I have not checked them—we consume more than 83 million tonnes of gas. That is equivalent to one third more than we produce, and the extra consumption will carry an import price.

I do not believe that the case has been made for treating nuclear power as a special case. The hon. Member for Bedfordshire, North made a valiant attempt to save the Electricity Bill, but the Opposition do not want the privatisation of electricity. We believe that the Bill is a monster and that it will make the consumer and the country suffer. I hope that when we decide what to do it will not be just a question of public ownership of the thermonuclear power industry but that we shall return to public ownership of energy and a policy and strategy that will benefit the people of this country.

Mr. Michael Stern (Bristol, North-West): I am grateful for this opportunity to make a brief contribution to the debate. I shall not follow completely the arguments used by the hon. Member for Midlothian (Mr. Eadie). I was sorry that he chose to refer so slightingly to my hon. Friend the Member for Bristol, East (Mr. Sayeed) who comes to the debate as a naval engineer. I am sorry that the hon. Member for Midlothian had not researched that fact before he spoke as he did.

This debate is mainly about the best future for the nuclear component of the electricity industry. In the next few years, that component will undergo several startling changes. The first, on which we are already embarked, is the changeover in the principal method of production through nuclear means from the AGR to the PWR which, in itself, is a major change.

In addition, as the pace of change is accentuated—even in advance of the passage of this Bill—by the prospect of privatisation, even greater changes are taking place in the potential of the nuclear industry. The possibility of smaller PWRs and nuclear stations, designed to plug gaps rather than provide a base load, are being discussed for short-term use.

In recent weeks the physician's dream of the production of power by nuclear fusion has, hopefully, come one small step closer to reality. No doubt, as fusion becomes more of a possibility, its impact on the generation of electricity will become more marked.

I should like to refer briefly to a subject that I mentioned on Second Reading—the fact that the demands

[Mr. Michael Stern]

on electricity generation throughout the world will, in a short time, be infinitely greater than we have ever been used to. The mere fact that we in this country—like most of the developed nations—use 15 times as much electricity per person as many parts of the developed world, which want to accelerate their standards of living to somewhere closer to ours, will mean that there will be a demand for vastly increased electricity generation.

Anyone who believes that such vastly increased electricity generation can possibly come from the burning of fossil fuels can only be someone who believes that human life is designed to grow in ever hotter greenhouses. If we are serious about wanting to assist the developing world to achieve a standard of living which we find acceptable, we can help them only through nuclear or renewable sources of energy. There is no other alternative available. In the next few years we shall demand from the nuclear section of the industry rapid changes, merely to meet the demands of the rest of the world.

The new clause gives us a simple choice. Tremendous demands for change will be made of this section of the industry. Is that industry more likely to respond rapidly to change if it is in the private or the public sector? I do not think that even Opposition Members would argue that if an industry is retained in the public sector it will have the impetus to change and develop.

If the nuclear sector is to develop in the way that will be demanded of it in the next few years, we must give it every incentive to be ready to meet that change. It will have to take its place in a market and be responsible to the forces of competition.

10.15 pm

A second argument for the nuclear industry to move into the private sector as quickly as possible concerns marketability. It has been said several times, not least by my hon. Friend the Member for Bedfordshire, North (Sir T. Skeet), that the nuclear industry will be difficult to market. I take exactly the opposite view. If we look at the various sections of the industry in terms of their attraction in a stock market issue, we find that we are looking at two rather different industries. The fossil fuel industry has a potential for high profit, but its profit can be greatly affected very quickly by environmental demands, regulatory demands of the EEC and the development of new and untried technologies such as the massive expansion of flue gas desulphurisation—or hopefully, at a later stage, fluidised bed combustion.

The non-nuclear end of the industry could be characterised, in marketing terms, as the sort of equity that would be very popular on the stock market among private investors but would carry high risk and high reward. The nuclear industry, as it exists at present, is a wholly different animal. Most of the costs that go into the profit equation in the nuclear industry have already been incurred: they are known. Therefore the nuclear section, particularly in its attraction for institutional investors, will be very much more in the nature of a gilt-edged stock. It is unlikely to show the same rapid changes in profitability as the non-nuclear industry; on the other hand, it is much more likely to produce a steady return for the investor.

I do not share the doubts of my hon. Friend the Member for Bedfordshire, North about the marketability of the nuclear section. I believe that it will appeal to a different section of the stock market, but appeal it undoubtedly will. On the basis that the industry must be ready to respond to change, and that that can result only from its being exposed to the forces of competition and profitability—and on the basis that the industry will itself broaden the appeal of the overall privatisation of the electricity industry—I hope that the new clause will be defeated.

Dr. Kim Howells (Pontypridd): In his proof of evidence to the Hinkley C public inquiry last October, Mr. F. P. Jenkin, on behalf of the CEGB, listed no fewer than 28 reactors—mainly Magnox—which had elected to be decommissioned in the next 12 years. The bulk, incidentally, are to be decommissioned by the mid-1990s. The likely costs of decommissioning, however, are as vague in 1989 as the various proposals so far announced for physically dismantling nuclear stations and disposing of their constituent parts.

The operators of nuclear power stations are required to make provision in advance for the cost of shutting them down, but a recent survey by the *Financial Times* energy economist suggests that they are planning that provision on the basis of very limited evidence, and that they are likely to find their funds insufficient to meet the actual cost. The utilities have recently calculated that cost on the basis of 10 per cent. to 20 per cent. of the cost of building a new station. With the cost of new reactor capacity running at around £1·2 billion per 1,000 MW, that conservative calculation represents a substantial sum. The SSEB, for example, estimates the cost of dismantling its two Hunsterston B reactors at £270 million in 1992 values.

If we give the utilities the benefit of the doubt and take, as an average per plant, a figure of just £200 million for decommissioning, the 20 reactor sites to be decommissioned by the year 2,001 will involve expenditures of no less than £4 billion. If, as is likely, the decommissioning cost is nearer £300 million per site, the global cost hovers around the £600 billion mark. It is little wonder that the majority of Government Members want to dump responsibility for that decommissioning in the lap of somebody else. But the responsibility cannot be dumped—the decommissioning process will affect us all, whether we like it or not, in the same way as we all share responsibility for the burning of hydrocarbons and for the detrimental effect on the environment of doing so without proper technological safeguards.

Some of the proposals for decommissioning nuclear power stations are barmy enough to make even the Secretary of State's hair curl. Recently, I read a paper by a group of West German nuclear engineers. It advocated that, once fuel rods had been taken from the reactor core, they should be replaced by high explosives, and that controlled explosions should take place in order that a new generation of robots might go into the reactor core, pick up the fragments of irradiated material, and drop them into little lead-lined sacks. The robots would then come out of the reactor. It would be dismantled in that fashion.

It seems to me that the industry simply has not thought this problem through. The Government are attempting to make sure that they get out of the situation so that they will not have to take responsibility for it. That is not good enough. They assume that they can substitute the effects of the free market—that, somehow, a magic wand will be waved and that everything will be all right once privatisation has taken place. I should like to draw the

attention of the Secretary of State to reports that the Chinese are negotiating for South African coal, despite the fact that British Coal is now the world's largest importer of Chinese anthracite because it closed down virtually all the anthracite mines in South Wales. The Chinese are so desperate for coal that they are willing to shop around and buy it from other countries at the same time as they export subsidised coal to break the coal industry of a potential customer—namely, us.

A free market in energy does not exist, and it never has existed. Energy has always been right in the cockpit of politics, and it always will be there whoever controls the sources of energy in the 21st century will have political power as well as economic power. It seems to me that the Government are trying to dump responsibility and make a fast buck. That is what it is about. To quote a former distinguished member of this House, we are selling the family silver for short-term gain. That is a disgrace—a disgrace in terms of safety, in terms of the health of our children in the future, and in terms of those children's inheritance of a sterilised coal industry.

Mr. Ian Bruce: I did not plan to speak, but I listened with great interest to information being abused by the Opposition and thought that I should say a few words about the rather strange notion of my hon. Friend the Member for Bedfordshire, North (Sir T. Skeet)—for whom I have great respect—that somehow, by keeping the nuclear industry within government, we would be protecting the public and doing the best job for the nuclear industry.

We in this country started off with a Magnox programme. We built some 20 stations, every one of them different. So many of the decisions as to how we would build them, where we would build them, and the different equipment that would go into them were examples of Ministers putting their sticky fingers into decision-making. Of course, we know well what happened when there was a decision to be made under a Labour Government. The AGR technology was unproven; the pressurised water reactor technology was well proven, and was going through in the case of most of our competitors; and there was the steam-generating, heavy water reactor, in respect of which, I might point out, I have the honour of representing Winfrith, which had the only model of that type. We decided to go for the advanced gas-cooled reactor. We learned to our cost that that was a very expensive route to follow.

We toyed with fast breeder reactors, but we decided to soft-pedal on that type of reactor. I was surprised to hear the hon. Member for Midlothian (Mr. Eadie) say that Britain has no experience of pressurised water reactors. My hon. Friend the Member for Bristol, East (Mr. Sayeed) pointed out, having been in the Royal Navy, that we have built and run over 20 of those reactors and that we have done so extremely effectively. If an organisation decides to go down a particular technology route—as the Royal Navy did—and to stick with it, it can be most effective.

France adopted a technology and then refined it. By investing an amount equal to £20 billion, it is now able to provide the cheapest electricity in Europe. *[Interruption.]* No, Electricité de France is not in debt. Moreover, France is exporting electricity to this country, Germany and other countries. France generates more nuclear power than it needs.

We have suffered from constant changes, influenced by Government policy. That is why our nuclear industry is in such a mess. One wonders, therefore, why the South of Scotland electricity board has been so successful. It runs a small number of nuclear power stations. However, the board was sensible enough to look at other people's technology—for instance, at the CEGB's technology—and pick the winners when the bugs had been taken out of them. The SSEB's nuclear power programme provides cheap energy which has benefited Scottish industry.

The European sector of the Soviet Union is running out of cheap coal. It has made the decision——

Mr. Morgan: Perhaps I could correct what the hon. Gentleman said a few moments ago. Electricité de France has made a loss. *Power in Europe* of 30 March says:

"EDF slipped back into the red last year."

Mr. Bruce: I stand corrected on that point, but that is only one year. After all the money that has been invested in the coal industry to ensure that bulk supplies of coal are produced for our electricity industry, it would be hard to argue that we are making a profit out of the energy industry.

The European sector of the Soviet Union has little cheap coal now available to it, so it has decided to build 36 large pressurised water reactors. The Soviet Union is asking Britain to help it to design safe pressurised water reactors.

Before the Secretary of State introduced his proposals, the CEGB said that nuclear energy was cheap. Many people have referred to the fact that before the break-up of the organisation was suggested the CEGB said that nuclear energy was cheaper than any other form of energy. By fair means or foul, it has now made sure that in the Bill the Secretary of State provides compensation if nuclear energy, when it is properly costed and put into the system, is found to be more expensive than other forms of energy. One can imagine why National Power has taken that view: it is the only organisation that currently has large-scale generation from nuclear power, and so it is looking for some guarantees from the Government. But I also understand why it has great problems with the way in which nuclear power is to be costed. We in this country have failed to make the decisions that we should have made on a number of matters, particularly on waste disposal.

10.30 pm

We were told some years ago by Nirex that the shallow burial of nuclear waste was a sensible, economic and safe means of keeping the waste out of harm's way. One must remember that this particular type of nuclear waste has been stored for 20 or 30 years in prefabricated asbestos or metal sheds above ground in encapsulated tubs, and that we have all felt very safe about that. Bradwell, which did not want a shallow nuclear dump, has had a shed filled with nuclear waste for years. I have one in Winfrith; anyone who has a nuclear power station has one of these sheds, where we have stored safely for up to 30 years intermediate and low-level waste.

Unfortunately, the Government have been pushed—possibly by people's fears, which have been whipped up by Opposition Members—[HON. MEMBERS: "Oh!"]—into proposing such an incredible solution as burying this type of waste under the sea.

[Mr. Bruce]

We also have the problems of decommissioning. When Magnox stations were built, it was clear, before we built them, how they would be decommissioned: people would remove all the parts that could be removed, take out the very radioactive material—the fuel, and so on—which would be taken away for reprocessing, and the inside of the nuclear reactor, which would be only marginally radioactive, would be inside a large shield, purpose-built to keep it in, even when it contained very radioactive material, and would simply be buried in a hill. That is the cheapest and most sensible way of getting rid of a nuclear power station.

The amount of radioactive material left in a pressurised water reactor will be even less, and these reactors will be even easier to deal with. To want to break the reinforced concrete shielding at Sizewell, in order to take away a small amount of radioactive material when the life of the power station is at an end, is totally mad. Why not have the highest hill in Suffolk, simply by covering it over and leaving it? That is the best and cheapest way of getting rid of it.

Again, National Power will be worried about the costs of having to reprocess.

Mr. Eric Illsley (Barnsley, Central) *rose*——

Mr. Bruce: I must get on.

It will be worried about reprocessing fuel that has no use. We have said in the past that we were reprocessing this fuel because we would run out of uranium which we would need for fast breeder reactors. The Government ought to look at what is to be done with the fuel. Magnox fuel needs to be reprocessed because it is unstable in its unreprocessed state, but the fuel from AGR and PWR reactors could be stored without reprocessing.

The Government must therefore look at the cost of waste disposal, the cost of decommissioning, and the cost of reprocessing and perhaps see that as the way to control the additional costs that may or may not come through in nuclear power. I believe that we have an opportunity to do something about costs while we are selling off this part of nuclear generation, because on-going costs of nuclear generation are lower than those of any other fuel; that is why they are left on as base load in all our power systems. By selling these power stations at a price that the market believes they are worth rather than at the cost of building them, one can get an economic cost for the operator to operate them at the price the shareholders paid for them rather than the price that the CEGB paid for them. In that way the market could decide the best economic rate for running the power stations.

New power stations will show on an economic basis that they can be cost effective. The two organisations currently licensed to run nuclear power stations—the Atomic Energy Authority and BNFL—are considering the possibility of going into partnership with private companies. That demonstrates graphically that when decisions are taken away from the monopoly supplier, the CEGB, other people want to get into nuclear power generation. I should be grateful if my right hon. Friend would address a few remarks to how he sees power stations being run effectively by the Atomic Energy Authority or BNFL if they eventually get into private hands.

With the use of present technology, the private approach will mean that nuclear power will be generated far more cost effectively than before. The same efficiency that the CEGB has demonstrated in running coal-fired stations, which provide 80 per cent. of its production, will be shown in a group of nuclear reactors which will have to come inevitably because we do not have an unlimited supply of coal. The economic cost of taking coal from the ground will get higher and higher, while the cost of nuclear energy will get lower and lower.

Mr. Hardy: I will try not to respond at length to the hon. Member for Dorset, South (Mr. Bruce) but some parts of his speech cannot pass unremarked. His was the first reference today to cheap French nuclear power. We have shown over the last three or four years, after listening to a succession of Conservative Members in previous energy debates making the same point, that it is unjustified. Electricité de France is the largest single corporate debtor in the world. It is sustained by the French Government because they are determined to ensure that it corners the market and supplies heavily supported nuclear power to keep French industry in a competitive condition.

The hon. Gentleman also referred to Polaris submarines. I thought that at one point he was about to suggest beaching them all in order to provide new little top-ups. If they were privatised as well, they could be used to serve the spot market in power stations, as was recommended in Committee.

I do not want to respond further to the hon. Gentleman although I think that his speech was the first of the penal sanctions that will be taken against the hon. Member for Bedfordshire, North (Sir T. Skeet). The hon. Member for Dorset, South gave the credit for the decision to reverse the Nirex clay bed burial proposal to the Opposition and not to the three Conservative Members who were instrumental in changing that decision just before the election.

I want to compliment my hon. Friends on their comments. My hon. Friend the Member for Pontypridd (Dr. Howells) echoed the Secretary of State's concern for priority for security of supply. The Secretary of State joined us only on rare occasions in Committee. He never finished a speech that I interrupted on a point of order before we finished one day. I do not think that we saw him in Committee after that. However, the Secretary of State is right to serve the priority of security of supply. The only difficulty is that he seems to see security only in the nuclear context. If he was really keen on security of supply, and if he was really in pursuit of diversification, the Government's record on energy efficiency would be more commendable. Our Government's record is the worst in the civilised world. The jobs which would have accrued had we copied the other countries of northern Europe would have made a substantial genuine contribution to reducing Britain's unemployment figures.

Some people believe that hon. Members who represent coalfield constituencies have only the interests of the coal industry at heart. Obviously I have. I am sponsored by the National Association of Colliery Overmen, Deputies and Shotfirers and I have a mining constituency, although it is much less a mining area than it was three years ago. There are more redundant miners in my constituency than there are people working in the coal industry. The number working in the industry is shrinking and could shrink to a dangerous level before long.

We must have diversity and give a higher priority to energy efficiency and conservation. At the same time, if the Secretary of State is sincere in his pursuit of security of supply, he must resist the blandishments of some of his hon. Friends and pay attention to that small band of Conservative Members who agree with our view and who are worried lest we develop a dependency on imported coal.

At present—the Under-Secretary of State knows this, even if he will not say so with the clarity that the situation requires—we are in a buyers' market in the world coal trade. But add 10 million tonnes, let alone 30 million tonnes, to the increased demand for coal in that market, and it will rapidly transform from a buyers' to a sellers' market, and I think I see the Under-Secretary nodding in agreement. That transformation could occur rapidly. Indeed, because of the antics of some people who cannot see further than the end of their noses, in the coming few years the British coal industry could be reduced to a tiny rump. Then we would not be able to meet our demand for coal and we would have to buy as world coal prices rise.

Today, world coal is available at $3, $5 or even more per tonne less than the cost of production at the colliery, before transport costs are incurred. It would be stupid for us to develop a reliance on imported coal while it is cheap, discounted and offered at a dumped price.

The action of the Government is not that of pure dogmatism. It is the action of an Administration who are worried about the level of trade deficit and international indebtedness. They believe that one answer to that problem—an answer which is also comfortable in a party political sense—is to rattle the begging bowls around the world and to dispose of an industry on the cheap, thereby creating problems, some of which we have mentioned in this debate, which the Secretary of State hopes will go away. If the right hon. Gentleman's first priority is security of supply, he cannot maintain the posture which dominates this part of the Bill.

I am glad that the hon. Member for Bedfordshire, North has provided us with an opportunity to discuss these issues. He appreciates, as do my hon. Friends and I, the way in which the research and development base in Britain is declining. He was right to express anxiety about that. Indeed, in 10 years time that may appear to have been the most important part of his speech. We are relying on others' research. Our nuclear programme demonstrates that we have turned our backs on some difficult and costly decisions. It seems to me that we are developing a dependency not merely on other people's research and other people's money but on other people's coal.

Mr. Geoffrey Lofthouse (Pontefract and Castleford): Is my hon. Friend aware that Mr. Malcolm Edwards, giving evidence to the Select Committee on Energy, said that, because of the Government's refusal to find £11 million to continue the research and development of the fluidised bed at Grimethorpe, it may have to be discontinued? If that happens thare will be very little research and development into such schemes.

10.45 pm

Mr. Hardy: I am delighted that my hon. Friend raised that point as it answers many of the comments that we have received from Conservative Back-Benchers. We are in favour of research and development in support of the environment for which the Prime Minister occasionally expresses some sympathy. If that research were to founder, the Government would be acting with the most abject irresponsibility.

When Conservative Members spoke at their counts after the last general election, they did not merely thank the 25, 30 or 35 per cent. of their electorates that voted for them, but made the point that they would be representing all the people in their constituency. As that obligation exists for every individual Conservative Member, surely the Government must accept that their responsibility is national and is not merely to the City of London and to the affluent and favoured areas of these islands. They should understand that they have inflicted on many communities in coalfield areas, particularly in the past three or four years, dereliction and devastation, the dampening and destruction of hope, the slaughter of jobs, the depression of wage rates and the creation of an environment which, unless something is done very soon, will cause further dismay and destruction.

For example, we still await decisions about derelict land grant. For the Government to embark on a further round of job destruction and annihilation—*[Interruption.]* It is no good the hon. Member for Dorset, South (Mr. Bruce) smirking. These islands are too small for the regional differences which he views with equanimity. It is time that he understood that hon. Gentlemen representing areas as far from the coalfield as his constituency are beginning to worry about the differences between one part of the country and another which are daily being exacerbated.

Mr. Ian Bruce: Will the hon. Gentleman give way?

Mr. Hardy: No, I shall not give way. The hon. Gentleman spoke for a long time and uttered a lot of nonsense and is not going to interrupt my concentration.

These islands are small and while hon. Gentlemen can happily engage in short-term calculations with no long-term wisdom whatsoever, in importing coal and destroying our communities, it would be not merely injurious to the Secretary of State's first priority, which is security of supply, but that short-term folly would bring about utter destruction and injury to our constituents. If Conservative Members resent our making such points because we come from the coalfields, that does not mean that our arguments are unjust or invalid. Our arguments have a great deal more wisdom than some of the points raised by Conservative Members. It is certainly time that the Secretary of State recognised that enough damage has been done and that further risk should not be incurred.

Mr. Beith: I shall concentrate on what the Secretary of State said. First, I acquit him of the charge that he played no useful part in Committee. At least he was on the Committee, which is more than can be said of the Secretary of State for the Environment in respect of the Water Bill. The Secretary of State illuminated some of the contradictions in the Bill, sometimes deliberately and openly, sometimes by accident, but he made a valuable contribution to the Committee and I do not agree with the charge that he did not.

I also agree with the key aspect of the Secretary of State's analysis of the industry now. The present system is indefensible. It has allowed the industry, as a monopoly supplier, to make decisions about investment without any real regard for the return on the investment or the cost to the consumer. The Labour party would have perpetuated that system in an even worse form. I have vivid

[Mr. Beith]

recollections of what it had in mind. It wanted to create a single nationalised monolithic industry under the leadership of Sir Francis Tombs, who has a greater reason than anyone not to vote for my party as it was I, with my late friend David Penhaligon and other colleagues, who refused to allow that proposal to pass during the Lib-Lab pact. Sir Francis Tombs thus never became the head of the single nationalised monolithic electricity industry that the Labour party preferred, although he has managed to carve out a lucrative career elsewhere. That system would have been even more damaging than the system that we now have. The current system has produced colossal excess capacity, especially in Scotland. The South of Scotland electricity board has more than double the capacity that it requires on the coldest day of the year.

The Secretary of State has failed to follow through his analysis in the shape that he is creating for the industry. He is in a ludicrous dilemma. He claims to be creating a market system for electricity while shielding nuclear power from that market. He is engaged in ensuring that shareholders do not take any risks. How can a market system work other than on the basis that shareholders have to take risks with their capital and are therefore concerned about the level of risk? The purpose of the Bill is to protect shareholders from any of the risks of investment in nuclear power. That is the contradiction at the heart of the matter.

The Minister referred to the two manifesto commitments that he and his colleagues made—to privatise electricity and to retain a substantial nuclear power industry. When they made those commitments they did not realise that they were incompatible. That discovery came later but the Minister and his colleagues decided to plough on and try to do both. They should have changed their minds and recognised, as we did long ago, that the protection and feather-bedding of the nuclear power industry is against the interests of the consumer.

The Minister criticised the investment decisions that were made in the past, but he and his colleagues did not oppose them at the time. When Labour Governments made crazy investment decisions, my hon. Friends and I were described, often by Labour Members, as the brown bread and sandals brigade because we objected to the absurdity of those decisions. Now the Minister, too, realises how absurd some of those decisions were, yet he has created a system in which such decisions can still be made—a system in which the disadvantages of nuclear power will be paid for by the consumers without any choice on their part. There is a higher cost and an incalculable level of risk involved in nuclear power. We all know that, although the risks of nuclear power are statistically smaller in incidence, they are incalculably greater in terms of the character of what is involved, as we all saw in the Chernobyl incident.

I shall not go into the many other problems with nuclear power, but one pressing problem that has been pointed out in some of the speeches today is the dependence on the creation of more green field site nuclear power stations. They are then sterilised for 100 years, for the reasons given by the hon. Member for Dorset, South (Mr. Bruce). All that is built into the Government's privatisation plan instead of being exposed to the market considerations to which they attach such importance.

When the Secretary of State talks about diversity of supply, why does he not look at the energy efficiency and energy conservation side of the problem? It is argued that the amount of expenditure involved in building one pressurised water reactor would yield many times that saving in output if it were invested in energy efficiency and energy conservation. If there is a danger that we may have insufficient power in certain circumstances, such as those of the miners' strike which the Minister described, we could take the precaution of investing in more efficient use of power and less use of power in some areas in which we are profligate with it now.

The Secretary of State sought to argue that the Government were being open about nuclear power and bringing about a situation in which we could make real choices, but I am profoundly worried about what will happen at future public inquiries on nuclear power stations, such as could take place in my own constituency because of the Druridge bay proposals. It will be argued that all the planning considerations must be swept aside because Parliament has decreed that there has to be a non-fossil fuel quota, so we have to have that and other nuclear power stations. There will be a distortion of the decisions in which local communities seek to be involved as they argue the case against nuclear power. We have seen signs of that already at the Hinkley Point inquiry and the provision may prove to be the destruction of future public inquiries into nuclear power.

The hon. Member for Bedfordshire, North (Sir T. Skeet) has gone to the heart of the illogicality of the Bill, arguing cogently that, if nuclear power is to be ring-fenced and singled out, as he wants it to be, it should remain in the public sector at least for the time being. I do not want it to be ring-fenced and protected, but I accept the logic of his argument—that if that is to be so, the place for the industry is with the Government, who are imposing all these conditions to protect it. It is significant that the examples produced by Conservative Members of the new interest in diversified nuclear power generation came from the public sector. They were drawn from the Atomic Energy Authority and British Nuclear Fuels plc, both of which have shown interest in nuclear power generation and both of which are in the public sector. As public sector bodies, they are putting forward such proposals on the basis that they would have a guaranteed return.

Mr. Ian Bruce: The reason why the Atomic Energy Authority wants to go ahead with research into a small, integrated reactor is that private enterprise, not the Government, will provide the funds to carry out that research and build that power station.

Mr. Beith: That is only because its shareholders will be protected to the ludicrous extent provided in the Bill. It is as though a Government about to introduce a breathalyser announced widely that a previously unknown device was to be required by police forces all over the country and that any company which decided to manufacture them would have its shareholders protected from any risk that its particular version would go wrong. The Government are creating the market and protecting the shareholders who go into it. That cannot make sense by the Government's own standards, and it makes no sense by ours.

Mr. Alan W. Williams (Carmarthen): I want to outline some of my criticisms. I support the proposal to keep nuclear power in the public sector and my main concern is

with nuclear safety. Since Chernobyl, the British public has become aware that nuclear reactors can go badly wrong and completely out of control. In the 1960s and 1970s the industry used to argue that so many fail-safe systems were installed in reactors that they could not go out of control. But they can and not merely once in every 1 million or 1,000 million reactor years, as the industry would have us believe.

We have had two major catastrophes, at Three Mile Island and Chernobyl, in 3,000 reactor years of experience. The statistics show that reactors will go wrong once every 1,500 reactor years. That means that if we build a pressurised water reactor with a design lifetime of 40 years at Hinkley Point, there is a one in 40 chance that it will become a Chernobyl or a Three Mile Island—and that goes for every pressurised water reactor that we build. The safety of nuclear reactors must be paramount and I am certain that the British public feel that they will be run more safely in the public sector than in private ownership, where a profit will be sought.

Once the industry is privatised, there is no question but that de-manning will follow. There will be pressure to cut the number of staff. Curiously, nuclear power stations are labour-intensive. For the same power output, nuclear power stations employ twice the number of staff of fossil-fuel power stations. Therefore, the pressure to shed staff will be all the more severe in nuclear power stations and that must mean compromises on safety.

11 pm

I shall be brief because of the time, but I too have strong reservations about decommissioning, nuclear waste and about the fate of the plutonium recovered by reprocessing. With decommissioning, we are talking about a time scale of 100 years or more. When we remember the time scale it strikes me as irresponsible to hand to private industry the important task of decommissioning.

The same goes for nuclear wastes, which we must keep from the environment, not for 100 years but for hundreds of thousands of years. Again, it is the height of irresponsibility to pass the safeguarding of such wastes to the private sector. Under the Bill plutonium will become private property. About 20 tonnes of plutonium will be handed over to private companies.

I turn now to economics and echo some of the points made earlier by the hon. Member for Bedfordshire, North (Sir T. Skeet) when he moved his new clause. What exactly will National Power be buying when it buys the nuclear industry? Well, it will be buying 10 Magnox reactors and five advanced gas-cooled reactors. That is the bargain. Of the 10 Magnox reactors, Berkeley is already closed, Hunterston is due for closure and the other eight will all be closed during the 1990s. The Magnox reactors are a fleet of old crocks. That is what is being sold off.

We heard the Secretary of State himself make critical comments on the AGR programme. Dungeness is a legend on its own. It took over 20 years to build. Three of the other five AGRs are clearly performing poorly. They are lame duck reactors.

The proposal to build four PWRs is a speculative venture because they are large reactors and their future economics is uncertain. The City of London knows that nuclear power is uneconomic. The figures that we received in Standing Committee from John Baker of the CEGB showed that at 5p per unit nuclear electricity is 40 per cent. more expensive than electricity from coal at 3·5 pence per unit.

It is clear that nuclear power is the Achilles heel of the Bill. There is the danger that, in the flotation, the distribution companies and PowerGen may go all right, but that National Power, with its 20 per cent. nuclear component, may be unmarketable.

I ask my hon. Friends to support the new clause tabled by the hon. Member for Bedfordshire, North and I hope that he will also receive a lot of support from his own party.

Finally, I should like to draw attention to the document that we have all received today from the Confederation of British Industry. It is rare that I support anything from the CBI but, for different reasons, on this issue we are in agreement. Safety is the paramount issue to the general public and I believe that privatising nuclear power stations is irresponsible purely on safety grounds.

Mr. David Tredinnick (Bosworth): My remarks will be brief, as time is pressing on. I have attended most of the debate.

I cannot support the new clause. It is logical and desirable to include the nuclear industry in the privatisation measure now. I want the industry to be privatised in its entirety at once. It is quite right to do so. It is right also to have a non-fossil fuel obligation, with 15 to 20 per cent. generation coming principally from nuclear power. We cannot risk one supply of energy holding us to ransom. That occurred during two long strikes.

The significant point about the non-fossil fuel obligation is that provision has been made by my right hon. Friend the Secretary of State for renewable sources of energy. I look forward to renewable sources being part of that non-fossil fuel obligation.

I support also the non-fossil fuel levy. For the first time, the cost of generating electricity from different fuel sources will be crystal clear for all to see. That is a great step forward. It is vital to share any additional nuclear costs between the area boards. It is quite right for my right hon. Friend to stipulate that.

There was much talk in Committee about the so-called future nuclear levy. That is absurd as consumers are already paying for nuclear power through the current electricity pricing structure. Of course, customers have been paying a coal levy for over 30 years, as the CEGB has been paying over the market price for British coal. The Opposition cannot escape that fact.

Mr. Martin Redmond (Don Valley): Will the hon. Gentleman give way?

Mr. Tredinnick: I will not give way.

It is vital that the nuclear industry is privatised now, particularly as we move towards 1992, when the single European market will be with us. We will have a more efficient nuclear industry, and that will be better for consumers, the country and for all of us.

Mr. Ieuan Wyn Jones (Ynys Môn): This has been an extremely wide-ranging debate. *[Interruption.]* I remind hon. Members that I have been present for most of the debate, and I have listened carefully to all the arguments that have been advanced. I even listened carefully to the excellent speech of the hon. Member for Bassetlaw (Mr. Ashton). There has been little support by Conservative

[Mr. Ieuan Wyn Jones]

Members for the new clause which was put down by the hon. Member for Bedfordshire, North (Sir T. Skeet). I listened carefully also to what he had to say.

There is one matter which I should like the Secretary of State to clarify. He made it clear that the Government have an unqualified commitment to build four new PWR stations. I assume that he is prepared to assure the House that that is subject to the normal planning inquiries. I ask him to confirm that there will be public inquiries into the proposals. As he is aware, there is a proposal to build a nuclear power station in my constituency. My constituents would welcome an assurance tonight.

I shall concentrate briefly on the consequences of privatisation for jobs in the nuclear sector. It has already been said that privatisation has consequences for jobs. It is clear that, in putting forward its plans for a nuclear power station in my constituency, the CEGB stressed the economic benefits in terms of jobs and investment that will occur. Irrespective of the arguments for or against nuclear power, the CEGB knows that the only way that it can persuade people in my constituency to support that proposal is on economic grounds—jobs, infrastructure and investment. There remain a number of question marks about that commitment, because already in readiness for privatisation there are changes in the working structures within the Magnox station in my constituency. There is a shift away from full-time maintenance staff to contractors, many of whom come from outside the area.

When the CEGB announced that there would be an application for a nuclear power station in my constituency, we were told that at the height of the building programme 3,500 jobs would be created. That was dangled as a carrot in front of the people who would consider the planning application. Consequently, the CEGB considered that that should have been sufficient for us to accept the building of a nuclear power station. However, the problem is that the CEGB says that only half of those temporary jobs—1,750—will be created locally. It is clear that people within the county of Gwynedd would be capable of undertaking the task, but the CEGB is not prepared to give them the opportunity. That is irrespective of the argument for or against nuclear power.

The privatisation programme is making it impossible for the CEGB to overcome the problems presented by the economic case. My constituents feel very much like pawns in the game. They wonder whether the indemnity given to nuclear power under the Bill will be a temporary commitment that will allow National Power to build those nuclear power stations or whether it will be a continuing one. There will not only be the initial investment and the building costs, but there will be ongoing costs for at least 20 years during the useful life of a nuclear power station and the decommissioning costs at the end. That is why I believe that there are great dangers involved in privatising the industry and why I believe that the House should support the new clause.

Mr. Parkinson: I shall be brief, but I feel that I owe it to the House to reply to a number of specific points. I am glad to see that the hon. Member for Bassetlaw (Mr. Ashton) is back in his place, because I wanted to deal with his point about West Burton power station.

As a result of the Bill, the obligation to supply is being switched from the Central Electricity Generating Board—the generator—to the area boards. That means that in future the generating companies will be able to build power stations only if they can find a customer for the electricity. In the past, because they had the obligation to supply, they decided on the technology, the site and the size. If it turned out that they had over-estimated and that the industry did not need the power station, we still paid. In future, they will be able to build a power station only if they can find a customer for the electricity. I believe that at present they are negotiating with the area boards to seee if they will buy the electricity that West Burton could produce. This is an inevitable consequence of the change in the obligation to supply. If the hon. Member for Bassetlaw would like to discuss it with me, as he suggested, I should be happy to meet him.

The hon. Member for Pontypridd (Dr. Howells), in a very good speech, the hon. Member for Wentworth (Mr. Hardy) and the hon. Member for Midlothian (Mr. Eadie) made the point that, because there is a non-fossil fuel obligation, that is evidence of an anti-coal attitude. We do not regard it as any such thing. The non-fossil fuel obligation will fix the level of electricity from nuclear sources at exactly the same level as at present—15 to 20 per cent. of the market. That means that 80 to 85 per cent. of the market will be supplied from fossil fuel sources.

In future, coal has the same possibilities as it has now. The difference will be that the generators will be able to buy their coal where they will. As the hon. Member for Wentworth has said, however, if a major purchaser went into the fairly small international market for steam coal, that would have a spectacular effect on prices. We believe that the prospects are extremely good for the British coal industry.

Mr. Hardy: I am grateful to the right hon. Gentleman for that comment, but does he accept that some overseas suppliers will be prepared to face a continuing loss to ensure the destruction of British capacity?

Mr. Parkinson: A number of things work in favour of the British coal industry: first, its location; secondly, the fact that it is extremely well equipped; and, thirdly, the facilities do not exist to handle huge imports of coal. For those reasons, the market is open to British coal and I believe that it will supply a substantial part of the market.

11.15 pm

The hon. Member for Carmarthen (Mr. Williams) talked about safety and is worried that the industry will be less safe in the private sector. The safety standards will not be relaxed. The nuclear inspectorate is an independent body, and it will supervise the industry as it does now. There will be no change in the codes of safety, the standards expected or the supervision of them. The hon. Gentleman mentioned the two major incidents at Three Mile Island and Chernobyl. Three Mile Island was a privately owned power station and Chernobyl was state owned. It is a question not of who owns a power station, but of how it is built, supervised and operated. Standards will be enforced as rigorously in the private sector as they would be in the public sector.

The hon. Member for Berwick-upon-Tweed (Mr. Beith) mentioned planning and suggested that, in future, things will be much easier for those who wish to build nuclear power stations. I do not see that happening. Perhaps we will reach the stage where every application for a nuclear power station will not result in a debate on

whether we should have nuclear power. However, whether the location suggested is correct and whether the technology used is correct will still need to be settled. If there is a demand for a public inquiry—the hon. Gentleman knows how such inquiries come about—it must be held. The legislation will not short-circuit the planning system as suggested by the hon. Member for Ynys Môn (Mr. Jones).

The Government have no plans to build any nuclear power stations. We are planning to get out of the business of being responsible for the building of power stations. The non-fossil fuel obligation means that we shall need about four PWRs if we are to continue with the same level of electricity generated from nuclear power. Where they will be and what they will be is a matter for the generating companies that apply to build them. There will be no short-circuiting of the planning system, which must be followed properly.

I made a long speech earlier tonight and I have attempted to answer some of the points raised since I spoke. I conclude by thanking my hon. Friend the Member for Bedfordshire, North (Sir T. Skeet) for the way in which he moved his new clause. He did so in an interesting, almost intimidating, fashion, and it is a disappointment to me that I have to advise my right hon. and hon. Friends to vote against him. I am only sorry that I am unable to accept the new clause, and I hope that my hon. Friend will not feel too lost as he goes into the other Lobby with Opposition Members.

Mr. Barron: We heard the thanks of the Secretary of State to the hon. Member for Bedfordshire, North (Sir T. Skeet) for his earlier speech on new clause 3, which will no doubt be repeated during the next 12 months or more, prior to the flotation of the electricity industry, if the Bill becomes an Act. It is ironic in many ways that they seem to be on the same side, while both purporting to be major exponents of the nuclear power industry in their different ways.

The speech of the hon. Member for Bedfordshire, North was enjoyed by hon. Members from both sides of the House, but perhaps a little more quietly by Conservative Members than Opposition Members. It will probably go down as a memorable speech, although perhaps not as memorable as the speech mentioned by my hon. Friend the Member for Pontypridd (Dr. Howells), which was made in the other House a few years ago, and which mentioned the selling of the family silver. I cannot remember what position the hon. Member for Bedfordshire, North took on that matter at the time but I think we can see what his position is on the selling of the family plutonium. He appears to be against that, and to wish it could be kept in the public sector.

We discussed the nuclear levy at some length in Committee, and highlighted the effect that it would have on consumers' bills. An amendment was tabled by the Opposition but was fortunately defeated. In that debate the Minister said that he would not accept the amendment because National Power would publish separate, full accounts for its nuclear business when it publishes its main accounts. Most people do not see the accounts of businesses such as National Power unless they are politicians, have a vested interest, or perhaps know a local librarian who is interested in them.

Earlier today the Secretary of State said that the cost of nuclear power would be transparent and that the transparency would, apparently, go no further at this stage than the annual accounts, of National Power. There is no doubt that new clause 16 would involve much more than the national accounts, of National Power, which we assume will be published annually. Without being able to see those accounts most people will be unable to see how uneconomic the nuclear industry is at present. Without the protection afforded to the nuclear industry by the Bill, I and many others are sure that consumers and producers would resist the nuclear industry, and would, instead, concentrate more on debates about developing our resources for renewable energy.

I was pleased that the Secretary of State said that the non-fossil fuel obligation of between 15 per cent. and 20 per cent. would be highlighted. We shall watch with great interest to see what percentage the Government believe that they should aim for. We shall also watch how much research and development the Government put into that area to ensure that targets set are feasible.

I should also like to see the developing and sustaining of the British coal industry—more so within a national and rational energy policy, which is now absent. At this stage, the Government seem prepared to plan energy in terms of nuclear and some small renewables, but not in terms of the rest of the country. We are firmly against that and believe that it highlights a great contradiction in the Government's flotation of the electricity industry. The Government have obviously failed to convince many people in the country that selling off the nuclear power industry is in their interests. We shall wait to see what happens to it when we come closer to the flotation date.

The nuclear levy is another tactic for sustaining the industry. We have been told that while nuclear power might be more expensive now—an admission that has come only in the past 18 months—we must wait because in the future it may seem better when compared to fossil fuel.

In October 1987, when the matter first came to light, Lord Marshall spoke of "jam tomorrow". The Minister has said that if nuclear power were "transparent", as the Secretary of State would wish—and as I would wish even more strongly—10 per cent. on our domestic electricity bills would be shown to be due to it. The CEGB's forecast, which has been highlighted by Opposition Members, suggests that the PWRs at Sizewell and at Hinkley, one of which is under construction, will for the foreseeable future also be more expensive than coal. Consumers have been offered not jam today or jam tomorrow, but, perhaps, no jam at all.

The Secretary of State argued for diversity as the basis for security of supply. Can he picture someone sitting at home, eating a meal cooked on an electric cooker, watching television or perhaps listening to music on the radio? How many people using consumer goods at home wonder how much electricity for them has come from nuclear fuel, how much from renewable fuel and how much from fossil fuel—coal, oil or gas? It is nonsense to suggest that people are concerned about diversity. What people are concerned about is security of supply. The other thing that concerns them is cost—and, as I have said, what the Bill offers is not jam today, tomorrow or in the foreseeable future, but extra costs on electricity bills from nuclear generation.

The Secretary of State told the Committee:

"diversity may have its price. We are prepared to identify, and justify, that price."—[*Official Report, Standing Committee E*, 7 February 1989; c. 736.]

[Mr. Barron]

Many Opposition Members feel that the Government have not done that. We cannot see how diversity can be used as a justification for putting up electricity prices now.

The Secretary of State also said in Committee that the cost of coal was a secondary consideration for the CEGB. The right hon. Gentleman knows better than anyone that in 1986, after the fall in the oil price, British Coal immediately lowered it price to the CEGB, which it has consistently done since then. In real terms, the cost of British coal to the electricity industry has been reduced. It is not the burden that hon. Members have described.

That price is an important consideration can be seen from the offer made by British Coal to the new generating companies—long-term contracts below or within the RPI for the next five or 10 years. That offer has been made nowhere else. In the past 12 months there has been a reduction in the coal price of some 30 per cent. in real dollar terms, and that is likely to continue. Everyone knows that if the new generators went on to the market now there would be colossal balance of payments problems, and also an increase in world coal prices. That is not an option for Britain at this time.

My hon. Friend the Member for Bassetlaw (Mr. Ashton) mentioned the Humber ports. Today we have seen for the first time the report from the Committee on the Associated British Ports (No. 2) Bill. In what, as the Secretary of State knows, is a preamble to its decision, the Committee says:

"In our view it is the Government's duty to take whatever steps are necessary, in the overall national interest, to protect the indigenous coal-mining industry."

That is what we hope that the Minister will do. Rather than merely speaking at the Dispatch Box, we want him to make sure that there is as much protection for the British coal industry as there has been for the nuclear industry.

11.30 pm

The Secretary of State for Energy said earlier today that his party had been elected on a commitment to maintain nuclear power. He got it nearly right: his party was elected on this commitment, but the Conservative party campaign guide for 1987 said:

"More nuclear power means that the rise in demand for electricity can be met cheaply and effectively",

and the Conservative manifesto of 1987 said:

"We intend to go on playing a leading role in the task of developing abundant, low-cost supplies of nuclear electricity".

Neither of those got it right, as might have been clear for the last 30 years if there had been the transparency for which the Secretary of State now argues.

What the Government have been saying is commonly not the case. There is a central contradiction in what the Government stand for in relation to privatisation. They will feather-bed the nuclear industry, whether in respect of decommissioning, day-to-day running, or investment in the new PWRs. In Committee the Secretary of State said of the nuclear industry:

"If there is a price to pay, we are prepared to pay it."—[*Official Report, Standing Committee E*, 7 February 1989; c 738.]

Well, we in the Opposition believe that that price is one that the nation cannot afford, and we will oppose this sale.

Sir Trevor Skeet: We have had a good debate. This is a major issue, and I think the House should divide.

Question put, That the clause be read a Second time.

The House divided: Ayes 199, Noes 254.

Tellers for the Noes:
Mr. David Heathcoat-Amory
and Mr. Tom Sackville.

Question accordingly negatived.

Further consideration of the Bill adjourned.—*[Mr. Kenneth Carlisle.]*

Bill, as amended (in the Standing Committee), to be further considered tomorrow.

11.44 pm

Mr. Alan Williams (Swansea, West): On a point of order, Mr. Deputy Speaker. You may have heard reports, but because of the duties you have been performing this evening you will not have had an opportunity to see for yourself. Therefore, we want to allow you time to consider this.

This evening, on television, there has been a series of reports of an interview by Sir Leon Brittan relating to the Westland affair. In it he said that the release of the Solicitor-General's letter was approved by Charles Powell, the relevant private secretary at No. 10, and by Mr. Bernard Ingham, the Prime Minister's press secretary and that there would have been no question of a release of that document without that express approval from No. 10.

Yet in his evidence, reported in the fourth report of the Select Committee on Defence—*[Interruption.]* I am sorry; Conservative Members must understand that we have rights in the House as well. *[Interruption.]* A majority of 100 does not constitute absolute rights to dictate what happens.

The fourth report of the Select Committee on Defence, said in paragraph 203:

"Mr. Brittan told us that he had no discussion with anyone in No. 10 before the disclosure."

We have a clear conflict of evidence in which there may have been a serious injustice done to the House by Sir Leon and/or by the Prime Minister.

I understand, Mr. Deputy Speaker, that you cannot give us a ruling this evening on the most appropriate way in which we should proceed to inquire into it, but it is a matter of enormous severity, as you will understand. May I ask that tomorrow afternoon you or Mr. Speaker, at the appropriate time, give advice to the House on how to pursue the issue?

Mr. Ivan Lawrence (Burton): Further to the point of order, Mr. Deputy Speaker. Is it not a fact that that interview took place before Christmas, that it was not considered——

Mr. Deputy Speaker (Mr. Harold Walker): Order. I do not think that the hon. and learned Gentleman should proceed to debate the matter. I recognise the importance that the right hon. Member for Swansea, West (Mr. Williams) attaches to what he has said to the House. If he believes that questions of privilege are involved, he knows that it is a matter on which he should write to Mr. Speaker. I shall in any event make sure that Mr. Speaker is aware of what has been said on this occasion.

Mr. Lawrence: May I be heard, Mr. Deputy Speaker, as you heard the right hon. Gentleman?

Mr. Deputy Speaker: Mr. Lawrence.

Mr. Lawrence: If it is a fact that that interview took place before Christmas and——

Mr. Deputy Speaker: Order. I thought that I had made it clear to the hon. and learned Gentleman that I was not prepared to allow a debate on what had bern said. That is precisely what the hon. and learned Gentleman is seeking to embark upon.

WELSH GRAND COMMITTEE

Ordered,

That during the proceedings on the matter of Housing in Wales, the Welsh Grand Committee have leave to sit twice on the first day on which it shall meet, and that, notwithstanding the provisions of Standing Order No. 88 (Meetings of standing committees), the second such sitting shall not commence before Four o'clock nor continue after the Committee has considered the matter for two hours at that sitting.—*[Mr. Kenneth Carlisle.]*

Mr. David Curry (Skipton and Ripon): On a point of order, Mr. Deputy Speaker. Are you aware that the remarks made by Sir Leon in his broadcast are identical to those made in a debate in the House on 27——

Mr. Deputy Speaker: Order. Hon. Members do not listen to what I say. The hon. Gentleman is seeking to turn a point of order into a debate. I will not allow that to happen.

LAW OF PROPERTY (MISCELLANEOUS PROVISIONS) BILL *[LORDS]*

Order for Second Reading read.

To be read a Second time tomorrow.

General Practitioners (Wales)

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Kenneth Carlisle.]*

11.50 pm

Mr. Gareth Wardell (Gower): I am grateful for this opportunity to draw attention to the difficulties inherent in the Government's proposals for the reform of the National Health Service. The proposals for general practice will have a crucial bearing on our primary health care. It is therefore important that they are the right policies, that they have the full backing and support of GPs and health professionals, and that they are policies which will carry the Health Service forward with enthusiasm and commitment into the next century.

From the representations that I received from GPs in west Glamorgan at a meeting on 29 March, from the Powys local medical committee and from letters that I have received from doctors, including hospital doctors, it would seem that consultation and negotiation about the White Paper "Working for Patients" and the GPs' contracts have a long way to go before they can be regarded as supportive of improvements in primary health care. The comments by the Secretary of State for Health that GPs are concerned only about their cheque books are cheap and nasty and say far more about his own values and attitudes to health care than about the average GP's concern about the best way of organising surgeries, clinics and work schedules. The projection of the right hon. Gentleman's priorities to his critics ill becomes his office and responsibilities.

Critics of the right hon. Gentleman's proposals are to be found in large numbers. Under the White Paper proposals, GPs are already concerned that their role, as it were, of an independent broker between patient and the other Health Service facilities will be undermined. At present, a patient consulting his GP can rely on the doctor to offer him a course of treatment of a referral determined only by the GP's expertise and the patient's interests. When a GP has the additional responsibility of providing treatment or referral at the cheapest option—not necessarily the most cost-effective in the long term—from the patient's viewpoint the GP is no longer independent in the same way. Public concern is already mounting and I predict that there will be many more public meetings in Wales similar to the one that Councillor Brian Ford, with the support of his local GPs, has arranged in Clydach on 21 April.

The stated aims of the proposals in the White Paper are that patients should have a new deal, more choice, higher standards of health care and better quality care. The effects of the proposed new contracts for GPs in practices outside major cities, especially in rural and semi-rural areas such as Wales, including parts of my constituency, will directly conflict with those aims. Patients will certainly have a new deal, but it will not be a better deal—they will have less choice, lower standards of health care and no better quality of care. It is ironic that a Government whose basic philosophy and lodestar is the belief that people respond only to incentives, especially financial incentives, cannot see that the new contracts comprise a series of positive disincentives to GPs to maintain and promote primary health care services.

For example, the targets that GPs must reach to be paid for immunisation programmes were set at 90 per cent. Those were penal targets, penal because in England and Wales as a whole in 1987-88 the average take-up rates of immunisation for vaccines such as whooping cough and measles were 70 and 75 per cent. respectively. In Wales, take-up has traditionally been lower, at 62 and 65 per cent. respectively, and in west Glamorgan, which has been extremely resistant, take-up was an abysmal 51 per cent. for whooping cough and 57 per cent. for measles.

On 8 February 1988, from a parliamentary answer I received from the Parliamentary Under-Secretary of State for Wales about immunisation against measles, diptheria, whooping cough, tetanus and polio in each county in Wales, I note that only Powys, in relation only to diptheria, tetanus and polio, had immunisation take-up of over 90 per cent. Knowing that, and unable themselves to provide a solution, the Government expect individual GPs to meet targets that have never been reached. Even 80 per cent. has not been widely reached, even with the new triple vaccine, even in health-conscious mainly middle-class areas. If GPs respond to the financial incentive in the proposed contracts, they will not even attempt immunisation programmes but will divert their time and effort elsewhere.

Cervical cytology testing is another area of primary health care which will be seriously undermined. The target of 80 per cent. for testing women aged over 35 years at five-yearly intervals is, again, unrealistic and puts the onus on GPs to press their patients into treatment which, however clearly beneficial, too many women often do not want to contemplate. Not only is there the same financial incentive to GPs not to take on the hassle of chasing target women and the administrative workload of results and recall, but I find it petty in a particularly mean way for the Government to ignore the fact that many GPs already recognise best medical practice and test all sexually active women at three-yearly intervals, routinely and without payment. It ill becomes the Government not only to settle for targets which are less than best practice but to haggle like fishwives about targets of second-rate effectiveness which are supposed to be improving standards and quality of care.

The proposed switch of emphasis to capitation payments will do nothing to improve the choice, standard or quality of care. Linking a large proportion of GPs' pay merely with the number of patients on a list is not the progressive reform that the Secretary of State for Health claims. The policy of rewarding larger lists was abandoned as a discredited system in 1966 because it encouraged poor patient services. As lists have been reduced, GPs have improved and extended services, particularly in rural practices, and the Government cannot claim otherwise. Since 1966 there has also been an invaluable exchange of ideas between practices because GPs are not competing for patients. That is likely to be inhibited among some GPs.

Powys local medical committee has already told the Secretary of State for Health that the committee is appalled that his civil servants are completely lacking in knowledge about the way in which rural health care is organised. The practice of Dr Mark Vernon-Roberts in Scurlage in my constituency of Gower is typical of many.

As well as carrying out surgeries and branch surgery sessions and making home visits, which are extra-frequent and extra-time-consuming because of the distance, GPs also regularly and routinely visit nursing and residential homes, for which they are not paid. They hold ante-natal and baby clinics; they hold well women clinics,

[Mr. Gareth Wardell]

undertaking breast examination, family planning services and blood pressure checks; and they hold well person clinics, undertaking general health examinations and influencing lifestyle risk factors. They also hold diabetic clinics and provide facilities for blood testing to save long and expensive trips to hospital, and they provide minor surgical and casualty services at the surgery and in local hospitals. In Powys, where there is no district general hospital, GPs are vital in keeping open community hospitals such as those at Newtown, Brecon and Ystradgynlais. In addition, they have prescribing and administrative functions.

It does not take a time and motion expert to appreciate that if a GP's pay is to depend on how many patients he has on his list, the standard and quality of care must deteriorate unless he discards some of his functions to take on more patients so as to keep his income up to today's levels or offers fewer services that he can afford to provide on a lower income from a lower list.

The financial incentive in the proposed contract in regard to capitation allowances is for GPs to take on more patients and reduce services so as to maximise income. The alternative is to merge practices to achieve economies of scale. The merging of practices can only reduce patient choice. When patients are ill they prefer to see a GP they know. Large practices work against that preference as they need to become highly organised and more bureaucratic. In my experience, bureaucracy and personal interaction conflict. The merging of practices is practical only in city areas. In rural and semi-rural areas it is not an option. Rural practices have traditionally been paid an extra capitation allowance to take account of the extra expenses arising from large areas and dispersed populations.

The Government propose additional capitation fees linked to a so far undisclosed population density in electoral wards. Electoral wards in rural areas are often very large and internally variable in density, so a rural doctor may find himself disqualified even though his practice area would easily meet the criteria. The question has to be asked—why abandon old and well-tested methods of distributing a fixed sum in favour of new and arbitrary ones?

Listening to the general practitioners, it is clear that in the negotiations which are still taking place the additional allowances must be seen as essential if the present level of care is to be maintained. Although there may be a redistribution of patients from one rural practice to another, it is unlikely that there will be an overall increase or decrease in the number of patients on an individual general practitioner's list. If one lives in or near a village or hamlet 10 or 20 miles from any sizeable town, with no public transport, no car or one car that the husband needs for work, and no chemist, one is glad to take the choice of general practitioners in the nearest practice and appreciate a branch surgery five miles away.

Rural practices will be particularly penalised by the capitation and rural capitation allowances proposals. They cannot obtain economies of scale. The Powys local medical committee reports that between 45 per cent. and 65 per cent. of a general practitioner's gross income is spent on staff wages, rent, rates, heating, telephones, administration and equipment for the services provided. Rural practices also operate branch surgeries for which the general practitioner has to pay. If the income of practices is reduced under the terms of the proposed new contracts, it is inevitable that patient facilities at surgeries will be reduced and that more patients in rural areas will more frequently have to use or make expensive arrangements to travel to hospital for the care and treatment that could and should be available for them in their home or at the local surgery.

What is most likely to happen if rural general practitioners respond to the financial incentives in the new contract proposals as they stand is that, when a partner retires or leaves, he will not be replaced. With fewer general practitioners sharing the same number of patients, the remaining partners could maximise their income. The partners would be unlikely to take on a part-time colleague, most likely a women, because the capitation system works against part-timers almost to the point of discriminating against women. Fewer partners maintaining the same level of income into the practice to pay for extra services such as clinics, minor operations, casualty facilities and so on means a heavier work load for the remaining partners and, therefore, less time for each patient. It is a catch-22 situation.

There is another catch-22 for rural practice general practitioners—the new 20-hour rule. That is the number of hours a general practitioner must spend in the surgery each week. I have already outlined the many ways in which the role of rural general practitioners is much less centred on care in remote surgeries and, of necessity, far more geared to caring in the home and the community than the city practice with which the Secretary of State and his civil servants are more familiar. Rural general practitioners agree that the 20-hour rule would work against patients' interests in rural areas. It will do nothing to improve standards and quality of care. In fact, it will cause a deterioration in standards.

Rural general practitioners will lose out on another aspect of the new contracts. It seems possible that those who perform minor surgical operations in their surgeries will receive additional payments in recognition of that additional responsibility and the costs of providing staff and equipment for the facility. That should benefit rural general practitioners, who already undertake many such operations routinely. In comparison with their city colleagues, they save the National Health Service disproportionately more every time they perform such tasks, in terms of ambulance and hospital costs, patient care and convenience, by not referring patients to distant hospitals. However, it is just not practical and cost-efficient in the use of time for rural general practitioners to carry out at least five such procedures per session so that they can be paid for carrying out even one. The Secretary of State must look again at that aspect of the contract.

Many general practitioners are unhappy about the changes in the contract for the use of deputising services and 24-hour cover. The measure will also affect semi-rural areas where one practice covers for another, but will not affect rural practices which already cover for their partners. The exception is the single general practitioner practice. For the single practice general practitioner, the contract could be described as the death knell. All the problems inherent in the contract that I have outlined for general practitioners work against the one-practitioner practice. It seems that the Government regard such a practitioner as an anachronism, but those patients who

chose their general practitioner on the basis of continuing personal care from the same doctor for the whole family would not agree.

There are justified fears about the impact of the Government's proposals on the quality of patient care in primary health care. If we are really looking for policies that will enable general practitioner services to expand and develop the quality of care to patients—and not just to save money—the proposals are not only inadequate but deeply flawed. They are ill conceived and show that the Government are far removed from the real world and what is happening in general practice, especially in rural areas.

In articulating the points made to me by general practitioners, I have shown that their criticism stems from their interests in their patients' well-being. I have not found their interest and motivation in putting over their case to be purely financial. Rather they are concerned, from the real world of their practices, to ensure that what they have achieved in improving primary health care is not undermined by changes motivated only by the need to cut spending.

Since the first Black report in 1979, there has been a plethora of reports and research showing unacceptable levels of inequality in health in Britain. The Government have long paid lip service to the need to establish strong primary health care teams, led by general practitioners, to tackle endemic problems. The White Paper reforms and the proposed contracts for general practitioners provide an opportunity to implement long-needed changes. Instead, however, unless the Government are prepared to listen and negotiate on the basis of informed argument, we shall have yet another sector of fine public service sacrificed on the altar of cost cutting.

I trust that the Government will be prepared to listen and that meaningful negotiations will take place. I trust that the Under-Secretary will ensure that we do not regress to a Government preoccupation with list sizes as the criteria for good health care. I trust, on behalf of my constituents and of people throughout Wales and the rest of Britain, that rural health care will continue to be dictated by patient need, not by Government-determined, city-oriented economic efficiency.

12.8 am

The Parliamentary Under-Secretary of State for Wales (Mr. Ian Grist): I congratulate the hon. Member for Gower (Mr. Wardell) on being successful in the selection for the Adjournment debate. He spoke with the trenchancy that we have come to expect. I welcome the opportunity to reiterate the Government's position in respect of our proposals for the new contract for GPs. In particular, I want to correct some of the misunderstandings that appear to have arisen within the profession which the hon. Gentleman has adumbrated this evening. The hon. Gentleman has made a number of points about the contract and its specific effect on rural areas and in the time allowed or left I shall do my best to answer some of the points raised.

However, I want first to underline the crucial and central role of the GP in the Health Service. He or she is the linchpin of that service and the first and main point of contact for every citizen, and will remain so under our proposals.

I remind the House that the new contract proposals now under wide ranging discussion spring from our 1987 White Paper "Promoting Better Health" which contained the following objectives: to improve value for money, which includes wise as well as effective prescribing; to give patients the widest range of choice in obtaining high quality primary care services; to raise standards of care; to promote health and prevent illness; and to make services more responsive to the needs of the consumer. The new contract proposals set out the methods for achieving those objectives. I shall give just three examples.

First, we propose to introduce practice leaflets and annual reports for general medical practice. These will enable patients to be better informed about the services which are available to them so that they can make more informed decisions about their choice of doctors. This is an essential change if we are to make progress in informing the patient—as a consumer—of the services provided by doctors.

Secondly, the proposed incentive payments in respect of health promotion clinics, minor surgery, services to children and the elderly will shift health promotion and disease prevention to the very centre of primary care provision. That is vital if we are to use our resources to the best possible effect for patients.

Thirdly, the switch to capitation-linked payments means that a GP will have a strong incentive to sustain and develop service standards for patients.

I believe that these and the other measures that are implicit in the new contract will make a quite fundamental contribution to securing the future of primary health care services in this country. But, of course, we recognise that change—however positive—can be and clearly is unsettling. I know that GPs in rural practice have particular concerns, which I want to deal with now.

In the first place there has been some anxiety that rural practices might lose revenue due to the change from the present rural practice payment system to the basic practice allowance rural capitation supplement. Throughout our consideration of these matters we have had the particular circumstances of general practice in rural areas very much in mind. How could it be otherwise for those of us in Wales? To begin with we have to face the fact that the present rural practice payment system is poorly targeted. Payments are made relative to rural practice areas which were defined prior to the local government reorganisation on 1 April 1974. The hon. Gentleman will accept that in the intervening period, a number of areas have undergone considerable change—to put it mildly.

By contrast the proposed rural supplement will be simple to administer and monitor, better targeted, and constructed to provide adequate remuneration for GPs serving sparsely populated rural areas. The supplement will ensure that doctors are not disadvantaged under the new remuneration system because they practise in rural areas where the population density is lower than in towns. The supplement will be banded so that GPs working in areas of greater sparsity of population will receive proportionately more per patient. It is not intended that the supplement be related to work load. It is meant to assist in sustaining broad parity of earning capacity between doctors in rural areas and those in urban areas.

The hon. Gentleman suggested that the rural supplement would work against the consumer's interests because GPs might find it more difficult to look after patients living at some distance from the surgery than those in the same ward living nearby. But that is to ignore the effect of the increased emphasis on capitation, which

[Mr. Ian Grist]

will encourage GPs to offer and maintain attractive services for all their patients wherever they live. Each patient will attract a standard capitation fee, plus extra basic practice allowance, if the GP's list is below 1,500, plus the rural supplement which, as I have said, will be pitched at a higher level in very sparsely populated areas.

Another way in which the situation of the rural practice will be recognised is through the weighting of our proposals for basic practice allowance capitation supplement. We appreciate that there are certain basic costs in running a practice irrespective of its size. So the BPA capitation supplement, which is payable for up to 1,500 patients per GP, is to be weighted in discrete stages for each group of 500 patients so that the supplement is highest for the first 500.

As the hon. Gentleman mentioned, many rural practitioners are concerned about the requirement in the new contract that 20 hours of surgery time will be given over five days. We shall reflect on the comments made about this, but I should just like to say two things. First, I was interested to read in *Pulse*, a medical journal, of 18 March that in a survey that it had undertaken no less than 82 per cent. of GPs already met the proposed requirement for 20 hours spread over at least five days. I mention that only as an indicator—no more—of what is being done already.

The second point is that a number of the GPs in rural areas are already providing a wide range of services in terms of clinics and minor surgery services. A number of them seem to be unaware that the time spent in clinics also counts towards the 20 hours. In addition, under our proposals, GPs will in future be paid a sessional fee for running clinics, and we also have proposals for minor surgery fees. I hope that the hon. Gentleman will support the view that it is right to reward those GPs who put in the effort to provide those much-needed services.

Two other matters of particular concern to rural practices which the hon. Gentleman raised concern our proposals for targets for child vaccination and immunisation, cervical cytology, and minor surgery sessions. In respect of targets for vaccination and immunisation which are in line with World Health Organisation recommendations, these proposals form part of our wider efforts to increase take-up and coverage—an objective which I am sure that doctors will wish to support.

Additionally, family practitioner committees and district health authorities are being encouraged to address those issues, for example by developing effective call-recall sytems and by making best use of staff in attaining high levels of coverage in their areas. Obviously, there is a place for health education in this sphere, and I am sure that the health promotion authority for Wales will have its own contributions to make here in conjunction with health education within district health authorities. I am grateful for the comments made on these two matters, and I can assure the hon. Gentleman that serious consideration is being given to the views expressed by GPs and others.

I should like to take this opportunity to correct another misconception which has been mentioned to my officials during the Helpline telephone calls, and that is in respect of part-time GPs. Again, the hon. Gentleman raised that point. If he looks at page 18 of the contract, he will know what I am talking about.

It has been suggested that, under the 20 hours proposal, GPs on a part-time basis will no longer be employable. That is a misunderstanding of the proposals concerning job-sharing, part-time working and the so-called fractional doctors. GPs wishing to work part-time will still qualify for basic practice allowance capitation supplements, but at a reduced rate. Those doctors will continue to be principals in their own right, fully responsible for the patients on their lists but the BPA capitation supplement will need to be abated for fractional GPs to take account of the fact that their standing expenses will be lower than those of a full-time GP.

However, the abatement will be pitched at a level which will act as an incentive to flexible working. That should be particularly welcome to GPs with domestic commitments who wish to return to general practice on a part-time basis. I assure the hon. Gentleman that the Government remain committed to their objective of drawing more women doctors into general practice. They will be all the more valuable to practices if they offer one of the specialties for which we are introducing new fees—for example, minor surgery or child health surveillance.

I believe that the new contract will give the most powerful stimulus to enhancing the quality of patient care. The Government are whole-heartedly committed to the objective of helping the family doctor service to maintain and advance standards of practice. We aim to encourage GPs to provide the services that their patients want, and to ensure that those who offer a range of high quality services are properly rewarded. That will inevitably lead to an improved service for patients and a level of remuneration for doctors which will more accurately reflect their performance and commitment, which is the Government's commitment, to the National Health Service.

Question put and agreed to.

Adjourned accordingly at seventeen minutes past Twelve o'clock.

House of Commons

Thursday 6 April 1989

The House met at half-past Two o'clock

(By Order)

KING'S CROSS RAILWAYS BILL *(By Order)*
Orders for Second Reading read.
To be read a Second time on Thursday 13 April.

Oral Answers to Questions

NATIONAL FINANCE

Unleaded Petrol

1. **Mr. Gregory:** To ask the Chancellor of the Exchequer what is the anticipated excise revenue on unleaded petrol for the current year; and if he will make a statement.

The Economic Secretary to the Treasury (Mr. Peter Lilley): The excise duty revenue on unleaded petrol will be about £665 million in 1989-90.

Mr. Gregory: Now that the Chancellor has increased the tax differential between leaded and unleaded petrol to 14p per gallon, which I understand is the second highest in the EC after Denmark, does my hon. Friend agree that petroleum companies should extend the availability of unleaded petrol so that more motorists can do the green thing and support the Government?

Mr. Lilley: My hon. Friend is correct when he says that our differential is now greater than that of any country apart from Denmark. Because of the additional changes that we made in the Budget affecting the price of two-star petrol, an even greater number of filling stations are transferring pumps and storage capacity from two-star and three-star petrol to unleaded petrol, and the response so far is encouraging.

Mr. Frank Field: Why have the Government found it necessary to rig the free market in favour of unleaded petrol? Would it be right for voters to draw from that a conclusion that on the growing agenda of environmental issues an untrammelled free market does not serve the best long-term interests of mankind?

Mr. Lilley: We have never believed that environmental considerations are best met by an untrammelled free market. We have always been prepared to introduce incentives, as we have done here, to encourage a better environment. By and large the measures announced by my right hon. Friend the Chancellor in the Budget have been warmly welcomed by all those concerned about the environment.

Manufacturing Investment

2. **Mr. Colin Shepherd:** To ask the Chancellor of the Exchequer what is his latest information on the investment intentions of British manufacturing industry.

12. **Mr. Irvine:** To ask the Chancellor of the Exchequer what is his latest information on the investment intentions of British manufacturing industry.

The Chancellor of the Exchequer (Mr. Nigel Lawson): The Financial Statement and Budget Report forecast is for business investment to rise by 8 per cent. in 1989.

Mr. Shepherd: I thank my right hon. Friend for that response. Does he agree that it shows that under the Government manufacturing investment is growing satisfactorily? Will he confirm that in terms of GDP, total

manufacturing investment is now higher than it was at any time during the last Labour Administration? Can he say whether this growth is fully nationwide?

Mr. Lawson: Yes, my hon. Friend is right. The investment boom that has been continuing now in this country for several years and is scheduled to continue in this current year is nationwide. It is perfectly true that total investment is a higher proportion of GDP than in any year under the last Labour Government and indeed business investment last year—1988—was the highest proportion of GDP since records began. As for manufacturing investment, the latest Department of Trade and Industry investment intention survey suggested that manufacturing investment will rise by 11 per cent. in 1989—far and away the highest figure ever.

Mr. Irvine: Does my right hon. Friend agree that this continuing high level of investment is the best possible indication of confidence by industry and commerce in the Government's financial policy and in the fundamental strength of the British economy?

Mr. Lawson: My hon. Friend is right. It has long been the case in this country that our two main problems—they have been identified in the past by many outside commentators—were a poor rate of growth of investment and a poor rate of growth of productivity. Now we have the highest rate of growth of investment in the 1980s of any major country in Europe. Indeed, over the past seven years total investment has grown more than twice as fast as consumption and we also have, of course, throughout the 1980s an unprecedented growth in productivity and so the fundamentals of the British economy are improving in the way that we always desired, but never before achieved.

Mrs. Mahon: If the Chancellor believes that the economy is improving so much, why were 20,000 jobs lost in the textile, clothing and hosiery industry last year? Will he give us his forecast for the future of textiles over the next 12 months?

Mr. Lawson: Of course I am well aware of the difficulties of the textile and hosiery industry, not least because I represent an east midlands constituency. But of course there are some industries that shed jobs and there are others that put them on. What we have seen is overall —taking the economy as a whole—unemployment falling further and faster than in any other country, and than in any other period. Indeed we now have a level of unemployment in this country well below the European Community average.

Mr. Grocott: Can the Chancellor of the Exchequer confirm that, according to the Government's press release of 15 March, manufacturing investment in 1988 was £10,990 million while manufacturing investment in 1979 —nearly 10 long years ago—was £11,137 million? Is that not a pathetic record?

Mr. Lawson: I do not think that it is a pathetic record. As I pointed out, total business investment is at a higher proportion of GDP than it has ever been since records were first collected. What was happening in manufacturing industry under the Labour Government was that there was so much—*[Interruption.]* I am answering the hon. Member's question. He asked me a question and I am now answering it. What was happening then was that as a result of restrictive practices, inefficiency and, in many cases, poor management the return on the capital then was very very poor. It was necessary to increase investment substantially in manufacturing, it was necessary to get more output—which is what we have got—more output and better and more efficient use of existing capital. Now the forecast is for manufacturing investment to rise, as it is set to do in the current year, to a record level and the quality of investment is far higher as is shown by the return on manufacturing investment. So the hon. Member does not know the first thing that he is talking about.

Mr. Quentin Davies: Does my right hon. Friend agree that the continuing buoyancy of investment in this country is one of the most favourable and promising factors for the prospects of non-inflationary growth? It is vital that nothing should be done to damage that investment confidence. Does my right hon. Friend also agree that his very cautious Budget did a great deal to reassure industry and shore up that very important confidence?

Mr. Lawson: I am grateful to my hon. Friend for his remarks about the Budget and of course he is quite right to emphasise the importance of confidence. Confidence in this country is very high and this is shown, of course, most recently by the CBI survey of investment intentions. It really is deplorable, the way in which the Labour party can do nothing but try to run Britain down and to deny the facts of investment success and of investment boom that are all around us.

Balance of Payments

3. **Dr. Godman:** To ask the Chancellor of the Exchequer what representations he has received on his Budget forecast for the balance of payments in 1989 and 1990.

The Chief Secretary to the Treasury (Mr. John Major): None, Sir.

Dr. Godman: After learning last week's figures, does the Chief Secretary's right hon. Friend, the Chancellor of the Exchequer, now predict that the balance of payments deficit for this year will rise or fall?

Mr. Major: I see no reason to change the estimate that my right hon. Friend gave some time ago.

Mr. Nicholas Winterton: Bearing in mind the answer given by my right hon. Friend the Chancellor to the last questions, does my right hon. Friend the Chief Secretary accept that if interest rates were lower, investment in this country would be higher and that our balance of payments would improve? Does my right hon. Friend agree that interest rates have affected, and will affect, investment, and that investment will have a direct impact on our balance of payments?

Mr. Major: What would certainly have a very direct effect on investment would be a failure to take the action necessary to bring down inflation—and that is the purpose of the current short-term interest rate policy. One of the attractive aspects of investment over the past year or two is that so much of it has been made out of retained profits, whereas in previous years and under previous Governments, profits were not there to provide for investment.

Mr. John Smith: Has the Chief Secretary seen the international monetary fund's prediction that the balance of payments deficit for 1989 will reach a record £17 billion? As the Chancellor got it so badly wrong this year, why should we believe his prediction this year as opposed to that of the IMF?

Mr. Major: The right hon. and learned Gentleman will recall that the IMF was equally inaccurate last year, as were most other forecasters. The right hon. and learned Gentleman neglects to mention that the IMF report also described the Government's policies as being entirely appropriate, and it confirmed that our strong fiscal policies support monetary policy and strengthen confidence.

Mr. Beith: Would the Government regard it as an achievement if, instead of being £10 billion out with their balance of payments forecast, this year they were only about £6 billion out? Will the Chief Secretary explain why he believes that exports will rise more than twice as fast as imports in order to make his promise come true?

Mr. Major: There is no doubt that in recent years exports have been performing extremely well. The reasons why we believe that export performance will continue include the degree of investment and the improved supply-side performance.

Mr. Sumberg: As we listen to the views of Opposition Members and hear their policies unfolded, is it not becoming clearer day by day that the Labour party remains the party of high taxation and of higher spending than we can afford, and that it wants to return to the days of public borrowing and public debt?

Mr. Major: My hon. Friend describes the situation with precise accuracy.

Profit-related Pay

4. **Dr. Reid:** To ask the Chancellor of the Exchequer what percentage of the work force is currently participating in profit-related pay schemes as defined by the Inland Revenue.

The Financial Secretary to the Treasury (Mr. Norman Lamont): Take-up of profit-related pay has been encouraging. So far, about 121,000 employees are participating in PRP schemes. In his Budget statement, my right hon. Friend announced several improvements and simplifications to the tax relief for PRP. We expect those further to encourage take-up.

Dr. Reid: Why does the Minister not answer my question and say what percentage of workers are involved in such schemes? I have worked out that a total of 121,000 participating employees out of a work force of 28 million represents less than 0·5 per cent. Is that not an indication of the scheme's dismal failure? Why does not the Chancellor admit that the abolition of the 5 per cent. rule is an indication of yet another failure of one of his pet schemes? Why does he persist in throwing good money after bad, when there is no evidence that it has any beneficial effect on the economy? Why does he not get down to tackling the real problems facing the British economy?

Mr. Lamont: I did not give the precise figure for which the hon. Gentleman asked because he is such a brilliant mathematician that I thought that he could work it out. When he gave his figure, he worked it out wrongly. As one of my hon. Friends said, it is over ½ per cent. but under 1 per cent.—*[Interruption.]* This is just over a year after the scheme was introduced. The take-up is ahead of that of the all-employee share scheme when it was a year old. This scheme is being taken up more quickly than other schemes when they were introduced. I do not know why the hon. Gentleman wants to make out that the scheme is a failure. I should have thought that any Socialist Opposition might be interested in the idea of profit-related pay, which gives people a stake in their company and helps to make pay bargaining more flexible. Any sensible person should want to encourage that.

Mr. Ian Taylor: Will my right hon. Friend note that this Budget has done an immense amount to boost the participation of workers in the success of the companies for which they work? Will he urge companies and trade unions to take up such schemes more often? It is not the Government's fault that the take-up rate has been slow, it is the fault of those in industry who have not realised that, in the long term, workers participating in the success of their companies, and not dependency on the annual wage round, is the way forward.

Mr. Lamont: I know of my hon. Friend's great interest, particularly in employee share ownership plans. Again, we have introduced some tax reliefs, and we will certainly do everything we can to encourage employees and employers to take them up. I repeat the point that I made earlier. After 18 months, it is not surprising that only that proportion has taken up PRP. Contrary to what the hon. Member for Motherwell, North (Dr. Reid) said, the changes that were introduced in the Budget and the 5 per cent. rule will encourage more people. That is a good thing.

Interest Rates

5. **Mr. Turner:** To ask the Chancellor of the Exchequer what are interest rates in *(a)* Britain and *(b)* Japan.

Mr. Lilley: Three month market interest rates on 4 April were 13 per cent. in the United Kingdom, 9·8 per cent. in the United States of America, and 4·6 per cent. in Japan.

Mr. Turner: The Chancellor of the Exchequer has a reputation for straight talking. I do not think that we got straight talking in his answer to a question from the hon. Member for Macclesfield (Mr. Winterton). May I try again? In terms of the widely differing interest rates, how on earth does he expect British business to seek to reduce the balance of payments deficit? Will he give us a straight answer? He said that interest rates in Japan are 4·6 per cent., compared with 13 per cent. in this country.

Mr. Lilley: The level of profitability of British industry has been restored to levels which it has not seen for a long time, and it is so healthy that it is clear that British industry can compete.

Mr. Budgen : Is the Japanese economy a good example of what happens when Governments reduce interest rates too much? Is my hon. Friend aware that, when interest rates in Japan were reduced to their present low level at the beginning of 1987, the price of residential land was already

the highest in the world by a long way and was increasing by 9 per cent. per annum? It then started to increase by 27 per cent. The price of land and that increase is a major cause of the social and political turmoil that Japan is going through at present.

Mr. Lilley: I am happy to say that my responsibilities do not extend to the Japanese economy. I am sure that my hon. Friend's remarks will be noticed there and that his concern for their current difficulties will be greatly appreciated.

Mr. Radice: Has the Minister noticed that the Government urge a strong yen to reduce the Japanese surplus, whereas in Britain they urge a strong pound to reduce our deficit? Which is the right course of action?

Mr. Lilley: It is clear that, in an economy such as ours, devaluation would largely feed increased inflation and would affect the value of the pound in the hon. Gentleman's pocket. Therefore, we believe that the exchange rate should not be allowed to depreciate. The Group of Seven Ministers reaffirmed the desire of the Finance Ministers of the leading countries to seek continued stability of exchange rates.

Mr. Hanley: Does my hon. Friend agree that if levels of personal savings were as high in Britain as they are in Japan and if levels of personal borrowings were as low in Britain as they are in Japan, interest rates might be much more in parity?

Mr. Lilley: My hon. Friend who, I am sure, does not share the view that I am responsible for the Japanese economy, makes a good point. We are anxious to see saving encouraged and borrowing discouraged, which is what higher interest rates achieve. I must point out that although personal savings have been low, there has been a good recovery in savings and investments by industrial companies.

Inflation

6. **Mr. Buckley:** To ask the Chancellor of the Exchequer how many members of the European Economic Community have inflation rates lower than that in the United Kingdom.

Mr. Lawson: On the basis of comparable figures, seven EEC member countries currently have lower inflation than the United Kingdom and four have higher inflation.

Mr. Buckley: Does the Chancellor of the Exchequer agree that the United Kingdom inflation rate of 7·8 per cent. is largely a consequence of Government policy in pushing up electricity, gas and transport prices and of the high mortgage rate, which is punishing people in this country?

Mr. Lawson: No, I do not agree with any of that and, indeed, the higher mortgage rates, which are a consequence of higher interest rates generally, are necessary to get inflation down because I do agree that inflation is currently too high. Indeed inflation, which during the whole of our period of office has averaged 1 per cent. above the European Community average, is currently 3 per cent. above the European Community average. However, to put that in perspective, it is worth recalling that during the whole of the period of the Labour Government, our inflation rate was 6 per cent. above the European Community average.

Mr. Dykes: Is not the ominous truth now dawning that higher interest rates actually add to the rate of inflation, which in turn creates an additional spiral?

Mr. Lawson: No, Sir.

Mr. Gordon Brown: Will the Chancellor confirm that after the rises in gas, electricity and water charges, in rents and rates, including the poll tax in Scotland, and even in television licences, prescriptions and the new eyesight charges, the petrol price rise is the ninth rise in one week? How many more price rises must we have on his road to zero inflation?

Mr. Lawson: The hon. Gentleman is extremely perceptive and he has noticed that he has just informed the House of the interesting fact that, until inflation is zero, prices tend to rise.

Sir Dudley Smith: Is my right hon. Friend aware that despite all his great efforts in this respect, there will always be considerable difficulties for any Government in this country while we have the relentless annual wage awards in both the private and public sectors, irrespective of performance?

Mr. Lawson: My hon. Friend is certainly right that it is desirable that British industry should keep a tight control of its costs and that, of course, includes, most importantly, pay costs. Nevertheless, that is not the primary cause of inflation, although it does add to the difficulties for British industry in dealing with the current situation. But the remedy is in its own hands. But inflation is the responsibility of the Government and it is the responsibility of the Government to get inflation down by pursuing an adequately tight monetary policy and that is what we are doing. The Opposition, by their repeated calls, which we have heard again today, for lower interest rates are revealing themselves, once again, as the party of higher inflation.

Tax Relief

7. **Mr. Morgan:** To ask the Chancellor of the Exchequer if he will estimate the cost to the Exchequer of tax relief in relation to *(a)* enterprise zones, *(b)* business expansion schemes and *(c)* personal equity plans.

Mr. Norman Lamont: The estimated costs of the business expansion scheme and personal equity plans are £100 million and £15 million respectively in 1988-89. The latest year for which estimates of the cost of the relief relating to enterprise zones are available is 1985-86, when the cost was about £60 million.

Mr. Morgan: Does the Minister agree that what the Chancellor has done in making personal equity plans tax deductible to cover privatisation in the coming year is to admit that the privatisation of electricity and water cannot take place without creating a tax loophole? Will he tell us, therefore, what the cost of privatising electricity and water will be to the taxpayer, as the Government have again thought up a wonderfully socially progressive idea for getting the non-shareholding classes to subsidise the shareholding classes?

Mr. Lamont: The hon. Gentleman seems terrified that the privatisation of water or electricity might be a success and, therefore, more difficult for the Labour party to reverse. The hon. Gentleman is exaggerating wildly. The purpose of the changes to personal equity plans that my right hon. Friend made in his Budget is to encourage wider share ownership. The point relating to new issues was one detail and the cost of that is extremely modest.

Mr. Neil Hamilton: Does my right hon. Friend agree that the best form of tax relief is straight reductions in tax rates? As Opposition Members seem to have grasped that fact and, in their increasingly desperate scramble for office, are making their party more voter-friendly by following the lead that we have been giving for the past 10 years, can my right hon. Friend tease out of the right hon. and learned Member for Monklands, East (Mr. Smith) the bands at which the lower rates of tax that the Opposition propose would be payable?

Mr. Lamont: My hon. Friend is absolutely right. The Leader of the Opposition made a tantalising speech earlier this week when he attempted to explain the tax policies of the Labour party. However, as my hon. Friend has identified, he left out the absolutely crucial point and most of us are wondering where the beef was in that speech.

Mr. Chris Smith: Does the Financial Secretary accept that the business expansion scheme, especially now, when it is so overwhelmingly employed for the purposes of private rented property, has long ceased to be a genuine source of new equity for enterprise, and has become simply a principal means of tax avoidance for higher rate taxpayers? Is that not another example of what we have seen so often under this Government? For the great majority of taxpayers it is pay-as-you-earn, but for the privileged few it is pay-if-you-like.

Mr. Lamont: I do not agree with the hon. Gentleman. The changes that we made to the business expansion scheme last year targeted it much more on small companies and, with the changes that have taken place in the equity and venture capital markets, I believe that that was the right change to make. The second change that we made was to target the business expansion scheme on the revival of the private rented sector. I am not at all embarrassed by the fact that £300 million to £400 million seems to have been invested in private rented accommodation because that is absolutely excellent.

Pensioners (Income)

8. **Sir Trevor Skeet:** To ask the Chancellor of the Exchequer what has been the change in the post-tax income of pensioners since 1979.

Mr. Major: The average post-tax incomes of pensioners increased by 23 per cent. in real terms between 1979 and 1986.

Sir Trevor Skeet: I welcome those figures and the fact that the Chancellor raised income support substantially in the Budget for the over-75s, but will my right hon. Friend bear in mind the plight of pensioners who are on only the single state pension and have no savings?

Mr. Major: I understand my hon. Friend's concern. These days it is misleading to assume that most pensioners rely solely on the state retirement pension. At present about 50 per cent. of all pensioners also have an occupational pension and that proportion rises to about 70 per cent. of those who retired in the past five years. Those who do not have an occupational pension could either receive an earnings-related supplement to their state pension or be entitled to income support and housing benefit additions.

Mr. Shore: How much of the increase about which the Chief Secretary told us was due to reductions in income tax and how much was due to the secular increase in occupational pensions that has been taking place year after year?

Mr. Major: To give the right hon. Gentleman the precise figure I shall need to write to him.

Mr. Charles Wardle: Have not people who retired before the introduction of the state earnings-related pension scheme in 1978, without an occupational pension of their own, fared less well than the average? Therefore, will my right hon. Friend consider including in his welcome changes to the higher level of age allowance people of 70 and over to cater for all women who retired at 60 prior to 1978?

Mr. Major: The principal problem that my hon. Friend outlines has been dealt with in the package for poorer pensioners that my right hon. Friend the Chancellor announced some months ago. It comes into effect from October this year and will provide an extra £2·50 for single pensioners who qualify and £3·50 for couples.

Balance of Payments

9. **Mr. John Garrett:** To ask the Chancellor of the Exchequer when he expects the balance of payments deficit will begin to fall as a percentage of gross domestic product.

14. **Mr. Galbraith:** To ask the Chancellor of the Exchequer when he expects the balance of payments deficit will begin to fall as a percentage of gross domestic product.

Mr. Lawson: Probably this year.

Mr. Garrett: Does the Chancellor agree that the balance of payments deficit was 1·7 per cent. of GDP in 1979 and 4·4 per cent. of GDP in 1988? Does he further agree that we have become a country that imports capital goods and exports oil, and is that not characteristic of an underdeveloped economy?

Mr. Lawson: The hon. Gentleman is wrong on pretty well all counts. His figures for the balance of payments current account deficit in 1988—it was 3·2 per cent. of GDP, not the 4·4 per cent. It is 3·2 per cent. That, of course, is a high figure but it is worth bearing in mind that the United States has had a current account deficit averaging over 3 per cent. for the past five years.

As for the imports of capital goods, there the hon. Member is right. There has been a substantial increase in the imports of capital goods and that has been the counterpart of the massive investment boom which has been going on throughout British industry and which will stand us in very good stead in the future.

Mr. Galbraith: Has the Chancellor read the report of the Institute of National Economics which states that

Britain's deficit is in a class by itself and is likely to reach £44 billion by 1992? What will the Chancellor do to prevent than horrendous outcome?

Mr. Lawson: The statement by the organisation to which the hon. Member referred is wrong as, if the hon. Member would listen to what I said, the Americans have had a current account deficit of this order as a percentage of gross domestic product for the past five years——

Mr. John Smith: The right hon. Gentleman criticised them.

Mr. Lawson: —which I have not criticised. I am happy to answer questions from the Opposition Front Bench from a sedentary position since they have been put. I have criticised them for their budget deficit, not for their current account deficit. So it is certainly not in a class of its own, but it is obviously necessary that we get it down in due course and that is what we shall do.

Mr. Batiste: My right hon. Friend will be aware of the scepticism with which the statistics on which the balance of payments figures are calculated are treated in many quarters. Is he satisfied with the accuracy of those statistics? If not, what action will he take to improve them?

Mr. Lawson: My hon. Friend is right; the statistics are almost certainly inaccurate, as is indicated by, for example, the fact that for 1988 there was in the balance of payments a balancing item of £15 billion, greater indeed than the recorded deficit—and a balancing item is just a polite name for errors and omissions. We are concerned to improve the quality of Government economic statistics, and that is why the measures were announced yesterday involving a substantial reorganisation and enlargement of the Central Statistical Office and a number of other measures which, over time, will lead, I believe, to an improvement in the quality of statistics.

Having said that, it is a balance that has to be drawn between the burdens on business—the burdens that are put on business through the collection of statistics—and getting the full amount of statistics; and also, now that the economy is a much more complex, more service-based economy, it is genuinely harder to get statistics of the quality that we had in the past. Clearly, we have got to do better, and the announcement yesterday is designed to do just that.

Sir Richard Body: Will my right hon. Friend explain how there can be both a balance and a deficit? Surely the balance of payments deficit on current account is matched exactly by a capital account surplus, which may well be to our advantage?

Mr. Lawson: My hon. Friend is absolutely right. Part of the point that I was making was that if my hon. Friend looks at the officially recorded figures he will see that there is a substantial deficit on the current account in 1988 but equally there is a recorded capital outflow, which clearly cannot be the case. The two things must match and counteract. Of course, my hon. Friend is also right that the overseas savings which are coming to the United Kingdom to finance investment here—because they feel that this is a very good place to invest—are extremely welcome and will strengthen the British economy.

Mr. Robert Sheldon: Since the high pound and the high level of interest rates are a disadvantage to the balance of payments, are not the Chancellor's remarks quite unconvincing on how he expects to improve the balance of payments so long as these factors remain?

Mr. Lawson: I disagree with the right hon. Gentleman, even though he has at one time been a Treasury Minister. What has been happening is that domestic demand in this country has been running at an unsustainably high level, and one of the things that will happen is that the rate of growth of domestic demand will slow down and, as it slows down, import growth will slow down. That is one of the mechanisms by which there will be an improvement in the current account.

What the right hon. Gentleman is proposing, however, which is lower interest rates and a lower exchange rate, would probably have very little benefit, if any, to the current account. What they would do is ensure that inflation took off in a major way, as it did during the period when he was a Treasury Minister.

Mr. Gow: As forecasts and statistics prove so frequently to be made in error, would the world come to an end if we were to suspend both for a trial period of 12 months?

Mr. Lawson: I can assure my hon. Friend that in those circumstances the world would not come to an end. However, it might be a somewhat controversial measure to put before the House.

Mr. John Smith: Will the Chancellor tell us whether the IMF is wrong in predicting a £17 billion balance of payments deficit? Why should his prediction for 1989 be treated with any more credibility than his prediction for 1988?

Mr. Lawson: My right hon. Friend the Chief Secretary answered that point earlier, when he pointed out that the IMF frequently gets its forecasts wrong. Indeed, it got its forecasts hopelessly wrong last year, just as all other forecasters did. If I may give advice to the right hon. and learned Gentleman, who is an up-and-coming politician, I suggest that, if he were to concern himself less with forecasts and more with what is actually happening in the British economy, he would do a great deal better.

Mr. Redwood: Will the Chancellor confirm that the £15 billion unidentified item may include substantial under-recording of exports? Is that not very likely given the completely out-of-date basis for the survey of the service sector which is now such an important component in our overseas earning capacity?

Mr. Lawson: My hon. Friend is absolutely right and that is why one of the recommendations of the scrutiny report that came out yesterday, which he will have read, is to try to improve just that sector. It would certainly strain credulity to believe that the entire £15 billion balancing item is accounted for by unidentifed capital flows and none of it by unidentified flows on the current account.

Value Added Tax

10. **Mr. McFall:** To ask the Chancellor of the Exchequer how much value added tax was paid per annum by an average family in 1978-79; and what was the comparable figure in 1988-89.

11. **Mr. Allen McKay:** To ask the Chancellor of the Exchequer how much value added tax was paid per annum by an average family in 1978-79; and what was the comparable figure in 1988-89.

15. **Mr. McKelvey:** To ask the Chancellor of the Exchequer how much value added tax was paid per annum by an average family in 1978-79; and what was the comparable figure in 1988-89.

Mr. Lilley: A married man on average male earnings with two children would have paid approximately 2·6 per cent. of his earnings in value added tax in 1979-79 and 4·8 per cent. in 1988-89.

Mr. McFall: Does the Minister realise that over the past 10 years the VAT paid by average families with two children and average male earnings had risen from £2 million to over £22 million in real terms, which represents a doubling of the VAT that people paid under Labour? Does the Minister not agree that this regressive tax hits the poorest people in society? When will he stop fooling the British people and his Back Benchers by chattering on about income tax cuts, when he is using the VAT sledgehammer to clobber the British people?

Mr. Lilley: The hon. Gentleman does not appear to realise that since 1978-79, the take-home pay of a man on average earnings with one child has risen in real terms by 29 per cent., which takes account of all taxes. Under Labour that family saw an increase of less than 1 per cent. in its real take-home pay. The tax is not regressive, as the hon. Gentleman suggests.

Mr. McKay: Does the Minister not agree that the £6·60 by which the average family would be better off if VAT represented a proportion of gross income, as it did under Labour, would be helpful to the average family? It would help to pay the mortgage interest that Government policies have increased.

Mr. Lilley: As I have just pointed out, if the average family had to go back to the level of income that it possessed under the last Labour Government, it would be in dire straits. One of the benefits of VAT is that families at least have some choice about whether they pay it. A high proportion of spending goes on zero-rated items, such as food and housing.

Mr. McKelvey: Does the Minister not realise that only an economic illiterate would argue that VAT is anything other than a regressive tax? Does he not understand the effect that it has on poor people, especially those in Scotland who have also been hit by that most obnoxious and regressive tax of all—the poll tax?

Mr. Lilley: The hon. Gentleman is simply wrong. People on three quarters of average income pay less than 4½ per cent. of their income in VAT; someone on average income pays about 4·7 per cent. and someone on one and a half times average income pays 5·1 per cent. Therefore VAT is clearly a progressive and not a regressive tax. That is manifestly obvious and were the hon. Gentleman in contact with his constituents he would realise that the less well off spend a much higher proportion of their incomes on zero-rated items.

Mr. Oppenheim: Given that VAT is not levied on most basic essential items, surely the figures merely prove that, under a Tory Government, people can afford more luxuries.

Mr. Lilley: My hon. Friend is absolutely right. Under a Labour Government they would of course, be able to afford far less. It is sheer hypocrisy for the Labour party to show any concern about any tax because it is, after all, the party of high spending and high taxation.

Mr. Holt: My hon. Friend will be aware that in the calculations of VAT in 1978-79 one major difference for many people was that the whip-round for the drinks and refreshments of one's opponents at sporting events were not VAT rated. That was brought in by the Government in 1982 and will be thrown out as a result of harmonisation. Why not do it in advance of that date?

Mr. Lilley: I know my hon. Friend's strong feelings about the impact that VAT has had upon Beaconsfield rugby club. I have dealt with the matter as best I can. I think that my hon. Friend has a strong case about the treatment that he has received and I apologise to him and his son.

PRIME MINISTER

Engagements

Q1. **Mr. Alton:** To ask the Prime Minister if she will list her official engagements for Thursday 6 April.

The Lord President of the Council and Leader of the House of Commons (Mr. John Wakeham) *rose*——

Hon. Members: Where is she?

Mr. Speaker: Order.

Mr. Wakeham: I have been asked to reply.

This morning my right hon. Friend the Prime Minister presided at a meeting of the Cabinet. In the course of the day she will be having meetings with President Gorbachev. This evening she will give a dinner for him.

Mr. Alton: While the House will want to give a generous welcome to the remarkable improvement in the human rights record of the Soviet Union, will the Leader of the House take this opportunity to underline the Government's continuing commitment to the 400,000 Jewish refuseniks seeking exit visas and to the 4 million Ukrainian Catholics who have been outlawed since 1946? Will he make it clear that conditional on our attendance at the 1991 human rights conference is the Soviet Union's pursuance of a zero option to end human rights abuses and the renouncement of the sale of weapons to regimes that are opposed to this country's interests and the interests of other Western democracies?

Mr. Wakeham: I recognise the hon. Gentleman's long-standing concern with those matters. The Prime Minister will, of course, be raising the whole question of Soviet human rights with Mr. Gorbachev and will underline the need for fundamental reform. The Foreign Secretary will be pressing the Soviet Foreign Secretary on a range of specific questions, including those raised by the hon. Gentleman.

Q2. **Mr. John Marshall:** To ask the Prime Minister if she will list her official engagements for Thursday 6 April.

Mr. Wakeham: I have been asked to reply.

I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Marshall: Will my right hon. Friend give an assurance that when the Prime Minister is discussing human rights with the Russians she will raise with Mr. Gorbachev the case of Mr. and Mrs. Zolotarevsky [HON. MEMBERS: "Reading."] It is not the easiest name to remember. Does my right hon. Friend agree that the only wish of that pensioner couple is to be reunited with their daughter and granddaughter in Israel? Does he agree that it is wrong for the Soviet Government forcibly to divide grandparents from a granddaughter? Will the strongest possible representations be made?

Mr. Wakeham: My right hon. Friend the Prime Minister will be writing to my hon. Friend about this case. Although she will probably not have time to discuss individual human rights cases with Mr. Gorbachev, she has asked my right hon. and learned Friend the Foreign Secretary to raise that case with the Soviet Foreign Secretary.

Mr. Kinnock: Will the Leader of the House tell us whether, when the person who leaked the inspectors' report on the House of Fraser is discovered, the culprit will be prosecuted, like Miss Tisdall and Mr. Ponting, or protected, like Mr. Ingham and Mr. Powell?

Mr. Wakeham: I have nothing further to say on that except to remind the right hon. Gentleman that under this Government prosecution is a matter for the proper authorities and not for Ministers.

Mr. Cormack: When my right hon. Friend the Prime Minister is discussing human rights with Mr. Gorbachev, will she make it plain that we recognise that there has been a significant improvement in that sphere in the Soviet Union? While we expect intentions to be honoured and lived up to, we recognise that progress has been made.

Mr. Wakeham: My hon. Friend makes his point well. Certainly that must be part of the message.

Mr. Robertson: The Prime Minister was absent yesterday as well and she sent the Leader of the House to apologise to the House for the unavailability in the Library of promised documents on Namibia. Is the right hon. Gentleman aware that the key document, the report of the secretary general of the United Nations to the Security Council, on which the Prime Minister based her blame on SWAPO alone for the continuing violence in Namibia, is still not in the Library, and will not be in the Library because it has now been classified as confidential? As the Prime Minister specifically and categorically said on Tuesday that hon. Members could read that report, will the Leader of the House again apologise to the House and ensure that the report is put in the Library today?

Mr. Wakeham: If any apologies are required, they are from the hon. Gentleman for abusing points of order yesterday. That is not a matter for me.

Hon. Members: Withdraw.

Mr. Speaker: Order. The Leader of the House must accept that the point of order was not out of order.

Mr. Wakeham: I withdraw what I said to the hon. Gentleman. I just noted that his point of order was somewhat long-winded. I apologise for saying what I did.

As I told the House yesterday, relevant documents have been placed in the House of Commons Library. They include the Geneva protocol which has been made public by the South African Government. A further set of documents, which together comprise the United Nations plan, will be placed in the Library today. The secretary general has asked that the report on the recent fighting be kept confidential for the time being.

Mr. Moate: Is my right hon. Friend aware of the widespread concern about the internationally and nationally important national fruit collections in my constituency—*[Interruption.]*—which, despite the reaction of the Opposition, are of considerable importance to the country, and which were supported so vigorously recently by His Royal Highness the Prince of Wales? Is my right hon. Friend aware that the collections are threatened by the Government announcement of the closure of that fruit centre? Will he please ask the Minister of Agriculture to take no further steps until there has been proper consultation, including—if it is not too much trouble—consultation with the local Member of Parliament?

Mr. Wakeham: I am aware of the position in my hon. Friend's constituency. Final decisions on the closure of the Brogdale research station will not be taken until consultations with the industry are concluded. I shall see to it that my hon. Friend is included in the consultations. If research at Brogdale ceases, suitable arrangements will be made to continue the necessary work on the collection either at Brogdale or at another suitable site.

Q3. **Mr. Eastham:** To ask the Prime Minister if she will list her official engagements for Thursday 6 April.

Mr. Wakeham: I have been asked to reply.

I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Eastham: Now that the Prime Minister has returned from her tour of central Africa and is able to apply herself to some of the problems at home, will the Leader of the House draw to her attention the homelessness crisis in Britain and the recent statements by Shelter pointing out that thousands of teenagers, who have nowhere to sleep at night and are staying under arches and in doorways, are turning to crime, prostitution and drugs? What will the Government do about it?

Mr. Wakeham: The hon. Gentleman must recognise that housing in this country is of a much higher standard than it ever was under a Labour Government. The Government have taken particular steps to help those who are worse off.

Economic Performance

Q4. **Mr. Goodlad:** To ask the Prime Minister what representations she has received regarding the performance of the economy.

Q8. **Mr. Malins:** To ask the Prime Minister what representations she has received regarding the performance of the economy.

Mr. Wakeham: I have been asked to reply.

My right hon. Friend receives a wide variety of representations.

Mr. Goodlad: Will my right hon. Friend confirm that, as a result of the Government's management of the economy, the number of jobs in this country has increased since 1983 by 2·75 million—which is the biggest increase of any comparable period since the war—employment is now at its highest-ever level and that those trends are particularly reflected in the north-west of England and are set fair to continue?

Mr. Wakeham: My hon. Friend is absolutely right. The number of people in employment is at a record level—nearly 1 million higher than in 1979. Unemployment has been falling steeply and the figure is now more than 1 million lower than at the time of the last election campaign. The fall has been achieved in less time than the Labour party claimed that it would be able to achieve it—not that the British people remotely believed that claim any more than they believed the forecast of the right hon. Member for Birmingham, Sparkbrook (Mr. Hattersley) that unemployment would rise after the Conservative victory.

Mr. Malins: Bearing in mind the importance of small businesses to our economy, does my right hon. Friend agree that we should take yet further steps to minimise the impact of the uniform business rate on smaller businesses, many of which—especially in areas such as Croydon, which has a good record on rates—face swingeing rises under the present proposals?

Mr. Wakeham: I am sure that my hon. Friend will agree that the new arrangements will produce a much fairer distribution of rate burdens on commerce and industry. However, the changes are to be phased in gradually and my right hon. Friend the Secretary of State for the Environment has proposed a generous level of protection for small businesses to give them plenty of time to adjust to the new uniform business rate.

Mr. Harry Ewing: The Leader of the House began his reply by saying,

"I have been asked to reply."

When the Leader of the House uses those words does he not worry greatly? Is he aware that, since 1979, all his right hon. Friends who have been "asked to reply" are either in the other place or have returned to the Back Benches? Where does the Leader of the House expect to be by October this year?

Mr. Wakeham: I am always delighted when my right hon. Friend asks me to reply to questions, particularly to those from the hon. Gentleman. However, my right hon. Friend told the Leader of the Opposition that she would not be able to be here this afternoon because she has made herself available to President Gorbachev—*[Interruption.]*

Mr. Speaker: Order.

Mr. Wakeham: I think, perhaps, I have finished my answer.

Mr. Campbell-Savours: Is it not strangely incongruous that, while the Prime Minister warmly embraces Mr. Gorbachev in London and the chemistry is good, she is perfectly willing to build Trident missiles and point them towards the Soviet Union? Will the Leader of the House——

Mr. Speaker: Order. What has this to do with the performance of the economy?

Mr. Campbell-Savours: The Prime Minister points them towards the Soviet Union and so may undermine the Soviet economy. What is the target? Is it the Soviet Union or Raisa?

Mr. Wakeham: If, on the 40th anniversary of NATO, the hon. Gentleman has not yet realised that over those 40 years a great part of the West's strength has been our defence, he has a great deal more to learn than even I thought.

Engagements

Q5. **Sir Richard Body:** To ask the Prime Minister if she will list her official engagements for Thursday 6 April.

Mr. Wakeham: I have been asked to reply.

I refer my hon. Friend to the reply that I gave some moments ago.

Sir Richard Body: If, as a result of Mr. Gorbachev's visit, my right hon. Friend believes that there may be more opportunities for expanding trade between East and West, would it not be advisable for Britain to play a more lively part in the affairs of the Economic Commission for Europe, which has been responsible for several hundred agreements and conventions with the object of bringing down trade barriers?

Mr. Wakeham: My hon. Friend is right, but I think that he will also agree that my right hon. Friend the Prime Minister has played a most important part in just those discussions, and I am sure that all my right hon. and hon. Friends will join me in congratulating her on her achievements.

Dock Labour Scheme

3.31 pm

The Secretary of State for Employment (Mr. Norman Fowler): With permission, I should like to make a statement about the future of the dock labour scheme.

The scheme was introduced just after the end of the second world war under the Dock Workers (Regulation of Employment) Act 1946. An amended scheme was brought into being in 1967 and remains in operation today. It now covers 40 main British ports responsible for handling some 70 per cent. of our national trade. A further 35 ports are outside the scheme because they were not significant for cargo handling in the immediate post-war years.

The scheme is administered by the National Dock Labour Board and its 20 local branches which are made up of equal numbers of trade union and employer members. The boards have very wide powers to control employment in scheme ports, including the numbers employed and ultimate decisions on discipline.

Only those who are on the registers of the boards are permitted to do dock work in scheme ports. An employer who, without approval of the board, uses non-registered dock workers commits a criminal offence. The nature of the dock work itself and the exact areas where the scheme applies are subject to statutory definitions which have remained unchanged since the war.

The original purpose of the scheme was to ensure greater regularity of employment for dock workers. However, since then there have been radical changes in cargo-handling technology. Dock work today, by its very nature, requires a permanent and skilled work force. In ports where none of the scheme's restrictions apply, casual working, which was such a feature of dock work before the war, is very small. In big non-scheme ports like Felixstowe and Dover, it is effectively non-existent.

Over the last 10 years the number of dockers employed in non-scheme ports has risen by a third to around 4,000. During the same period the number of registered dock workers has dropped by nearly two thirds, from 27,000 to 9,400 today.

As the House will know, it is a major objective of the Government to remove barriers to employment and in the last year we have published two White Papers in this area. As part of this continuing process the Government have now reviewed the dock labour scheme and I am publishing today a White Paper which sets out our conclusions. In summary, we believe that the scheme suffers from a range of fundamental defects and that the time has now come to put the position right.

The scheme provides a statutory monopoly in dock work. No one other than employers and workers registered by the dock labour boards can engage in dock work. Given the changes in the nature of dock work, this is not only unnecessary but also totally at variance with the practice in any other industry. It has created two classes of employees in the ports—registered dock workers, and the majority of other workers—and it has certainly not secured good industrial relations in scheme ports.

Management is unable to manage its own work force effectively, and restrictive practices add to the costs of the ports. The public have to pay for the costs of the scheme, both as customers for goods that come through the ports, and as taxpayers. Since the early 1970s the taxpayer has contributed over £420 million, in today's prices, in payments for voluntary severance, the only means of reducing any surpluses of registered dock workers. A further £350 million of public money has gone to help certain scheme ports survive.

Just as important is the effect that the existence of the scheme has on prospective investment in scheme port areas. Companies are deterred from investing for fear that they will be caught by the scheme. The Government believe that without this constraint there would be more investment and more jobs in our ports and in their surrounding areas.

In short, the dock labour scheme today is a total anachronism. We rely on our ports for the bulk of our trade. We must ensure that they can prepare for the intensified competition that free movement of goods in the European Community after 1992 will bring.

The scheme will not simply wither away of its own accord. For that to happen, our great historic ports, as well as smaller ports all around the country, would have to close permanently. That would involve abandoning major facilities, with all their natural advantages of location and tidal waters, fixed assets and infrastructure, much of it provided at public expense over many years. Local business activity in port areas would suffer equivalent damage.

The Government have concluded, therefore, that positive action is needed to free the scheme ports from their present artificial constraints. Our intention is to bring all port employers and dock workers into exactly the same position as other employers and other workers. The only way in which this can be effectively achieved is through the abolition of the dock labour scheme. Its amendment or restriction would not remedy present defects, and would merely create new problems.

The Government therefore propose to introduce a Bill to repeal all the existing legislation connected with the scheme. The Bill will provide for the National Dock Labour Board to remain in being temporarily to transfer medical and training facilities as the industry requires, and then to wind up its affairs. The Government will assist financially—for example, by meeting redundancy payments due to board staff.

The legislation will also make special provision for registered dock workers. The Government are introducing a new statutory compensation scheme for anyone made redundant during a transitional period after the scheme is abolished. This will provide for individual payments of up to £35,000 until early 1991, and up to £20,000 in the following 18 months. The costs of these payments will be shared equally between the Government and the individual employer concerned. In addition, as soon as the Bill is enacted, dock workers will acquire all the normal employment protection rights which are available to other workers but from which they are currently excluded by virtue of the scheme.

The necessary Bill will be presented to the House tomorrow. As long as the scheme continues to operate, it will remain the biggest obstacle to a modern and efficient ports industry in this country. That is why the Government have decided that the time has now come to abolish the scheme.

Mr. Michael Meacher (Oldham, West): Is the right hon. Gentleman aware that it is an act of wilful sabotage against this country's economic interest to plunge the nation into politically motivated strife in the docks, as his

statement this afternoon will do, in order to end a scheme covering only 9,500 workers? None of his allegations today remotely provides any economic justification for the abolition of the scheme. I will deal with it point by point.

The right hon. Gentleman talks about restrictive labour practices. How, then, does he explain that over the past 20 years productivity in scheme ports has increased by 700 per cent? There are not many industries that can match that record of productivity.

The right hon. Gentleman talked about job creation in British maritime industries. If he is really concerned about that, why does he not stop the far bigger job losses from allowing British shipowners to flag out their vessels to foreign flags of convenience?

The right hon. Gentleman talks about inhibiting port development. Why is he so blind to the fact that tens of millions of pounds are today being invested by employers —£30 million at Hull, £8 million at Tilbury, £10 million at Newport, £5 million at Bristol and similarly at Dartford —in new multi-million-pound terminals and huge new riverside ro-ro berths, all in scheme ports?

The right hon. Gentleman says that casual working is a small feature of non-scheme ports. How does he square that with the recent statement of Mr. Peter de Savary that he intends to open a new container terminal on the Isle of Grain with a return to the casual system because that suits his needs best?

How does the right hon. Gentleman justify the statement that the scheme increases port costs when, of the £7 to £15 per tonne charged by British companies, only 1½p can be attributed to the scheme?

Why did the right hon. Gentleman not mention that all our main competitors, such as Germany, the Netherlands and Belgium, operate dock labour schemes similar to ours? If they all believe that a dock labour scheme is essential to the efficient control of manpower and for good standards of training, medical—*[Interruption.]*

Mr. Speaker: Order. The hon. Gentleman must be given a fair hearing.

Mr. Meacher: If a dock labour scheme is essential on the continent for the efficient control of manpower and for good standards of training, medical services and amenities, why is it not necessary here?

Is it not absolutely cynical of the Secretary of State to abolish a scheme which provides 3,300 training places a year, from induction courses to advanced cargo handling, in an industry desperately in need of modernisation and increased competitiveness at a time when he is exhorting the rest of industry to invest in training, which it is not doing?

Will the right hon. Gentleman acknowledge that, if there are deficiencies in the scheme, it is because of employers who increase standbys because of their reluctance to train their work force and who will not purchase the mechanical equipment needed for the proper use of their own manpower? Is it not the employers who have brought about the under-use of their labour force by indiscriminately releasing fully fit skilled men from the industry and by allowing the registers to fall below the levels required for a sound, safe and efficient service in the docks?

This statement has a great deal more to do with Thatcherite dogma than with any genuine concern with advancing Britain's economic interest.

Mr. Fowler: No one defends the indefensible as badly as the hon. Gentleman. All he appears to be in favour of is a museum economy in this country. On all the issues that he has raised he is typically wrong.

There is no question but that restrictive practices have reduced the productivity of scheme ports by devices such as ghosting, bobbing and demarcation disputes. If the hon. Gentleman does not know about that, he should look more clearly at the scheme.

The hon. Gentleman asked about employment. In the past 10 years, the number of registered dock workers in scheme ports has dropped from 27,000 to 9,400. Over the same period dock workers in non-scheme ports doubled in number. There is no doubt that the scheme deters investment to the great disbenefit of the port and the area around it. Companies are deterred from investing because of the fear that they will be covered by the scheme.

The hon. Gentleman is also wrong about costs. As far as we can estimate, it adds about 20 per cent. to labour costs and there is no question but that the costs of the scheme have been picked up by the customer and the taxpayer.

The hon. Gentleman spoke about casualism. I obviously accept and sympathise with points made about what the position was like in the past, but it is a non-issue today. Once again, the hon. Gentleman is fighting the battle of half a century ago. There is no evidence of significant casual working in non-scheme ports. No industrial action has been taken on that issue in ports such as Felixstowe and Dover, and it ignores the real requirements of modern ports in a capital-intensive industry.

The hon. Gentleman spoke about other Governments. I remind him that the Socialist Government in New Zealand are doing much the same thing to the dock work regulation scheme in that country. The dock work regulation scheme is a statutory monopoly. It is a criminal offence for an employer to employ anyone other than a registered dock worker. That cannot be right under modern working conditions. It is a historical anachronism that is bad for employment and means that management cannot manage. The scheme is out of date, as is the hon. Gentleman's attitude. We need to rid Britain of the scheme.

Mr. Jacques Arnold (Gravesham): I thank my right hon. Friend for responding so effectively to the widespread Back-Bench opinion in favour of the abolition of the scheme. Does he appreciate that his statement will be welcome on Thameside and in other inner-city dockland areas because of the opportunities that will now open for the redevelopment of dock areas and the creation of far more dock jobs?

Mr. Fowler: My hon. Friend is absolutely correct. I pay tribute to him for what he has done in the legitimate campaign against the dock labour scheme. There has been long discussion and much debate about the scheme and there is a growing consensus that it should be abolished. That consensus has been joined not only by Conservative Members but by some in the Opposition parties. One of the reasons for people wanting to see this scheme ended is precisely that which my hon. Friend has given. They see the prospect of development and new jobs and businesses being created.

Several Hon. Members *rose*——

Mr. Speaker: Order. I remind the House that the Secretary of State has said that there is to be a Bill on this matter. I shall allow questions to go on until 4.15 and then we shall move to the business statement.

Mr. Eric S. Heffer (Liverpool, Walton): Many years ago Aneurin Bevan said that Conservatives or Tories were lower than vermin. Until today, I thought that that was an overstatement. However, on the basis of the disgraceful baying that we have heard this afternoon by Conservative Members, who have never been near a dock in their lives, I now think that it is true. Their attitude will not go unnoticed by the people of this country, because they are lower than vermin. I say that without any qualification. Is it not clear that the scheme, which has been in existence all these years, has given stability—*[Interruption.]*

Mr. Speaker: Order. The hon. Gentleman has every right to put his point of view.

Mr. Heffer: —to workers in the industry and to the industry?

Is it not absolutely clear that once the scheme is abolished there will be a return to casual employment? This is one of the most backward steps that the Government have taken. The Minister had better be quite clear that dock workers and those connected with them will resist this proposal in every possible way. I hope that we shall have a clear statement from my colleagues on the Opposition Front Bench that once we get back into office, as we will at the next general election, we will introduce a scheme which operates in every port in the country.

Mr. Fowler: I will leave the hon. Gentleman to take up that issue with his hon. Friend the Member for Oldham, West (Mr. Meacher).

I must point out to the hon. Gentleman that many of my hon. Friends represent constituencies which have docks in them. He must not think that he has a monopoly of concern on this subject. Under the scheme there have been job losses. Over the past 10 years, jobs have been reduced from 27,000 to about 9,000. Industrial relations have also been appalling not simply over one year or two years, but over 10 years or 20 years.

I repeat what I said to the hon. Member for Oldham, West about casualism. In non-scheme ports, casual working is minimal, and it scarcely exists in big ports.

With regard to the comments made by the hon. Member for Liverpool, Walton (Mr. Heffer) about action, I hope that he—and if not he, then the Opposition Front Bench—will confirm that the proper place for the abolition of the scheme to be debated and decided is in this House. The hon. Gentleman should confirm my view that this is a decision for Parliament and say that he will oppose any steps outside Parliament.

Mr. Terence L. Higgins (Worthing): Is my right hon. Friend aware that I have been advocating the abolition of the dock labour scheme for even longer than the abolition of the earnings rule for pensioners, and the achievement of both within a month is something on which the Government should be congratulated?

In the light of the remarks of the hon. Member for Liverpool, Walton (Mr. Heffer), will my right hon. Friend make it clear to those privileged few in the scheme who have benefited for so long at the expense of the consumer and taxpayer that the party is now over, and that the present he is proposing and its terms are, if anything, over-generous and should be enthusiastically accepted by those who must recognise that we cannot look to the past of our industrial relations but must look to the future of our economy?

Mr. Fowler: It has obviously been a good month and a good year for my right hon. Friend. I am not sure whether I would agree with him that our proposal is over-generous. I think that it is fair. We are proposing £35,000 for those with 15 years' service who are made redundant. That is certainly much more generous than any statutory redundancy provision in this country. I hope that hon. Members on both sides of the House will recognise that this is a generous redundancy arrangement. Once the scheme is abolished, there is no reason why the ports presently covered by the scheme should not prosper and why new business should not develop. There is no reason why there cannot be more jobs, particularly in some of the inner-city areas.

Mr. James Wallace (Orkney and Shetland): Whatever the necessity for the scheme and its merits when it was introduced, the Minister will agree with us that it has outlived its usefulness. We welcome his announcement to end it. He said that there were two classes of employees in the ports. Does he agree that there are two classes of ports? His announcement today will give scheme ports the opportunity to develop, and it will also bring benefits to them.

As we consider the list of scheme ports, we discover that many are in areas of high unemployment. What analysis has the Minister made of the employment impact of this measure? Although the Bill is to be introduced tomorrow, will the Minister give an undertaking that there will be consultation with the industry, the unions and local authorities in the areas so that job opportunities can be created at the earliest possible opportunity?

Mr. Fowler: I am grateful for the hon. Gentleman's comments about the scheme and about the need to abolish it. I believe that they will be widely repeated and echoed throughout the country. The hon. Member for Oldham, West is entirely out of touch with public opinion.

As to jobs, I repeat what I said a moment ago. Without the scheme there is absolutely no reason why we should not see more investment and more business being created in these areas. The result will be more jobs and more employment. That is what I would like to see. I entirely agree with the hon. Member for Orkney and Shetland (Mr. Wallace).

Mr. Malcolm Thornton (Crosby): Does my right hon. Friend accept that all who use the port of Liverpool, which I had the privilege of serving for 24 years before entering the House, will be delighted by his statement? Will he confirm that a company such as the Mersey Docks and Harbour Company, now that it is no longer the employer of last resort, will no longer be held back from investment in the port because of its position? It will be able to do the sorts of things about which it has been talking to my right hon. Friend's Department, attract trade across the Atlantic and take advantage of the land bridge to Europe from 1992. This is a good step for Liverpool and will be welcomed.

Mr. Fowler: I entirely agree with my hon. Friend. When I was Minister of Transport between 1979 and 1981, I went to the Mersey Docks and Harbour Board on a number of

occasions. There is potential there, and it is beginning to be realised at what is a first-class port. The ending of the scheme will be good for Liverpool and good for its port.

Mr. Robert Hughes (Aberdeen, North): Will the Minister tell the House why he is acting with such provocative haste by publishing a White Paper today and publishing a Bill tomorrow, when for years employers have been told that if they wanted amendments to the scheme they should be prepared to discuss them and to negotiate? Why is the Secretary of State being so provocative? Why is he prepared to risk confrontation, when there is not one word in the document, published only a few minutes ago, showing that there has been any discussion with the unions or with the work force? The right hon. Gentleman is taking away people's livelihood without giving them any opportunity to respond. If he has trouble, that trouble will have been caused by him and by him alone.

Mr. Fowler: Few subjects have been debated more over the past few years than the dock labour scheme. The issues are clear, and there is no question about what they are. We looked at halfway houses. I do not think that halfway houses exist. The hon. Gentleman talks about compromise and about discussion. Compromise and discussion were not forthcoming from the Transport and General Workers Union or in any of the statements—and I have a whole list of them that I can show the hon. Gentleman—from Mr. Connolly, of the union's ports section.

The hon. Gentleman asks, why now? The reason is that I believe that there is an emerging consensus in this country that the scheme should go. I believe that the public will support a Bill to abolish the dock labour scheme.

Sir Ian Lloyd (Havant): As someone who has spent much of his life in this industry and has probably seen more ports and port systems than the hon. Member for Liverpool, Walton (Mr. Heffer) has, I greatly welcome the announcement. Seldom have I heard an announcement which I can welcome with greater sincerity, enthusiasm and conviction than this one.

My right hon. Friend suggested that, so far, the total cost of the scheme has been about £800 million, or £30,000 per docker, to defend what has amounted to the most indefensible, unjustifiable and destructive restrictive practices that the economy has known. Does he think that we should now spend what seems on the face of what he has announced a roughly similar sum to compensate those who are still there?

Mr. Fowler: There is a misunderstanding about that. We propose that people who are made redundant should be paid up to £35,000. That means that a registered dock worker who is made redundant would be paid up to £35,000. Obviously it would depend upon his length of service, but that maximum figure would go to those with 15 years' service. It is specifically not the proposition that every registered dock worker should be paid £35,000.

Mr. Alan Roberts (Bootle): Will the Minister expect cheering similar to that which we heard from Conservative Back Benchers when the Government announce getting rid of security of employment in the legal profession? *[Interruption.]* Is the Minister aware—*[Interruption.]*

Mr. Speaker: Order. Interruptions take up a lot of extra time.

Mr. Roberts: Is the Minister aware that the scheme is not a bar to employment? It provides security of employment. It has created the successful, profitable port of Liverpool, in my constituency, a successful grain container terminal, and the only free port that the Government have announced which has been successful. That is directly because of the operation of the scheme and the dockers functioning through it in that free port. All that and the good industrial relations on Merseyside are likely to be destroyed by the Minister's statement. If Conservative Members do not think that there are good industrial relations in the port of Liverpool, they should talk to the hon. Member for Crosby (Mr. Thornton), because there are, and it is a successful port because of them.

Mr. Fowler: The hon. Gentleman started with a peculiar point about the legal profession. He may or may not have noticed that we have put forward proposals on the legal profession. His next two points were no stronger than that. There is no question but that the dock labour scheme is a barrier to employment. Apart from anything else, it prevents investment taking place in any of the scheme areas which will create employment. I will not deal with industrial relations specifically in Liverpool, but industrial relations in scheme ports have been bad over a long period—certainly for the length of the scheme since 1967—and they remain bad today.

Mr. David Shaw (Dover): Will my right hon. Friend confirm that, in his Department's submission on the White Paper on expenditure, about £44 million of loans to the National Dock Labour Board must now be written off by Parliament? Will he confirm that that is taxpayers' money which will be lost? Will he confirm further that the port of Dover is self-financing and does not cost the taxpayer that sort of money?

Mr. Fowler: That is certainly the case. That decision has been taken. As has already been announced, in addition to the figures that I have given, employers are paid £125 million in cash—that is, over £200 million in real terms—to cover the cost of severance.

Mr. Simon Hughes (Southwark and Bermondsey): As somebody who represents a constituency with a large number of dock workers, I cannot welcome the statement as enthusiastically as my hon. Friend the Member for Orkney and Shetland (Mr. Wallace) did. Given that the Government have a commitment to regenerate the inner cities, how soon will the loss of jobs occasioned in London and elsewhere in port communities by the abolition of the scheme be compensated by increased substitute employment for those who may now find it difficult to get work?

Mr. Fowler: There is a great deal more chance of that happening without the scheme than under present circumstances. Much of the development has been in building. One reason for that has been the restrictions of the scheme itself, so that is one way in which the scheme will no longer have an impact. If one wants jobs and investment that use the skills of local people, one does not need the scheme. I must point out to the hon. Gentleman that not only he but the hon. Member for Gordon (Mr. Bruce) is in favour of abolishing the dock labour scheme. According to *The Scotsman* of 5 April, the hon. Member for Gordon said:

"It has now become a debilitating, restrictive practice."

[Mr. Fowler]

I agree with that.

Mr. John Townend (Bridlington): Is my right hon. Friend aware that I have been advocating the abolition of the scheme not only for the past 10 years in Parliament, but for the 10 years previously when I was a councillor in Hull and then leader of the county council? Does my right hon. Friend accept that the abolition of the scheme will be welcomed in east Yorkshire? When I was a boy, Hull was the third port, but it has been devastated by the scheme. Now it is not in the first 10 and its container port has been closed as a result of the scheme. Will my right hon. Friend accept that we shall be eternally grateful that we shall be able to compete with Felixstowe on equal terms?

Mr. Fowler: That is right. I want to pay tribute to what my hon. Friend has done, said and campaigned for over the past years. On the last occasion on which I spoke from the Dispatch Box when he was here, he intervened in exchanges on the dock labour scheme. I hope that he is satisfied with the action we have taken.

Mr. Austin Mitchell (Great Grimsby): What we see today is what happens when little men grapple with big issues. The real intention behind the proposal is to bring down wages and conditions for workers in the docks. There has been no consultation, and no consideration has been given to proposals to extend the benefits of the scheme to the other non-scheme ports, which is the point at issue. Is this not just a decision that this is a time when the Government can afford to face a stoppage in the docks to cut the Chancellor's bloated import figures? The question that has not been answered today is, "Why now?" Why has the decision been taken after 10 years when there is an alternative? If the scheme had the consequences that the Secretary of State claims, it could have been referred to the Monopolies and Mergers Commission, which could then have held a genuine inquiry, not just an assertion of party political prejudice.

Mr. Fowler: If the hon. Gentleman had been listening, he would have heard me answer the question about why the decision has been taken now. Few issues have been more debated and more considered than the dock labour scheme. The issues are clear. There are no halfway houses available and, as the hon. Gentleman will know from his own experience, no compromise has ever been put forward by the Transport and General Workers Union and Mr. Connolly over a long period. For a range of reasons, the scheme is a statutory monopoly and an anachronism with restrictive practices and bad industrial relations. The case for repeal and abolition of the scheme is overwhelming.

Mr. Robin Maxwell-Hyslop (Tiverton): Has my right hon. Friend noticed to what extent the little harbours like Teignmouth and Exmouth have prospered without the dock labour scheme, while the whole hinterland of the areas with dock labour schemes has been crucified by the strangulation of their ports? Is my right hon. Friend aware that I am satisfied that our ports can continue to thrive even with fair competition from those which are now released? Will that not give the reality of economic life to the areas previously strangled? Why are the official Opposition opposing the expansion of employment in the areas that will benefit from the measures that my right hon. Friend has announced today?

Mr. Fowler: The hon. Member for Oldham, West will have to answer that question for himself. What my hon. Friend has said is correct. The most significant feature of the past 20 years has been the fact that the non-scheme ports have developed employment, business and investment. At the same time, we have seen a real reduction in employment in the scheme ports. That is a significant contrast. My hon. Friend has put his finger on the point.

Mr. Ron Brown (Edinburgh, Leith): If the scheme ceases to operate, is not the House and the country giving a charter for cowboys to chase a fast buck at the expense of their employees and of the country? If the dock labour scheme is a hindrance to progress, what about the stock exchange? Will the Secretary of State abolish that? Of course not.

In many ports, including Leith in my constituency, vast efforts have been made to improve productivity and conditions are good for the employees and for the employers. If the Government's proposal goes through, there will be a fight back throughout the country, north and south of the border. The people that I represent will say that the jobs are not to be sold, because they belong to the local community. The Secretary of State must take note of the fact that there will be a struggle.

Mr. Fowler: The first part of the hon. Gentleman's comments took us into areas which even his hon. Friend the Member for Oldham, West did not seek to enter. The hon. Gentleman should bear in mind that this is essentially a decision for Parliament. We shall be putting a White Paper and a Bill before Parliament. A Second Reading will be arranged for the Bill in due course. It seems entirely right that the decision on a statutory scheme such as this should be taken here in Parliament. The hon. Gentleman will get little public support for the vague statements that he is making.

Mr. Allan Stewart (Eastwood): In contrast to the comments of the hon. Member for Edinburgh, Leith (Mr. Brown), does my right hon. Friend agree with me that his announcement today will be warmly welcomed by industry in Scotland because the scheme has caused great economic damage in Scotland, where an efficient port industry is of particular importance? Does my right hon. Friend further agree that recent events in Aberdeen have highlighted the absurdity and the total unacceptability of the present arrangements?

Mr. Fowler: My hon. Friend is entirely right. There is no question but that the Government's proposal will be welcomed in Scotland. The situation in Aberdeen is one of the anomalies that the scheme inevitably produces and Aberdeen, as well as Scotland as a whole, will welcome the change.

Mr. Paul Flynn (Newport, West): My hon. Friend the Member for Oldham, West (Mr. Meacher) mentioned my constituency, in which the port of Newport is situated. I wish that the attention of the House had been concentrated on ports such as Newport which has enjoyed extremely good industrial relations and a good degree of prosperity for a number of years. There has also been an increase and a heightening in the skills at that dock, which handles explosives. It has a marvellous record and was paid a tribute by Customs and Excise for its contribution

in keeping down the import of drugs into the town. The port also handles cargoes that can deteriorate in a short time.

The message that is being given today to the people of Newport is that this is not the act of a reasonable Government. The Government are to introduce a Bill without giving even 24 hours' notice. This announcement will come as a bolt from the black and from the darkness of the prejudice of a deaf and arrogant elective dictatorship.

One point will worry many dockers—knowing that the likelihood is that this proposal will be implemented. What protection will be given for the pensions of those who are involved in the scheme now?

Mr. Fowler: The proposals do not in any way affect the pension rights of registered dock workers. I can give the hon. Gentleman that assurance straight away.

On the strike record, whatever the position in Newport, one point is absolutely certain—the scheme has not ensured good industrial relations. I shall give the hon. Gentleman two figures. Since 1967, when the amended scheme was introduced, we have lost more than 4 million working days because of disputes in scheme ports. Since 1967 there have been 3,569 disputes in scheme ports; and even today the number of days lost in scheme ports is three times the average for industry as a whole.

Dame Peggy Fenner (Medway): My right hon. Friend will be perfectly well aware of the pleasure that I share in his at last recognising with me that not to have done this would have been the defence of the continuously and continually indefensible.As I made my maiden speech on the iniquities of the closed shop, perhaps my right hon. Friend could tell me whether he will make it a really good year this year and include that one as well.

Is my right hon. Friend aware that in Medway, a great port which has had to suffer a good deal from the loss of the dockyards, the workers will appreciate the chance to compete fairly with the non-scheme ports and will look forward to a continuing growth of that lively port industry in my constituency?

Mr. Fowler: I entirely agree, and pay tribute to what my hon. Friend has done over a long time in her statements on the scheme. Perhaps I may add in parenthesis that I already have proposals in a Green Paper on the closed shop.

My hon. Friend is quite correct: our proposals will enable ports like Medway to compete much more effectively than ever before. That is why I say that they will be good not just for non-scheme but for scheme ports. They will be good for industry and for employment.

Mr. Stuart Bell (Middlesbrough): Will the Secretary of State note that the public at large may feel it the height of cynicism and arrogance for the Government to seek to reverse the mandates of two past Labour Governments while not having a mandate of their own to abolish the dock labour scheme? Will he note that there will be considerable unease tonight on Teesside where there is a dock registered scheme, where there has been steady expansion with the full co-operation of the work force and where there will be genuine fears that redundancy will be a passport to unemployment, which we have so often seen in the past?

I welcome the comments made by the Secretary of State in response to my hon. Friend the Member for Newport, West (Mr. Flynn) to the effect that the pension rights will be safeguarded but, when the Bill comes before the House, I can assure the Secretary of State that we shall do all we can to ensure full dockers' rights in the future such as they have had in the past.

Mr. Fowler: It is entirely open and sensible for the hon. Gentleman to say that in the debate on the Bill he and his hon. Friends will want to scrutinise the proposals and to make their own. The right and proper place for that to be done is in Parliament. The scheme is a statutory one. The debate should take place in the House and in Committee in the normal and sensible way in which we organise things.

Mr. Jonathan Sayeed (Bristol, East): My right hon. Friend is to be warmly congratulated on announcing the abolition of a regressive, expensive and anachronistic scheme. Will he confirm that it has cost the country billions of pounds to maintain the dock labour scheme, that the scheme has deeply damaged investment in ports, that it has damaged employment in those same ports and that it has sent ships fleeing to mainland Europe to deal with their cargo?

Mr. Fowler: That is substantially correct. One of the effects of the scheme has been to bring development blight in particular areas where it operates. When the scheme is removed, one of the results will be more investment and the creation of more new jobs in such areas. I am grateful for my hon. Friend's support.

Mr. Gavin Strang (Edinburgh, East): May I make it clear to the right hon. Gentleman that we do not accept the case that he has put forward this afternoon and that we reject his statement about future investment in these ports and the risk of the reintroduction of casual labour? It is for these reasons, among others, that we will oppose the Bill.

Has the Secretary of State not totally failed to explain to the House why he has made this statement at this time, a timing which, according to a telephone call that I made this morning, makes it as big a surprise to the employers as it is to the union? Is it not hard to resist the conclusion that the Government have decided that, at a time when we have a huge and growing deficit on our balance of payments, it may be expedient to run the risk of a long stoppage in our ports?

Mr. Fowler: No, that is not the position, although I welcome the tone of what the hon. Member for Edinburgh, East (Mr. Strang) has said rather more than I welcome the tone of what the hon. Member for Oldham, West said.

I will repeat the position. Few subjects have been more debated than the dock labour scheme. The issues are very clear. It is a statutory monopoly. The fact that a criminal offence was created by this scheme is completely out of kilter with anything else in industrial relations today. It is bad for employment and investment, and it means that management cannot manage effectively. I believe that abolition of the scheme will lead to a better future for those areas that are at present covered by the scheme.

What I detected in what the hon. Gentleman said and what I welcomed is that those are matters to be debated essentially in the House. I hope that the hon. Gentleman and his colleagues will make that absolutely clear.

Business of the House

4.20 pm

The Lord President of the Council and Leader of the House of Commons (Mr. John Wakeham): With permission, Mr. Speaker, I should like to make a statement. The business for next week will be as follows:

MONDAY 10 APRIL—Conclusion of remaining stages of the Electricity Bill (3rd day).

Motion on the Lord Chancellor's Salary Order.

Motion on the Medicines (Fixing of Fees Relating to Medical Products for Human Use) Order.

TUESDAY 11 APRIL—Opposition Day (6th Allotted Day). Until about seven o'clock there will be a debate entitled "The Inadequate Uprating of Pensions and Other Benefits". Afterwards there will be a debate entitled "Safety in the Construction Industry". Both debates will arise on Opposition motions.

Motion to take note of EC document on weights and measures. Details will be given in the *Official Report*.

Motion to take note of EC document on the driving licence. Details will be given in the *Official Report*.

WEDNESDAY 12 APRIL—Debate on a Government Motion on the Fennell report on the investigation into the King's Cross Underground fire (Cm 499).

Motion relating to National Health Service regulations. Details will be given in the *Official Report*.

THURSDAY 13 APRIL—Second Reading of the Road Traffic (Driver Licensing and Information Systems) Bill *[Lords]*.

Afterwards Second Reading of the Atomic Energy Bill *[Lords]*.

FRIDAY 14 APRIL—Private Members' Bills.

MONDAY 17 APRIL—Opposition Day (7th Allotted Day). There will be a debate on an Opposition motion, subject for debate to be announced.

[First Debate on Tuesday 11 April
Relevant European Community Document
4102/89 Weights and measures
Relevant Reports of European Legislation Committee
HC 15-xii (1988-89), para 2 and HC 15-xvii (1988-89), para 1

National Health Service (Travelling Expenses and Remission of Charges) (Scotland) Amendment Regulations 1989 (SI 1989 No. 393)]

Mr. Frank Dobson (Holborn and St. Pancras): I thank the Leader of the House for his statement.

I shall refer first to the point raised by my hon. Friend the Member for Hamilton (Mr. Robertson) at Prime Minister's Question Time. Will the Leader of the House make it his business to ensure that the report of the secretary general to the United Nations Security Council is placed in the Library of the House next week, as was promised by the Prime Minister on Tuesday of this week? Will he bear in mind the convention of which he and the right hon. Lady will be aware—that, when Ministers at the Dispatch Box quote from an official document, they should make that document available to everyone else? Documents that Britain receives at the Security Council must fall into that category, especially as it was not simply that the Prime Minister——

Mr. Harry Greenway (Ealing, North): The hon. Gentleman did not listen to Prime Minister's Questions.

Mr. Dobson: I am talking about the business for next week. Will the hon. Member for Ealing, North (Mr. Greenway) contain himself?

Mr. Speaker: Order. The hon. Gentleman will have his chance later.

Mr. Dobson: As the Prime Minister not only mentioned that document, but also told the hon. Member for Inverness, Nairn and Lochaber (Sir R. Johnston) that he could obtain all the details he needed from that document and that it was available, it appears that the burden falls on the Leader of the House to ensure that, in line with the conventions of the House, that document is made available to everyone.

In view of Sir Leon Brittan's recent confirmation of many people's suspicions of the degree of involvement of the Prime Minister's closest advisers in the leaking of the Attorney-General's letter on Westland, will the Leader of the House tell us whether the Prime Minister will come to the House next week to make a statement and to answer further questions on that matter, and especially to clarify once and for all who knew what and when they knew it?

Will the Leader of the House tell us when we can expect the long-promised and the equally long-delayed debate on student loans?

As there is mounting concern throughout the country about the threat that the Government's National Health Service review poses to the health care of most people, will we have an early debate in Government time to give the Secretary of State the opportunity to answer questions in the House rather than spending taxpayers' money roaming around the country on a Tory party political propaganda exercise?

On the subject of the Department of Health, when can we expect a statement on the Government's response to the Griffiths report on care in the community? The

Department has had that document in its possession for more than a year and surely it should be moving towards giving us some suggestion of the Government's intentions.

In view of the particularly precipitate way in which the Government have managed to come forward with a Bill to abolish the national dock labour scheme, when will they come forward with the Bill that they have promised and on which civil servants have been working for four years—if parliamentary answers of 1985 were truthful—to outlaw the buying and selling of human organs?

Mr. Wakeham: I am grateful to the hon. Member for Holborn and St. Pancras (Mr. Dobson) for asking me six questions about the business for next week. I wondered whether he might have found time today just to say "Thank you" to me for having arranged for the debate on the Fennell report, for which he has been pressing me and also for managing to fit in two Opposition days in the business for next week.

Mr. Dobson: They are not both next week.

Mr. Wakeham: If the hon. Gentleman had listened, I announced two full Opposition days in the business statement for next week.

With regard to the United Nations plan and the documents concerned, I told the House yesterday that the relevant documents have been placed in the Library. They include the Geneva protocol, which has been made public by the South African Government. A further set of documents, which together comprise the United Nations plan, will be placed in the Library today. The secretary general has asked, however, that the report on the recent fighting should be kept confidential for the time being. On reflection, I hope that the hon. Gentleman will consider that the right thing would be to respect the request of the secretary general. Obviously I shall look into the matter in view of the question asked, but I cannot promise that anything will be revealed at the present time.

With regard to the recent television coverage of a television programme, which neither you, Mr. Speaker, nor I have seen, I understand that Sir Leon Brittan made certain statements which he suggested did not add anything new to the position. That is as I understand the matter and, therefore, I see no need for any further statement on the position, which has been well ventilated in the past.

The hon. Gentleman knows that consultations are taking place about student loans and I believe that the right time for a debate on that matter would be later rather than at present.

I agree with the hon. Gentleman that there is a need for a National Health Service debate and I agree that it would be right for the Government to find time for that. The exact timing of it is best left for discussion through the usual channels. I also recognise the consistency with which he has pressed me on the Griffiths report. I understand his disappointment that it has taken rather longer to deal with that matter than he wanted. We are giving active consideration to the report and hope to bring forward our proposals in the near future. We recognise the concern that our response should not be unduly delayed, but it is vital that we reach the right solution in this important area.

There has been some discussion between the Government and the hon. Gentleman's Front-Bench colleagues about the abhorrent trade in kidneys. If we are to make progress as fast as we can—both of us are agreed on that, I believe—it is probably best for those discussions to continue through the usual channels.

Mr. James Hill (Southampton, Test): My right hon. Friend will know that, from time to time, I have asked questions regarding a ports policy for the United Kingdom. The statement by my right hon. Friend the Secretary of State for Employment, who said that the national docks labour scheme is to be reviewed, obviously makes my question about a ports policy null and void. Nevertheless, there is a need not to demoralise the employees of certain ports, because I know that they will put their shoulders behind the new review. The port of Southampton was closed for a whole year in 1981 due to militancy. It is now working well. If we can persuade the Transport and General Workers Union to adopt a reasonable approach, there will be further co-operation. That can only do good to Southampton.

Mr. Wakeham: I agree with my hon. Friend. I am grateful to him for his support for the way the Government are approaching the problem. With the inevitability of these matters, there will be plenty of opportunity for my hon. Friend to raise the issue constructively in the debates that we shall have in forthcoming weeks.

Mr. James Wallace (Orkney and Shetland): Will the Leader of the House arrange for a Minister to come to the House next week to explain why those who were demonstrating in Whitehall today against human rights abuses in the Soviet Union were told to take down their placards before Mr. Gorbachev arrived, which seems to be almost a contradiction in human rights terms?

Secondly, given that we will debate the Lord Chancellor's salary next week but that we do not have a Select Committee on the Lord Chancellor's Department or on the Law Officers' Department, will the Leader of the House consider setting up an ad hoc Select Committee with powers to call for witnesses and papers to look into the Government's proposals for the reform of the legal profession?

Finally, when did the Prime Minister find out that the United Nations secretary general wished the report on the Namibian incidents to be kept confidential?

Mr. Wakeham: I am not in a position to answer the question about the placards in Whitehall, but I shall make inquiries and see that the appropriate answer is given to the hon. Gentleman.

I do not propose to set up a special Select Committee to deal with our law proposals. I believe that the right procedure is that which the Government have adopted, which is to issue Green Papers for discussion. We hope to get as many constructive views as we can. Then the Government will have to make up their mind how best to act.

I cannot answer the hon. Gentleman's third question, but it was certainly not until after my right hon. Friend had said what she did in the House.

Mr. Henry Bellingham (Norfolk, North-West): Can the Leader of the House tell us when the Second Reading of the Bill on the dock labour scheme is likely to take place? Is he aware that today's announcement will be warmly welcomed by the vast majority of people connected with and working in King's Lynn docks, who realise that the

[Mr. Henry Bellingham]

abolition of the scheme will lead to more jobs? It will also lead to much more cargo being handled at King's Lynn and will enable it to compete with non-scheme ports in East Anglia.

Mr. Wakeham: I welcome what my hon. Friend has said. The Bill will be introduced tomorrow and the House will have an opportunity to debate it in the usual way, subject to the usual conventions. I hope to make a business statement including the Second Reading of the Bill in the not-too-distant future.

Mr. Max Madden (Bradford, West): May I draw the attention of the Leader of the House to two early-day motions standing in my name, numbers 672 and 673, concerning freemasonry?

[That this House notes, as reported in the book, Inside the Brotherhood by Martin Short, that most Right honourable and honourable Members who completed a questionnaire issued by Mr. Short in 1986 said that councillors, local government officers, civil servants, policemen, judges and honourable Members should be required to disclose Masonic membership; therefore urges the Select Committee on Members' Interests to make necessary arrangements for appropriate resolutions to be considered by the House to require Right honourable and honourable Members to disclose Masonic membership in the Register of Members' Interest; further urges Parliamentary journalists who are Masons to be required to make an appropriate declaration; and finally urges the appointment of an Ombudsman to whom public servants, including police officers, can make complaints of discrimination in public employment.

That this House congratulates Martin Short on the publication of his book, Inside the Brotherhood; notes that the honourable Members for Ilford South, Croydon South, Chichester, Erewash, Banbury and Belfast North told Mr. Short they were Masons; further notes that Mr. Short believes that the honourable Members for Bury South, Reading East and Keighley are Masons; and finally notes Mr. Short reveals the Masonic Lodge to which Right honourable and honourable Members, Parliamentary Officers and staff belong is called the New Welcome Lodge (5139) which was consecrated in 1929 and meets five times a year at Freemason's Hall in London, and that Parliamentary Journalists who are Mason's belong to the Gallery Lodge (1928).]

May I unusually ask the Leader of the House himself to make a statement next week in view of the support of more than 200 hon. Members from all parties for the proposal that hon. Members who are masons should be required to declare their masonic membership in the Register of Members' Interests? Will the Leader of the House next week ask the Select Committee on Members' Interests to consider the matter urgently so that the necessary motions may be brought to the House?

Mr. Wakeham: As I told the hon. Gentleman in answer to a written question on 3 March 1988:

"Any consideration of changes in the scope of the Register of Members' Interests or the Register of Parliamentary Journalists would, in the first instance, be a matter for the Select Committee on Members' Interests."—[*Official Report*, 3 March 1988; Vol. 128, c. *638*.]

That is where he should pursue the matter.

Mr. Michael Latham (Rutland and Melton): Will my right hon. Friend ensure that the debate on the Health Service that he has promised takes place at an early date and allows us to discuss the proposed contract for general practitioners? I think that he will have noticed that it has not been received with unanimous rapture by the practitioners.

Mr. Wakeham: Whether that is within the scope of the debate is not a matter for me but for you, Mr. Speaker. I should think that my hon. Friend, with his usual ingenuity, will be able to make the points that he wants to make on that subject.

Mr. Pat Wall (Bradford, North): May I bring to the attention of the Leader of the House a recent report by John Bourn, the Comptroller and Auditor General, regarding serious underpayments in the national insurance fund and the social fund—in particular, an estimate of underpayment of unemployment benefit of between £34 million and £89 million? That is very serious because it affects some of the most deprived people in our society. The money was not paid because of an error by Government Departments. The Minister responsible, if he is not prepared to initiate a debate in the House, should make a statement on payment to the unemployed. He should give an explanation and describe what measures will be taken to rectify the matter.

Mr. Wakeham: I do not know whether this is the same report from the Comptroller and Auditor General as that which I looked at the other day. I thought that there had been errors in allocation of costs rather than beneficiaries going short of anything to which they were entitled. However, I shall investigate the matter and I believe that the Public Accounts Committee will also consider some of these issues in the near future. If something has not been properly answered, I shall ensure that it is.

Mr. Charles Wardle (Bexhill and Battle): My right hon. Friend will be aware of the recent consultation about possible amendments to the Financial Services Act 1986. Will he find time for a debate on the subject, with particular reference to the role of merchant banks? Does he recall that in the debate on the financial services White Paper in April 1985, several hon. Members, including me, referred to the possible conflicts of interest in merchant banks, but subsequent legislation left out that aspect?

Mr. Wakeham: I cannot promise that we shall have a debate in the near future but I shall certainly refer my hon. Friend's point to my right hon. Friend the Secretary of State for Trade and Industry to see what can be done in the future.

Mr. Robert Parry (Liverpool, Riverside): Does the Leader of the House recall a question that I put to him some weeks ago regarding early-day motion 395?

[That this House calls upon the South African Goverment to release Mr. Oscar Mpetha a 79 year old trade union leader imprisoned since 1980; notes that he had his leg amputated in 1983, that he is a diabetic with complications and was refused permission to leave prison in 1986 to attend his wife's funeral; believes that his imprisonment is solely due to his struggle on behalf of black workers and as a member of the South African Congress of Trades' Unions and as President of the African National Congress in the

Cape; welcomes Her Majesty's Government's representations to the South African Government on his behalf; and calls upon the South African authorities to release Mr. Mpetha as a matter of urgency.]

That is supported by 118 hon. Members. Mr. Mpetha, who is imprisoned in South Africa, lost his son last week when he was killed in an accident. Will the Government make urgent representations for his immediate release on compassionate grounds?

Mr. Wakeham: As I have said on previous occasions, the Government have made representations to the South African Government on at least five separate occasions. I shall refer the hon. Gentleman's point to my right hon. and learned Friend the Foreign Secretary.

Dr. John G. Blackburn (Dudley, West): Will my right hon. Friend give serious consideration to the report of the Monopolies and Mergers Commission, published on 22 March, on the production, distribution and sale of beers in this country? It will have a widespread effect on the brewing industry. Many of the major breweries are established in the midlands and there is a wave of uncertainty running through the industry. I should value it if my right hon. Friend would give an assurance that there will be a debate on this important subject.

Mr. Wakeham: It is an important subject and, in another capacity, as chairman of the Government's committee on the misuse of alcohol, I know that changes in the structure of the brewing industry are important for us to consider. However, many of my Government colleagues are also considering the matter, so it is being carefully examined.

Mr. D. N. Campbell-Savours (Workington): In light of the fact that Mr. Tiny Rowland has repeatedly used the Lonrho broadsheet to call for the prosecution of the Al-Fayeds over their trading practices, is it not now time for the Government to review the decision taken in 1977, which meant that prosecutions would not be brought under section 84 of the Larceny Act 1861, section 19 of the Theft Act 1968, and section 7 of the Exchange Control Act 1947 or for conspiracy to commit breaches of the Southern Rhodesia (United Nations Sanctions) (No. 2) Order 1968? Is it not time to review the decision and bring prosecutions under all four headings against the owners of *The Observer*?

Mr. Wakeham: As the hon. Gentleman knows, questions of prosecution are not for me. He may or may not have a case on the reforms of such matters, about which he is knowledgeable, but I regret that, even if they were acceptable to everybody, I could not find time for a debate next week. However, I shall refer the matter to my noble Friend the Secretary of State for Trade and Industry.

Mr. Tony Marlow (Northampton, North): I did not catch all of my right hon. Friend's statement, but may I draw his attention to the fact that during yesterday's sitting of the Select Committee on European Legislation the recommendation was made that a heavily amended draft directive on broadcasting should be brought before the House for debate before the common position is agreed? As that common position may well be agreed next Thursday, will my right hon. Friend look into that matter? This is an important matter, as the directive has been much amended since it was last debated by the House as long as two years ago.

Mr. Wakeham: I understand my hon. Friend's concern and those expressed in the debate on the original proposals in January 1987, most of which have been met by the latest draft directive on broadcasting. I accept that the proposal has changed, but there has been a debate on the subject and I hope that my hon. Friend agrees that the changes were largely foreseeable and will generally find favour in the House. We have a heavy business programme next week which I cannot easily alter, but I am having discussions with my hon. Friend the Minister of State, Home Office on the subject.

Mr. Merlyn Rees (Morley and Leeds, South): Will the Leader of the House reconsider the need for a statement next week as a result of Sir Leon Brittan's further revelation, for which we do not have to wait until Friday night; we have already heard it on television and read it in the newspapers. There is a strict constitutional convention in Britain, which does not have a written constitution, that Law Officers' letters should not be revealed. Two Law Officers nearly resigned on the issue and we now find that two civil servants at No. 10 took it upon themselves to reveal that letter, self-authorised. Two basic questions arise: first, why did they do it, and, secondly, why have they not been removed from their posts for doing so?

Mr. Wakeham: The right hon. Gentleman, who has a reputation for objectivity in such matters, should look at the report of the Select Committee on Defence and the debates in the House at the time. If he does that, he will see that nothing new has arisen. These matters were referred to. If the hon. Gentleman is interested in names he should look at the Select Committee's report, which was published and debated a long time ago. All the issues have been well ventilated. There is nothing fresh or new in the statement made by Sir Leon Brittan, as he confirmed yesterday.

Mr. Harry Greenway (Ealing, North): Is my right hon. Friend aware that, if President Gorbachev had arrived 24 hours earlier and had used the Underground, he would not have been able to keep his appointments, like many other Londoners, owing to the most uncalled for strike by the drivers, and, according to a CBI report, if he comes in 10 years' time, unless he uses a helicopter he will not be able to move because London traffic will be at a standstill. Therefore, may we have a debate next week on the management of traffic in London, and could the motion include the possibility of a Minister with responsibility for London's traffic?

Mr. Wakeham: I was at the airport yesterday to meet President Gorbachev, when adequate road transport was available for him. However, I have every reason to believe that those arrangements were made regardless of whether there was a strike of Underground workers. I regret that, against the advice of the union, Underground workers took unofficial action yesterday. It would be much better if proper negotiations to settle the dispute were entered into without delay. On my hon. Friend's wider question about ministerial changes, I do not think that that is a matter for me or that it arises today in particular.

Mr. Nigel Griffiths (Edinburgh, South): Will the Leader of the House make time for an early debate on the repeal of rent legislation which has brought about a fourfold increase in the rents in housing association properties in my constituency, which has been forced on retired people and highlighted so well in *The Scotsman* today? Will the right hon. Gentleman give time for an early debate on the plight of retired people in retirement homes?

Mr. Wakeham: I cannot promise the hon. Gentleman a debate, but I should be tempted to have one because I suspect that his analysis of the situation was not a particularly balanced one. However, the points he has raised about elderly people seem to be relevant to the debate that I have managed to arrange for Tuesday of next week.

Sir Ian Lloyd (Havant): My right hon. Friend will be aware of the widespread concern in all parts of the House as a result of the tragic events on the Namibia-Angola border. He may also be aware that those of us who recall the record of the United Nations in Katanga do not exactly have the utmost confidence in the ability of that organisation to react expeditiously and impartially. My right hon. Friend may not be aware of recent reports that aerodromes for advanced fighter aircraft are being constructed on the Angolan border, and that specialist Vietnamese troops are being brought into Angola to replace the Cubans. In the light of these very serious events, may we have an early opportunity to debate this matter?

Mr. Wakeham: I recognise the importance of the matter, and I recognise my hon. Friend's knowledge of that area, based on many years' experience. I wish that I could offer a debate in the near future. I shall certainly bear the matter in mind, but I cannot give my hon. Friend a promise.

Ms. Diane Abbott (Hackney, North and Stoke Newington): May I draw the attention of the Leader of the House to early-day motion 44 on cosmetic experiments on animals?

[That this House is appalled by the failure of the Animals Act 1986 to prevent the testing of animals for cosmetic purposes; notes that in 1987 there were still 14,534 animals being used in cosmetic experiments and considers this totally unacceptable; and calls upon the Home Secretary to cease the granting of any further licences for cosmetic testing and furthermore to put a time limit on those existing licences for the same purposes.]

May I draw to his attention the fact that this is a completely barbaric and unnecessary practice, about which I have had very many letters from constituents? The early-day motion has been signed by more than 200 hon. Members. In the light of the feelings of millions of people up and down the country, will the Leader of the House make time for an early debate on this issue?

Mr. Wakeham: I have seen the hon. Lady's early-day motion. The term "cosmetic" covers not only beauty preparations, such as lipstick and perfumery, but hygienic products, such as toothpaste and anti-dandruff shampoos, as well as preparations to combat other problems, particularly for workers in industry. It is essential that all these products are safe to use and safe to produce. Safety testing, for mildness only, involves some use of animals. All applications for cosmetic testing licences are examined by the Animal Procedures Committee, whose first report, published on 6 December, describes the difficult issues involved and its approach to them. I cannot promise the hon. Lady a debate at the present time, but it is a matter that I shall certainly bear in mind.

Mr. Neil Hamilton (Tatton): I warmly endorse my right hon. Friend's decision not to waste any more of our time debating the Westland affair and its aftermath. Sir Leon Brittan, in his most recent remarks, has added nothing to what we knew already. He has not said anything that is inconsistent with anything said by the Government in the past. Although the endearing, but slightly barmy Member for Linlithgow (Mr. Dalyell) and his friends may have an obsession——

Mr. Speaker: Order. I think the hon. Gentleman can do better than that. I do not think that we will have "barmy" here.

Mr. Hamilton: It was a slip of the tongue, Mr. Speaker, which I certainly withdraw.

Although the hon. Member for Linlithgow and many of his hon. Friends are obsessed by this topic, the country at large has no interest in it whatsoever.

Mr. Wakeham: As I have indicated, I do not think that there is anything new to be debated or discussed, and I am glad to have the support of my hon. Friend.

Mr. Tam Dalyell (Linlithgow): Is the Leader of the House suggesting that the recent statement by Sir Leon Brittan is in any way consistent with the evidence given, on behalf of the Government, by Lord Armstrong of Ilminster to the Select Committee? Is he saying that the Select Committee had any notion that there was explicit approval by two of the most senior civil servants? Would the Leader of the House feel it right next week to make a statement on his own position, in the light of the assertions by his hon. Friend the Member for Aldershot (Mr. Critchley) in the book "Heseltine"—the unauthorised biography—page 153, that he was present on 4 and 5 January 1986 when there were discussions at Chequers on tactics in relation to the Law Officers' letter, that he was present on 18 December 1985, with Mr. Bernard Ingham and Lord Whitelaw, when the strategy was being discussed, and that he was party to the inner Cabinet decisions on 9 January? Can he confirm his hon. Friend's statements, which are in writing?

Mr. Wakeham: The last time the hon. Gentleman raised the subject in that form he seemed to have got stuck at page 153 of the book. I suggest that he finishes the book, but I do not think that anything in it will give him any grounds for saying that the Government have not been forthcoming and that there have not been proper inquiries. Nothing new has come out in what Sir Leon Brittan has said. There is not just my word for it; Sir Leon himself, said there is nothing new. I see no grounds for an inquiry.

Mr. Ian Taylor (Esher): Will my right hon. Friend find Government time for a debate about the inadequacies of the law on travelling people, some of whom may be gipsies? Many of my constituents have suffered great invasion of privacy and often abuse, from these people, who just camp without invitation. The police find it very difficult to move them on under the current legislation. Will he find time for this debate at an early date and will

he ask his right hon. Friend the Secretary of State for the Environment for a White Paper on the Caravan Sites Act 1968?

Mr. Wakeham: I cannot promise my hon. Friend a debate, but I recognise that this matter causes concern in quite a number of constituencies, including his and, as a matter of fact, mine. I wonder whether my hon. Friend might consider raising the matter on an Adjournment debate.

Mr. David Winnick (Walsall, North): Would it not be appropriate for the Prime Minister to make a statement next week to try to explain to the House and the country how her private secretary and her press secretary could approve and authorise the leak of the letter from the Solicitor-General unless they knew quite well that it would be her wish that they should do so? The Leader of the House tells us that what was said yesterday by Sir Leon Brittan is nothing new, and all the rest of it, but does he not recognise and appreciate that what is at stake here is the Prime Minister's integrity and truthfulness? My hon. Friend the Member for Linlithgow (Mr. Dalyell), although he has been mocked and baited by the Tories over this issue, has been absolutely right.

Mr. Wakeham: These issues were well and truly debated at the time and nothing new has come up. Whether the hon. Gentleman likes it or not, that is the position. He might have got a little excited yesterday, but he really has missed the point. There is nothing new to discuss.

Mr. Doug Hoyle (Warrington, North): Will the Leader of the House take time to read the two contributions on the Westland affair by his right hon. Friend the Prime Minister? If he does he will find that she suggested that her office had nothing to do with it. Sir Leon Brittan said yesterday quite categorically that Mr. Ingham and Mr. Powell approved the action. Will the right hon. Gentleman ask his right hon. Friend to come to the House and make a statement on why those two close associates of hers have not resigned? Will she at the same time give us a full, factual, detailed account of this squalid matter of the missing letter?

Mr. Wakeham: The hon. Gentleman invites me to take a quiet moment to read all these documents and speeches again. I did that just this morning in order to refresh my mind because I thought that some of these matters might come up in business questions. I suspect that the hon. Gentleman has not read them and I suggest that he should, because he would then probably agree with me that nothing new has arisen and therefore there is no need for a debate.

Mr. Harry Cohen (Leyton): I have a two-part question. First, will the right hon. Gentleman give an assurance that the Prime Minister will make a statement to the House early next week on her discussions with President Gorbachev? Secondly, just in case President Gorbachev asked to see me, I thought that I would brush up on a video on nuclear disarmament from the Library, only to find after a short viewing that another Member wanted to watch the television, and I was chucked out of the room. That is not the first time this has happened. Can we make sure that there is a room in this place in which Members can look at videos to do with work?

Mr. Wakeham: Any time the hon. Gentleman wants to watch the television and he cannot find a place to do so, if he will drop me a note I will look into it immediately. I am very happy to assist him in any way on that part of his question. On the first part of his question, I cannot give any undertaking that the Prime Minister will be making a statement on her talks with President Gorbachev.

Mr. Greville Janner (Leicester, West): Surely the Leader of the House can and ought to give an undertaking to the House that the Prime Minister will report not merely to the press but to the House on this very important and welcome visit by Mr. Gorbachev. Does the right hon. Gentleman know that, while the Jewish community in this country unanimously welcomes the visit, it remains deeply concerned at the large number of Jewish families still not allowed to emerge from the Soviet Union in spite of the fact that there has been a most welcome change in the Soviet Union's attitude both to emigration and to the rights of Jewish people within the Soviet Union? In particular, there are families such as the Upspensky family, the Chernobilsky family and the Lurie family who have been waiting over 10 years.

I was disturbed to hear the right hon. Gentleman say that there was to be no raising of individual cases by the Prime Minister with Mr. Gorbachev. Will he please reconsider his remarks and his failure to assure the House that there will be a statement on both human rights and the allegations that have been made about the sale to the Libyans by the Soviets of long-distance aircraft, which of course would have amazing potential in the hands of somebody like Gaddafi?

Mr. Wakeham: I am not in a position to say anything about the details of the talks, which are still going on. What I said was perfectly sensible and fair. My right hon. Friend the Prime Minister will, of course, raise the general matters in her talks with Mr. Gorbachev, but it seemed to be the best use of the day for my right hon. and learned Friend the Foreign Secretary to raise the individual cases with him. As the hon. and learned Gentleman has great knowledge of, and long experience in, these matters and his contribution is acknowledged by hon. Members on all sides of the House, I certainly take seriously what he says. Statements in the House are governed by custom and practice and my right hon. Friend the Prime Minister will observe the normal customs in dealing with these matters. It is not for me to say at the Dispatch Box what she will or will not do. It is not the practice always to have statements after bilateral discussions.

Mr. Bob Cryer (Bradford, South): Can the Leader of the House confirm that the two EEC documents on Tuesday will be debated for only one and a half hours each? If that is the case, surely it is an inadequate amount of time when dealing with the EEC bulldozer yet again imposing more legislation on the United Kingdom.

May I draw the right hon. Gentleman's attention to early-day motion 670 and ask for a debate on it?

[That this House draws attention to the editorial, Vilest M.P. in Britain, in the newspaper Today of 5th April, referring to the honourable Member for Dover; notes its expression of grave concern at the growth of violence against women; and urges all honourable Members to set an example of courtesy and restraint, whether towards reporters, photographers or Spanish police.]

[Mr. Bob Cryer]

Then the hon. Member for Dover (Mr. Shaw), referred to in the motion, will be able to explain how he falsely alleged that pickets at Dover—National Union of Seamen members sacked by P and O—were engaging in brutality and the double standard of the fact that the hon. Gentleman is accused by *Today* of beating up a woman photographer. That sort of double standard should be the subject of debate. At the same time, the hon. Member for Mid-Staffordshire (Mr. Heddle), who has been engaging in fisticuffs with the Spanish police, can explain his position as a representative of the law and order party. Can the Leader of the House, in the same debate, explain why there is this extensive thuggery in the parliamentary Conservative party and has it anything to do with lager drinking on the quiet?

Mr. Wakeham: If we were to have this debate I am glad that I would not have to be in the Chair, Mr. Speaker. There seem to be rather a lot of subjects and I would not want to have to keep that sort of debate in order.

I confirm that the motions on Tuesday night on EC documents will follow the Standing Orders of the House. These matters have been agreed through the usual channels and, assuming there are enough speakers for the Opposition Day debate and that does not end until 10 o'clock, there will be one and a half hours for each of those two debates.

With regard to early-day motion 670, I cannot arrange a debate on that. Anyone who wishes to complain of assault can go to the police or deal with the matter in other ways. If I had to arrange a debate every time that occured or every time the hon. Gentleman made some wild allegations about my hon. Friends, we would never get down to all the important matters such as dealing with the levy scheme.

Mr. Harry Ewing (Falkirk, East): Unfortunately the Leader of the House does not appear to be aware of the seriousness of Sir Leon Brittan's allegations in the television programme. If the Leader of the House is saying that what Sir Leon Brittan said in that programme is acceptable to the Government, he is saying that the Government knew that the press secretary and the private secretary leaked the Law Officer's letter. If that is accepted by the Leader of the House, it is a staggering new development and gives rise to a serious situation.

Against that background will the right hon. Gentleman come to the House next week and explain why my hon. Friend the Member for Linlithgow (Mr. Dalyell) can be named and suspended from the proceedings of the House for five days on a motion by the Leader of the House for what is now seen to be the truth? In what circumstances can the suspension be removed, and if there are no provisions for removing it can the matter be referred to the Select Committee on Procedure?

Mr. Wakeham: I think that we are making progress when the charming hon. Gentleman, whom the whole House respects, can talk so much rubbish in such a short time. We clearly recognise that it is not a question of the Opposition fox having been shot, because there was no fox for them to shoot in the first place. The allegations and problems that arose over what is known as the Westland affair were fully debated at the time. We had debates in the House and Select Committee reports, and nothing new has emerged in recent times to require any further discussion or debate about the matter. Obviously, the hon. Gentleman and his hon. Friends are disappointed that that should be the case. That is why the Opposition put up the charming hon. Member for Falkirk, East (Mr. Ewing) to try to make something out of the mess in which they find themselves.

Mr. Keith Vaz (Leicester, East): Could we have a statement or debate on the operation of regulations made under section 1 of the Road Traffic Regulation Act 1984? After a four-year campaign by shopkeepers and residents in the East Park road area of my constituency, the city council established some laybys but, because of the provisions of section 1 of the Act, nobody can park in them until the double yellow lines have been removed. Under the terms of the Act it will take seven months to remove those lines. Will the Leader of the House have a word with the Secretary of State for Transport to see whether we can amend the regulations to end this absurd scenario?

Mr. Wakeham: I do not entirely accept what the hon. Gentleman says, but I certainly accede to his request to raise the matter with my right hon. Friend the Secretary of State for Transport, and I shall write to him.

Mr. Richard Caborn (Sheffield, Central): Will the Leader of the House arrange for the Prime Minister to come to the Dispatch Box next week to make a statement about the Namibia crisis and the implementation of United Nations resolution 435? The Prime Minister should do that because she misled the House on no fewer than three occasions on 4 April. She told the House:

"There is no provision in the United Nations plan for SWAPO to have bases in Namibia."—[*Official Report*, 4 April 1989; Vol. 150, c. 15.]

That would be in contravention of protocol SI 13120 of 26 February 1979.

Secondly, as my hon. Friend the Member for Holborn and St. Pancras (Mr. Dobson) said, the statement by the secretary general to the Security Council is not in the Library and is not likely to be put there because it is a confidential document. The implication about SWAPO and the impression given to the outside world by the House was based on that report which we cannot see, although we were told at the time that we would have sight of the document.

The third matter is about SWAPO being a signatory to the Geneva protocol. That is mentioned in column 15 of the *Official Report* of 4 April 1989. That is not the case. SWAPO is not a signatory to that and the letter from the leader of SWAPO to the secretary general did not accept the protocol, which had four signatories. Misleading statements were given to the House indicating a totally biased approach against SWAPO. This is a serious matter, because we are talking not just about the independence of Namibia but about matters that affect the whole of southern Africa. As I have said, the Prime Minister misled the House on three occasions and she should now come to the House and make a statement.

Mr. Wakeham: I do not accept that at all. We have discussed whether the documents were in the Library and I recognise that there was some misunderstanding. The first requirement is for urgent action to restore the ceasefire under the authority of the United Nations. We are active in promoting that. Secondly, it is important for

all parties to hold to the terms of the United Nations plan for the independence of Namibia and to the other international undertakings, notably the Geneva protocol. It has been suggested that there was a provision for SWAPO bases in the country. That assertion is based on proposals made by the then secretary general in February 1979. Those were overtaken by a subsequent agreement in 1982 by the parties involved to monitor bases in Angola and Zambia. That is why there is no provision in the secretary general's report of 23 January, which sets out his proposals for the role of the United Nations transition assistance group, for any SWAPO bases inside Namibia.

Points of Order

5.7 pm

Mr. Max Madden (Bradford, West): On a point of order, Mr. Speaker. May I raise with you the procedures that were observed today during Prime Minister's Question Time? Some of us were rather puzzled about why question No. 4 was linked to question No. 8. It is unprecedented for questions to be linked at Prime Minister's Question Time, and the linking today prevented hon. Members from asking questions Nos. 5, 6 and 7. Today as always well over 100 hon. Members put down a standard question. Why should what is traditionally called the "closed question" be given priority? If this is the name of the new game, you are likely to be faced, Mr. Speaker, with hon. Members putting down questions in that way in the hope that they will be linked and will therefore obtain priority. Will you look urgently at this matter and advise the House, because if an unfortunate precedent has been set today it should be removed as quickly as possible.

Mr. Speaker: I thank the hon. Gentleman for his point of order. I share his concern about this matter and have made my views known.

Mr. Bob Cryer (Bradford, South): Further to that point of order, Mr. Speaker. Could you make a statement saying quite clearly, not that you have views about the matter but that you will not accept linking of questions to the Prime Minister? You will see that later in the Order Paper there is another question identical in type and form to questions Nos. 4 and 8. Quite clearly conspiracies could develop to flood the Order Paper so that one party could dominate the Order Paper to the exclusion of other parties. It would simplify matters if it was understood that there would be no linking at all.

Mr. Speaker: The linking of questions is a matter for Ministers and not for the Chair. As I have said, I share the concern expressed about this matter for the very reasons that hon. Members have mentioned.

Several Hon. Members *rose*——

Mr. Speaker: Order. I cannot say any more about the matter. I hope that it will not happen again.

Mr. Alan Williams (Swansea, West): Further to that point of order, Mr. Speaker. I clearly recollect one of your predecessors intervening when questions near the top of the Order Paper were linked with later ones. That was about 10 years ago. The Speaker of the day intervened and stopped that practice. I note and I am grateful for the fact that you have made your views known, Mr. Speaker. May we have some assurance that your representations will be as effective as those of your predecessor?

Mr. Speaker: The right hon. Gentleman's knowledge of the precedents of this matter is rather greater than that of those who advise me. I will certainly take into account what he has said.

The Lord President of the Council and Leader of the House of Commons (Mr. John Wakeham): Further to that point of order, Mr. Speaker. I have no strong views about these matters and I will seek to do whatever is in the best interests of the House. In his enthusiasm to show his great knowledge of this matter, the right hon. Member for Swansea, West (Mr. Williams) did not perhaps consider the Order Paper or the problem very carefully. If he does, he will see that whether what I did was generally acceptable or not, is one matter. However, there were three questions between questions 4 and 8. Two of them were reached and those hon. Members who asked them have no particular grounds for grievance. The other question was tabled by my hon. Friend the Member for Ealing, North (Mr. Greenway) who, in spite of his question not being reached, seemed to manage quite well.

Mr. Frank Dobson (Holborn and St. Pancras): Further to that point of order, Mr. Speaker.

Mr. Speaker: Order. We have a very busy day ahead of us. I have already made my views on this matter clear and the Leader of the House has accepted what I have said.

Mr. Nigel Spearing (Newham, South): On a point of order, Mr. Speaker.

Mr. Dobson: Further to the point of order, Mr. Speaker. It is my understanding that under the conventions of this House it is accepted that, roughly speaking, Ministers can decide whether to link questions. However, there is a convention over and above that which states that the linking should apply only to questions which are likely to be reached. Many hon. Members, probably from both sides of the House, are very dubious about a development in which a question which was on the borderline of not being reached can be linked. Having been linked, other questions tabled by Members who came higher in the ballot were not reached. The House would want a general view and a ruling from you, Mr. Speaker, if Ministers are to believe that they can link one question with one which may be so far down the list that it receives a leg up and is answered when it would not otherwise be answered.

Mr. Doug Hoyle (Warrington, North): Further to the point of order, Mr. Speaker. I want to correct the Leader of the House. Question 6 to the Prime Minister stood in my name and that certainly was not reached. Question 5 was reached, but questions 6 and 7 were not. Question 8 had precedence. That is what the argument is about.

Mr. Speaker: I agree.

Mr. Spearing: On a point of order, Mr. Speaker. You will know that when tabling questions, particularly about matters which are regarded as historic, a point is reached when it is questionable whether matters are new in relation to the events in question. My point of order is relevant to

[Mr. Spearing]

the courteous exchange between my hon. Friend the Member for Falkirk, East (Mr. Ewing) and the Leader of the House.

The Leader of the House said that nothing new had arisen from the statement made by Sir Leon Brittan. I wonder whether you will allow the Leader of the House, through you, Mr. Speaker, on this point of order, to tell us where in previous exchanges in the House or in any Select Committee report the two civil servants named by Sir Leon Brittan are named as being responsible for the leak. Unless and until such a demonstration is made in this House now or in future, the assertion of the Leader of the House must be found wanting and questions can be tabled which otherwise would not be raised.

Mr. Speaker: It is a great pity that the hon. Gentleman was not here—at least I did not see him here—during business questions, because he could have put that question to the Leader of the House then.

Mr. Tony Marlow (Northampton, North): Further to that point of order, Mr. Speaker. A lot of hon. Members would take a different point of view and would be very grateful if you could protect the House from the turgid and continuous regurgitation of this boring and bogus historical issue which may be of rotting political interest to a small out of touch portion of the chattering classes, but the vast majority of the country could not give a tuppeny whatever about it.

Mr. Spearing: Further to that point of order, Mr. Speaker.

Mr. Speaker: Order. We have a very long day ahead of us. If the hon. Member for Newham, South (Mr. Spearing) has a legitimate point of order, I will have to deal with it.

Mr. Spearing: I invite you, Mr. Speaker, on this very important matter, to ask whether the Leader of the House would be willing to demonstrate where these matters were made explicit—namely, that the two civil servants concerned were named in official documents and therefore there is nothing new. Unless that is done, the House may doubt the words used by the Leader of the House in reply to my hon. Friend the Member for Falkirk, East (Mr. Ewing).

Mr. Robert Parry (Liverpool, Riverside): On a point of order, Mr. Speaker. Can you explain why, in the statement on the abolition of the dock labour scheme, as the only Liverpool Member in the House who has Liverpool docklands in his area, I was not called?

Mr. Speaker: I can easily explain that. With the greatest good will in the world to all hon. Members, it would have been completely impossible for me to call every hon. Member who had an interest in the matter during the statement. It is a question of judgment on the part of the Chair to try to have every part of the country represented. I am extremely sorry for the hon. Gentleman. I called him during business questions and I thought that he might have raised his point then.

Mr. Harry Ewing: Further to that point of order, Mr. Speaker. As you know, I am a great student of procedure in this House. I have sat here for endless hours without being the slightest bit interested in the debate—just watching you very carefully to see how you run the business. My interest in procedure has been heightened with my appointment as chairman of the Scottish convention on the constitution issue. I thought about asking to try your wig on, Mr. Speaker, but I had better not.

I have noticed in recent weeks that there is a new practice of the Chair calling Conservative Back Benchers after the Opposition Front Bench spokesman has questioned the relevant Minister—today it was the Chancellor of the Exchequer. For my benefit, can you explain what procedural advantage is gained from that?

Mr. Speaker: That is a matter of judgment for the occupant of the Chair. One day perhaps the hon. Gentleman may have this very difficult job.

Statutory Instruments, &c.

Mr. Speaker: With the leave of the House, I will put together the eight motions relating to statutory instruments.

Ordered,

That the Community Service Orders Rules 1989 (S.I., 1989, No. 191), be referred to a Standing Committee on Statutory Instruments, &c.

That the Air Quality Standards Regulations 1989 (S.I., 1989, No. 317), be referred to a Standing Committee on Statutory Instruments &c.

That the Health and Safety (Emissions into the Atmosphere) (Amendment) Regulations 1989 (S.I., 1989, No. 319), be referred to a Standing Committee on Statutory Instruments, &c.

That the Control of Industrial Air Pollution (Registration of Works) Regulations 1989 (S.I., 1989, No. 318), be referred to a Standing Committee on Statutory Instruments, &c.

That the Criminal Legal Aid (Scotland) (Fees) Amendment Regulations 1989 (S.I., 1989, No. 388), be referred to a Standing Committee on Statutory Instruments, &c.

That the Legal Aid (Scotland) (Fees in Criminal Proceedings) Amendment Regulations 1989 (S.I., 1989, No. 390), be referred to a Standing Committee on Statutory Instruments, &c.

That the Confirmation to Small Estates (Scotland) Order 1989 (S.I., 1989, No. 289), be referred to a Standing Committee on Statutory Instruments, &c.

That the Gaming Act (Variation of Fees) (Scotland) Order 1989 (S.I., 1989, No. 362), be referred to a Standing Committee on Statutory Instruments, &c.—*[Mr. Gerald Howarth.]*

Orders of the Day

Electricity Bill

As amended (in the Standing Committee), further considered.

New clause 7

ENERGY CONSERVATION

'. The Director shall have a duty to promote the efficiency and conservation of energy and in carrying out that duty shall in particular—

(a) ensure that public electricity suppliers take such active steps as, in his opinion, are reasonable to maximise energy efficiency and conservation; and

(b) set annual targets for improvement in energy efficiency for public electricity suppliers which he shall publish and on the attainment of which he shall report to the Secretary of State'.—*[Mr. Blair.]*

Brought up, and read the First time.

5.17 pm

Mr. Tony Blair (Sedgefield): I beg to move, That the clause be read a Second time.

Mr. Speaker: With this it will be convenient to discuss the following: New clause 12—*The Deputy Director General of Electricity Supply for Energy Conservation*—

'.—(1) The Secretary of State shall appoint an officer to be known as the Deputy Director General of Electricity Supply for Energy Conservation (in this Act referred to as the Deputy Director for Conservation) the purpose of carrying out functions relating to energy conservation and efficiency.

(2) The Deputy Director for Conservation shall have a duty to exercise the functions assigned to him by this Part in the manner which he considers is best calculated to secure—

(a) that all functions relating to the supply, generation and transmission of electricity are carried out in a manner that requires the most efficient use of electricity;

(b) that all functions relating to the supply, generation and transmission of electricity are carried out in a manner that requires the conservation of energy;

(c) that no new plant is developed unless it is proved to the satisfaction of the Deputy Director for Conservation that the required capacity cannot be met by additional measures of efficiency or conservation.

(3) An appointment of a person to hold office as the Deputy Director for Conservation shall be for a term not exceeding five years; but previous appointment to that office shall not affect eligibility for re-appointment.

(4) The Secretary of State may remove any person from office as Deputy Director for Conservation on the grounds of incapacity or misbehaviour.

(5) Subject to sub-sections (3) and (4) above, the Deputy Director for Conservation shall hold and vacate office as such in accordance with the terms of his appointment.

(6) The provisions of Schedule 1 to this Act relating to the director shall have effect with respect to the Deputy Director for Conservation.'

New clause 14—*Environmental Duties*—

The Secretary of State and the Director shall each have a duty to exercise the functions assigned to him in this part in a manner which is best calculated to preserve, protect and improve the environment and to this effect shall place on all licence holders a duty:

(i) to achieve target improvements, which shall be set annually, in the efficient use of energy;

(ii) to achieve target reductions, which shall be set annually, in pollution.

Amendment No. 117, in clause 7 page 6, line 17, at end, insert—

'(c) such conditions as the Director may determine which enable the holder of a licence to conform to pollution legislation through:—

(i) energy efficiency measures;

(ii) the expansion of alternative renewable generating sources;

(iii) a system determined by the Director which allows one licence holder to offset the reduction requirements of another licence holder.'.

Amendment No. 124, in clause 8 page 7, line 4, after 'supplier', insert '(a)'.

Amendment No. 126, in clause 8 page 7, line 6, at end add—

'(b) to promote energy conservation in the supply and use of electricity to his consumers.

Amendment No 128, in clause 8 page 7, line 11, after 'competition', insert 'and energy conservation.'.

In connection with this grouping, I am prepared to allow reference to new clause 17 which is an amended version of former clause 13. I have not selected it for a separate division.

Mr. Blair: The purpose of new clause 7 is to impose on the Director General of Electricity Supply a duty to

"promote the efficiency and conservation of energy and in carrying out that duty . . . to ensure that public electricity suppliers take such active steps as, in his opinion, are reasonable to maximise energy efficiency and conservation and set annual targets for improvement in energy efficiency."

New clause 14 supplements that by imposing a duty on the director general and the Secretary of State to set targets for improvements for the emission of pollutants.

We will debate energy conservation and more environmentally beneficial ways of generating electricity under this group of amendments. Later we will combine heat and power and discuss other matters relating to the environment. This is effectively "environment day".

I want to begin by referring to an intriguing press release from the Press Association the other day. It revealed that next week the Secretary of State will have talks with Soviet Ministers about energy use and the need to safeguard the environment. He will do that during his five-day trip as head of a delegation of top business men. I found it rather intriguing and not a little bizarre that he should go abroad next week to promote environmental concerns in the Soviet Union—matters over which he has no responsibility—while he does not take the opportunity to promote environmental concerns this week during the Electricity Bill debates, a matter for which he is directly responsible. It occurred to me that perhaps he was not acting so much in his capacity as the present Secretary of State for Energy, but in the capacity of a future head of the Department of Trade and Industry—a position he desires to occupy in future. Perhaps we will find out about that later.

The Bill is the most important single measure touching on the environment that we shall debate this Session, yet virtually nothing in it provides even the mildest encouragement to energy conservation, which is the biggest contribution to meeting concern about the environment that we can make. The new clause sets the Government a fundamental test of their sincerity. Is green just the colour of the Prime Minister's rhetoric—a passing flag of convenience to protect her in dangerous political waters—or is she prepared to match words with action and to stand up to the industry's vested interests? So far, from the evidence in the Bill, the answer is a resounding no.

Every amendment promoting vigorous action to conserve energy—they numbered about 30 in Committee

[Mr. Blair]

—has been defeated. Instead, we have a derisory and pathetic response of such inadequacy that it casts doubt upon the commitment of those who make it. We debate energy conservation against the background of a Select Committee report on privatisation that wanted the regulator to require public electricity suppliers to come forward with energy conservation schemes. We debate it against the background also of our European obligations to promote energy conservation. However, clause 3, which lists the director general's primary duties, does not include energy conservation or efficiency. They are only mentioned as a secondary duty, subject to the primary duties, in subsection (3). The Bill contains nothing specific.

If one examines the licences that will govern both the public electricity suppliers and the generators, one finds an alarming state of affairs. All that is said in specific terms about energy efficiency in relation to the area boards that will supply electricity appears in condition 18 on page 83 of the draft licence. Licensees—the area boards—will be obliged to prepare a statement of general information about electricity efficiency

"and make a copy of such statement available for inspection by members of the public at each of the relevant premises during normal working hours."

The notion that that is an adequate contribution to energy efficiency is laughable. However, we find that in the terms of the licence for those generating electricity—the Secretary of State or his hon. Friend the Minister will advise me if I am wrong—there is not one single specific duty in relation to energy conservation. It is scarcely any wonder that the Bill's existing provisions have provoked the ridicule of every serious environmental lobby group.

The one argument that is not available to the Government is that energy conservation does not matter. It is not disputed that energy conservation is important. The question is how best to promote it. The Government fail in terms not only of the test that we set them but of the test that they set themselves. That is of a piece in the policy of the Government, who cut the budget of the Energy Efficiency Office, ceased to allow home insulation grants, and scrapped industrial energy schemes. Soon, all that will be left is a massive television advertising campaign—the usual substitution of style for substance that has become the Government's hallmark.

It is vital that action is taken in respect of the greenhouse effect, for example, which may be small in its terms of global impact but is still of importance in relation to the electricity industry's emissions. Also, acid rain has been established as an environmental problem. What is unbelievably depressing about the Government's response is that they see in the evidence about greenhouse gases or acid rain, not an opportunity to promote environmental concern but a chance to make the case for nuclear power.

Those environmental hazards first came dramatically to public notice last year, although many people had known about them for a long time. The Prime Minister, in an interview in *The Times*, commented:

"Had we gone the way of France and got 60 per cent. of our electricity from nuclear power, we should not have environmental problems."

That statement is about as bold as it is possible to imagine. I do not know whether the Secretary of State will give the House the benefit of his views on that remark, but I can guess his views on the statement made subsequently by the Secretary of State for the Environment, who commented:

"There is absolutely no doubt that if we want to arrest the greenhouse effect we should concentrate, like the French, on a massive increase in nuclear generating capacity."

It need only be said that not only is such utterly impracticable—as to swap from coal to nuclear would mean building nuclear power stations at a rate that not even Lord Marshall foresees—but radioactive waste is itself a major environmental problem and one for which we have no easy answer at present. When people learned from television that nuclear reactors must be left for 100 years before final decommissioning takes place, it provided them with a considerable education in the environmental implications of nuclear power.

Even on the most optimistic forecasts, the demand for energy conservation will rise—at least in the short term. We are talking not about reducing that demand but rather how to reduce or contain an increase. That re-emphasises points that we made in Committee about the desirability of ensuring that before power stations of whatever type are built, it should first be ascertained whether it will not be more cost-effective—quite apart from environmental considerations—to put more money into energy conservation and less into new build. Under the proposed new clause, that aspect is one that the director general could consider. That is done in the United States and in Norway with considerable success, and it is difficult to understand why such planning should not be adopted in this country.

The amendment does not stop there. It would ensure that we promote not only energy conservation but environmentally clean technology. Later, we shall debate the subject of combined heat and power. At this point, I wish to raise a specific point concerning the future of the fluidised bed combustion plant at Grimethorpe, which is a subject dear to the hearts of many of my hon. Friends.

I understand from the *Financial Times* that a director of British Coal who appeared before the Energy Select Committee yesterday morning said that that project provides an opportunity to burn coal in an environmentally beneficial way, but that it is at risk because of the Government's refusal to come up with what is, by comparison to the sums put into the nuclear power industry, a small amount of money. He said that £11 million is still wanted, but believes that the Government will not make that commitment. In debating the new clause, it is entirely appropriate to ask the Government to make that commitment, and to ask what are their intentions in respect of a project that has widespread support and shows that the industry is prepared to take seriously its environmental responsibilities.

Earlier this week, four environmental groups—all of which have a long-standing commitment in the environmental field and are well respected—jointly urged support from all political parties for the amendments and new clauses that we propose. They mentioned many ways in which energy could be used more efficiently and to reduce environmental difficulties. Those proposals are at least worth examining. History has taught us that there is no possibility of encouraging a greater measure of concern for the environment unless one is prepared to interfere with the vested interests that wish to carry on burning energy in the least efficient way, which does not put care for the environment at the top of the agenda. If we are

serious about promoting environmental concern, it must mean intervening in the market place to do so. That is what the new clause would do.

Without obligations on the electricity supply industry and without legislative duties—in other words, without interference in the market place—the degree of care for the environment that we desire is simply highly unlikely to happen. If the House takes the environment seriously, that interference should not happen at the whim of industry but by the will of the people. If the Secretary of State was prepared to set aside market forces to protect the nuclear industry yesterday, why does he not set them aside today —this time for the good of the environment and the country as a whole?

5.30 pm

Mr. A. J. Beith (Berwick-upon-Tweed): My hon. Friend the Member for Gordon (Mr. Bruce) may seek to catch your eye later, Mr. Deputy Speaker, to discuss some clauses dealing with the conservation aspects of the amendments.

I shall refer to new clause 17, as Mr. Speaker said I could, because another version of the new clause was selected with this group yesterday. It is about rural areas. People in rural areas have a particular reason to be concerned about the conservation and energy efficiency aspects of the Bill. It is in rural areas that green field sites are sought for the new power stations which would not be needed if proper energy efficiency and conservation were applied. The race to find, buy and use green field sites could be halted if we had proper conservation and an energy efficiency-based policy were followed. Therefore, one of the first interests of rural areas must be that part of the new clauses.

Several other aspects must also be considered. One is the duty to supply, on which I dwelt yesterday. The weakness of the duty to supply aspects is only one of the problems that the Bill presents for rural areas. That is why my hon. Friends sought to incorporate into the Bill two deputy directors of supply, one to deal with conservation and one to deal with the particular problems of rural areas.

There are a series of such problems. One involves the compulsory purchase powers in the Bill. For example, the National Farmers Union remains deeply concerned that the private electricity companies will have compulsory purchase powers which have previously belonged only to a Government body—a nationalised industry—and will therefore be able to take from agricultural use land which is of agricultural and environmental importance in the same way that a public body was able to do. Draconian powers are to be in the hands of private companies. That is another matter in which a deputy director general concerned with rural affairs would have a role to play.

The Bill's most alarming feature for rural areas is that the electricity supply companies could choose to impose a higher tariff on rural customers than on urban customers. That provision would allow a private company a power which no public company would surely ever have dared to use. That is why it has not been an issue in the history of nationalised electricity.

Within the North of Scotland Hydro-Electric Board area, the common tariff—the right of every customer to pay the same tariff, regardless of where in the board's area he or she lives—has been enshrined in legislation and will continue to be so enshrined in the area of the north of Scotland electricity supply company. But in the rest of Scotland and in the whole of England and Wales, it will be open to the new electricity supply companies to choose to charge their rural customers more than their urban customers. It is common for commercial organisations to say, "It is costing us a lot of money to deliver to little villages and to go to the heads of valleys and supply goods. Therefore, we will impose a surcharge and charge them at a higher rate." That cannot be an improvement for such a basic commodity as electricity, which has hitherto—certainly since the war—been supplied by public service bodies.

The chairmen-designate of the new companies have given indications that they might not choose to use that power for the first five years after privatisation—but five years only, and not beyond that time. The very way in which they have given such indications suggests that they will seek to use that power. There was a trial run of the problem in the Isles of Scilly. From the consumers' point of view the outcome was rather satisfactory. At the end of the day, primarily because of EEC involvement in the provision of a new electricity service on the Isles of Scilly, it was determined that a differential tariff could not be required of consumers there. They have the guarantee that they will pay the same as consumers in the rest of their board area. We have the EEC to thank for that, not any provision in existing legislation or in the Bill.

Hon. Members should think of what the companies can do now. The company supplying north Wales could decide to charge Anglesey at a higher rate than the rest of its consumers. North Yorkshire consumers could be charged at a higher rate than the rest of the Yorkshire consumers. The company in the north-east could decide to charge Northumberland at a higher rate than Tyneside. The appropriate board could charge rural Devon at a higher rate than the city of Plymouth. Such practices could be tempting if companies want to load higher charges on rural consumers who have fewer alternatives. Those consumers will not have access to gas as an alternative fuel for cooking, for example, and therefore will not be able to offset any higher costs by turning to alternative fuel.

These are grave prospects for abuse of a monopoly at the expense of rural consumers, in the absence of any protection provision. They were not seriously considered by the Government when the legislation was framed. That is why we sought in Committee to build in a right or guarantee that there should be a common tariff and that there should be no discrimination against any geographical area. The Government failed to accept that. We said that there should at least be someone in the controlling mechanism—a deputy director, for example—with a specific responsibility to prevent boards discriminating against their customers on the ground that they live in a rural area. I fear that that will happen unless some such provision is incorporated in the Bill. That is why we will continue to press in the House and through our friends in another place that rural areas should be much better safeguarded than they are at present.

Mr. Peter Hardy: (Wentworth) Unfortunately and sadly, I must make an extremely critical speech about Her Majesty's Government's record in energy conservation and the environment. Last night, the Secretary of State said that the Government's approach was one of diversity to maintain security of supply. If the Government were keen to enhance the security of supply, they would not

[Mr. Peter Hardy]

have such an appalling record in energy efficiency and energy conservation. When I made that point last night, the Minister looked shocked. He should not be shocked. He should be aware that Britain's record is deplorably below those of other advanced European industrial countries. That is sad. We would not have needed a nuclear ring fence. We would not have had nuclear power stations if the Government had wanted to avoid the massive capital costs of such installations. It would have been cheaper to save that energy through proper energy efficiency.

I am sure that the Minister has seen the claim by conservation bodies that we could halve the present use of electricity by using new kinds of light bulbs, save three quarters of the amount of electricity consumed by freezers and refrigerators if modern technology were applied, and save two thirds of the electricity consumed by washing machines, not by having dirtier clothes, but by having modern, technologically advanced energy-saving electric washers. We could certainly reduce the energy required to warm our homes by at least 20 per cent. if we reached the standards which are the average in western Europe, rather than lagging so far behind. We have been in that position for a long time and the Government's response to the case for energy conservation has been to adopt the policy that, if the price is high enough, the brutal effect will be to compel people to insulate, conserve and act with energy efficiency in mind.

A little while ago, I was advised by some of the groups that do splendid work in seeking to advance those most in need in society of the comparative position of a four-bedroomed detached house occupied by people in comfortable circumstances who invested in conservation, insulation and energy efficiency, who had the maximum possible insulation and the most efficient and effective forms of heating. They could maintain their four-bedroomed detached home at a comfortable heating level for less than the cost incurred by many hundreds of thousands of elderly people living in little, old, drafty houses and having to spend a fortune on electricity for unsuitable appliances. From an economic as well as a social standpoint, the case for a much higher priority for energy conservation should have been adopted long ago.

I said that I would be critical of the Government and I hope that the Government will accept that their record on conservation and efficiency deserves condemnation. An even greater criticism should fall on the Government if the work of such people as my hon. Friends the Members for Pontefract and Castleford (Mr. Lofthouse) and for Barnsley, East (Mr. Patchett), in whose constituency lies the Grimethorpe research centre, is ignored and the centre is allowed to founder simply because the Government are not prepared to support it. The Government should understand that Britain's record in research and development is deteriorating and that this is one area in which international advances and economic benefit could accrue. I hope that the comments already made about Grimethorpe will lead to a more favourable decision, especially if the Minister takes note of the work of the Select Committee on Energy.

I may be more critical of the Government than ever in regard to the environment. The Minister heard me say in Committee—and it is worth repeating—that the words of schedule 9 in regard to the "preservation of amenity" sound attractive. They were attractive, forward-looking words of high quality prose and literary merit in 1957.

The Secretary of State for Energy (Mr. Cecil Parkinson): I am not used to hearing praise from the hon. Gentleman.

Mr. Hardy: I am delighted that the Secretary of State is taking credit for the words of 1957. Unfortunately, whereas those words were commendable in 1957, the record of Governments in the 32 years that have elapsed since suggest that we need a rather different approach. A mere reliance on words that have already been frequently ignored and which receive a deteriorating priority is not acceptable. The Government have included the words in a series of pieces of legislation far too frequently, but having used the words, far too frequently no relevant action has followed. I am reminded of the Government's approach in a series of ways. As the Secretary of State knows, I could continue at length in giving illustrations, but I shall illustrate my point by the examples of one current event and of another that took place a little while ago.

On 16 January 1989, as the Secretary of State knows —I am sorry if some of my hon. Friends have heard this before, but I do not apologise if Conservative Members have heard it before—at the centenary of the Royal Society for the Protection of Birds, the Prime Minister, dressed in green, made a splendid speech. In terms of literary quality, her words were as good as those in schedule 9. The Prime Minister advised us to protect our natural heritage and she expressed her disapproval of the fact that 120,000 miles of hedgerow had been destroyed in the past four decades. I was delighted to hear her speech. That afternoon, I presented the Hedgerows Bill and I thought that the Prime Minister's words would allow my Bill to succeed, but it failed because the Government blocked it. I wrote to the Prime Minister because she was supposed to have been converted to the cause of greenery and the environment. I shall not bore the House by reading out her letter, but I was somewhat annoyed when I read that she believed that other matters should be considered as well as conservation.

5.45 pm

The second incident is, perhaps more venal. My hon. Friend the Member for South Shields (Dr. Clark) was drawn in a high place in the ballot for private Members' Bills. He tabled a Bill in 1985 of considerable environmental relevance—the Wildlife and Countryside (Amendment) Bill, which had six particular points in it. The Government disfigured the Bill by leaving only one of the points in substance when the Bill went to the other place. I mention that because when the Bill was considered in the other place, the five points that the House had removed from the Bill as a result of Government pressure were restored. The Government were then left in a bit of a dilemma. They had to decide what to do about the five Lords amendments. Grudgingly, belatedly and at the last minute, following the most concentrated telephone lobbying the House of Commons has ever experienced, the Government decided the following day that they would not oppose those Lords amendments. What was nasty was that later that day, the appropriate Department issued a press statement claiming the credit for my hon. Friend's Bill and describing it as a Government measure.

No doubt the Government advance that Bill as evidence of the fact that from time to time they have paid attention to the words included in schedule 9, but those words, lifted from the Electricity Act 1957, have been far too frequently ignored. They have been too widely disregarded by this Administration during the past decade for us to have any trust or faith that the words in schedule 9 will receive a response. That is why environmental organisations throughout the country are deeply worried about the Bill. They believe that when the Government finally complete the privatisation of the industry—and the transactions for the water industry give us no cause for relief of that anxiety—perhaps substantially into the ownership of those who have no interest in these islands, the environmental consequences may be tragic. That is why I hope that the amendments will be accepted. If they are not accepted here, I hope that they—or similar amendments—will be passed in the other place. I hope that when the Bill returns to this House, suitably amended, the House will ensure that it provides better arrangements and safeguards to assist the causes of energy conservation and the environment.

Mr. Alan W. Williams (Carmarthen): Since last September, we have become familiar with the Prime Minister's conversion to green, environmental issues and to beliefs that we did not realise she had ever had over the previous 10 years. The privatisation of the electricity industry was an opportunity for her to put some of those sentiments into legislation, because in dealing with the electricity industry, we are dealing with Britain's largest polluter. In terms of air pollution, it has no rival. It is responsible for about half our total air pollution, 73 per cent. of sulphur dioxide emissions, 35 per cent. of nitrogen oxide emissions and 40 per cent. of carbon dioxide emissions.

Surely the Bill could have given the Government the opportunity to legislate to improve their environmental record? However, as my hon. Friend the Member for Sedgefield (Mr. Blair) said, there is nothing in the Bill on environmental protection, conservation, energy efficiency or cutting pollution. There is some access to information via leaflets that may be distributed, but we already have that because information on insulation comes with our electricity bills. If ever there was an opportunity to try to do something about conservation and pollution, the Bill was it.

In the past 20 years, conservation has had far too little attention paid to it by both this Government and their predecessors. However, conservation has a critical role in energy policy. It can contribute as much as oil, gas or coal and certainly far more than nuclear power to our energy needs. In that sense, it is properly described as potentially the "fifth fuel".

Over the next 20 or 30 years planning is vital because if we adopt strict policies on energy conservation it will be possible to double our living standards without any growth in energy demand.

Despite the Government's green claims, their record speaks otherwise. In the past few years the budget of the Energy Efficiency Office has been cut from £25 million to £12 million, giving the lie to the Prime Minister's green claims. In new clause 7 on energy conservation, we are asking the regulator to take measures to instruct the distribution companies to improve energy efficiency. We should like an annual energy audit and annual records kept to show how efficiency is being improved.

In Committee, we debated at length the idea of least-cost planning, which has been adopted in the United States. Instead of building more and more new power stations, it would be better to invest that money in home and factory insulation, in combined heat and power or simply in demand management to iron out the peaks in the demand for electricity in the evening and during the day. If we did so, we would not need such capacity to meet the demand.

Least-cost planning is very much in the consumers' interest. It is designed for consumers because ultimately it means that the electricity produced is cheaper. It aims for the lowest cost of electricity. Rather than consumers paying for the four PWRs or for new power stations, they would be paying for insulation, which is much more efficient. Such measures could be adopted in this country and new clause 7 would help the regulator to acquire those powers.

My hon. Friend the Member for Wentworth (Mr. Hardy) talked about energy efficiency and appliances, such as washing machines, refrigerators and television sets. He also mentioned light bulbs. It is possible to produce such things with between two and four times their present efficiency. In that context, one danger of the Bill is that the research work carried out by the CEGB may be cut. Therefore, in new clause 7 we are asking that the regulator be given powers so that conservation and energy efficiency become part of the role of the privatised industry.

My hon. Friend the Member for Wentworth also said that we have a sort of conservation policy at the moment. It is conservation by price. It means that in the winter pensioners, who often live in draughty houses, cannot afford to switch on two bars of their electric fires. That social problem applies especially to the poor, the elderly and families. It is a cruel kind of conservation.

Since 1973 energy efficiency has improved in the advanced countries by 20 per cent. I hasten to add that Britain is pretty well at the bottom of that league. Far more is possible, and our new clause asks that there should be action.

New clause 14 refers to pollution and environmental protection. Opposition Members acknowledge that coal is dirty. We realise that sulphur and nitrogen oxides and carbon dioxide are all by-products of coal combustion. However, they need to be and can be tackled. Sulphur dioxide and acid rain pose a serious problem. Acid rain is killing our trees and affecting water supplies and the tributaries of rivers in upland areas. The drinking water in my constituency has a high aluminium level, often in excess of the EEC limit, simply because of the problem of acid rain.

The Government's record on acid rain is appalling. My hon. Friend the Member for Rother Valley (Mr. Barron) was in Japan a few weeks ago and visited a power station that was built in 1974 and which had flue gas desulphurisation installed then. That was about 20 years ago but not one of our power stations has such FGD equipment. The Government did not recognise acid rain as a problem until 1986 and it was only then that they started to take some action. Under the present programme, none of our power stations will be cleaned up until 1997. We are dragging our feet. For years the Government refused to join the "30 per cent. club", and a 30 per cent. reduction

[Mr. Alan W. Williams]

by 1997 is now completely out of the question. The Government have agreed to a European Community directive to cut sulphur oxide by 60 per cent. by the year 2003, but that is now impossible under the Government's present policies. Nothing in the Bill will help to achieve those targets.

We believe that part of the regulator's role should be to monitor the amount of sulphur oxide, nitrogen oxide and carbon dioxide that is emitted year by year. The regulator should set targets for reduction in line with those of the EEC directives.

Clean combustion technology and the work of Grimethorpe was commented on earlier. It is appalling that the Government are placing such important long-term research in jeopardy. Grimethorpe is the power station of the 1990s. It is the way to produce electricity in the next century, yet under this Government that programme is threatened. I hope that we shall receive some assurance today from the Secretary of State that the money that is needed will be found. It is a small amount —£11 million—which is pathetic when compared to the money that has been given to the fast breeder reactor programmes and to nuclear power in general over the years.

There can be no doubt about the greenhouse effect being the most intractable environmental problem. I read in the *New Scientist* last week that the amount of carbon dioxide in the atmosphere has now passed the 350 parts per million barrier. In was 290 ppm, but it is now 350 ppm. It has increased by 20 per cent. during the past century and it is increasing at the rate of an extra 1 per cent. per year. That could lead to global warming and to the climatic effects that we have all heard about. Exactly what may be implied there is not very clear, but it would be prudent to take action now on the greenhouse effect.

At last year's United Nations conference in Toronto on the global climate, Britain agreed with other countries to cut carbon dioxide emissions by 20 per cent. over the next 15 years, but we saw in Committee that the Central Electricity Generating Board projects an increase of generation of 25 per cent. over the same period and of 60 per cent. over the next 50 years. So our assurances and our promises to that conference were not worth the paper that they were written on.

The only way to cut those CO_2 emissions is by conservation. Nuclear power stations are almost irrelevant. Conservation is the answer, and that is where the two Opposition new clauses tie together.

I end by quoting something said by my hon. Friend the Member for Sedgefield—it deserves to be a "quote of the week". In a recent article he said that in the 1970s conservation was about saving money; now it is about saving the environment.

6 pm

Dr. Kim Howells (Pontypridd): It has been a joy to watch the greening of the Government over the past 12 months. I remember that in July 1984 the Government's delegate to an international acid rain conference in Munich, the right hon. Member for Bristol, West (Mr. Waldegrave), did not even bother to turn up to present the United Kingdom's case and had one of his civil servants read out Britain's excuse for not joining the "30 per cent. club", despite the fact that the Government were well aware of the outrage felt at the time by Scandinavian countries at having to suffer the noxious and destructive effects of United Kingdom sulphur emissions. At the time, Britain's most notorious trained scientist, the Prime Minister, had decided that the evidence on acid rain was inconclusive and had forbidden right hon. and hon. Conservative Members to support any shade of green—although rumours abounded that a few were secretly wearing green underpants as a gesture of concern for the environment. They are now retrofitting green garments at a far faster rate than they are retrofitting flue gas desulphurisation equipment in the nation's power stations.

Nevertheless, I welcome the plan to retrofit 6,000 MW of coal-fired capacity over the next eight years. I also welcome the plan to install low nitrous oxide burners at the CEGB's 12 largest power stations over the same period. But I do not welcome the Government's continuing refusal to sign the Helsinki protocol to undertake the reduction of sulphur dioxide emissions or their trans-boundary fluxes by 30 per cent. from 1980 levels by 1993.

The Government's new air quality standards for nitrous oxides and sulphur dioxides comply with EC directives and are most welcome but, as my hon. Friend the Member for Carmarthen (Mr. Williams) has already said, the directed levels are unlikely to be reached by the dates set.

Retrofitting is one answer, but it has limited application and it is very expensive. What is needed is a general transformation in our attitudes towards the fuelling and production of electricity in this country, one which posits an altogether more imaginative and environmentally sensitive approach than is encapsulated in the present Bill. I am not trying to defend the status quo. The attitudes towards energy production of virtually all the interested parties over the past decade have been partisan, unimaginative and generally governed by a notion that energy conservation and efficiency, and environmentalism as a whole, meant job losses, additional expense and consequent political unpopularity.

The Bill strengthens rather than weakens that notion, and I commend new clause 14 as a measure which may encourage a different attitude towards the fuelling and production of electricity. The development and application of the kinds of energy technology already mentioned by my right hon. and hon. Friends might be encouraged—for example, the various renewable sources of energy, the greater efficiency of existing technologies, and moves towards the proper uses of materials with which we can make better use of our energy.

If we adopt this new attitude we shall see that environmentalism and efficiency will mean more jobs, not fewer. They may be different jobs, and that is a problem that the trade union movement must take on board, no question about it. If we support those new clauses we shall be doing a very constructive thing in that we shall not merely force the Government to act upon some of their protestations about being a green party, a party that cares about the environment; we shall encourage all levels of society to adopt a much more imaginative and realistic approach to the great problems of fuel production, electricity generation and the protection of the environment.

Mr. Malcolm Bruce (Gordon): I have tabled an amendment calling for a deputy director of conservation.

It is my view and that of my colleagues that that issue ought to be at the heart of the debate about the Bill. It is very unfortunate that we have been diverted into a debate about nuclear power which, although interesting, has allowed the Government to avoid confronting the fundamental issue of how we can use energy much more efficiently.

Our record of energy efficiency is extremely poor compared with that of our competitors. It is difficult to understand why, given the number of times that Ministers have come to the Dispatch Box and claimed that they are in favour of conservation, we have fallen so far short of the objectives declared by the Government to be both achievable and desirable and to which they are committed. It is something that we really ought to take on board.

For example, in 1986 the Prime Minister opened the Milton Keynes energy week. She said that Britain's total fuel bill was £35 billion, which could be reduced by £7 billion. The Secretary of State for Energy tells us that the energy bill is £39 billion and could be reduced by £8 billion. In other words, nothing has changed except the figures, which have, in both cases, gone up. We have failed to achieve any significant move towards the reduction in energy use that the Government say they want to achieve and which they believe can be achieved.

I suspect that the reason is that the Government believe that it is not their responsibility, that the market will solve the problem and that it is up to everyone except the Government to take appropriate action. Given that this is one area where the Government and my colleagues and I share common ground, the Bill should have been seen as an opportunity. The common ground that we share is a complete dissatisfaction with the way in which the industry has been run over the past 10 or 15 years. It has been centralised and inefficient. It has over-invested. It has been generation-biased in the extreme; its response to forecasts of rising demand has been the desire to build more power stations instead of asking how it can ensure that the demand can be met with the existing capacity, because the technology exists to do that.

The irony—I may be giving the Minister the lead to his reply—is that it is cost-effective to invest less money to achieve greater profitability. It is true—I have some common ground with the Government on this—that the industry in the public sector has manifestly failed to grasp that issue, but I part company with the Government in that I believe that they can and should do a great deal more, and that the Director General of Electricity Supply should have been—and would be, if our amendments were carried—charged with a specific responsibility to promote energy conservation.

Significant benefits will flow from energy conservation. The first benefit is environmental. According to the Rocky Mountain Institute, investment in energy efficiency and conservation is seven times more effective than nuclear power in abating global warming. I do not believe that the Government will get very much mileage from suggesting that their nuclear programme is a contribution to dealing with the greenhouse effect. It is irrelevant. The programme, as promoted in the current state of the electricity supply industry and as endorsed by the Government as their future direction, will, in fact, lead to a 20 per cent. increase in carbon dioxide emissions from the United Kingdom by the end of the century.

It has already been stated that the original reasons for introducing energy conservation were financial and were connected with the oil crisis of the 1970s. At the risk of boring the House, I would point out that I wrote a pamphlet in 1979 in which I stated the environmental benefits and urged action to be taken. I regret to say that nothing has changed. My pamphlet is just as relevant today. The problems are even more severe, and no action has been taken to confront the issue.

Mr. Rhodri Morgan (Cardiff, West): It has been recycled.

Mr. Bruce: It has not even been recycled. It has been shelved.

The second benefit from energy conservation is economic. It would lead to a cheaper unit cost of energy. That would be beneficial to industry and to our ability to compete in world markets. I hope that the Government would regard that as desirable, because at present we are not competing very successfully as a trading nation. That is possibly because we use energy substantially more inefficiently than our major competitors, Japan and West Germany. The Japanese use half as much energy per capita as we do and the primary energy consumption ratio to GDP in West Germany is half that of the United Kingdom. Therefore, effectively, it is twice as good as we are at using energy efficiently, which possibly explains why it is twice as good as we are at securing shares in world markets.

That benefit also has a social relevance as it helps to deal with the problem of fuel poverty. I worked for a number of years for a Norwegian-based oil and gas industry publishing company, and travelled to Norway fairly regularly during that time. I found it extraordinary that the issues of fuel poverty and condensation which are so alive in this country are almost unknown in Scandinavia. That is, first, because the Scandinavians have learnt that they live in a climate that requires a particular standard of building. They build to meet the climatic conditions and, therefore, they have houses that are fundamentally efficient and warm and do not suffer from condensation. Secondly, they ensure that their energy is relatively competitive. They have, of course, for a long time had the advantage of hydro-power, which has obviously been an additional helpful factor.

Perhaps the even more extraordinary situation is that investment in energy conservation would actually make money. The science policy research unit has estimated that every pound spent on conservation—this is not an airy-fairy proposition, but is based on spending money on existing conservation methods, which are specific and known—would save 38 kW, would cut carbon dioxide discharges by 42g and would save customers £1·90 each. Will the Secretary of State tell us what other investment in the United Kingdom could give a 90 per cent. rate of return? He must address himself to why we do not manage to achieve the target savings for which he has said that we should be aiming.

6.15 pm

The Association for the Conservation of Energy has recently carried out an analysis of some fairly simple measures that would produce significant benefits. It has assessed that simply by ensuring that lights, old fridges and freezers are replaced with the state of the art, best available technology, demand for electricity would be cut by 12 per cent. That means that it would cut the demand for electricity by the equivalent of four and a half Hinkley Cs.

[Mr. Bruce]

That reinforces the point that I have often made—that, if the electricity supply industry had any imagination, it would recognise that instead of spending money on wasteful public inquiries and the building of unnecessary power stations, it should spend that money on conservation, and thereby improve the profitability of the industry as well as reducing the cost to its consumers. That should be at the heart of the post-privatisation regulatory system.

In anticipation of the Minister's response—although I hope that I am wrong—I must say that it is not good enough to say that the figures I have quoted are so dramatic that once the industry is privatised the problem will solve itself. All the evidence from other countries shows that there must be a specific Government momentum behind the problem in order to solve it.

I know that the Minister is not enthusiastic about all its aspects, but the regime that has operated for a number of years in the state of California for promoting conservation and alternative energy required legislation, funding and tax benefits to ensure that it was stimulated. Once there was that framework, people were prepared to make investments because they were required to do so. They were astonished to find that under the regulation system that this Government so often denounce they were able to make greater profits than they would if they had pursued their desires in a free market, which was their initial wish.

The other sources of benefit are closer to home. The Select Committee on the Environment, when considering especially the problems of air pollution, stated:

> "However, if the world wants light, heat and energy in constant and increasing supply, the choice might resolve itself between a source which is deliberately and constantly poisoning the atmosphere and one whose misadventure would have catastrophic global results"—

that is obviously between fossil fuels and nuclear power—

> "but an alternative would be energy conservation and reduction in demand".

Energy conservation and improved energy efficiency is the absolute key to dealing substantially and significantly with the problems facing the energy industry of high costs and great environmental concern.

The proposals put forward by a variety of organisations have all reinforced that message. What should concern the Government now is how they will retain credibility as a Government who are putting forward the privatisation of electricity as an environmentally and economically beneficial measure, when all the indications are that without substantial action by the director general prices will rise, our competitive relationship with other countries will continue to deteriorate and the output of carbon dioxide and the aggravation of the greenhouse effect will continue to escalate between now and the end of the century.

I am led to believe that the Prime Minister is specifically concerned about the greenhouse effect and that that is her major environmental concern. Unlike many sceptics and cynics I welcome her conversion and believe it to be sincere. I believe that she has come to terms with the problems. [HON. MEMBERS: "No."] Oh yes. But I do not believe that she has appreciated that a commitment to deal with the greenhouse effect and the associated environmental problems is, unfortunately, incompatible with Thatcherism. When the Prime Minister discovers her dilemma I suspect that she may suffer a severe attack of schizophrenia. The one great thing about schizophrenia is that it reduces the patient to immobility and a little immobility on the part of the Prime Minister would, I suspect, be attractive to the majority of the country.

The market will not succeed in dealing with the environmental and economic problems of high energy costs and inefficiency energy use—that must be the duty of the regulator. The Director General of Electricity Supply—the regulator—may be correct in believing that the effective operation of the market may help to achieve a solution to the problems. He may consider that more information should be made available to people to enable them to make rational decisions which will be of economic benefit to them. If that is so, I wonder how the Government justify the reductions, and the forecasts of further reductions, in the budget of the Energy Efficiency Office. Its budget is small in any case and I believe that its role must be encouraged and intensified if we are to ensure that rational decisions are made by individuals and by companies in the private sector to take advantage of the economic benefits of investment in energy conservation. Surely the Government should do their best to make that happen.

It is not good enough to believe that market factors will determine the solutions to the problems. We need direct regulations. The hon. Member for Carmarthen (Mr. Williams) has already mentioned "least-cost" planning. The Minister will know that that terminology has been imported from the United States where it is used as part of the criteria to assess operators' plans. When an application is made to build a new power station, the question asked is whether that represents the least-cost method of meeting the required capacity that the operator wishes to provide. Almost inevitably the answer is no. Using the same or a smaller amount of money to invest in energy conservation measures always proves to be more cost effective within existing technology. In other words, every pound or dollar invested in energy conservation will yield substantially more saved units of electricity than that same pound spent on investing on new generating capacity. It is a radical concept, but it works. The Minister should tell the House why he has not adopted that method here and why he does not believe that it is a good way of ensuring that conservation becomes central to our thinking.

Earlier, I noted that the Secretary of State nodded in agreement when I expressed my dissatisfaction with the way in which CEGB has worked as a result of its centralist mechanisms. However, the right hon. Gentleman has not said—even if he believes it to be true—how the proposed privatisation will substantially change the bias towards generation. The newly privatised industry will still say that demand is rising and that, therefore, new and bigger power stations should be built. I do not believe that we need any more capacity; what we need is more variety. We need greater flexibility and smaller-scale generation. That opens up all the market opportunities about which the Secretary of State and the Minister are so enthusiastic. If we followed that course there would be a great deal more enthusiasm for a privatised electricity supply industry.

Given that privatisation will take place and that the Director General of Electricity Supply will be appointed, I hope that he will have the power to pursue developments that will lead to greater flexibility. The new clause would help to achieve that aim. Without the new clause and the associated amendments I am not convinced that the Bill will ensure that the critical issues, which should be at the

heart of the legislation, are properly addressed. Even at this late stage I urge the Minister to consider the need to amend the Bill to put conservation at the heart of it. If he does that he will put on the statute book a Bill which, however controversial it is in other ways, will advance the electricity efficiency of this country by a marked degree and which will benefit every individual and company throughout the land.

Mr. Geoffrey Lofthouse (Pontefract and Castleford): The House will be aware that in June 1988 the Select Committee on Energy produced a report arising from the White Paper and the subsequent Bill to privatise the electricity supply industry. I appreciate that there is not much evidence to suggest that the Government take a great deal of notice of the Select Committee reports, but I believe that we should be able to rely on the Government's observations on that report. If that is so, the Secretary of State should have accepted the new clause today.

No doubt the Secretary of State will recollect what the Government said about energy efficiency in paragraph 39 of the third special report on the report from the Select Committee:

"The efficiency with which the electricity industry uses fuel will significantly affect its costs, and hence its ability to compete successfully. The increase in competition which is central to the Government's proposals will provide a major incentive to the electricity companies to use fuel efficiently. The Government believes that pressure to find ways of increasing fuel efficiency to obtain competitive advantage will be an effective pressure for improving efficiency of fuel use in the industry. There will also be a general duty on the Secretaries of State and the Director to promote efficiency on the part of licence holders."

If that does not mean what new clauses 7 and 14 mean, I do not know what does. If the Government were genuine in their response to the Select Committee, what are we doing here today? The new clauses should be unnecessary as their provisions should already be a part of the Government's programme.

We have heard much about the greenhouse effect. At present the Select Committee on Energy is taking evidence about that. I wish that its report was available now, as it would provide a great deal of ammunition for this debate. The House will agree, however, that, unless such information is leaked, we must await the publication of that report.

Research and development have an important part to play in energy efficiency and the greenhouse effect. In paragraph 54 of the third special report, the Government, in response to the original report from the Select Committee, state:

"The Government accepts that its role in assessing long term energy R & D is an important issue. The nature of the programme overall will be determined by the inter-action of the industry's R & D programme with the Government's existing policy on R & D as set out in the 'Annual Review of Government Funded Research and Development'. The electricity industry has been asked to submit proposals for the organisation and implementation of research after privatisation and expects to receive these in the near future. When these have been reviewed it will be in a position to consider the appropriate role for the Government."

The Secretary of State may be in a position to tell us whether they have received that information. If so, what are the Government's views on it and what action will they take?

6.30 pm

We have recently heard much about the intentions of the Government and the Prime Minister to control the greenhouse effect. I wonder how serious those intentions are. The Secretary of State did not respond last evening to a question that I put to him about the Grimethorpe complex. He has had time to consider the question. The evidence given by Mr. Edwards of British Coal was that the Grimethorpe complex was under threat because the Government were not willing to provide £11 million for it to continue. If that is the case, how serious are the Government about efficiency and about research and development to protect the environment? Mr. Edwards told the Select Committee that if that scheme failed, very little other research and development would take place on the technology for sulphurised beds. *[Interruption.]* The Secretary of State is talking to his colleague. I hope that he is listening to what I am saying because it is very important.

The Government's case is that nuclear energy is much cleaner. They have also said time and again that they believe that coal has a great part to play in the future of British energy. If they are serious about that, why will they not put money into research and development? If they are not serious about it, they should say so. If they do not want to put money into R and D, that may be why they are not keen to support the new clauses.

I hope that the Secretary of State will attempt to convince people that the Government are serious about protecting the environment and about coal having a part to play in the future of British energy. Will the Secretary of State give us an assurance that the Grimethorpe complex will be funded and that research will continue there?

Mr. Malcolm Moss (Cambridgeshire, North-East): Energy efficiency makes economic and environmental sense. I do not think that proposition is opposed by Members on either side of the House. But all energy sources have an environmental impact. Burning fossil fuels contributes not only to acid rain but to the greenhouse effect. Nuclear energy produces radioactive waste which needs to be disposed of safely. The solution is not to transfer to renewables because to produce energy from wind farms we would need thousands of acres, and tidal barrages have detrimental environmental effects of their own.

The question is: how best can we achieve energy savings? Should we do it via the amendments under discussion, with their emphasis on a more direct and hands-on procedure, with more direction and regulation by the director general? It is ironic that at a time when the Government are seeking to remove themselves from day-to-day involvement in the running of the electricity supply industry we should be discussing amendments which would give future Governments the potential to get their hands back on the industry. Or should we achieve energy savings through the operation of a free market within the framework set out in the Bill for the privatisation of the electricity supply industry?

Whichever way we go, there are things that the Government can and should do. They have some influence, although sometimes one doubts it, with local authorities. I understand that the Audit Commission is to re-examine how local authorities in England and Wales manage energy in their own properties. The new initiative

[Mr. Malcolm Moss]

follows an earlier study completed in 1985 which established that at least £130 million could be knocked off fuel bills. However, an initial survey of progress undertaken last year suggested that only a tiny proportion of the anticipated savings is being achieved. The survey found that only about 13 per cent. of the investment opportunities have yet been taken up on the energy management side.

The Government should also consider their own buildings. Of all public sector buildings, 50 per cent. or more are occupied by Government Departments. When the Back-Bench committee on energy invited a consultant from an energy management firm to talk to it, he pointed out that whenever his firm was called in on a consultancy basis to examine Government buildings and spoke to the Property Services Agency, it got short shrift and got absolutely nowhere. The Government have a direct responsibility to make sure that the doors are open to proper consultancy so that savings may be achieved.

What is happening in industry? To hear the CBI talk, one would think that putting up prices this year would have a serious effect on the performance of industry. A survey last year, I think, by March Consultants in the north-west region showed that savings of 30 per cent. or more could be achieved by business and commerce. Yet very little was done. Even when showed the possibilities of energy saving, efficiency and conservation, few firms bothered to invest the money necessary or to employ within their structure people who could deal directly with the problem.

Where will energy efficiency fit within the newly privatised electricity supply industry? Surprisingly, some interesting information has come to light recently. Only the other week Mr. Malpas, the chairman-designate of PowerGen, spoke to a meeting of the Fellowship of Engineers. He said that most national energy policies focused too much on how energy was generated and far too little on the concern for its use. When challenged as to how that view fitted in with making profits in a privatised electricity supply sector, he said that PowerGen was considering taking a leaf out of the books of many American power companies and positively assisting the introduction of incentive schemes to promote the installation of energy-saving measures.

If we turn to the American position, evidence was given at the Hinkley inquiry by a representative of an American company, the Bonneville Power Administration, which supplies electricity to five states in north-west America. The company indicated that it was spending some $700 million to help its consumers to reduce energy wastage. It said that within five years cumulative savings had already reached 220 MW, which is equivalent to a small coal-fired station, and predicted that by 2010 the programme would have saved 2,750 MW of electricity. When challenged, its spokesman said:

"We are in business. You don't spend $700 million on a passionate enthusiasm. You do it as a good business investment."

PowerGen is to be a privatised company under the Bill. The Bonneville Power Administration is not a public company; it is not state-owned but is a private company. These two examples indicate how in future the privatised electricity supply industry in this country could make a positive contribution to energy conservation and efficiency.

Mr. Malcolm Bruce: Is it not a fact that the Bonneville Power Administration was set up originally as a state corporation? Were it not for the requirements of the Public Utility Commissioners, who refused permission for the building of power stations, it would not have embarked on that course. What the hon. Gentleman says is right; having embarked on it, it found that it was profitable.

Mr. Moss: I am grateful to the hon. Gentleman for making those points. Whatever the incentive for looking into energy efficiency, the proof of the pudding is that it has been achieved and it is possible for that to happen here as well.

The Government's budget for the Energy Efficiency Office has been challenged by Opposition Members. It is not just the size of the budget that is important; the effectiveness of the spending is paramount. We should consider energy efficiency as our fifth fuel, which has significant environmental advantages. The new structure of the electricity supply industry will encourage that in three main ways.

First, one of the director general's main regulatory responsibilities is to promote energy efficiency. Secondly, the area boards, in competition with British Gas, will have a direct interest in keeping down their customers' bills. They will also, in competition with British Gas, encourage people to switch to electricity which, for heating, will be far more cost-effective if the householder is, at the same time, encouraged to take energy efficiency measures. In discussions which I have had with them, area board chairmen see this as a positive contribution which will also help overall market penetration. Thirdly, competition in electricity generation will ensure efficiency in the use of fuels.

These amendments are irrelevant. Adequate energy efficiency measures are already well taken care of in the Bill.

Mr. Elliot Morley (Glanford and Scunthorpe): Unlike the hon. Member for Gordon (Mr. Bruce), I am not convinced of the Prime Minister's commitment to green issues. For the Prime Minister, green issues seem to go along with the green outfits that she takes out of her wardrobe and wears on a number of public occasions. I have been to meetings where the Prime Minister has made a speech that is fine in terms of conservation and ecological issues. Unfortunately, when I come to the House, I find, along with many other colleagues, that some of the issues which she so warmly supported at public meetings are voted down by the Government or not given the Government support that they should receive. That directly contradicts the policies that she sets outside the House.

The Bill is one example of that. The conservatioin of energy must be crucial to any country, not only in reducing the greenhouse effect—a major need which has been identified by the Prime Minister—but in cutting costs, both for domestic and industrial users.

We all know of the damage caused to the environment by acid rain and the greenhouse effect, but, in a modern technological society, we also accept that we must have power. The CEGB forecasts that there may be a 25 per cent. increase in demand in energy in the coming years.

Rather than simply ploughing ahead to meet that demand with more power stations—whether nuclear or coal—we should try to absorb that demand by greater energy efficiency.

In contrast to the argument put forward by some Government Members, nuclear power is not the answer to meet the increase in demand. It has advantages, but it also creates a different sort of pollution—in particlar, radioactivity. High environmental costs are also involved in dismantling the nuclear power stations and handling the waste that they produce. Therefore, nuclear power stations will not cut down pollution.

The union that I represent has members in both heavy industry, including steel, and rural areas. The steel industry has made great strides towards reducing its energy consumption, which has helped to return steel to profitability. However, not all companies have taken the same progressive line and invested in energy use. Of course, it could be argued that it is in the steel industry's interests because it makes savings by reduced power bills. Nevertheless, many industries which are not under the same kind of pressure to save money could pass on the savings in energy costs to their customers. The new clause would give the director general a role in encouraging the necessary energy conservation.

Another concern of mine, which has been echoed in the Bill, is the differential rates in rural areas. If new power companies are allowed to charge differential rates rather than concentrate on efficiency and energy saving, they will take that option. Therefore, housing estates built in rural areas to meet housing demand could face extra charges and industries set up in rural areas to provide jobs could also face a penalty.

6.45 pm

The Secretary of State will be aware that environmental organisations strongly support this batch of amendments. They call not only for energy efficiency and conservation programmes—which, if all the various conservation schemes were implemented, could cut the peak demand by 70 per cent.—but for target-led reductions in the pollutants of the electricity generating industry, particularly carbon dioxide and sulphurs.

Apart from the obvious industry energy conservation, the director could encourage energy conservation in domestic use—including the installation of low energy light bulbs. In my house we have installed such bulbs in areas where they are used a great deal, such as the porch and downstairs. They are bulky, but they can be hidden by choosing the right shade and they provide considerable cost savings because they last longer than average light bulbs. However, many people are unaware of the benefits of these light bulbs. If more houses switched to them it would considerably reduce the power generated. At present, one fifth of all power is used for domestic lighting.

Energy conservation could also be encouraged in fridges, washing machines and televisions, the modern variations of which use less energy than their older counterparts. However, the benefits of those machines are not driven home to the consumer.

Home insulation is another important method of energy conservation. Danish standards are far superior to ours. I understand from a conservation organisation that, if we adopted Danish methods, we could reduce the CO_2 output by 510,000 tonnes every year—a significant reduction and a benefit to house quality standards.

There is no reason why the director should not have a far more interventionist role in advising house builders on the quality and insulation standards that they should use. There would be long-term benefits for us all—not least the people who buy the homes.

Research has been covered by other speakers so I shall not spend too long on it. However, as coal is our major power source—I believe that it will remain so for the foreseeable future, until there is more research into alternatives—I am disappointed that the Government have not shown greater commitment to the fluidised bed method of burning coal which is more efficient and cuts down on pollution. Another option involves biomass generators, which could be fuelled on fast-growing crops of willow, and could form part of an overall policy to reduce cereal crops and use EC funds to encourage farmers to grow biomass to fuel power stations.

More research and development is needed in district heat and power stations—perhaps domestic refuse could be burnt, which would not only generate power but would generate heat to towns and cities while reducing waste. I see nothing in the Bill to give the director and the power companies the sort of duty that the new clause proposes. The Government should welcome it in the spirit in which is is moved.

More consideration should be given to the design and environmental impact of power stations. It is only fair to give some credit to the CEGB which, when it put forward plans for the new Burton power station—not far from my constituency—devoted a large part of its planning application to an environmental impact study, designs for using the cooling pools, landscaping and the layout of the power stations. We all need power stations but they can be ugly and a great deal more can be done to make them blend into the environment and to use the considerable areas of land that accompany them in a positive way, encouraging and conserving nature.

The new clauses are progressive. The Government say that they are committed to a policy of environmental support; the new clauses will not only protect our environment and set targets to conserve energy conservation and reduce pollution, but could have long-term benefits for the competitiveness of our industry by encouraging it to take measures that will reduce its energy costs to the benefit of the community.

Mr. David Tredinnick (Bosworth): The headline on page 2 of *The Times* today says:

"20,000 people a month joining green groups".

The crucial proposal in new clause 7 is the requirement to impose a duty on the Director General of Electricity Supply; in new clause 12 to require the appointment of a deputy director general of electricity supply for energy conservation; and in new clause 13, to require a deputy director general of electricity supply for rural areas.

Hon. Members have three questions to consider before reaching a decision on the new clauses. The first is whether the existing provisions are adequate; secondly, whether adequate provision has been made, or is likely to be made in other legislation; and, thirdly, whether the Government's record makes the new clauses necessary. I am talking not just about the Government's recent record, but about their earlier record. I propose to address each of those questions in reverse order.

I consulted the Library about the measures that Conservative Governments have introduced in the House

[Mr. David Tredinnick]

since the 1950s. In that time they have introduced at least 10 Bills affecting the environment. For the benefit of the House I shall list them quickly. There is the Rural Water Supplies and Sewerage Act 1955, which was amended in 1961 and 1973; the Clean Air Act 1956; the Litter Act 1958; the Noise Abatement Act 1960; the Rivers (Prevention of Pollution) Act 1961; the Clean Rivers (Estuaries and Tidal Waters) Act 1960; the Prevention of Oil Pollution Act 1971; the Radioactive Substances Act 1960; the Water Act 1973 and the Control of Pollution Act 1974, which I must admit was started by a Conservative Administration but was finally enacted under a Labour Administration. That does not sound like the record of a Government who have been negligent in environmental matters since the day that I was born in 1950. It is a rather good record.

Mr. Keith Mans (Wyre): Does my hon. Friend agree that, apart from the Control of Pollution Act 1974, which began its life under a Conservative Government, no other Acts of environmental significance were enacted by the Labour Government between 1974 and 1979?

Mr. Tredinnick: My wise hon. Friend is correct. The Opposition must take that record into consideration. How quiet they are now.

There are more recent measures to consider. There is the Wildlife and Countryside Act 1981. That is a great favourite of the hon. Member for Wentworth (Mr. Hardy), who I see has just come back into the Chamber. Her Majesty's inspectorate of pollution was set up by the Conservative Government in 1987 to improve the mechanism for the control of all types of pollution.

One of the great destroyers of natural beauty, flora, fauna, and geological or physiological features is acid rain.

Mr. Morley: At a recent meeting I and my hon. Friend the Member for Wentworth (Mr. Hardy) heard the Prime Minister give a good speech on the need to protect hedgerows. My hon. Friend is the sponsor of a Bill which, for the first time, gives legal protection to hedgerows. Despite the Prime Minister's public commitment to that, the Government blocked that Bill.

Mr. Deputy Speaker (Sir Paul Dean): Order. This is a wide debate, but to include hedgerows is really stretching it too far.

Mr. Tredinnick: I shall try not to get too close to hedgerows, or hedgehogs.

There are several critical issues relating to pollution which I want to consider and see what has been done about them. The first is acid rain and the problems of sulphur dioxide and nitrous oxide. Opposition Members say that the Government have been negligent in dealing with the problem of acid rain, but in 1984 the Government set a target of 30 per cent. reduction in total SO_2 emissions by the end of the 1990s. As the Opposition have said, the Government's commitment in terms of real money was £600 million. That is hardly being negligent. In 1987 a programme was announced to reduce NOX emissions by 30 per cent. by the end of 1990. Again, substantial investment in low NO_2 burners is being made to ensure that that target is met. That is hardly being negligent. I shall give way to the hon. Member for Wentworth, who is trying to intervene.

Mr. Hardy: I am grateful to the hon. Gentleman for giving way. I always try to give way to hon. Members with something to say and I would have given way to the hon. Gentleman in past debates if he had sought to intervene, but I shall not go into detail on that.

The hon. Gentleman has referred to a number of pieces of legislation. For example, he referred to the Wildlife and Countryside Act 1981 and claimed credit for the Government for that. However, that Act was Britain's response to the Berne convention for which members of the Socialist group of the Council of Europe, in which I was involved, were responsible. It also consolidated a number of other Acts of Parliament, two of which I had contributed myself, and it embodied, as a result of considerable effort on the part of Labour Members of the Standing Committee which considered that Bill, many amendments which were strengthened by initiatives taken in the other place. I could go on at great length, but the Government had little to do with many of the Bills for which it is suggested they should take credit.

Mr. Tredinnick: I am aware that the hon. Gentleman could go on—I would not question that—but I would question what he has just said. The inescapable fact is that it was this Government who produced the Bill and saw it enacted.

7 pm

Secondly, there is unleaded fuel. Lead absorbed into body tissue can cause damage to the brain and other organs. It is quite remarkable and quite outstanding that this Government have taken the lead in Europe in setting targets for the introduction of lead-free petrol throughout the Community. My right hon. Friend the Chancellor of the Exchequer has again stretched the differential between the price of ordinary petrol and the price of lead-free petrol. What a wonderful thing that is. The Government have certainly engendered tremendous support in my constituency by adopting that policy. The promotion of lead-free petrol illustrates again a laudable commitment of which we must take note.

Mr. James Wallace (Orkney and Shetland): Perhaps the hon. Gentleman can help me and other hon. Members in our efforts to work out the relevance of his comments to electricity. Is he about to suggest that one way of getting round the problem of lead in petrol would be to have electric battery-operated cars?

Mr. Tredinnick: I wondered whether I should give way to the hon. Gentleman; now I know that I made a mistake in doing so. I am illustrating what the Government have done, and posing the question whether we should consider these amendments as desirable additional measures. If the hon. Gentleman had been listening, he would have understood that.

My right hon. Friend the Prime Minister has moved the frontiers beyond Europe, where we have taken the lead in lead-free petrol, to the rest of the world in what she and the Government have done concerning the ozone layer and the greenhouse effect. It is a fantastic tribute to my right hon. Friend that she seized the initiative in getting 200 world leaders to London to thrash out the crucial issues concerning this very worrying atmospheric problem that affect the world. We saw six concrete achievements resulting from that conference. There was agreement on CFC controls; 20 more countries agreed to the Montreal

protocol, and there was a commitment from 14 countries, including China and India, to consider signing it; the countries of the EEC agreed to a total ban—and what an achievement that was. Of course, we are also promoting the substitute gases that are so necessary to replace CFCs.

Mr. Mans: Does my hon. Friend agree that people who live in greenhouses should not burn coal?

Mr. Tredinnick: My hon. Friend is obviously thinking of the hon. Member for Wentworth.

I want to deal now with my last point. It concerns an item that the Government have addressed recently—research funding. When one looks at the record, contrary to what the Opposition claim, one finds that the Natural Environment Research Council has received a cash boost of £71 million over the period 1989-90 to 1991-92; that the British Antarctic Survey, which, of course, was responsible for the discovery of the hole in the ozone layer, is to receive £23 million over the same period; and that the public expenditure plans that were announced in November include an extra £2·6 million for the research programme of the Department of the Environment. That is hardly a poor record.

There is one other aspect that must be considered—the leadership of the parties, and who is doing most in environmental control. My right hon. Friend the Prime Minister is a scientist. I do not see many scientists on the Opposition Benches. There is quite a contrast between the way that my right hon. Friend tackles environmental issues and the way that the Leader of the Opposition tackles them. I am indebted to a Mr. Malcolm Grimston, of Trevelyan road, Tooting, who wrote saying:

"After the ozone layer conference Mr. Kinnock was on the radio. After giving grudging praise to the Prime Minister he went on about how deforestation in Brazil was causing extra carbon dioxide and methane to be released, and this was also damaging the ozone layer. This is rubbish. Carbon dioxide and methane don't attack ozone, though they do add to the far more serious greenhouse effect."

That is a pretty fair illustration of the lack of knowledge of environmental issues at the very top in the Labour party.

The Government's record, long-term and short-term, is good. Besides this Bill, they have acted in a whole range of areas to improve the environment, and, of course, we have better leadership.

Let me refer to the 20,000 people a month who are joining green movements. It seems to me fairly clear that for anybody thinking of joining a green movement the right way of spending money is to join the organisation that is most likely to effect change, and that is the Conservative party. The first priority should be to join the Conservative party, and the second priority should be to join the Tory green initiative, which has been set up specifically to channel the tremendous concern on this side of the House.

Mr. Sydney Bidwell (Ealing, Southall): I wonder how many copies of this Tory Central Office brief there are to spare. I should like to have one—perhaps, after the hon. Member has finished, the one that he is using.

Mr. Tredinnick: The hon. Gentleman chivalrously question my notes. I can assure him that I wrote them myself. However, if he would like a photocopy after the proceedings, perhaps he would like to meet me behind the Chair.

I have been asking myself whether the wording of schedule 9 is strong enough. I know that this is what exercises the minds of many Opposition Members—whether phrases such as "having regard" and "taking into account" are strong enough to ensure that the director general will put into effect the intentions of my right hon. Friend the Secretary of State. At the 19th sitting of the Standing Committee, I raised the issue of the conservation of energy, as against the creation of energy sources. Some Opposition Members may find common ground with me when I say that it is essential that we keep very much in the forefront of our minds the possibility of cutting energy consumption. I cite in particular the dramatic numbers of people who are now interested in environmental issues. I say to my right hon. Friend that we really must keep at the forefront of our minds the possibility of cutting energy consumption.

Let me illustrate the point by drawing attention to a survey that was carried out in the north-west of England late last year. It was found that a 20 per cent. cut in energy consumption could be achieved at a cost of £1 billion. The cost of Sizewell B is £1·646 billion, and the cost of Hinkley Point £1·47 billion. I am not suggesting that these stations should not be built, but I am suggesting that there is a trade-off here that we should consider very seriously. I know that my right hon. Friend is considering it very seriously; what I hope to do is to reinforce his thoughts.

I come, finally, to the issue of how the alternative energies that are now coming forward—wind, wave and even plants as energy sources—fit into the scheme of this Bill.

Mr. Morgan: Sit down.

Mr. Tredinnick: The hon. Member for Cardiff, West (Mr. Morgan), who has spoken so often in Committee, is obviously anxious to get up again. I have not had the advantage of speaking as often as he has, so I should be grateful if he would bear with me while I finish my speech.

I have received letters from organisations such as the Wind Energy Group—which is a British Aerospace and Taylor Woodrow company—stressing how the Wind Energy Group's MS3 can now generate electricity at a cost competitive with that of nuclear power. The director, Dr. Peter Musgrove, informs me:

"Given a fair price for electricity from wind turbines it is quite realistic to forecast the installation of up to 500 MW annually throughout the 1990s so that wind energy could supply several per cent. of our electricity needs by the year 2000."

He says that his concern is that the legislation now being drafted will mean that wind energy is treated unfairly in the context of nuclear energy. That is something that we have to guard against. We have diversity and we welcome it, and I am very anxious that the alternative sources of energy should be given a fair crack of the whip.

The Government have a fine record, in both the long term and the short term, but I ask the Minister to ensure that the Director General of Electricity Supply takes into account the environment, energy conservation and alternative sources of power.

Mr. Frank Haynes (Ashfield): I now know why the Government Whip would not let the hon. Member for Bosworth (Mr. Tredinnick) speak in Committee. We would still have been on the first amendment if he had

[Mr. Frank Haynes]

allowed him to get up. He does talk a load of rubbish, he really does. In Committee, I accused him of being sensible, but I will withdraw that now.

It is really a great pleasure——

Mr. Tredinnick *rose*——

Mr. Haynes: No, I will not give way; the hon. Member has only just sat down.

It is really a great pleasure to have the Secretary of State in attendance during this very important debate. This is a very important issue and my hon. Friend the Member for Sedgefield (Mr. Blair) did a first-class job in moving the new clause. He made it clear to the Government what should be happening when this privatisation takes place on the question of conservation and efficiency in the electricity industry. I congratulate my hon. Friend on his speech.

Hon. Members have talked about research in connection with the industry. That lot over there are guilty of cutting back on research, never mind what the hon. Member for Bosworth said about pouring in £70 million or so since 1979.

By the way, it is about time the laddie went outside to have his nappy changed, because he is still wearing nappies judging by the way he has been talking this afternoon.

Mr. Tredinnick *rose*——

Mr. Haynes: No, I am not going to give way. Stay down.

Since this Government have been in office they have done nothing but cut back here, there and everywhere, on research among other things. I remember one of my hon. Friends standing up seven or eight years ago and saying that the Aston university had lost 1,100 places under this Administration. That is in one university, and we are talking about people being trained and educated for the job of research, not only in the electricity industry but in many other industries. So I do not know why the hon. Gentleman made the comment he did, because he is completely wrong. I am correct; the facts are in my favour and I have the information I need from the people on the Opposition Benches who have sussed it out.

7.15 pm

When it comes to conservation, I know what the Government are after. It is not a question of conservation for people who are buying in to this marvellous industry and lining their pockets with gold—including foreigners.

The Secretary of State laughs. It is not a laughing matter; it is a serious matter. The Government will allow foreigners to pour in over our shores and buy shares in our electricity industry. This is how that lot go on. They are not bothered about the British; they are looking after the foreigners. That is why we have this argument down the road about Harrods. I am looking at this thing sensibly. The people of this nation are laughing at that lot the way they are carrying on. But they will not be in office much longer. We shall be moving across the Floor and we shall put it right; we shall put the electricity industry, as well as many other industries, right.

I have been in the Secretary of State's constituency. I should have told him when I went, but I did not, and I apologise for that. I went to have a look at the palatial property in which he lives, and he really does live in a palatial property. When I saw it I thought to myself that there were not many properties like that in my constituency, with all those poor old colliers that I worked with underground for 35 years. Some of them are living in hovels, and it is because of the policy decisions of the Conservative Government. We talk about energy conservation. The roofs are falling in and the Government have cut back on grants. We are wasting energy when the Government ought to be encouraging people to do something to their properties to conserve energy.

The Conservatives talk about efficiency. We have never seen anything efficient coming from the Government Benches and it is about time we did. It is about time Government Members livened themselves up as far as efficiency is concerned.

I have seen efficiency. I had 35 years of efficiency underground and I am proud of it. When I come into this place and find the Tory Government doing the things they are doing, I see no efficiency. But we will put that lot right; there is no doubt about that. They stand at those Benches and at the Dispatch Box bragging and boosting themselves up, but a lot of them will not come back to the House. We shall be on that side and we shall make all the decisions that have to be made.

When the Government talk about efficiency they mean less and less manpower. That is how they look at efficiency —more people on the dole, more profit for the rich to pour into their pockets. We have had a bellyful, we have had enough, and we shall change the system at the first opportunity we get. We shall do it well, and that lot will be sorry for what they have done to the people of this nation in terms of electricity, the poll tax, the Health Service—I am reeling these off as the hon. Member for Bosworth reeled off the Bills. I am reeling off all the wicked things that the Government have been doing since 1979. The lad only came into the House in 1987. He is getting an education this afternoon, as he did in Committee, and there is more to come. Until that lot go we will educate them on what they should be doing in the interests of the people.

We are talking about the Electricity Bill, which I hope will not become an Act, because I hope that the people outside the House will demonstrate quite clearly that they do not want what has been pushed down their throats, particularly on electricity, water and health.

I hope that the Government and the Secretary of State have got the message. I am pleased that the Secretary of State is here to listen to me. He said that he enjoyed my speech yesterday. I hope that he has enjoyed this one. I do not make fancy speeches for people to read in future records. My speeches come from the heart because I represent the people of Ashfield and I shall continue to fight on their behalf.

Mr. Wallace: It is always a pleasure to follow the hon. Member for Ashfield (Mr. Haynes). There is certainly no conservation of energy in the spirited way in which he delivers his contributions, and I am sure that the House commends him for that.

Hon. Members have highlighted the great contribution that conservation of energy can make. Some examples have been given, not least by my hon. Friend for Gordon (Mr. Bruce) and by the hon. Member for Glanford and Scunthorpe (Mr. Morley) who highlighted the ways in which energy conservation can make a valuable contribution.

About eight or nine years ago somebody suggested that if all the money up to that time spent on Britain's nuclear industry had been spent on thatching roofs the amount of energy conserved would have been equivalent to the amount of energy generated by nuclear power. That example is by way of illustration rather than a prescription, but it underlines the great importance of energy conservation. It is important not only in terms of the stewardship of our resources but because of the benefits that it can bring.

It has often struck me as quite telling that many elderly people and people on benefit who receive benefit through the post could well save much money by the simple operation of insulating their homes. Such a policy has a strong environmental base. My hon. Friend the Member for Gordon spoke about the importance of low-cost planning. A case can be made for that in economic terms, but it does not take into account the important environmental benefit.

I had hoped that the Government would be sympathetic at least to the ideas put forward in the Bill even if they were not sympathetic to the amendments and new clauses 7 and 12. We should have been able to hope for some positive response. If amendments were technically deficient, the Government could have said that they would bring forward correct ones in another place. The hon. Member for Cambridgeshire, North-East (Mr. Moss) put his finger on the real point when he spoke about the Bonneville Power Administration. He accepted that that company had shown what could be done through investment and energy conservation. In an intervention, my hon. Friend the Member for Gordon said that that had not been done as a result of the company's own free will but that someone had had to prompt the company to do it. That is what is behind the new clauses.

Energy conservation has not been practised in the past and the record shows that it will not happen in future. We need someone to give companies a prod, and we propose a deputy director general of electricity supply who will be able to do that. That will ensure that the electricity supply industry takes into account the great savings and the contribution that can be made by energy conservation.

My hon. Friend the Member for Berwick-upon-Tweed (Mr. Beith) spoke about new clause 17. We want to see a deputy director general of electricity supply with special responsibility for rural areas. I acknowledge that a common tariff will be charged throughout the area of the North of Scotland Hydro-Electric Board. That is welcome, especially in my constituency. Our new clause would add to the duties of our proposed deputy director a duty for boards to have regard to the social and economic requirements of the area served by the various supply boards. That requirement currently exists in the North of Scotland Hydro-Electric Board but it will disappear if the Bill becomes law.

The disappearance of such a statutory duty is regrettable. The Government have sought to justify it by saying that there will be a common tariff, and that is fair enough. Secondly, they have said that there are now other bodies charged with responsibility for economic and social development. Too much cannot be done to try to promote the economic and social development of areas with special geographic problems such as the Highlands and Islands. Most places in the Highlands and Islands are now connected to the electricity supply. It is fair to acknowledge that that has been done with assistance from the uneconomic rural development programme. However, some people are still not connected to the main electricity supply.

One of my constituents comes regularly to see me. In 1985 he was given a tentative quote by the North of Scotland Hydro-Electric Board that it would cost £10,500 to connect him to the main supply. He was told that connection would have to take place at the end of the uneconomic rural development programme. More recently he sought an estimate and was told that the cost would be £60,000. I am talking about an elderly couple living in croft property in Orkney and the wife is an invalid. They have a generator but it cannot be operated for 24 hours a day and that means that they lose the benefits of refrigeration and night storage heating. It would be of great value to those people if their property could be connected to the mains supply. I agree that in some conservation areas planning permission is not likely to be given for overhead wires, and underground cables are much more costly. I do not know how anyone could reasonably expect an elderly pensioner couple to find £60,000 for vital supplies.

I am told that under the crofting grants scheme the Department of Agriculture, Fisheries and Food in Scotland can offer a £600 grant and a loan of £600. Clearly, that is not enough. I have asked the Minister of State, Scottish Office to see whether there is any way in which assistance can be offered. I wrote to him some time ago, but he has not yet replied. I do not criticise him for that because I am sure that he realises the seriousness of the problem although I doubt whether he can find a way around it.

New clause 17 seeks to ensure the possibility of every domestic household being connected to the main supply. That should be done at a cost that is within the means of the vast majority of people. While the tariff is common throughout the north of Scotland there are no guarantees for any other part of Scotland or for the rest of the United Kingdom. Will the Minister tell us what he understands by the word "tariff"? Does it mean the standing charge? Does it include charges for repair or a call-out charge? While one would not expect connection charges to be identical throughout an area there should be at least some common basis on which charges are calculated, such as happens at the moment for wayleave payments.

The quality of the supply and especially the quality of the repair service are vital in remote rural areas and cannot be measured in terms of pounds and pence. Those things cannot be left on trust. We need a person with responsibility for looking after the provision of the electricity supply in rural areas. That would ensure that when the supply was cut, not least because of inclement weather, there would be someone to put pressure on the electricity supply industry to ensure a proper and adequate response. No one expects overnight miracles, but without additional prompting the quality of the electricity supply to rural areas could seriously diminish. That is why I commend the new clause to the House.

Mr. Eric Illsley (Barnsley, Central): I want to make one point about the Grimethorpe fluidised bed plant because that plant stands at the edge of my constituency. As several hon. Members have said, the funding for the continuation of that plant's experiments has been under threat for several months.

[Mr. Eric Illsley]

Only yesterday, British Coal gave evidence to the Select Committee on Energy that £12 million would be necessary to continue the experiments. As British Coal has attracted private investment from a foreign company in Finland called Ahlström, we should like a commitment from the Minister about future funding. I understand that the decision could be delayed until after September because of the public expenditure allocations. If the money is delayed until then, the plant will have to close. Already jobs have been lost at the plant in the sense that some key personnel have gone abroad to work on similar schemes. Those jobs were in and around my constituency. I want the Minister to consider British Coal's request for a sign that the funding will be forthcoming even if that means waiting for the cash until September.

7.30 pm

The Parliamentary Under-Secretary of State for Energy (Mr. Michael Spicer): I want to answer three specific points before I set out the Government's general position. We agree entirely with the Opposition about the very important subject of energy conservation and its relationship to the Bill.

Having designated today as "environment day"—I am not sure whether that is official—the hon. Member for Sedgefield (Mr. Blair) said that we had cut the Energy Efficiency Office budget. He said that we would presumably be left with a massive generalised advertising campaign. The sneer with which he made that point—perhaps sneer is too strong a word; rather, his pained tone—showed that he thought that that would be a waste of money. I assure him that the cuts have taken place precisely because we cut the generalised advertising budget. We have replaced that large generalised budget, which we agree with the hon. Gentleman is not the best way to convey the message, with a much more cost-effective advisory programme targeted at specific major users. We think, and I suspect from the comments made by the hon. Member for Sedgefield that he would agree, that that is the best way to convey the message.

The hon. Member for Berwick-upon-Tweed (Mr. Beith) has just popped out of the Chamber so perhaps his colleagues will pass my comments on to him. He raised the matter of common tariffs. The privatised public electricity supply companies, the present area boards, will maintain the present structure for five years after flotation if that takes place in 1990. Ultimately we cannot prevent companies from charging tariffs which relate to costs. However, powers will be given to the director general under the terms of the Bill to enable him to ensure that tariffs relate to costs and are not excessive or in any way an abuse of a company's power. That new protection for consumers will exist in the Bill.

Mr. Wallace: The Minister said that there was no way in which the Government could enforce a particular stucture. However, I understand that they will enforce the common tariff structure for the North of Scotland Hydro-Electric Board. If it is possible to do it there, why is it impossible to do it in the rest of the country? Is the Minister backtracking from the commitments given about the north of Scotland?

Mr. Spicer: I did not say that there was no way in which we could do it. I said that there is no way in which we would want to do it. Very special circumstances apply in the north of Scotland in terms of its geography and the way in which it is supplied with electricity—primarily through hydro. The Government felt that there were exceptional circumstances in the north of Scotland. Generally we would not wish to distort the market by insisting on common tariffs.

In answer to the point raised by the hon. Member for Orkney and Shetland (Mr. Wallace) about his constituent, I can tell him that my hon. Friend the Minister of State, Scottish Office has taken that on board and has had a word with the hon. Gentleman. My hon. Friend will look into the matter. Under the terms of the Bill, if the hon. Member for Orkney and Shetland was distressed about a particular charge for connection imposed on a constituent, he could involve the director general in determining whether that charge was correct. In that respect, the Bill is an improvement for the consumer.

It is easy to agree with almost every speech; turning lights on and generating heat involves processes which, with the exception of certain nuclear and renewable technologies, deplete the world stock of natural resources and, with no exceptions, have potential detrimental effects on the environment. The difficult part about this debate is to agree on what to do about it.

The thrust of the amendments is to rely on measures aimed at conserving energy. The most illiberal of those proposals is contained, as is sadly often the case these days, in the amendments of the old Liberal party. Those proposals relate to giving the regulator powers of direction and intervention to ensure, for example, that no new plant is developed unless a deputy director for conservation is satisfied that it meets certain conservationist criteria. The Democrats have gone over the top with new clause 17 which the Chair has allowed us to refer to. That new clause has been popping on and off the Amendment Paper over the past 24 hours like a jack-in-the-box.

New clause 17 proposes a rural supremo. Perhaps the Liberals can have a word with Mr. Gorbachev while he is in town. He is trying to withdraw his supremos from the countryside. The proposal for a deputy director for conservation and one for the countryside leads us to wonder why we do not have deputy directors for small houses, large houses, mothers or babies. We do not believe in that kind of interventionism. There is no way in which we can accept the new clause.

The Labour amendment proposes that a director should set annual targets for energy efficiency. Before we rush down that path of central direction and control, we should ask ourselves what is the precise purpose of conservation. Two distinct objectives have been mentioned so far and each of them may require distinct policies.

The first objective of conservation, as suggested by several hon. Members, is to make better use of scarce resources. The Government view on that is clearly different from that of the other political parties. Rather than use the instruments of central direction we shall provide the variety and the market conditions that will allow for advancing resource-efficient ways of producing power. In an excellent speech, my hon. Friend the Member for Cambridgeshire, North-East (Mr. Moss) stressed that particular point.

Mr. Blair: The Minister makes the extraordinary argument that he has some inhibition about central control, whereas he is setting up a panoply of regulation in the public interest that will interfere with the industry in many ways. Suppose that the interests of the market and of the environment conflict. Is the Minister prepared to interfere with the market to uphold the interests of the environment?

Mr. Spicer: I shall be dealing with such matters soon. I am trying to distinguish between the different thrusts of our argument, and perhaps I should not have given way. I shall be stressing that when it comes to environmental questions, the Government have a panoply of arguments. For the moment, I am talking about making better use of resources. Quite often, the Labour party engages in generalised rhetoric without explaining what it has in mind. We believe that it is better to focus on what we are proposing to achieve in the area of conservation. That is one of the reasons why we introduced the non-fossil fuel obligation, which the Opposition have so derided.

Nuclear power is certainly resource efficient, as are renewable sources of energy. It appears to have escaped the attention of the Opposition that last night we announced a special provision for renewables within the non-fossil fuel obligation. For the first time ever—and no one disputes this—the Bill gives the regulator the duty to promote efficiency. Above all, in the context of making better use of natural resources, the Bill radically restructures the industry, to allow energy-efficient producers to come on to the system. I have no doubt that that will happen, and the hon. Member for Gordon (Mr. Bruce) agreed that such producers will come on to the system as a consequence of our proposed restructuring.

Plans for combined cycle gas-fired stations, for new technology coal-fired plants, and even for smaller nuclear power stations are, as a direct result of the Bill, appearing in their legions as proposals with genuine prospects of being implemented. My hon. Friend the Member for Cambridgeshire, North-East was also absolutely correct in that respect.

Mr. Malcolm Bruce: The Minister is in danger of confusing himself. He said that he would move on to speak about environmental issues as distinct from those of conservation, and therefore does not accept that conservation is an environmental issue. Also, he proceeds to tell the House about the list of generating investment that is to come, as if it were an instrument of conservation. Conservation is about reducing demand, and therefore about reducing the requirment for additional investment in generating capacity.

Mr. Spicer: The hon. Gentleman appears not to be listening as attentively as he normally does. He will see in *Hansard* tomorrow that I said that there are two functions of conservation. One deals with natural resources depletion, the other with the environment. We must be sure that we focus our policies in such a way that they will deal with both.

For the moment I am discussing resource depletion. As my hon. Friend the Member for Cambridgeshire, North-East pointed out, even the successor companies to the CEGB are beginning to adapt to the spirit of the new age created by the Bill—judging by the recent pronouncements of Mr. Robert Malpas, chairman-designate of PowerGen.

The second objective of energy conservation is to meet the growing and legitimate concern for our environment, notably in respect of the effects of acid rain, SO_2 emissions, and the warming effect caused by CO_2. Our view, in contrast to that expressed by some hon. Members, is that we cannot rely solely on conservation measures to solve those problems. Demand for electricity is growing, and it is likely to continue increasing in all major industralised countries as consumers install new electrical processes and equipment. When the hon. Member for Gordon presents —as he did throughout the Committee stage—conservation as his major policy, he must acknowledge that major international organisations such as the International Energy Agency and the European Commission forecast continuing growth in electricity demand throughout the Community, even after taking account of prospective efficiency gains.

7.45 pm

A policy that wholly or largely relies on conservation —as does that of the hon. Member for Gordon from time to time, and, although I may be misinterpreting him, it is a policy which seems to be implicit at least in the Opposition's amendment—flies in the face of what is likely to occur in the next few years. Even allowing for conservation measures, demand is likely to grow. As we expect to be in government for the next 15 years, we cannot afford to theorise about those matters, and must be sure that the lights do not go out for old people and for the constituents we all represent. We must ensure that the growing demand for electricity is met while minimising the effects of that expansion on the environment. The key problems are how to achieve increased supply and not to rely exclusively on conservation to protect the environment. That is why the Government have introduced the tightest regulations ever to control SO_2 emissions, for example, which will have to be reduced by 60 per cent. on 1980 levels by the year 2003.

The other day, I heard it reported on radio that the hon. Member for Sedgefield proposed setting up reduced emission targets that would include one for CO_2. As we do not yet have the technology for controlling CO_2 emissions, I have to ask the hon. Gentleman whether that is an implicit reversal of Labour's anti-nuclear policy.

Mr. Blair: I was talking about conservation targets.

Mr. Spicer: If the hon. Gentleman meant conservation, I refer him to my earlier remarks, when I said that we must allow for the fact that demand will increase, even allowing for conservation. Targets related to CO_2 are a nonsense, and the hon. Gentleman probably knows it.

It is right to search for clean coal technologies, and right hon. and hon. Members in all parts of the House are right to stress the need for it. That brings me to the future of Grimethorpe. We have spent £17 million of public money on Grimethorpe, and we are now trying to ensure that industry adopts the available technology, particularly that relating to the topping cycle. We place great emphasis on individual involvement, mainly because in that way we can ensure that when the technology is fully developed it will be used—as opposed to being just another piece of fancy research that does nothing more than pander to green rhetoric. We have a good chance of successfully finding such a combination of industrial involvement in the technology. I certainly spend much of my time ensuring that that involvement takes place.

Mr. Kevin Barron (Rother Valley): If by the end of the public expenditure round in September or October of this year, industry cannot fund Grimethorpe, will the Government fund it to make sure that the topping cycle —we are a world leader in that technology—is continued in the autumn of this year?

Mr. Spicer: I cannot accept that. Even the hon. Member for Barnsley, Central (Mr. Illsley) accepted that the public expenditure round takes place in its own way. I cannot predict what submissions my Department might make to the Treasury or what the Treasury's response would be. I confirm that we are looking for industrial involvement in the project, for the good reason—not just the financial reason—that industrial involvement would mean that there would be a marketplace for the technology. It would not be sensible simply to pile in public money, in the absence of a genuine marketplace and take-up for the technology. Much public money has already been spent on Grimethorpe. If the hon. Gentleman thinks about it, he will understand that there has not been much take-up of the technologies.

We want to be sure that the development that takes place at Grimethorpe is taken up by industry. Industrial involvement is clearly the best way forward for Grimethorpe. We are certainly doing our best to ensure that there is such involvement.

There is a difference of approach between the Government and the Opposition parties on major matters of environmental controls and of conservation in particular.

Mr. Lofthouse: The Minister has already been informed by myself and other hon. Members that Mr. Malcolm Edwards made it clear yesterday that, by September, if there is no money from the Government, the Grimethorpe plant will be doomed. If that is the case, there would be little research into that technology in this country. Emergency measures must be taken by the Government to save Grimethorpe between now and September. Mr. Malcolm Edwards made it clear that he could not foresee any private sector money, apart from what has already been accepted, going into the scheme.

Mr. Spicer: I do not speak or answer for Mr. Malcolm Edwards. I answer for the Government. We are looking for industrial commitment to the technology, not because of funding but because we want the technology to be developed in such a way that it will be applied. That is a sensible way of going forward.

Mr. Allen McKay (Barnsley, West and Penistone): As far as I can recollect, there have been field studies into industrial technology and other high-tech matters. Are the Government prepared to test the fluidised bed on a field basis to prove its viability?

Mr. Spicer: As the House already knows, there is considerable industrial involvement. We want to find more people to be involved, for the good reason that it will then be much more likely that the technology will be properly applied and used. We are not just spending money or keeping jobs in Grimethorpe. That is not the primary objective of even those hon. Members who represent constituents' interests. All hon. Members are concerned about developing a technology that will be applied to make the use of coal much more efficient, and particularly to affect carbon dioxide emission levels. One way in which we can ensure that the technology is applied is to get the participation of those who believe in the application of the technology. That will be good for its further use in the way that we have argued it should be used.

The Labour party and the Liberals would engage in rhetoric and bureaucracy, and that is demonstrated by their amendments. The Government are engaged in providing the market conditions and the associated regulations which will protect the environment and make the best use of scarce resources. For that reason, I ask my right hon. and hon. Friends to vote against the amendments should they be pressed to a vote.

Mr. Morgan: Hon. Members should be conscious of the importance that energy and the environment may have in politics. We are conscious of the visit by President Gorbachev, glasnost, and East-West relations. The Secretary of State is to visit the USSR next week. We must remember also that Mr. Gorbachev and glasnost would never have been successful but for the catastrophic Chernobyl accident. The attempt by the old Russian system to close the matter and say, "We must not tell the public about it," set the glasnost ball rolling in the Soviet Union. That is why we, in turn, place great emphasis on the conservation of energy and on conservation being written into the Bill in a much more powerful way than the Government have so far agreed to do. Why have the Government kept the Bill so weak and toned it down?

The Minister spoke at length, trying to break down energy conservation into its component parts and persuade people to make better industrial use of electricity in particularly and energy in general. He mentioned the problems that have arisen and the use of new technology in generation and utilising the waste heat that inevitably comes from generation. In his view, pollution has presented some sort of challenge. He said that, somehow, we are failing to take account of the impact of the coal industry on the pollution load in the atmosphere. The Government have suddenly deemed that they should grab the great issue of the greenhouse effect arising from carbon dioxide. That problem has arisen in the past two or three years. There is no point in jobbing backwards. Scientists are not examining it.

If the cause and effect that some scientists believe to exist in the connection between fossil fuel electricity generation and global warming is firmly proved over the next three or four years, obviously it will be a matter for policy adjustments when scientists have a clear message to tell us. In the meantime, it is not possible to find a serious scientist who is willing to commit himself or herself to the view that it is right now to change technologies from fossil fuel to nuclear fuel or other renewables. They will say that it makes sense to opt for conservation. The greenhouse effect argument that the Government have been trying to promote and use as a justification for the non-fossil fuel levy and for the protective right fence that they are putting around the nuclear industry but not around the coal industry was used by scientists to promote the need to write in conservation measures, as most American states have done and as the European Community is trying to do, but as this Government, given their big opportunity, are funking.

Let us work out why. The answer is simple. We have read about the great argument—we have heard it on serious television current affairs programmes on Sundays —between the Secretary of State for the Environment and

the Secretary of State for Energy. The Secretary of State for the Environment wants Britain to go all nuclear as quickly as possible. The Secretary of State for Energy had to put him right and insist, but in more elegant language, "Stay off my turf." He believes that we cannot afford to commit ourselves to a big programme of nuclear power and hope to float the industry.

The Secretary of State for the Environment says that he is an all-nuclear man, whereas the Secretary of State for Energy has a job to do—to sell the industry to the private sector. He is perfectly well aware from the advice that he is receiving from the merchant banks that one simply cannot do that and commit oneself to major changes in technology or to a building programme which he knows that the British power engineering industry cannot meet. He knows that if there were to be a big shift to nuclear power, there would be no chance of privatising the industry.

One cannot say that the industry is now due for a sea change in technology and for a major shift to some new and, in British terms, unproven method of generating power and yet hope to sell the industry. That would be an argument for keeping the industry in the public sector. There are many other arguments for that, but that is the argument that the merchant banks would use if the Secretary of State for the Environment were successful in persuading the Secretary of State for Energy that he had to shift to a major programme of nuclear power.

8 pm

The Department of Energy says that it wants to keep things simple and not tell anyone in the City who might be advising the buyers that they might need to think about huge write-offs of existing plant. The Department of Energy says that the industry should be kept as it is so that it can produce profits every year and that if there were to be tighter regulations, they should be introduced on a cumulative basis, a few per cent. a year, with which the industry could cope as if it were a conventional company.

The Secretary of State for the Environment goes for the big bang and the shifting of everything into nuclear power. We believe that we should adapt the existing technology and convert to smaller power stations, from which we could obtain far higher efficiency ratings. We are well aware that it is possible to improve the peak performance of power stations from the present 37 per cent. fuel efficiency to 75 per cent., with the use of the combined cycle, combined heat and power technology or both at the same time.

The other points that the Opposition have raised have been in relation to the Government's attitude to the Energy Efficiency Office and other allied activities. There has been an enormous deterioration in the availability of advice to industry and consumers because of the change from the community regulations to the employment training regulations in respect of schemes that can provide energy advice or energy saving devices in houses, such as draught strips and insulation. Grants have also been abolished.

I shall give an example from Cardiff. About six months ago, 230 people were engaged in energy advice under the community programme. In spite of the changes announced by the Department of Employment to try to save some of the schemes, only 40 people are now engaged in that scheme. The energy advice centre has been scrapped completely because it proved to be wholly impossible to make it compatible with the employment training regulations. That is a major loss to energy efficiency and conservation and it is a matter with which the Government have proved themselves inadequate to cope.

The Government's actions since the new year do not give us any confidence in the future of energy conservation. That is why we believe that it is essential to write into the Bill far stricter provisions than the Government have in mind. We know that the only people who are stopping the Government are the merchant bankers in the City who say that stricter provisions would over-complicate the issue and might stop the industry being sold off successfully. The merchant banks believe that if the Government want a successful sale, they should keep matters plain and simple and ensure that the industry can see the profits coming. The merchant banks believe that the Government should not tell people what there is to worry about in the energy future of the world.

We are glad that Mr. Malpas, the chief executive of PowerGen, has done his best to bring to the notice of the investing public, the general public and, most importantly, to the Government, just how important energy conservation is, whether the future of the electricity industry is in the public or private sector. Before any Conservative Back Benchers get the idea that conservation of the environment can be left safely to the private sector, I must point out that Opposition Members do not want to see the corner-cutting ethics and mentality of the Esso oil company, which caused the Prince William sound disaster of the Exxon Valdez in the past couple of weeks, running the electricity industry in this country.

Question put, That the clause be read a Second time:—

The House divided: Ayes 191, Noes 254.

Question accordingly negatived.

New clause 11

Access to Information

'(1) The Director General shall require that consumer committees, customers and members of the public have full access to any information regarding their health and safety resulting from any activities connected with the supply, generation or transmission of electricity.

(2) Nothing in this Act concerning the protection of information or persons shall prevent disclosure of any information required under (1) above.'.—*[Mr. Malcolm Bruce.]*

Brought up, and read the First time.

Mr. Malcolm Bruce: I beg to move, That the clause be read a Second time.

Mr. Deputy Speaker: With this it will be convenient to discuss Government amendments Nos. 2 and 28.

8.15 pm

Mr. Bruce: The purpose of the new clause is to ensure that information on safety is made available to consumer committees and to the public. That is not specifically allowed for in the Bill as it stands. The record of the electricity supply industry in the recent past suggests that such a measure is necessary. The Minister and hon. Members who served on the Committee with me know that I feel strongly about the conduct of the industry especially in relation to nuclear power. I believe that having the requirement that such information be made available to consumer committees and to the public would be beneficial to the image and to the esteem in which the industry is held by the public. The lack of such a provision has been extremely damaging in that respect.

The problem with the Bill as drafted is that the specific restriction on the publishing of information is likely to work against the public interest and lead to the information being withheld or suppressed until long after it has any relevance or could in any way be helpful.

It might be helpful to the House if I quote three or four examples of the sort of information that I feel should be available. One problem that has been actively debated in recent years, especially since the Three Mile Island and Chernobyl accidents, is exactly what emergency procedures there should be for a nuclear accident at a British nuclear installation. At the moment there is a lack of public awareness about exactly what would happen in the event of a significant nuclear accident. Do people actually know what to do? Do the operators of nuclear power stations know that action they should take? At what point should they alert people round about? When should they shut down and evacuate the area? What should people in the area be told to do in the event of a significant leak of radiation that would require action?

There is no doubt that if there were such a leak without people being properly informed, the instinct would be to run, to panic and to evacuate the area; yet there is evidence to suggest that that is the wrong thing to do, depending on how serious the accident is. When the plume of radiation is being discharged, that is not the time to be out in the open and, although there is a danger wherever one is, it may be safer to stay indoors than to go out into the open. People need to know when they should stay and when they should move.

There are practical considerations too. Nuclear power stations, in particular, tend to be in rather remote areas where the roads are not designed to allow a lot of people to move quickly at one time; the congestion could aggravate the seriousness of the incident. There is no agreed procedure as to whether or not and when, if and how, stable iodine tablets should be issued; people do not even know where they could get them or whether to take them.

This is in sharp contrast with the situation in the United States perhaps because, regrettably, that country has experienced a major accident. In the United States the telephone books in the area of a nuclear installation contain clear descriptions of what people should do in the event of a nuclear accident. We should, in any case, have that sort of agreement here. It should be published and available now, but it should certainly be done once the industry moves into the private sector, and the Bill should require it to be done.

The Prime Minister and other Ministers have suggested in replies to hon. Members that the whole thing is under control, that they have discussed this with all the relevant authorities and that the latter know what to do. That does not appear to be the view of the County Emergency Planning Officers Society whose members remain concerned about a number of shortfalls in the agreement. A working party has produced a number of reports yet still has outstanding concerns as to what can and should be done. So nobody is in a position either to say that the relevant authorities have a nationally agreed scheme and a standard of what should happen. Nor does anyone know how to publicise this or ensure that the public know what to do and what not to do in the event of a major disaster.

I make no apology for the fact that my examples are drawn mostly from nuclear accidents, but what I am saying applies to other kinds of generating station. The same procedures should apply. There should be a clear understanding of exactly what happens and how the public

[Mr. Bruce]

will be informed. It is quite proper that the consumer committees set up under the Bill should be an integral part of the process of ensuring dissemination of accurate information.

A problem has emerged, for example, in relation to overhead power lines. I am not competent to say whether the anxieties that have been expressed about safety risks from living close to overhead power lines are valid, but I think that consumer committees should be empowered to get the relevant information, publicise it and make recommendations about appropriate action. I have had a representation from a doctor in my constituency who says that he has had complaints from patients living in the area of overhead power lines. Although he has no statistical proof, he feels that there is some correlation, although it may be more psychological than real. That is the kind of information that needs to be examined and circulated.

Workers in the industry have suffered from overdoses of radiation. They are entitled to know exactly what the situation is. In 1986 British Nuclear Fuels said that 631 of its employees had received a dose of radiation in excess of the approved safety level. Although figures are not available for the Atomic Energy Authority and the Central Electricity Generating Board, there seems to be some suggestion that some of their employees have been affected. This is aggravated by the National Radiation Protection Board's view that the recommended safety limit be reduced to one third. If that were applied, the numbers exposed to unsafe radiation levels in the industry would rise substantially. That kind of information ought to be available and properly circulated, and people working in the industry should have the right of access to it.

Our most recent experience is the Chernobyl disaster. What happened then is indicative of our country's lack of preparedness in the event of a major accident, not just in the United Kingdom but across the Channel in France or Belgium. Those countries are much closer to us than Kiev, so the intensity of radiation to which we could be exposed and the speed at which it arrived would require much more urgent and coherent reaction than the Chernobyl cloud required. Yet the reaction to Chernobyl was confused and contradictory and did anything but inspire public confidence in our procedures.

Perhaps I could refer the House to a letter in *The Independent* of 10 August 1988 from a senior registrar in community medicine and a lecturer in community medicine, writing from London NW3. They conducted their own survey of district medical officers to ask how they viewed the response at the time of Chernobyl. The writers had a response rate of 89 per cent., which in itself indicated a high level of concern. Fifty-two per cent. of those responding said that they had tried to get information about local radiation levels but had had little success. The general view was that what information was available was in a form that was unusable, unintelligible and contradictory. It was said that the blind were leading the blind and that the advice which arrived was too little and too late. Two years after the incident, the letter writers' view was that nothing had fundamentally changed.

We need to know how we would respond if—I hope it does not happen—we had an accident close to our shores or within the United Kingdom where it would appear that we have no mechanism for ensuring that safety information is properly conveyed to the public, information to which they can have access as of right.

Lack of information leads to a proliferation of rumour and suspicion, which, in return, may lead to an exaggeration of the problem. If, for example, there is a minor radiation leak in a nuclear power station, there is no mechanism for ensuring that the information is made available to the relevant people; yet in the locality people will hear about it and will assume that it is much worse than it is because, they will argue, why should people cover up if it is only a minor incident? I am sure that the Minister will accept that it would be much better to state clearly the nature of the incident; then the consumer committees, because they would gain a degree of understanding, could put the matter in its proper perspective.

Having been a very strong critic of the conduct of the nuclear industry, I think that there has been an improvement—although it is not perfect by any means—in recent years. The difficulty is that the industry has spent so many years misleading the public and suppressing information that there is a fundamental inability to take anything that the industry says at face value. People are extremely suspicious.

Perhaps the most dramatic example of suppression of information that the public had a right to know is that of the Windscale fire. It happened a long time ago and we are fortunate that, although it was a serious incident—the most serious in the United Kingdom—we have not had an incident on that scale since. I believe that what happened there is indicative of how serious the suppression problem is. I shall not go into the political domain about the fact that the Prime Minister of the day basically suppressed the information because it was thought to be unwise, undesirable and politically embarrassing to reveal it. My concern is that the National Radiological Protection Board estimated that the Windscale fire led to 260 cases of thyroid cancers, 13 of them fatal.

Another estimate has suggested that there could have been up to 1,000 fatal cancers linked to that fire. That is serious information. What happened was that there was a fire and a discharge of radiation, and information on the matter was suppressed. People in the area were not told and therefore were not able to take any precautions. They were exposed to excessive levels of radiation and as a result 1,000 people died of cancer during the years that followed. Clearly, if they had had the right of access to that information, some of those deaths would have been avoided because precautions could have been taken at the time.

8.30 pm

The right to know is a fundamental right, as is the right to take relevant action to protect one's own life. The new clause would ensure that the consumer committees and the public generally had a right to obtain information relating directly to their health requirements. I believe, therefore, that the new clause would be welcomed.

The Minister should accept the new clause because at the end of the day it will be beneficial to the industry. The industry's record of suppressing information and releasing bits and pieces of information late and in a form that does not increase knowledge, adds to public concern and anxiety and has probably damaged the industry's public image almost irreparably. There is no doubt that, if that action were taken, a start could be made towards ensuring

that there was greater confidence between the public and the consumer committees and the industry. The public would have the right to information about what was happening in the electricity supply industry that would have implications for their safety and that of those working in the industry.

I hope that the House will accept the new clause.

Mr. Hardy: I shall not take as long as the hon. Member for Gordon (Mr. Bruce), but I urge the Minister to look favourably on the new clause. I accept that it may have one defect that is perhaps regrettable, which is that it does not refer directly to those who are employed in the industry. However, one assumes that the Democrats were including those people in the reference to members of the public. I believe that the intention of the new clause is one that we should support and, if it comes to a vote, I shall be in the Lobby with the hon. Member for Gordon.

The Minister should recognise that education goes hand in hand with safety. We see far too much of the furtive commitment to secrecy from the present Administration. I shall cite an example. Probably the only open Department of State nowadays is the Department of Transport. It has recognised that it is necessary to put warning notices up on our highways. I accept that under this Administration warning notices proliferate much more than they have ever before. However, if the Department of Transport feels that it is necessary to warn people of approaching road hazards, surely the Department of Energy should insist that a similar approach is adopted for generation. I am not talking only of nuclear generation. I accept, too, that the hon. Member for Gordon was not restricting his remarks to that sector.

The Government must recognise that people demand more information. About two days after the Chernobyl incident I recall a member of the present Cabinet saying to me, "Is it not disgraceful that the Russians are not saying anything about this event that is reported to have happened in the Soviet Union?" I said, "I don't know anything about it, but, if they don't say anything about it, it would, indeed, be disgraceful and disreputable." After the first few days the Russians were quite severely criticised for an excessive reticence, which may have been due to an excessive bureaucracy. However, the fact remains that after that period of discretion, reticence, or whatever one likes to call it, they were a great deal more open and informative in telling the world about the details of that dreadful accident that some Western countries have been in regard to incidents or accidents in their plants, which, fortunately, have not been on the same scale as Chernobyl. However, that perhaps is a matter of fortune rather than of skilled administration.

We have been too furtive. In the past decade we have seen example after example of the use of public resources for unnecessary secrecy. I learned the other day that there are techniques and staff in the public service in various Government Departments devoted to detecting photocopies of pieces of paper. That causes one to wonder sometimes about the Minister's hesitation in incurring expenditure on matters which are perhaps far more in the public good.

I believe that the new clause is a good one. I hope that the Minister will respond positively to it, because with new clause 11 have been selected Government amendments Nos. 2 and 28. The Minister will recall that, in Committee, he appeared to be slightly persuaded when I moved amendments on safety. I hope that in the weeks since those debates, he has recognised that he appeared to be moving towards a sympathy with safety. If he has, perhaps when the House approves Government amendments Nos. 2 and 28, he will allow new clause 11 to go through as well.

Mr. Morgan: A key factor in Government amendments Nos. 2 and 28—I quote amendment No. 28 as an example —is

"protecting the public from dangers arising from the generation, transmission or supply of electricity".

We understand that that is to cover also the dangers that arise from the disposal of the waste products on the nuclear side of the industry and those arising from generation.

Mr. Hardy: My hon. Friend is right to make that assumption. Perhaps the Minister will make that point clear when he replies.

I can see nothing wrong with the new clause except, as I have said, that it would have been useful if it had included specific reference to the people employed in the industry rather than simply assuming that they would be covered by the reference to members of the public.

I am not too worried about the reference to those who will serve on the committees, largely because I am suspicious of the sort of people who nowadays are appointed to quangos. They are more likely to embarrass or injure themselves than us. I am, however, concerned about the public good.

I had no intention of referring to those who live underneath transmission lines but, when I saw a scare story reported in a newspaper some time ago, I recall that I asked our local medical officer of health if it would be possible to carry out a survey. The statistical base would need to be a great deal larger than would have been possible in my local locality and therefore, as far as I know, no study has been undertaken.

Now that the matter has been mentioned in the House, the Minister had better be prepared to respond fully. If he cannot do so tonight, I have no doubt that the matter will be raised in another place. There is a possibility that more scare stories may develop and, if reassurance is justified, it would be as well for that reassurance to be offered. If it is not justified, perhaps a little more information should be given.

I recall the considerable strain and anger that existed, and may still exist, in Belgium, Luxembourg and the Saarland as a result of the anxieties of the people living quite close the French border, about French secrecy. We do not have any national or territorial boundaries with other countries, so we must contain our anxieties and strain within our island. I believe that the arguments advanced by the hon. Member for Gordon are justified and those who live in the proximity of a power station —it need not be nuclear—are anxious.

There is no reason why the Government should be furtive or secretive or seek to deny information. Information should be available if only because of the 1957 episode. Never again should people be denied information that is of direct relevance to their health and their other interests. For that reason I am happy to support the new clause. I only wish that it covered the employees of the nuclear industry.

Mr. Alexander Eadie (Midlothian): I had not intended to contribute to the debate, but the hon. Member for Gordon (Mr. Bruce) made a fair point when he moved the new clause.

We have already been told that the Government are unlikely to respond to any attempts to amend the Bill, but the hon. Member for Gordon raised the important issue of safety. We must all be safety-conscious, as that is the only way in which to deal with problems. Any laxity in safety means that we are put in peril. The Government must reflect on the experience of previous legislation. It is not good enough for something permissive to be written into legislation. If the argument advanced is right and proper, any obligations should be mandatory. In that way there is no argument. I hope that the Minister will not fall back on the excuse of previous Governments and decide that what is written into the Bill should be permissive.

The only weakness in the new clause—this is not meant as a criticism—is that the employees of the industry are not included. They are not just employees, but members of the public. Their knowledge would help to achieve the aims set out in the new clause.

The new clause is important because of the defensive history of the thermal nuclear power industry. It has spent a lot of time and effort to promote the idea that everything is all right and that there is no danger. It has claimed that, technologically, everything is perfect. The possibilities of an accident have been worked out statistically, but, as the hon. Member for Gordon has said, Three Mile Island and Chernobyl have put paid to those efforts. Human weakness can always occur.

We are still suffering the effects of Chernobyl in Scotland. During last night's debate a Conservative Member made an absurd intervention during my speech and spoke about radiation from coal. I have never heard of any coal mine being responsible for radiation for year after year. I was in Norway at the time of the Chernobyl incident and when I was told that its reindeer herd had had to be slaughtered I was extremely sad.

The hon. Member for Gordon is right to say that the nuclear power industry has always been extremely defensive. I know of people who earn their livelihoods from statistics. If a construction is undertaken, people can calculate with amazing accuracy how many people are likely to be killed at the building site if the construction continues for a couple of years. As a consequence of our North sea oil explorations, people are now able to calculate, statistically, how many people are likely to be killed as a result of that exploration. As legislators we do not appreciate that when we approve some legislation it means that, inevitably, people will be killed as a consequence.

I am all in favour of technology and I am not against nuclear power in the sense that it represents new technology. It is against my background to be against new technology because I have always said, "If new technology can do the job, why should men's backs be broken?" The silliest thing that I ever heard in my life was the claim that hard work never killed anyone. I live in a small mining village and in the cemetery I could point out those individuals who died as a consequence of hard work. When people say that hard work never killed anyone, it generally means that they have never done any hard work in their lives.

8.45 pm

Forty years ago I was employed in the rail industry for a short time. About a month ago I had the great privilege of driving a diesel train—I had only driven steam trains. The first thing I asked was where the dead man's brake was, but, although we have such brakes, accidents still happen. Human error still occurs. Such error can arise in the nuclear power industry and it is not valid to argue that everything is perfect and every effort has been made to make things safe—experience tells us otherwise. Many people in many industries spend a great deal of time trying to make those industries as technologically safe as possible, but the human factor must always be taken into account.

I am anything but impressed by thermal nuclear power, as I believe that it carries built-in hazards. However, the new clause could help the nuclear power industry. We should reveal all and we should tell people what has happened. We should make them even more safety-conscious and, above all, those who work in the industry should be taken into the confidence of those who run it. Those employees will not brook any people who are anti their industry. They want to make it work and they believe in it.

I hope that the Minister will not use the old argument about making such things permissive. If we really agree with the hon. Member for Gordon, the legislation should be mandatory and not permissive.

Mr. Dennis Skinner (Bolsover): I agree with my hon. Friend the Member for Midlothian (Mr. Eadie) about permissiveness as opposed to something that is mandatory. I was reminded of what was said today by the Leader of the House. He used a time-honoured phrase about the Prime Minister making herself available to Gorbachev. Is that what my hon. Friend means by permissiveness? I have a picture in my mind, but I had better not take that matter any further.

I am absolutely certain that the provisions of the Bill must be mandatory if it is to mean anything in terms of giving power and rights to consumers. Our experience of permissive local government legislation in particular has made us aware of the pitfalls. My hon. Friend has hit the nail on the head.

I am pleased that my hon. Friend mentioned the effects of Chernobyl and the way in which they are still being felt in Scotland, let alone in Wales and other parts of Great Britain. I remember that incident clearly. Two or three days after it we heard that the radioactive cloud was making its way up the Thames estuary—there was a report on the "Today" programme about it. That morning there was a large demonstration outside the Department of Energy. The leading wet, now the so-called Secretary of State for Wales, was in charge of energy at that time. The Friends of the Earth were drawing attention to the fact that he had said that nuclear power was the safest form of energy known to man. People were scared. It is the only time that I can recall men and women, young and old, coming towards us, snatching the leaflets out of our hands so that they would know what effects Chernobyl might have.

Once that radioactive cloud went up into the sky it belonged not to Russia or to America but to mother nature, and it went the way that the wind blew. People were scared stiff about the consequences. I remember one woman standing about five yards away, who had her hand

out waiting to grab a leaflet. I said to her, "It is all right; the cloud is moving away; it is behind you. If you keep moving the other way you can race it if you get as far as Reading." Off she went, scared stiff. That is what nuclear power means to people when there is a disaster like Chernobyl.

Considering the matter from that point of view, I wonder what powers the director general will have. If there were explosions, could he do anything to protect consumers and their rights? Let us suppose that the director general had to deal with something less important. Let us suppose that he was confronted by four Tory Members of Parliament who told him that they had heard on the grapevine that the new organisation running nuclear power—the new "opoly", or whatever it is called —had decided to dump low-level nuclear waste in their constituencies. Let us suppose that those four Members included a Cabinet Minister, perhaps the Leader of the House, and a junior Minister at the Home Office because they were to have low-level nuclear waste dumped in their areas.

Accountability is to be taken from the public sector and handed over to the private sector with a bit of a director general in charge who is to protect the rights of consumers. What would happen if the Leader of the House was complaining about the dumping of low-level waste in his constituency because he had had 5,000 letters from people taking a NIMBY attitude, people whom we might loosely call clones of the Secretary of State for the Environment. Under market force operations, what powers would the director general have in those circumstances? As we all know, similar proposals were made some time ago. Because we were coming up to a general election, and because there was an umbilical cord between the Secretary of State and the Leader of the House and other Tory Members, they managed to get rid of those dumping grounds.

The same process will be repeated over and over again, especially as power stations are to be decommissioned. The companies will have to find somewhere to put the muck. The director general will be a Tory; there is no doubt about that. The Prime Minister will ask, is he or she one of us? Whatever the Secretary of State says, the director general will go along with it because he will be in the Prime Minister's pocket. So the director general—good Tory that he will be—will say, "I will tell you what we will do; we will make sure that the waste is dumped in Labour areas." Perhaps it will be dumped in Liberal areas, or it could go into the areas represented by the new-fangled party, the party that dare not speak its name, the one that changes its name every five months.

So the director general will say that the waste may be dumped in old mines, perhaps in Derbyshire, Yorkshire or south Wales. He will suggest that the rubbish should be put in those areas. That is what I can see happening. That is why it is essential that there are mandatory powers.

Mr. Hardy: Has not my hon. Friend noticied over the last two or three years that there has been remarkable uniformity and solidarity on the Government Benches? Does not he suspect that the Government Chief Whip has been using that as a threat to maintain discipline in Government ranks?

Mr. Skinner: The Government have used some new-fangled ideas and some old-fangled bullying since the Prime Minister came to power. They have shop stewards on the door when we are voting. They may call them Whips, but they are really shop stewards. They hustle the Government Back Benchers in. Every so often they say, "If you behave yourself, we will give you a bisque." That is French for being absent without leave. It is a night off to do research or whatever they have to do in the course of those odd hours.

Mr. Gerald Howarth (Cannock and Burntwood): Clearly the hon. Gentleman is not a croquet player; otherwise, he would know that a bisque is a free go for an inferior player.

Mr. Skinner: Well, I never. Here am I, in this mirror image of the Eton debating society, and I have got the bisque wrong. Oh, what a disaster. Do I feel so small, so belittled that I do not know the croquet term "bisque"? I will tell hon. Members what I do know. I know that the Tories will trot through the Lobby behind him when the Minister decides to force a vote on the issue. They will be hustled in by the Tory shop stewards on the door. They will go through the hoop, or the French equivalent of the hoop—I have no doubt that there is a croquet term for that as well.

One of the most alarming things about all this is that the consumer has seen what can happen when parts of the public sector are privatised or when there is loose control by the Tory Government of the public sector. It means that less money is spent on safety and security. We have seen it at the airports; we have seen what it has meant for human life. There will be less public control. The entrepreneurs and those who operate the market forces will be in charge of nuclear power. The state will not be able to exert its influence. Even though we are talking about a small point we need a mandatory provision that gives proper rights to consumers.

Those are my few observations on the matter. I believe that the Bill will be looked upon in future as a disaster. People will reflect upon it and say. "What were the Government playing at? Why was a public utility responsible for nuclear power left to the whims of those who are in it to make money hand over fist and to line the pockets of the friends of the Tory party?" It would be a small price to pay if the Government were to accept the amendments and make sure that the Bill includes a mandatory provision.

Mr. Michael Spicer: Like other hon. Members, the Government attach great importance to maintaining the industry's high safety standards. That is why we undertook in Committee to examine safety questions carefully and to come forward, if necessary, with further safeguards. That is what lies behind Government amendments Nos. 2 and 28 to which only brief reference has been made by Opposition Members, including the hon. Member for Wentworth (Mr. Hardy). Opposition Members were rather churlish. We spent much time in Committee considering safety matters. As a result of those deliberations the Government have proposed amendments. They are the product of good work in Committee. I would have thought that Opposition Members would at least have made a passing reference to them.

I shall first refer to the two questions raised by the hon. Members for Gordon (Mr. Bruce), for Bolsover (Mr. Skinner), for Wentworth (Mr. Hardy) and for Cardiff, West (Mr. Morgan). The hon. Member for Bolsworthy, or

[Mr. Michael Spicer]

rather for Bolsover—Bolsworthy may be the right expression since we have been talking about croquet—mentioned mother nature and rightly said that nuclear incidents are international. The Government have signed an international convention on the notification of nuclear incidents under the aegis of the International Atomic Energy Agency and will ask Parliament to ratify that in the Atomic Energy Bill that the Leader of the House announced that we would debate next Thursday. On the basis of what Opposition Members have said tonight, I hope that they will vote in favour of the Atomic Energy Bill, of which a major part is the ratification of that convention. I hope that that partly explains what the Government have done, in answer to the important point raised by the hon. Member for Bolsover.

The hon. Member for Rother Valley (Mr. Barron) looks worried. Perhaps he has not yet geared up to dealing with the Bill. Perhaps I have just given him his first warning of it.

9 pm

Mr. Barron: I am geared up. What surprises me about the Atomic Energy Bill is that the Minister assumes that we shall not vote against it.

Mr. Spicer: I said that I assumed on the basis of the arguments and very good points which have been made by Opposition Members tonight, that because the Bill will meet those reasonable worries, the hon. Member for Rother Valley would vote in favour of it.

In answer to the hon. Member for Cardiff, West, the responsibility for the safety of nuclear waste and nuclear power stations generally is a matter for the operators of the stations, acting under the regulations, guidelines and monitoring of the nuclear installations inspectorate and Her Majesty's inspectorate of pollution. That is how safety regulations apply in this country.

Mr. Hardy: The Minister mentioned that I had referred to Government amendments Nos. 2 and 28. He will also recall that I expressed slight criticism of new clause 11 because it did not refer to employees of the industry. The same point could be made about Government amendments Nos. 2 and 28 because they refer to the public. The Minister will recall that when I took part in this debate in Committee, I made reference to employees in the industry. Will he assure the House that the new clauses will refer to employees of the industry as well as to members of the general public?

Mr. Spicer: I am checking the precise answer to that question but I am pretty certain that I can give that assurance to the hon. Gentleman. I want to be absolutely clear and I am just awaiting confirmation of that.

In our view, new clause 11 is not the sensible way to approach this extremely important—we are all agreed on this—issue of safety. By implication, it gives the primary responsibility for the safety of the general public to the director. In the Bill, it is implicit that the responsibility for safety is covered by the electricity supply regulations, the Health and Safety at Work etc. Act 1974 and other Acts and secondary legislation which deal with specific aspects of safety. Those include the Factories Act 1961 and the Control of Industrial Major Accident Hazards Regulations 1985. Within the broad panoply of these health and safety regulations it is right that the director and the Secretary of State should take safety into account as a major factor when the economic regime and regulation is set. That is the key issue and that is why amendment No. 2 specifically requires that the duties and functions of both the Secretary of State and the director should be exercised in the manner best calculated to protect the public from dangers arising from the generation, transmission and supply of electricity. The need to comply with that duty will clearly be a factor in the director's use of information powers under clause 44. That partly answers the question of the hon. Member for Wentworth.

Mr. Eadie: I talked about permissive and mandatory legislation. Am I to assume that the Minister is telling us that the director of information will have discretionary powers. The thrust of our argument is that the public, and employees of the industry, are entitled to know where they stand. Is not the Minister contradicting that if he says that the director is to have certain discretionary powers?

Mr. Spicer: All I have said is that the health and safety regime is laid down by a mass of parliamentary legislation and that we must ensure that our amendments achieve what they are intended to achieve; that nothing that the director—who is concerned primarily with economic and not safety regulations—does when applying his economic regulation duties, conflicts with the safety and health regime which exists by statute. In the Bill we must make it absolutely clear that, when assessing the duties of the director, they do not conflict with existing legislation which is outside the Bill.

Mr. Morgan *rose*——

Mr. Spicer: Before I give way I must not forget to tell the hon. Member for Wentworth that clause 3 (3) and the health and safety at work regulations cover employees.

Mr. Morgan: I wonder whether the Minister has seriously considered the practicalities of what he is saying—that the director will be mostly concerned with the economic and not safety regulations, and that the two interests should not conflict. What about when they do? Last night the Secretary of State mentioned the possibility of renegotiating the BNFL contract on reprocessing with National Power. One way to do that would be so that BNFL did not reprocess some of the fuel from the AGRs but, instead, left it for storage. National Power would say that it would save money by doing that. Would the director have the right to say that he did not consider that safe?

Mr. Spicer: The Government amendments emphasise that the director will have to bear in mind public safety at all times when making his decisions. These amendments will have additional effects. When clause 3 was first discussed in Committee, it was suggested that the duties of the director and the Secretary of State were deficient because they did not refer specifically to safety. However, that concern is met by amendment No. 2 which underlines the duties of the Secretary of State and the director to consider safety at all times.

At present, the general framework for safety in the electricity industry is set by the electricity supply regulations. The Government were responsible for instituting the first full-scale revision of those regulations

for 50 years, culminating in the issue of new regulations last year. Those regulations established a general framework of standards. The key point in answer to the hon. Member for Gordon is that only those with expert knowledge of a particular site or installation and with responsibility for its operation can determine the precise safety measures required under the general regulation. That is established practice in Britain for dealing with safety. That is why the first responsibility must and does rest with the industry.

Those responsibilities are laid down in an array of primary and secondary legislation and that is further supported by the common law on matters such as the duty of care under the law of negligence. None of that will change with the passage of the Bill. That is the answer to the point made by the hon. Member for Midlothian (Mr. Eadie). Licence holders and those operating under exemptions will have to act in accordance with the same regime that has resulted in the current high standards of safety in the industry.

The Bill provides for the continuation of the existing electricity supply regulations and clause 27 enables the regulations to be added to or revised as necessary.

In Committee there seemed to be some doubt about the precise purpose of clause 27. Amendment No. 28 is designed to put its purpose beyond doubt. It makes it explicit that regulations made under the clause can include those concerned directly with safety aspects of the industry's operations and, in particular, the protection of the public.

I hope that, having explained the philosophy of not only the electricity industry but other industries with which I have been concerned—for example, the aviation industry, where the primary duty is placed upon the operator within the standards laid down—we have made it clear that nothing done under the Bill, in particular under the terms laid down for the duties of the regulator, conflict with the standards, regulations and legislation laid down to protect safety, which all agree is paramount. I hope that, on the basis of that explanation, the hon. Member for Gordon will feel able to withdraw his new clause.

Mr. Malcolm Bruce: The Minister has dealt with the Government amendments rather than with my new clause. I accept that amendments Nos. 2 and 28 improve the Bill and that they are a response to our debates in Committee. But they do not relate to the points that I and other hon. Members have raised tonight. The Minister has essentially debated the quality of safety inspection and enforcement under the licences proposed by the Bill, whereas we are talking about the public's right to have information about safety and the directors' responsibility to ensure access to that information when it is needed.

I intended my new clause to include employees within the industry because they have a particular right to information. The new clause can include them, but it might have been better if it had specifically done so.

The hon. Member for Midlothian (Mr. Eadie) referred to reindeer in Scandinavia suffering from the fallout from Chernobyl. That is the sort of information that is important. Reindeer's metabolism enables them to operate efficiently in the Arctic tundra, but it also makes them especially vulnerable to radiation. They convert food quickly so that the build-up of radiation in their natural food, the tundra moss, affects them much more intensely than other animals. That is the kind of information to which the public are entitled and it was the kind of information that was not available in any clear or consistent form at the time of the Chernobyl disaster.

Many hon. Members will recall the confusing information that came from the Government at that time. The Scottish Office said that milk was not safe to drink, then that it was safe and then that it was not safe. That did not inspire public confidence and did not provide the important and relevant information.

However, the essential point is that the Minister is saying that the director should not impinge on safety; that the new regime will ensure that there is a specific responsibility to have due regard to safety. We say that the public and those working in the industry should have the director's support to get access to information that they need to enable them to make decisions. The Minister is effectively arguing that the public have to trust the experts who are entrusted with safety and have no right to know what the experts are talking about. In other words, they have no right to explanations in the kind of language that people can understand which show exactly what is expected of them, the action open to them and to whom they can turn to obtain the relevant explanation of expert information.

9.15 pm

Helpful as they are, the Government's amendments are not relevant to my new clause, without which the Bill will be substantially weakened because consumer committees and the public do not have the right of access to essential information. All the anxieties and reservations that many of us have had about the industry during the past 20 years are passing unanswered into the private sector. If we could not get the information that we needed when the industry was in the public sector, accountable through Ministers to the House, what chance have we of getting it through a private commercial organisation from which the director has no power to demand such information on behalf of the consumer committees or the public? The answer is that we have no chance of doing so. I intend to force my new clause to a Division and I hope that right hon. and hon. Members will support it.

Question put, That the clause be read a Second time:—

The House divided: Ayes 77, Noes 197.

Clause 2

CONSUMERS' COMMITTEES

Mr. Barron: I beg to move amendment No. 121, in page 2, line 23, after "shall", insert

"seek to ensure that the committee is representative of local consumer interests and geographical areas and shall".

Madam Deputy Speaker (Miss Betty Boothroyd): With this it will be convenient to take amendment No. 114, in page 2, line 25, at end insert

"The Scottish Committees shall include a representative of each island and regional authority.".

Mr. Barron: We had quite a lengthy debate in Committee on this matter, and this is a further attempt to ensure that the members of the consumer committees are really representative of the interests of local consumers. During the debate in Committee, the Minister showed a lack of understanding of exactly what concerns people who represent the interests of consumers. I quoted to him a brief that had been given, as I understand it, to all hon. Members by the Consumers Association, a respected body which has worked for many years promoting the interests and rights of consumers. It commented directly on the wording and on the likely operation of the clause:

"We do not agree with the 'desirability of appointing a person who has experience of, and has shown capacity in, matters relevant to the provision of electrical services'"—

that is the wording that we, too, should like to change with this amendment—

"Part 1 Clause 2 Subsection 4. This is a recipe for ensuring that the committees are 'captured' by the industries they are meant to be supervising."

Opposition Members, having been through the Bill in Committee, have little confidence that the vested interests of the electricity supply industry will be removed by clause 2 if it is left unamended.

Indeed, in Committee the Minister said:

"we see the committees not like such bodies in the past, which have stood on the touchline of the regulatory process, but as an integrated part of that process with well-defined roles." —[*Official Report, Standing Committee E*, 12 January 1989; c. 122.]

9.30 pm

We believe that, in a general sense, the committees may be far too integrated if their members do not directly represent consumer interests. Consumer interests are not necessarily the interests of the electricity supply industry. We are anxious, therefore, that the committees should not be dominated by the industry's needs or the regulator's demands. Regulations and consumer advocacy are not the same and we must ensure that the committees are vigorously independent. We tried throughout to get financial independence for these committees so that they would have their own offices in the different areas. On each occasion we failed and were not backed by the Minister. So we return to say to him that we are unhappy with the make-up of the consumer committees. What he asks for in the clause is not necessarily in the interest of the consumer.

We hope that the Minister has taken the opportunity in the few short weeks since we left clause 2 in Committee to look in greater detail at the issue. I look forward to hearing what he has to say. This looks a bit wider than the earlier debate and we hope that the Bill will be amended so that it, too, will be a bit wider than what we have in front of us.

Mr. Wallace: Amendment No. 114 is in my name and the names of my hon. Friends. In many respects, albeit in a Scottish context, it seeks to do much the same as the amendment moved by the hon. Member for Rother Valley (Mr. Barron).

The composition of the proposed committees requires the director to have regard to people who have experience of the provision of electricity supply services. This seems to be a very odd requirement considering that the committees, one assumes, are to represent the interests of consumers. While some passing knowledge is obviously required, many consumers do not have the first idea how their electricity supply gets to them but have far more than a passing interest in having a regular, secure supply. These are the people whose interests the consumers' committees should be protecting.

If one looks at the responsibility and functions of consumers' committees, one finds, in clause 47, that they have, among other responsibilities, a duty to keep under review matters affecting the interests of consumers of electricity supplied to premises in the committee's areas. My constituency is in the North of Scotland Hydro-Electric Board area. It is a vast area and my constituency is itself quite vast, with particular problems that apply to islands areas. For a start, Shetland is not connected to the national grid. Its main electricity supply comes from a diesel-generated power station in Lerwick. It has in places such as Fair Isle a unique form of supply which is dependent on wind power—and all credit to the hydro-electric board that it has set this up. But there are very particular problems relating to an area with particular needs.

Our reasonable request is that people from each geographical area—we have defined that in terms of local authority areas, because that is a neat way of doing it—should be on the consumers' committees. It is only people from specific areas who have first-hand experience of circumstances and conditions in different parts of the country and who know what the needs of these areas are.

These are very modest proposals and if the Government accepted the amendments it would show that they are genuinely interested in the rights and interests of the consumers. I do not see that there is anything fundamental at stake with regard to the overall strategy of the Bill. By conceding the amendments they would prove that they have the interests of consumers at heart and I hope that the Minister will give us a positive response.

Mr. Hardy: I shall be brief. I want to say a word or two in criticism of the "one of us" syndrome which is far too prevalent today in British political life. I am not at all happy about many of the appointments made by the Government. I recall not very long ago pursuing a regional aid case in my constituency. It was referred to the Department of Trade and Industry's advisory committee which found against my constituency proposal. Then I discovered that a significant proportion of the people involved had no connection with my region. I had to advise some constituents in fair rent cases not to appeal because I discovered that a rent tribunal was excessively representative of families of estate agents and solicitors, most of whom may well have been politically sensitive and acceptable to Treasury Ministers.

We have seen the proliferation of Government sympathisers in the health authorities and a tremendous decline in the number of appointments of people who do not share the ideology that is currently fashionable in the Government. I am not restricting my criticism to matters that affect only Opposition Members because some matters would not be acceptable to those who control the destiny of this nation.

We need to have an assurance from Ministers that the principal qualifications of those required to serve on consumer committees is not just the knowledge of what one does with an electric light switch, possession of a Conservative party card and adherence to the currently popular fashion in the Conservative party. I hope that the interests of the consumer will be well served and that they will receive priority over the interests of the political party in power.

Mr. Haynes: I remember the debate in Committee on this matter and on that occasion we were not at all satisfied. That is why we have come back to the issue. We are looking for satisfaction in this debate. The Government brag that the Bill is in the interests of the consumer. If that is the case, why does not the Minister cough up? We are asking him straightforwardly for proper representation for the consumer on these bodies. *[Interruption.]* I wish that he would not speak to his Parliamentary Private Secretary while I am trying to make an important point. If the Minister's ears were a bit larger, he might hear what was being said.

We are looking for fairness for the consumer. We do not want the committees loaded with Tories. We want

[Mr. Haynes]

fairness across the board. The Minister must not load the committees with Tory mouthpieces, but that will happen if we are not careful. I hope that he takes on board what is being said and especially what I am saying. I shall probably have more to say later during the evening or the morning, but I want the Minister to understand quite clearly that I am speaking on behalf of the people that I represent. They want a fair crack of the whip for the consumer. I hope that the Minister will come across and give us what we are looking for because he did not do that upstairs.

Mr. John Maxton (Glasgow, Cathcart): It is necessary to say a word or two about the Scottish consultative committees and the consumer committees that will be established by the Bill. As the hon. Member for Orkney and Shetland (Mr. Wallace) has said, there is a marginally different situation in the North of Scotland Hydro-Electric Board. That board and the new company will have a geographical area that is larger in terms of length but not in terms of population than from the north of England to Land's End. It will extend from Campbeltown in the south, which is almost, but not quite, the most southerly point in Scotland—some people might say that it is almost in Northern Ireland—right up to the most northerly house connected to the electricity supply in Unst, in Shetland.

That is an enormous geographical spread and places on the Government a responsibility, which so far they have not met, to ensure that that geographical distance is properly represented on the committee. The two amendments make some effort to achieve that. Any committee will have a difficult job to do better than the present North of Scotland Consultative Council, which I believe is the best of the councils at advising us about the needs of its area. The briefings from that council have been first-class.

The new consumers' committees must properly represent an area's consumers. The committee members should not be appointed as a result of their political interests or because of any connections with the electricity supply industry. In Scotland we have the advantage because the Government are rapidly running out of Tories to put on those committees in Scotland. The Government are trying desperately, but there are not many Tories left there and the few that are left are easily recognisable. We have no great problem in saying that such and such is a political appointment because that person is a Tory. In fact, there is a joke about the man in a paper hat who is the only Tory left in Scotland.

The consumers' committees in Scotland must represent the consumers. I would prefer it if there were legal constraints on the consumers' committees under the director to ensure that local committees are appointed in each of the areas covered by the North of Scotland Hydro-Electric Board to ensure local representation.

Even if the committees have proper representation, the committee members will have problems meeting regularly. It will be extremely difficult for anyone appointed to the committees to travel from Campbeltown to Perth or Inverness or from Unst to Inverness. The Minister must assure us that there will be no political appointments to the committees and that people will not be appointed because they have connections with the electricity supply industry. The committee members should be genuine consumers who know more about an area and its problems than about electricity supply. I hope that the Minister will respond to my points.

Mr. Michael Spicer: Clause 2 provides for consumers' committees to be attached to each public electricity supplier in the United Kingdom. That will ensure that the regional dimension, as set out in the amendments is achieved. In response to the hon. Members for Orkney and Shetland (Mr. Wallace) and for Glasgow, Cathcart (Mr. Maxton), I can state that that includes the north of Scotland dimension which will have its own consumers' committee.

We are not in favour of providing for special pre-defined interest groups, regional or otherwise. In future, we want to see the appointment of people who, if possible, know something about the electricity industry, and that is defined in clause 2(4). That answers points raised by the hon. Members for Cathcart, for Ashfield (Mr. Haynes) and for Wentworth (Mr. Hardy). The members of the committee will be appointed by the director.

I cannot promise that there will be no Conservatives on the committees. There are so many Conservatives these days and there will be more and more in Scotland. The director will have a very large catchment area to choose from and I am sure that there will be many Conservatives on those committees. However, I assure the House that the appointments will be made by the independent director and not by the Government. That is a major new feature of the Bill and I am happy to give that assurance. We have placed the whole process more at arm's length from the Government. *[Interruption.]* I can see that many Opposition Members would like to intervene. Let us have a little fun; I will give way to the hon. Member for Ashfield.

Mr. Haynes: I resent that remark. The Minister is trying to be funny. He will regret that. I warn the Minister now: he should not be clever.

I want to know whether the Minister or the Department will have any influence on the director, as to who serves on the committees. If one looks at other such bodies, one finds that the Government always have their grubby hands on appointments.

9.45 pm

Mr. Spicer: I happily give the hon. Gentleman a precise answer to his fair question. Committee chairmen will be appointed with the consent of the Secretary of State, but committee members will be appointed by the directors. The general membership of the committees will be independently appointed. I am pleased to give the House that assurance. The hon. Members for Wentworth and for Cathcart made an important point that the Government completely concede, which is that appointments to the committees should be made more independent and further removed from the Government. We agree completely, and that is why we are changing the Bill.

Mr. Wallace: The Minister responded to the points made by myself and the hon. Member for Glasgow, Cathcart (Mr. Maxton) by saying that at least the North of Scotland board will have a committee attached to it. Will he confirm that as the Bill stands, the membership of the committee, comprising between 10 and 20 persons, could all come from Glasgow—outwith the area served by

the board? Far from different parts of a vast area being represented, it is theoretically possible that not one geographical area under the board's control will be represented.

Mr. Spicer: No doubt that is theoretically possible. We are saying not that we want specialist groups predetermined, but that the sort of people who will represent consumer interests should be a matter for the director within the terms of the Bill. If there is such a difference between the characteristics of areas as the hon. Gentleman suggests, it would make sense, in providing proper consumer representation, to take geographical interests into account. However, we do not want to make that a statutory obligation. Somebody must appoint the members of the committee.

Mr. Wallace: The Minister means that the Government wish to abdicate responsibility.

Mr. Spicer: That is the way that the hon. Gentleman chooses to put it, but I suggest that he has a word with the hon. Members for Wentworth and for Cathcart. Although they represent different parties, they made a strong point. In response, I gave an assurance that there will not be political involvement in appointments, but that they will be the responsibility of the independent director. I believe that that meets the general view of the House that such an arrangement is a good thing.

The reason why, in future, consumers' committees will be an integral part of the regulatory process is clear, and it is one about which we feel strongly. I say in response to the hon. Member for Rother Valley (Mr. Barron) that one of the radical reforms introduced in the Bill is that there will no longer be merely lobbying organisations shouting their views from outside the industry—on a previous occasion, I used the phrase "from the touchline"—which is largely how the existing consumer committees operate. Under the new arrangements, they will be part of the regulatory body.

In that way, we are enormously strengthening the effectiveness of consumer representatives' involvement in the industry's development. I remind the House that the Electricity Consumers Council thoroughly approves of that new arrangement. It is a radical and great improvement in the involvement of consumer representatives in the affairs of a large industry. I hope that the House welcomes the new structure and accepts the points that I have made. Therefore, I hope that the amendment is withdrawn.

Mr. Barron: The amendment cannot and will not be withdrawn. The Minister continues to fall into the trap that he fell into in Committee. He regards regulation and consumerism as the same thing. That is not the case. I have put not only my arguments but those of consumer organisations which, for many decades, have attempted to represent consumers' interests. They say that the proposed structure of the consumers' committees is not necessarily right. It was said in Committee—I will not say that the Minister said it—that anybody who receives electricity is an electricity consumer. I argued that the chairman of an electricity board receives electricity and is an electricity consumer. But his idea of electricity and the consumption of electricity is different from that of his neighbour up the road who also receives electricity, uses it as a domestic consumer, and pays a quarterly bill. He has a different outlook on the electricity industry.

Mr. Michael Spicer: Will the hon. Gentleman confirm that he at least accepts that the Electricity Consumers Council has thoroughly approved the new arrangements?

Mr. Barron: Independent consumer bodies are not in a position to be the turkeys who vote for Christmas. Opposition Members would sooner listen to the people who, week in and week out, month in and month out, and year in and year out, have represented people who wanted help and have found the electricity supply industry lacking. We will debate that matter when we talk about fuel poverty. Those people have encountered the problems of consumers within the electricity supply industry. Opposition Members are not happy with the situation.

Once again, as he did in Committee, the Minister has dismissed the issue and said that those who are involved in regulation are therefore involved in the interests of consumers. I am pleased that the hon. Member for Bosworth (Mr. Tredinnick) is present. After he made his 20-minute speech, I said that I would refer to him later. Because of his presence on this occasion, I will put the amendment to the vote to see whether hon. Members are in favour of consumers' rights.

Question put, That the amendment be made:

Tellers for the Noes:
Mr. David Lightbown and
Mr. Tom Sackville.

Question accordingly negatived.

It being after Ten o'clock, further consideration of the Bill, as amended, stood adjourned.

Ordered,

That, at this day's sitting, the Electricity Bill may be proceeded with, though opposed, until any hour.—*[Mr. John M. Taylor.]*

As amended (in the Standing Committee), again considered.

Clause 3

General duties of Secretary of State and Director

Mr. Illsley: I beg to move amendment No. 134, in page 2, line 40, leave out

'able to finance the carrying on'

and insert

'financially and technically competent of undertaking'.

Madam Deputy Speaker: With this it will be convenient to consider the following: Amendment No. 135, in page 2, line 43, after '(2)', insert '(3 and 4)'.

Government amendments Nos. 79 and 80, and the following amendments:

No. 131, in page 3, line 10, leave out 'thereby'.

No. 132, in page 3, line 12, leave out 'to such premises'.

No. 133, in page 3, line 24, after 'efficient', insert 'and economic'.

No. 104, in page 3, line 28, leave out subsection (4) and insert—

'(4) In carrying out all their duties the Secretary of State and the Director General shall take into account, in particular, the needs of the low paid, those who are disabled and of pensionable age.'.

No. 146, in page 3, line 30, at end add—

'and in respect of subsection (3)(a)(ii) above, those who are medically dependent on electricity supply, and in respect of subsection (3)(a)(i) above, those on lower incomes.'.

Mr. Illsley: Amendments Nos. 134 and 135 have been tabled in the name of my hon. Friend the Member for Sedgefield (Mr. Blair) and others. Amendment No. 134 relates to the duties laid upon the director in relation to licence holders. Among those duties, the director must ensure that a licence holder is able to finance the carrying on of the activities for which he is licensed. Our amendment seeks to introduce a requirement for technical competence as well as financial ability.

In view of recent events in the latter part of 1988 when a business man purchased a power station in South Wales, perhaps the clause itself could do with further strengthening when it comes to the character of the people who want to buy such stations and involve themselves in the industry. In an industry such as electricity generation, distribution and supply, there is an obvious need for the very highest standards of technical competence, not only on the part of the scientists and operatives employed in the industry but on the part of those who will be directly involved in making the financial, investment and planning decisions on behalf of the industry.

A phrase which was bandied about in Committee talked of the responsibility of "keeping the lights on", but there is a little more at stake than that. We have hospitals, schools, offices, factories, foundries, warehouses, mines and any form of building which houses an industry or an enterprise: all rely on a secure supply of electricity. It would be an act of the utmost criminal folly if the supply of electricity to any of these or the supply of electricity in general, together with the future planning and investment requirements of the supply industry, were to be jeopardised by the poor performance of the director in deciding on the financial or technical competence of those who were allowed to invest or take part in the industry.

Yet, as the Bill stands, anyone who can afford to set up in the industry can apply for a licence to do so. There are clauses, particularly clause 7, which impose conditions, but those conditions will be formulated by the director in conjunction with the Secretary of State. It is quite unthinkable that anyone without technical competence would attempt even to consider setting up in the industry, but towards the end of last year it appears that someone actually did so. A Mr. Casfikis purchased a power station in south Wales with the intention of running it. When further investigations were made into the purchase it was found that the gentleman was a man of straw.

If there are profits to be made from the industry, however, the profitable companies will be bought out by others. There will be mergers and takeovers. We have seen this week what can happen when a company decides that it will buy out another company. A major finance house carries out an inquiry into the bona fides of a particular company and a firm of City lawyers advises on the legal aspects. If it is anything like what happened with the House of Fraser, all hell breaks loose. If anything illustrates the dangers of clause 3 as it stands, with the director making the decisions on financial and technical competence, it is the fiasco of the sale of the House of Fraser.

In that case the investigations were undertaken by a City firm of financiers. What chance has the Director General of Electricity Supply in trying to judge the financial and technical competence of a company that wishes to come into the electricity supply industry when the City of London cannot do it? Obviously, in those circumstances a large responsibility is being placed on the shoulders of the director general.

In the private sector, the industry will be subject to takeovers and mergers. They will involve major companies without the slightest interest in electricity, let alone in the security or obligation of supply. The larger companies will consider a generating company as simply another part of their portfolios.

We can expect, too, takeovers from abroad. We can well understand, because of its financial situation, that Electricité de France would very much like to invest in our power companies. Obviously, it will be looking long and hard at what happens after privatisation. There will be indications of overseas takeovers by companies that this country finds, perhaps, offensive or unwanted. What remedy will there be? Those takeovers will take place. There will be nothing to stop them, other than such bodies as the Monopolies and Mergers Commission and the Office of Fair Trading. However, if those takeovers comply with the regulations, there will be nothing to stop them. I shall cite two examples of such takeovers in the past year in my area. There was the takeover of Rowntree by Nestlé and, in my constituency, the takeover of the Redfearn glass firm by a Swedish company.

The electricity supply industry has 12 area boards and each area board covers a considerable area with a considerable number of consumers. Once those boards begin to be swallowed up by larger companies, obviously there will be a much smaller industry and there will be a move back towards the monopoly.

The structure, as it has been outlined in the White Paper and the Bill, might be put at jeopardy because of takeovers and mergers. Set out in the Bill is a horizontal structure with the separation of generation, distribution and supply. However, in future what will there be to stop the larger companies buying into other aspects of the industry—the supply and distribution sectors—or the suppliers coming back into generation to tie up the loose ends and moving us back into a system of vertical integration?

The area boards or the public electricity suppliers, as they will be known, will have power to have their own generation capabilities. We will therefore start from a small amount of vertical integration which could be increased by mergers of the area boards. We could also see —perish the thought—British Coal, if it is privatised, being bought by the electricity companies. We could see major consumers of electricity being purchased, which will again bring into question coal imports.

What prospects are there for the area boards? They will either be strong enough, or have the financial muscle, to stand alone after privatisation, or, if they have a large industrial customer base, they will stand threatened by the introduction of independent investors who will take away those large industrial customers and leave them at the mercy of the predators, the larger companies within the industry.

If, as we are led to believe, there are upwards of 20 companies ready and waiting to come into the industry, that threat is already there. We have yet to have names put to the 20 companies that have been talked about during the past three months. However, we will obviously take the Minister at his word and believe that the threat from those companies exists.

I shall cite two examples. There is the Yorkshire electricity board, which is my board, and the north eastern board, both of which have a large base of industrial consumers. If we compare those boards with the south eastern electricity board, the reverse is true. That board has a large domestic consumer base and obviously the new boards in the south-east will set off as being more attractive to investors. They will start off with a financial advantage because they will have locked-in customers—the domestic consumer, unlike the industrial consumer, cannot opt out and look to the private generator.

It is important to consider that 49·5 per cent. of the north-eastern board's customers are industrial and that industrial customers account for 52 per cent. of the Yorkshire electricity board's market. The one customer common to both those boards is the coal industry, which is a major consumer of electricity.

10.15 pm

With the introduction of coal and oil imports after privatisation, both aimed at taking away British Coal's share of the market, there will be a further knock-on effect in our areas. The area boards will lose their custom as we face further colliery closures.

[Mr. Illsley]

The Government should reconsider clause 3, especially the duties of the director regarding the financial and technical competence of entrants into the industry. They should tighten the Bill to enable companies or area boards, such as Yorkshire and north-eastern, to fend off the takeover bids with which they are bound to be faced after privatisation.

Dr. Kim Howells: It is important to draw attention to the implications of those parts of the Bill that test the probability that licence holders will seek to secure their hold on particular parts of the market by expanding their operations, as my hon. Friend the Member for Barnsley, Central (Mr. Illsley) has said, beyond the straightforward business of marketing and selling electricity. We are talking about area boards—licence holders—six of which have annual turnovers of more than £1 billion. Even the smallest, the south Wales board, has an annual turnover of £500,000.

The diversification of the boards is mainly discussed in terms of electricity generation, but I am sure that the Minister is well aware that several boards have been hyperactive in putting together generating projects and, in some cases, joint ventures for power production.

I echo the concern expressed by my hon. Friend. Is the Minister aware that there is a great deal of talk about generating boards buying back into their supplying companies in the future? It has even been suggested that they might buy coal mines as well as other sources of fuel. What implications will that have in terms of the creation of new, future monopolies?

Mr. Michael Spicer: The hon. Member for Barnsley, Central (Mr. Illsey) has focused on amendment No. 134. I understand the purpose of his introductory remarks, and I listened with great care to what he said.

We believe that the present wording of the Bill is more embracing than amendment No. 134. The present wording enables the director to do what he wants to do—to check the financial credentials of a potential new entrant and to bear in mind that entrant's future viability when considering such matters as pricing formula and his other duties. The present wording meets the concerns expressed by the hon. Gentleman, especially in relation to clause 3(1)(b), and offers other advantages.

The hon. Member for Pontypridd (Dr. Howells) was concerned about anti-competitive practices. So would we be, if there were the kind of anti-competitive practices that he has in mind. The normal anti-competitive rules and laws will apply. The Bill makes specific provision for the operation of the Monopolies and Mergers Commission and deals with the interrelationship between the powers of the director general to protect competition and the more general powers of the MMC.

While we would not want to restrict any reasonable diversification or development by any company, we agree that there should be consideration of anti-competitive practices. We think that the current institutions and laws for protecting the industry from the predatory behaviour that the hon. Gentleman has in mind are adequate.

On the basis of that explanation, I hope that the hon. Member for Barnsley, Central will withdraw his amendment. Certainly we would not accept any of the amendments, and particularly those which, contrary to what the hon. Member for Pontypridd was concerned about, are aimed at restricting competition and competitive pressures.

Mr. Illsley: In view of the speech of my hon. Friend the Member for Pontypridd (Dr. Howells) and the points that I made in my contribution, we still feel that the Bill needs strengthening, particularly as regards financial mergers and takeovers. As the Minister is not willing to accept amendments on the point, we will divide the House.

Question put, That the amendment be made:—

The House divided: Ayes 60, Noes 160.

Tellers for the Noes:
Mr. David Lightbown and
Mr. David Heathcoat-Amory.

Question accordingly negatived.

Amendments made: No. 79, in page 3, line 4, after 'charged', insert 'to tariff customers'.

No. 80, in page 3, line 5, leave out 'by them'.

No. 2, in page 3, line 24, after 'them', insert—

'(bb) to protect the public from dangers arising from the generation, transmission or supply of electricity;'.—*[Mr. Michael Spicer.]*

Mr. Barron: I beg to move amendment No. 136, in page 3, line 27, at end insert—

'(d) to promote the efficient and economic use of heat co-generated with electricity in combined heat and power plants or stations.'.

Madam Deputy Speaker: With this it will be convenient to take the following amendments: No. 1, in clause 30, page 24, line 43, at end add—

'(4A) That electricity generated in a combined heat and power plant shall be treated for the purposes of subsection (4)(a) above as generated by a non-fossil fuel generating station for the proportion of the electricity produced that is equivalent to the measured quantity of heat distributed at a temperature greater than 60°C or more from the power station.'.

No. 149, in clause 30, page 25, line 17, at end add

'; and electricity generated in a combined heat and power plant shall be deemed to be generated by non-fossil fuel'.

Mr. Barron: Clause 3 relates to the general duties of the Secretary of State and the Director General of Electricity Supply after privatisation. That is a crucial matter which we debated with great interest in Committee and should like to discuss again on Report.

The amendment seeks to give the Secretary of State and the director the duty

"to promote the efficient and economic use of heat co-generated with electricity in combined heat and power plants or stations."

It does not say exactly what type of plant that should be, and I do not want to go into that in great detail. However, I ought to give the reasons for the amendment.

Like many others, we believe that combined heat and power has not been treated properly. That form of co-generation has been in use in this country for a very long time, and we believe that there is a case for treating it effectively under the new regimes that are to take over from the Central Electricity Generating Board. Most people have no doubt that combined heat and power can make an important contribution. Indeed, larger schemes could make a dramatic contribution to the reduction of greenhouse gases—an issue which the Cabinet, and in particular the Prime Minister, has brought up. Over the last few months the Government have been saying that they are deeply concerned about the situation. The larger CHP schemes in this country could reduce emissions by at least 3 per cent.—and in some cases are doing so.

The Government tell us about the plans that are in the pipeline for smaller generators throughout the country after privatisation of the electricity supply industry. Experts predict that small-scale combined heat and power schemes, together with the larger ones, could cut greenhouse gas emission by up to 10 per cent. It is recognised that the wider use of waste heat for electricity generation would also result in savings for industry and for national and local government.

Let me mention briefly one or two of the current schemes which demonstrate the way in which many areas benefit, not just in the generation of electricity. The wider application of combined heat and power schemes in urban areas would stimulate urban regeneration, particularly in inner cities. For a number of years—certainly since the last general election—this has been a major theme of the Prime Minister. She has said that she will take effective action in the inner cities. We do not see much effective action being taken by the Government on CHP, despite the fact that such action could make an important contribution to urban regeneration. If the Government were to accept amendment No. 136, they would be going some way towards finding ways of doing that.

Two papers were published recently by the Government. I understand that one of them shows that up to 4,000 sites in this country could benefit from combined heat and power. The other, which I think was produced by the Energy Efficiency Office, says that up to 1,500 major industries could be using combined heat and power. Perhaps the Minister will mention that in his intervention. So this is not a small matter; the system could be applied widely and quite flexibly.

Our amendments, particularly No. 136, would enable the opportunities to be grasped. They would put combined heat and power on at least an equal footing with the generating options that are being promoted in the Bill. I do not intend to return to yesterday's debate, but I remind the House that the Government are making sure that we will have nuclear generation for a considerable time. The same could be done for combined heat and power.

There is an amendment in the name of the hon. Member for Erewash (Mr. Rost) about giving some form of protection that was offered by the Secretary of State yesterday. The Secretary of State talked about a new tranche of capacity in non-fossil fuels being reserved exclusively for renewables. We shall see what the Secretary of State does about an amendment that could result in a combined heat and power tranche. If he undertook to consider that proposal, he would probably have the support of the whole House.

Successful combined heat and power schemes are being organised despite, rather than with, the assistance of the Government, mostly in areas controlled by Labour authorities. For example, Labour-controlled Waltham Forest council has won a major award from British Gas for its pioneering scheme which, among other things, is helping to keep the elderly of that Greater London area warm.

In Sheffield, the Labour-controlled city council has created the first European-based joint venture to develop a combined heat and power scheme, and in the first stage of that scheme local tenants are receiving heat from an incinerator burning domestic waste. It will be a privilege for me tomorrow to visit the area and observe that scheme.

The Labour city council of Leicester is actively supporting a joint venture with the private sector to introduce a major combined heat and power scheme. Newcastle, another Labour-controlled area, is continuing to work with the local business community and the electricity industry to create a combined scheme for the area.

In south London, the Labour councils of Greenwich, Southwark and Lewisham are working with a few private sector companies to initiate a combined heat and power scheme based on energy from waste. The hon. Member for Erewash and others will be aware of the amount of heat that is wasted in power stations. Let us harness that energy and send it out into the community to heat hospitals and domestic dwellings and thereby contribute to the nation's energy resources.

In a BBC television interview on 15 January, the Secretary of State said that he supported the idea of combined heat and power schemes, and he claimed that CHP would be encouraged by, and CHP technology would gain from, privatisation. There is no evidence of the Government turning those fine words into deeds.

On Second Reading, I referred to the way in which the Energy Act 1983 had failed to provide openings for new and diverse forms of energy generation. The CEGB and other generating companies have made it impossible for those interested in combined heat and power schemes to get into the market and sell electricity. Nothing has been said by the Government in these debates to encourage those who are trying to promote combined heat and power schemes that this legislation will prove more helpful to them than the 1983 Act. The Government should accept the amendment and show their willingness to move forward on combined heat and power in the interests of the environment and the economy. There are many benefits to be had from combined heat and power.

Earlier in the debate the Grimethorpe fluidised bed project in south Yorkshire was mentioned. That is a way of enabling small generators to use coal cleanly and it avoids much of the air pollution that arises from the burning of fossil fuels, especially coal. I thought that the Minister would say that the Government would fill the gap that British Coal has encountered with that project. That project on fluidised bed combustion leads the world, and if we do not make sure that the final phase, the topping phase, is funded other countries will take the lead.

10.45 pm

Just before the Easter recess I was in Japan where fluidised bed combustion is being developed. We must not let our project fall at the end of the year. When it is commercialised in perhaps one or two years it could well fit into combined heat and power schemes. If we let the project lapse, I have no doubt that in 10 to 15 years the Government will buy Japanese technology on fluidised bed combustion, just as we are currently buying Japanese technology on flue gas desulphurisation, a technology which has been working in Japan for over a decade in coal-fired power stations. This year we have had to buy it for our big coal burners and have had to start a programme using Japanese technology.

The Opposition are in favour of developing British technology. The Minister spoke about the Grimethorpe fluidised bed project and said that he would probably be able to make a statement about it, but wanted more commitment from industry. That is like approaching a potential car buyer and saying to him, "I want you to invest in a new car. However, we have not quite finished the engine technology and we don't know exactly how it will work." No car salesman, not even the Arthur Daleys among Conservative Members, would try to sell such cars on the high streets of Britain.

We need to prove the technology that will fit in well with combined heat and power and Britain's technologists must be allowed to continue their development. The project needs about £11 million, but it has not been offered that in the debate. That money is required over three years and it is a mere pittance compared to the amount that the Bill is writing off in the nuclear industry. Not hundreds of millions but thousands of millions of pounds of taxpayers' money will be set against the excessive costs of the nuclear industry in the years ahead.

Month in and month out we have had to fight and argue with the Government in an attempt to get a commitment from them to follow private money into Grimethorpe to make sure that the technology is proved and that we are world leaders in the clean combustion of coal. Amendment No. 136 would commit the Secretary of State and the Director General of Electricity Supply to take seriously combined heat and power and all its benefits. I hope that the Government will say that they are at least prepared to look further at the matter. If they do not give that commitment, we may consider testing the amendment in a Division.

Mr. Peter Rost (Erewash): I should like to speak to amendment No. 1. In 1973 I made my first speech in the House on energy efficiency and at that time hardly anybody had heard of combined heat and power. Over the past 15 years I have continued the campaign. As a result, I have an interest to declare because I have recently become a consultant to Associated Heat Services plc, the major company involved in the management of combined heat and power systems.

The arguments developed over many years in favour of energy efficiency were intended primarily to conserve a finite resource, to use it and to produce it less wastefully. The argument now has additional force for environmental reasons. If the Government are right in the assumption that they have expressed again this evening that world and United Kingdom electricity demand is going to grow, there is little hope for the planet. If the greenhouse effect is shown to be caused by global warming as a result of burning fossil fuels, there is little hope for the planet if we continue to produce our electricity in the present wasteful way.

At the moment, we throw away two thirds of the fuel that we put into a power station by cooling water. That creates two or three times as much carbon dioxide—greenhouse gases—than is necessary. We could convert the cooling water into useful energy.

I maintain that amendment No. 1 is modest. I suggest that electricity produced combined with hot water should be classed as a non-fossil fuel, but only that proportion of electricity which displaces fossil fuel which would otherwise have to be burnt if the hot water from the combined heat and power plant was not being distributed and used for space heating. As a combined heat and power plant produces a thermal efficiency of about 70 per cent. —or twice as much as an electricity-only plant—and as nearly half the fuel is converted into useful hot water, that must displace other fossil fuel which would otherwise have to be burnt to provide space heating. We are really burning twice as much fossil fuel in this country than is necessary and we are doing twice over—once in our power stations and throwing it all away and then again to provide space heating.

When electricity is produced in a CHP plant, fossil fuel is saved. The proportion of saved fossil fuel which is sold as useful heat for heating water should be entitled to be categorised within the non-fossil fuel band in the Bill.

I have no doubt that my hon. Friend the Minister will give this amendment serious consideration because this is such a modest proposal. From our electricity production, we throw away about 60 million tonnes of coal-equivalent and we must bear in mind that that produces a considerable amount of CO_2-type greenhouse gas. We

[Mr. Peter Rost]

burn the same quantity of fossil fuel all over again to provide our space heating. Therefore, CHP can make an important contribution to reducing CO_2.

Yesterday in this debate my right hon. Friend the Secretary of State conceded that there will be a special slot for renewable energy categorised as non-fossil fuel. Why did he do that? He justified it on the grounds that we need diversity and security of energy supply and also because we want to do something to alleviate the environment threat.

The arguments in favour of this amendment are the same as those espoused by my right hon. Friend the Secretary of State. By using hot water from electricity production instead of throwing it away, we create more diversity, more energy efficiency and we reduce the greenhouse effect.

In recent years there has been increasing pressure from the EC, which will undoubtedly lead to a firm directive that we use energy more efficiently, less wastefully, and environmentally more acceptably. Combined heat and power is one of the EC's strongest recommendations. It is important that it is made to Britain, because we are bottom of the European league. Millions of citizens elsewhere in Europe already benefit from cheap heating in their buildings, which comes from power stations combined with electricity production. We have a lot to do to catch up.

Government studies over recent years identified and confirmed the enormous potential for CHP in the United Kingdom. I strongly support the remarks of the hon. Member for Rother Valley (Mr. Barron), but I believe that if the Government cannot go as far as the Opposition amendment goes they should at least seriously consider my modest proposal.

Combined heat and power is the only technology that can reduce fossil fuel burn and at the same time provide new electrical generating capacity—which are both urgent priorities for the future. I challenge my hon. Friend the Minister and other right hon. and hon. Members to name any other energy technology that can do the same. Combined heat and power is the only technology also to offer the biggest potential for greater energy efficiency. The Combined Heat and Power Association, which supports my amendment and helped me to present it, has for many years argued that the benefits of CHP are far wider than those that I described. They include urban renewal, better housing, better health, and the reduction of fuel poverty.

The Select Committee on Energy is currently conducting an inquiry into the greenhouse effect. The evidence already received from many authoritative sources confirms that combined heat and power will reduce greenhouse gases to a greater extent, and more economically, than any alternative. There are several ways of reducing CO_2, including the use of nuclear and renewable fuels and energy conservation. However, they all involve a higher economic penalty than CHP, which is the least-cost option for reducing CO_2 in the atmosphere.

If or when a consensus is reached by scientists internationally—which they have made a move towards reaching at Toronto—that, if we want to save life on earth, we are obliged to reduce fossil fuel burn, or at least greenhouse gases, then the Government will be able to congratulate themselves if, tonight, they supported my amendment. By doing so, they will be recognising that there are very long lead times in making changes to our energy patterns and in developing from the present inefficient method of electricity production to the more efficient system of combined heat and power.

Rather than defer action now and be forced to take crash measures to meet international standards—which will prove far more costly—the Government should consider more seriously at this stage what will undoubtedly need to be done in future years. My hon. Friend the Minister will undoubtedly acknowledge that combined heat and power is already economic. He may ask why it should need an extra stimulus. Industrial coal generation is taking off in this country—it needs to, as we are bottom of that league also—because of electricity privatisation. For the first time, it is offering a level playing field.

11 pm

Large scale city combined heat and power has more self-financing problems. Its rates of return are much more marginal. Schemes in Sheffield, Leicester and Newcastle will have difficulty in making more than a marginal commercial rate of return because of the large up-front capital investment required to lay the infrastructure for hot water mains pipes. When we have them, we will have cheap heat for ever more, but the up-front capital investment is large. That is why there is an argument for this modest incentive.

The Government's case for supporting the nuclear industry and renewals is justified for reasons of diversity, security, the environment, and energy efficiency. But they will be costly. If combined heat and power can be given the modest incentive suggested by the amendment, we will achieve the same objectives, but without the same economic penalty. The marginal increase in the cost of electricity that would result from this amendment will help to provide the necessary capital for developing heat nodes in our cities.

The case for the special slot is overwhelming. For once, the Government could be seen to lead the European Community in providing an incentive, even if we are at the bottom of the league in the development of combined heat and power. By giving that incentive, the Government will also encourage the new technologies that the hon. Member for Rother Valley mentioned. The clean burn coal technologies for the fluidised bed which is adopted by combined heat and power will be helped by the amendment. The major encouragement which that would give to greater energy efficiency and the help that it would provide for a more effective and economic contribution to reducing the greenhouse gases for future generations is overwhelming. I hope that my hon. Friend will respond constructively by accepting the amendment, or at least by saying that he will give the matter further consideration.

Mr. Hardy: The hon. Member for Erewash (Mr. Rost) is right to remind the House of his long commitment to the concept of combined heat and power. My commitment to it may not be as long-standing as his, but I recall addressing the annual conference of the Combined Heat and Power Association almost a decade ago. The arguments that were advanced by the hon. Gentleman—he has been advancing them for a long time—were advanced then.

The cause of combined heat and power should by now be more firmly established. Had it not been for the

Government's dogmatic approach in the 1980s, we would have seen a greater achievement and greater potential for international advance and international trading opportunities than we do now. One wishes the project well, but it is a great pity that the Government had to put dogma before achievement in the early 1980s. I can evisage enormous advantages from combined heat and power associated with fluidised bed combustion.

I am pleased that the Parliamentary Secretary to the Ministry of Agriculture, Fisheries and Food is present, because it will allow me to trespass for one moment on the environmental effects which may follow the development of combined heat and power.

The Agriculture Minister will know that there are anxieties about the scale of fish farming around our coasts. It is appropriate for the use of combined heat and power to produce hot water, but not merely for warmth and comfort. Many people in our towns and cities desperately need warmth and comfort. We might be able to use some of that hot water to promote inland fish farming. That might save the Ministry of Agriculture, Fisheries and Food from the almost illegal action in which it is involved by allowing or encouraging the importation of manila clams, the farming of which is becoming a serious risk to our coasts and estuarial areas. I hope that the Parliamentary Secretary will save my having to raise that matter in the House on another occasion by examining that grave problem this evening. Combined heat and power has benefits that may go far wider than mere energy or direct environmental interests.

I am grateful to the hon. Gentleman for tabling the amendment, and I hope that if the Government force us into the Lobbies in support of this just and wise cause, some Conservative Members will join the hon. Member for Erewash, who deserves the tribute of the House.

Mr. Malcolm Bruce: I shall speak briefly because I am a signatory to the amendment. I believe that the hon. Member for Erewash (Mr. Rost) has come up with a simple, straightforward and rather ingenious amendment. It simply asks that the net benefit that combined heat and power can achieve should be credited to the non-fossil fuel quota. That seems to be an eminently reasonable proposition. It will probably be required anyway because it is doubtful whether the industry will otherwise be able to achieve a quota of the order that the Government seem to be describing.

The amendment would have definite environmental and efficiency benefits and could lead to the encouragement of combined heat and power which, as the hon. Member for Erewash has rightly pointed out, has considerable potential in the United Kingdom—much of it untapped. His own tireless fight for this cause over many years is appreciated by the House. He has done a service tonight by tabling a useful, constructive and ingenious amendment. I hope that if the Government cannot accept it, they will consider it. It will be of considerable benefit to all if they do so.

Mr. Michael Spicer: It is getting late, so the House will want me to be brief.

I fully agree with my hon. Friend the Member for Erewash (Mr. Rost) and other hon. Members who have made the point that combined heat and power is an important potential source of energy. I also associate myself with what my hon. Friend said about the potential beneficial environmental effects. The hon. Member for Gordon (Mr. Bruce) is right to congratulate my hon. Friend on all that he has done over the years to keep this technology in the forefront of people's minds.

I do not fully share my hon. Friend's anxieties about the future. Existing private generation now amounts to 3 GW of electricity and 2 GW of that is represented by combined heat and power plant, which is a substantial figure. I know that my hon. Friend has already made the point that that is industrial plant, and I shall deal with that in a moment. However, if we are looking to the immediate future, there is ample evidence that the very existence of the Bill is already bringing forward much new, independent generation. We know of about 7 GW of new capacity potentially in the pipeline. Of that, about 1·1 GW is of combined heat and power, such as the Leicester energy scheme and the British Sugar scheme at Brigg.

Industry is, therefore, proposing to increase its investment in combined heat and power by more than 50 per cent. and that is just a beginning. We do not think that there is a need, with respect to industry, to subsidise and artificially support combined heat and power. It is not part of this Government's plans to subsidise schemes which are clearly profitable to private industry and which make sound economic sense.

Mr. Rost: If the amendment were accepted, there would be no question of the industrial side being subsidised because industrial combined heat and power produces electricity and processed heat for industry's own purposes. It does not sell it.

Mr. Spicer: I appreciate that my hon. Friend is especially concerned about the domestic side of this technology. Government policy in general and the Bill in several specific ways about which I shall briefly remind the House are addressing the more general problem to which my hon. Friend is referring. We have spent, for example, £750,000 on studies in Leicester, Belfast and Edinburgh, where there are city schemes. We are determined that the rating handicap under which this particular aspect of the industry has suffered should be altered so it is put on to an equal basis.

The Bill will not only give those wishing to engage in this form of technology free access to the system, but there will now be a duty on public electricity supply companies to buy from the most economic source. Therefore, if CHP is the most economic source, that duty will take effect. Perhaps most importantly in the context that my hon. Friend the Member for Erewash was discussing under clause 9(3) CHP operators will have statutory undertaker powers comparable to those enjoyed by the present utilities. For city schemes that is a major step forward.

In making this necessarily brief reply to my hon. Friend —given the time of night—and although I recognise entirely that this is an enormous subject, in which he is well versed, I must advise him that as a result of our privatisation proposals the prospects for private investment in CHP are looking very healthy. We are providing fair market conditions in which CHP schemes can compete freely with other forms of generation and heat supply. Their future will depend not on further public funding of subsidy but on their ability to operate competitively. Given its thermal efficiency, which my hon. Friend mentioned, and its versatility, CHP is well placed to do just that. In the light of that explanation, I hope that my hon.

[Mr. Spicer]

Friend the Member for Erewash and other hon. Members will feel able to withdraw their amendments, well intended though they are.

Mr. Morgan: I am sorry to have to say that all that the Minister of State has done in his brief reply is to show how very much less he knows about CHP than does his hon. Friend the Member for Erewash (Mr. Rost).

I shall go through what the Minister said about the glowing future that he envisages for CHP after privatisation. He said that 7 GW of new capacity is being promised or discussed with the Department and that 1·1 GW of that is CHP. That may well be true, but as far as we are aware—I shall be interested to know the views of the hon. Member for Erewash on this—the whole of that 1·1 GW falls into two categories. The first is industrial, which is sometimes known as micro-CHP, where the heat grid, led off from the power station, is on land that is within the control of the generator, Slough Estates or Tunnel Refineries. CHP programmes have also been started by Labour local authorities for the specific purpose of carrying out an experiment, which public authorities such as a local authority can do and have done in places such as Leicester, Sheffield and Newcastle. Other schemes have already been referred to by my hon. Friend the Member for Rother Valley (Mr. Barron). However, we are not aware of any breakthrough of the kind that the hon. Member for Erewash and my hon. Friends have been calling for, such as some kind of boost in policy terms —not a subsidy—that would establish the principle of how CHP should work in the new set-up, outside the property of the generator.

The Minister is right—all hon. Members know that converting one's generators to the CHP mode can be economic in places such as leisure centres with a swimming pool where one wants summer heat, in hospitals or old people's homes where summer heat is needed because of the demands of the elderly and so on, and in premises where there have to be standby generators, such as large telephone exchanges or hospitals. That is micro-CHP and we have already conceded that that is taking off. We know that that will produce a large saving on fossil fuel and that it will contribute to reduced energy costs and to a reduction in the greenhouse gas pollution load.

But that is not the point. The point is that the Bill as presently structured is biased against CHP— *[Interruption.]* It is not a question of a subsidy. Without the amendments that the hon. Member for Erewash and we have been proposing, the Bill will be biased against CHP for the simple reason that the duty laid on the Secretary of State and the director is to see that electricity —and only electricity—is generated in the most efficient and economic manner. In the CHP mode of generating electricity, one takes the steam off the turbines at a high temperature. That is not the optimum way of generating electricity because one would be virtually excluded under the Bill from operating an electricity power station in the CHP mode. One would not be generating electricity, taken on its own, in the most economic manner because one would be taking the hot water off before it had gone through the turbines to the maximum possible degree for keeping electricity prices down to the minimum.

11.15 pm

The point about our amendment, and that of the hon. Member for Erewash, is that it would permit the optimisation of two things at once—the taking off of the heat and the generation of the electricity. If anyone thinks that that is a minor point, he should look at the Government's own document on this subject, Energy Paper 20, in which it is illustrated. It is the Government's own calculation, which no one has contested, that if one supplies heat by generating electricity afresh to heat a room, and this is taken to be one unit of heat provided by electricity, one can do it at less than half that price if one does it by gas; but if one does it by CHP, by the offtake of the hot water, the cost goes down to one seventh of that of heating the room by freshly generated electricity.

That is the kind of point that we need to drill into the Minister tonight. The Bill is biased against CHP. An amendment of this sort is needed if we are to have CHP on a level playing field basis. If the Government want us to take them seriously, if they want us to believe that they are interested in fuel efficiency and in the greenhouse effect, and not just in making speeches at conferences or, as the Secretary of State will do next week, lecturing the Soviet Union on "British is best" in energy technology, they must think very seriously about the Bill and amend it so that it really gives a chance to "British is best" technology, which is there, waiting to be implemented if only there is a level playing field.

We know that we are behind in the application of CHP on other than a micro basis. We know that micro-CHP is taking off in the way that I have described. What we are not satisfied about is that large-scale CHP can take off unless the Government take a serious look at the legislation and at the amendments suggested.

On the grapevine we are told that, provided the Government persuade us and the hon. Member for Erewash not to press this to a vote, the Central Policy Unit, the 10 Downing street think tank, will recommend to the Department that it should support these amendments or something similar. I know that I should not be saying too much this week about 10 Downing street and leaks that have emanated from the staff there, but on the assumption that the information that we have had on the grapevine is even better than that of Sir Leon Brittan, now that he has emigrated temporarily to Europe, we will not press this to the vote. We shall expect to see some action from the Minister of State, taking, if not our advice, at least the advice from 10 Downing street, which is a far more important source

Mr. Rost *rose*——

Mr. Morgan: I give way to the hon. Gentleman.

Mr. Rost: I am sorry, I thought that the hon. Member had sat down.

Mr. Morgan: I am sorry. Was the hon. Member asking me to give way?

Mr. Rost: No.

Mr. Morgan: I am sorry. I do not really want to repeat my last line. I was just going to say that 10 Downing street will, I am sure, tell the Minister to do the right thing.

Mr. Rost *rose*——

Mr. Deputy Speaker (Mr. Harold Walker): Order. The hon. Gentleman has addressed the House once. He cannot speak again.

Amendment negatived.

Mr. Deputy Speaker: We now turn to amendment No.——

Mr. Rost: On a point of order, Mr. Deputy Speaker. I tabled an amendment and I have not yet withdrawn it. I ask you to——

Mr. Deputy Speaker: Order. The hon. Gentleman's amendment No. 1 was chosen for debate in a group of amendments selected by Mr. Speaker, the lead amendment of which was No. 136 which I have just put to the House and which the House has negatived.

Clause 4

PROHIBITION ON UNLICENSED SUPPLY ETC.

Mr. Michael Spicer: I beg to move amendment No. 3, in page 4, line 14, leave out

'of high voltage lines and electrical plant'

and insert

'which consists (wholly or mainly) of high voltage lines and electrical plant and is'.

Mr. Deputy Speaker: With this it will be convenient to consider the following amendments:

No. 137, in page 4, line 15, after 'for', insert

'the pumped-storage of electricity or'.

Government amendment No. 4.

No. 127, in clause 8, page 7, line 10, after 'transmission', insert

'and generation by pumped storage.'.

Government amendments Nos. 8, 51, 52, 64 and 67.

Mr. Spicer: The Government consider that the amendments are technical or drafting, with the exception of amendments Nos. 51 and 52, which meet one of the matters discussed in Committee. I believe that the hon. Member for Barnsley, Central (Mr. Illsley) raised in Committee the fact that the director general would be under a duty, if these amendments were brought forward, to publish information on performance standards at least once a year. We said that we would look at that matter and we have tabled the amendments in response to that debate.

We cannot accept Opposition amendments Nos. 137 and 127 because we do not see their point. The amendments aim to define pump storage as part of transmission. Transmission and generation, which pump storage is, are different things. Although, of course, pump storage is concerned with system stability, it is not the same as transmission. There is nothing to stop the transmission companies using pump storage in any way they wish, nor, indeed, to stop other pump storage stations coming forward, if they are economic, and are to be treated as generating companies. We may hear some concern to which I have not alluded, but we do not want to confuse, as do the Opposition amendments, transmission with generation. We would oppose amendments Nos. 127 and 137 if they were pressed, although I cannot see why they would be.

Mr. Morgan: I simply wish clearly to establish whether the National Grid Company will have a transmission licence. If not, how will it operate Dinorwig?

Mr. Spicer: Dinorwig will operate on the basis of generation licences. The National Grid Company will call up Dinorwig in precisely the same way as it calls up any other station. Therefore, there is no problem. It is part of its operations, but there is no problem about the licensing of future companies.

Amendment agreed to.

Clause 5

EXEMPTIONS FROM SECTION 4

Amendment made: No. 4, in page 4, line 21, leave out 'so specified' and insert 'specified in the order'.—*[Mr. Michael Spicer.]*

Clause 6

LICENCES AUTHORISING SUPPLY ETC.

Mr. Giles Radice (Durham, North): I beg to move amendment No. 138, in page 5, line 3, at beginning insert 'Subject to sub-section 11 below,'.

Mr. Deputy Speaker: With this it will be convenient to take the following amendments: No. 139, in page 6, line 8, at end add—

(11) no licence to supply electricity shall be extended by virtue of subsection 2(b) above, to cover an area without consultation with the consumers' committee for that area.'.

No. 165, in clause 7, page 6, line 17, at end insert—

'(c) conditions requiring any contract between a public electricity supplier and a person authorised to generate electricity which is of more than ten years duration to be referred to the Director prior to the contract being agreed.'.

No. 175, in clause 9, page 7, line 36, at end insert—

'(2A) A licence under section 6(1) above shall provide that Schedule 3 to this Act shall not have effect in relation to a license holder if—

(a) the owner of the land affected by a compulsory purchase order or the person whose livelihood would be affected by such an order objects on the grounds that his livelihood would be affected;

(b) a member of the public objects on the grounds that the natural environment or wildlife would be damaged.

(2B) Where objections are lodged under (2A) above the licence holder may appeal to the Director General, who shall take into consideration the measures taken by the licence holder to expand capacity by means other than the building or expansion of plant.'.

No. 176, in page 8, line 18 at end insert—

'(6) Nothing in this section or in the schedules mentioned in this section relating to compulsory purchase shall affect the holding or outcome of a planning inquiry into an application to contruct or expand buildings or installations for the purpose of the generation, transmission or supply of electricity.'.

No. 179, in schedule 3, page 72, line 5 at end insert—

'(2A) Such consent may be given:

(a) in an emergency, or where the powers are to be used to comply with a notice given under Section 15 of this Act, only after reasonable notice has been given to the owner and occupier of any land;

(b) in all other circumstances, only after the consent of the owner and occupier of the land has been obtained, which consent shall not be unreasonably withheld.

(3) Any question whether such consent is or is not unreasonably withheld shall be referred to and determined by the Secretary of State.'

No. 129, in clause 10, page 8, line 21 after second 'licence', insert

'and the consumers committee appropriate to that area.'.

[Mr. Deputy Speaker]

No. 140, in clause 11, page 9, line 10 at end add—

(c) notwithstanding subsection (i) above the Director must refer to the Monopolies and Mergers commission any modification he proposes to the conditions of a licence, where the holder of one licence under Clause 6(1)(c) above is proposing to acquire another licence holder under that section.'.

No. 141, in page 9, line 10 at end insert—

(d) notwithstanding subsection (i) above the Director must refer to the Monopolies and Mergers commission any modification he proposes to the conditions of a licence, where the holder of a licence is proposed to be acquired by another person.'.

No. 143, in page 9, line 23 at end add

'any observations of the consumers' committee for that area on the reference with regard to subsections (1) and (2) above.'.

No. 142, in page 10, line 3 at end add—

'(c) any observations of the consumers' committee for that area on the reference with regard to subsections (1) (2) and (3) above.'.

Mr. Radice: The amendments concern the licensing arrangements and contracts which I believe go to the heart of the Bill. The Secretary of State has said that electricity privatisation, unlike other privatisations, creates and enhances competition and produces what is called downward pressure on prices. The problem, of course, for the Secretary of State is that he must create the conditions in which he can successfully sell the industry to private investors and ensure certainty of supply. In the end what the Government have come up with is what is being called the big fix arrangement—*[Interruption.]* The Secretary of State appears surprised at the phrase "big fix". I should have thought that he had become very familiar with it, as he invented it.

The big fix regime is a licensing system in which—I quote not from a Labour party document but from a very good publication—

"the interests of the privatised companies are balanced out and protected as far as possible; where new entrants will, initially at least, find it difficult to enter the market, and where prices are very strongly regulated."

In Committee we had one of the fiercest, the most heated and, I believe, the most revealing debates over licensing and the issue of contracts. My hon. Friend the Member for Sedgefield (Mr. Blair) made one of his most able speeches and demonstrated that the licensing and contract proposals were extremely complicated. One hon. Member had to ask for a blackboard to try to assist other hon. Members to understand the proposals. The Minister also had trouble understanding them.

Mr. Cryer: My hon. Friend says that the Minister also had some trouble. Is he aware that the Minister is not listening to his argument, but is busy consulting the advisers in a great conference in the corner of the Chamber? Presumably he is trying to get some information to answer the debate, but surely it would be better if he listened to my hon. Friend.

Mr. Radice: The Minister had such problems throughout the Committee, that he was almost always consulting non-existent advisers while Opposition Members were speaking—that is par for the course.

The licensing arrangements and contracts were specifically designed in the case of electricity supply to rule out competition at the initial stage and to introduce, at best, a limited form of competition only in the future.

My hon. Friend the Member for Sedgefield also forced the Government to reveal the existence of the "contract working party", which has been established to arrange the big fix. In the so-called initial contracts for existing capacity, which could last for up to 10 years, the big fix ensures that there is no significant competition because the yardsticks do not apply.

In Committee the Government admitted that, in respect of contracts for future capacity, those contracts will be allowed to have take-or-pay clauses. It is unlikely that companies will enter the industry unless such clauses exist. If it is correct that the yardsticks will not apply in the contracts for existing capacity and that contracts for future capacity will contain take-or-pay clauses, it is extremely hard for the Government then to argue that those contracts will promote meaningful competition in the day-to-day operations of the industry.

Our amendment is designed to make the best of a bad job. It would ensure that all long-term contracts come under the specific supervision of the director general. Under our amendment he would be able to call in all long-term contracts prior to their agreement.

The amendment is sensible and constructive and a Government who were serious about competition would accept it. I suspect that, despite all the claims by the Secretary of State and the Minister about competition, the Government are more interested in ensuring the successful sale of a public industry. If they reject the amendment it will confirm our case, made so ably by my hon. Friends in Committee, that the Government believe not in competition or in helping the consumer, but only in privatisation, irrespective of the merits of the case.

Mr. Beith: I wish to speak to amendments Nos. 175 and 176, although, at this time of night, it would be more honest to say that it has fallen to me to speak to amendments Nos. 175 and 176.

Amendment No. 175 relates to the compulsory purchase powers in the Bill. They have caused a great deal of anxiety to many people, some of whom have, in the past, voted for the Conservative party. They are a little puzzled about why the party which they have long supported has granted such draconian—they would consider them Socialist—compulsory purchase powers to private companies. The amendment would change the procedure so that, in certain circumstances, it would be the director general's duty, if appealed to, to decide the matter and to take into consideration the alternatives that were available to the company concerned to expand capacity in some other way instead of building the proposed plant or expanding an existing one.

11.30 pm

Two sets of circumstances are envisaged. The first involves the owner of land affected by compulsory purchase whose livelihood would be affected. I quote the National Farmers Union:

"The NFU is opposed in principle to the granting of compulsory purchase powers to private companies. We believe that where PLCs need to acquire rights in land, or land itself, they should pay the open-market rate for those interests. That should include any development value . . . At the very least, the PLCs should have to seek the consent of the owners and occupiers of the land which they wish to acquire."

The NFU is concerned about occupiers whose livelihood will be at stake if land is taken away. It may be the crucial acreage without which a farm ceases to be viable. If that acreage is to be taken away because an

electricity supply company insists on building a power station when other alternatives are open to it, it is surely right that those alternatives should be examined. A power station project should not be presented at a compulsory purchase inquiry as inevitable and necessary, and as something which by its nature justifies the exercise of compulsory purchase powers. The director general will have the means, the experience and the qualifications to assess whether it might be open to the company to expand its capacity in another way.

The same procedure is envisaged in the amendment where there are public objections on the ground that the natural environment or wildlife would be damaged. Again, one can imagine a compulsory purchase inquiry where the objectors come along to point out that some unique wildlife habitat or noteworthy and well-appreciated environmental feature will be destroyed, but the supply company says, "We have to have this power station. It must be built. We have no alternative." In those circumstances, it is surely reasonable that instead of the inspector dealing with the matter at a compulsory purchase inquiry the director general, who will be qualified in those matters, should be able to consider whether the company could not carry out the expansion it required by some means other than the building of the plant in that particular place.

Amendment No. 176 also seeks to secure the rights available to objectors at planning inquiries in cases where compulsory purchase is involved.

The burden of both amendments is to protect the environment, wildlife and those whose livelihood may be affected by the exercise of draconian compulsory purchase powers by private companies which may not have sufficient regard to the alternatives open to them.

Mr. Michael Spicer: It falls to me to have to answer the hon. Member for Berwick-upon-Tweed (Mr. Beith) and, of course, the hon. Member for Durham, North (Mr. Radice). I shall deal first with the rather technical amendments referred to by the hon. Member for Berwick-upon-Tweed. We do not believe that those amendments are necessary, although we understand the hon. Gentleman's concern.

On amendment No. 176, where a proposed project requires the Secretary of State's consent under clauses 33 and 34, and is subject to public inquiry, the practice is for any related applications for compulsory purchase orders —the hon. Gentleman's worry—to be considered together with the planning application. In fact, the inspector will generally be asked to advise the Secretary of State on both matters. So there is no question of an application for a compulsory purchase order being allowed to affect the holding or the outcome of the inquiry.

We also think that amendment No. 175 is unnecessary because the compulsory purchase provisions of schedule 3 would apply only where the licensee wished to purchase land for licence-related activities, that is, activities directly related to the generation, transmission or supply of electricity. Under the Acquisition of Land Act 1981 a public inquiry has to be held if the owner-occupier of the land objects. The hon. Gentleman has fairly raised these matters, but they are covered under present legislation.

Mr. Beith: Is the Minister satisfied that, at such an inquiry, it would be open to the objector to argue that other options are available to the company, rather than building that particular plant in that place?

Mr. Spicer: The objector has rights to make whatever cases he wishes, and at the inquiry it will be up to the inspector to determine the terms of reference and the conditions. The objector's rights will be accommodated within the normal terms of an inquiry. Therefore, there is no problem for the hon. Member for Berwick-upon-Tweed to be concerned about.

I imagine that the hon. Member for Durham, North was speaking to amendment No. 165, which we do not want to accept because contractual procedures are fundamental to the new structure that we are introducing in the Bill. Contracts should be freely entered into with the least possible interference. The regulator will have powers over the price formula, but we do not wish to interfere with contractual arrangements after they have been set up.

Amendment negatived.

Clause 7

Amendments made: No. 5, in page 6, line 21 leave out from 'by' to 'and' in line 23 and insert 'other persons for such purposes as may be specified in the conditions'.

No. 6, in page 6, leave out lines 26 to 28.

No 7, in page 6, line 38, leave out

'by the Director such questions arising'

and insert

'or approval by the Director such questions arising or things falling to be done'.—*[Mr. Michael Spicer.]*

Schedule 3

COMPULSORY ACQUISITION OF LAND ETC. BY LICENCE HOLDERS

The Minister of State, Scottish Office (Mr. Ian Lang): I beg to move amendment No. 98, in page 72, line 15, leave out 'five years from' and insert

'the period of five years beginning with'.

Mr. Deputy Speaker: With this it will be convenient to take Government amendments Nos. 92, 81 to 84, 93, 9 to 11, 94 to 96, 85, 86, 89, 29 and 30.

Mr. Lang: The amendments in this group are all minor, technical or intended to clarify—with the single exception of amendment No. 92, about which I shall say a few words.

Schedule 3 sets out the procedure by which one licensee may compulsorily purchase land belonging to another licensee. The procedure would, in particular, be available when an independent generator wishes to purchase redundant land, for example a disused power station site, belonging to National Power or PowerGen. The procedure would involve both the Director General of Electricity Supply and the Secretary of State. The director is required to refuse his consent to a CPO application if it appears to him that

(a) the land would be used for the purposes of an installation necessary for the carrying out of the activities which the existing owner is authorised by his licence to carry on; (b) the use will commence, or any necessary planning permission or consent will be applied for, within five years.

The compulsory purchase order then has to be confirmed by the Secretary of State.

Amendment No. 92 enables the Secretary of State, by order, to vary the five-year period that the director general

[Mr. Lang]

has to take into account. It introduces an element of flexibility and calms the anxieties expressed in Committee and I commend the amendment to the House.

Mr. Morgan: Will the Minister give us further assurances on this point. He referred to the problems that could arise when a would-be private independent generator wants to take over "redundant land"—that was his expression. Redundant plant, or land that is no longer required, is one thing, and we understand that it would be particularly attractive for a private generator to acquire access to such land. That sounds an innocent and fair procedure—on the surface. However, something else is lurking beneath the surface. In the redundant power station, or major switching station, site is the belly of the transmission system.

The new would-be private generator will receive two advantages if the director general chooses to favour him with the benefit of the Secretary of State's advice. He not only gets a site—that is the innocent part of it—he gets a site which has been planned for the integrated system, from which we in Britain benefit, which has all the grid lines running straight out of it.

Therefore, the private generator has the advantage of a site with a windfall of gains which removes the need to invest in a transmission network. To do that without specifying in the Bill that compensation will be paid to those who have invested in the power lines from that location, whether it is a major switching station or a power station, would be an abortion; an improper procedure contrary to the rights of the people who have invested a large amount of money. We need some assurance from the Minister on that.

Mr. Lang: I understand the anxieties of the hon. Member for Cardiff, West (Mr. Morgan). They are probably exaggerated and I shall seek to reassure him.

First, we are talking often about land which has not been developed in any way at all but which has been acquired with a view to possible development for a power station. In other cases we may be talking about redundant power station sites, possibly in an urban area, which might have value, not necessarily for electricity.

Mr. Morgan: The hon. Gentleman is getting to the nub of the argument. It is precisely those sites that are the most attractive to the new technology. We could quote examples from almost every large city in Britain. The technology in electricity generation has caused the siting requirements to come full circle. Power stations 30 or 40 years ago were 50 MW, 100 MW or 150 MW on average, all in large cities. Then with the explosion of turbine generator size they went straight up to 500 MW, 600 MW, and finally 660 MW, as one sees in giant stations such as Drax. They all had to be moved 30 or 40 miles from the cities to sources of cooling water such as the large rivers of the Trent, the Ouse or the Ayr.

Now, according to John Baker, the chief executive designate of National Power and PowerGen, the technology has come back to the 200 MW or even 150 MW power stations, which can produce electricity just as cheaply. Therefore, those redundant downtown power station sites are needed once again. Those are the attractive sites because the technology means that the plants can be small. This is where the fight will come.

The old power stations of the municipal era in the 1920s and 1930s were located precisely where everybody who is after the jam which will be made available on privatisation will want to go. This is an extremely hot potato in the technological, profitable and competitive future of the industry. Any suggestion that that can be slipped through as a technicality is a complete misconstruction of where the investment will take place.

Mr. Cryer *rose*——

Mr. Deputy Speaker: Order. The hon. Member for Cardiff, West (Mr. Morgan) was intervening in the Minister's speech. We cannot have an intervention on an intervention.

Mr. Lang: I shall give way to the hon. Member for Bradford, South (Mr. Cryer).

Mr. Cryer: If my hon. Friend the Member for Cardiff, West (Mr. Morgan) is making a valid point, as I think he is, is it not also true that the very sites that he is talking about are ideal for combined heat and power schemes operating in inner-city areas? Would it not be important to keep such sites as an alternative?

Mr. Lang: That may be so, but the point of the amendment is simply to vary the five-year period by replacing the words "five years from" with the words "the period of five years beginning with".

In devising the procedures in schedule 3 the Government have sought to establish a balance between, on the one hand, the good competition reasons for enabling independent generators to gain access to redundant power station sites and, on the other, the rights of the incumbent owner.

The Government believe that the schedule gets the balance right, but that the amendment would provide a reserve power that would enable the Government to reduce the five-year period in paragraph 2(2)*(b)* of schedule 3, if that should appear desirable on competition grounds, in order to facilitate access for independent generators to surplus land held by other licensees. It is a desirable element of flexibility and the balance is right.

Mr. Morgan: The question is whether the balance is right. Even the CEGB, before the cap-badging and the theoretical split took place on 1 January, was anxious about the future of gas turbine stations which it wanted to locate on many of its old redundant power station sites such as Colchester avenue in Cardiff. It thought that these were the right places for its booster stations, even with the old-fashioned technology, and with none of the impact of the splitting of the two power stations, or the additional encouragement for private generation. The board still wanted those sites to be reserved for gas turbines. What compensation will there be for the loss of that ability to put gas turbine stations in to act as local boosters at times of peak demand?

11.45 pm

Then there is the point that my hon. Friend the Member for Bradford, South (Mr. Cryer) made about CHP. Obviously, one cannot have CHP, on sites like Ratcliffe-on-Soar or Drax, a long way from stations. The middle of Slough or Cardiff or Bradford, where power stations that were built in the 1930s were knocked down in the 1960s, is where one finds the really attractive locations for water grids to go with electricity grids. Almost

invariably the switching stations are still there, conferring enormous benefit on the land. In addition, there are the housing and industrial estates that are to be supplied from the hot water grid. Whoever controls this land controls the industry.

We have heard the Minister of State boast about the 7 GW from potential private investors. He seemed to be waving some sort of macho symbol before the House, to indicate the great success of private generation, forgetting that half the time it was Labour-controlled city councils that were putting together the consortia which were going to have the more constructive and innovative schemes in areas like Leicester, Sheffield and Newcastle.

But they all need these sites. The whole point about this legislation is that we must be sure that the Minister, in his search to come good on the 7 GW of private power about which he has been talking—some of it might be described as Socialist private power, emanating from the innovative ambitions of Labour-controlled city councils, which, half the time, half of the rest of Ministers are trying to close down—realises that these sites are absolutely critical. Without the right site one does not have the potential for a profitable scheme.

I am concerned that private generators may, by back-door methods, gain preferential access to the Minister, who has been putting himself on the line by saying, "I am going to get private power in." When I say "private generators" I mean really private generators with just banks behind them, and not generators controlled by Labour local authorities—or even Conservative local authorities or hung councils—or British Coal, or other public-sector bodies. Private generators will want those sites, and they will get preferential access, because otherwise they will not go ahead, and if they do not go ahead the Secretary of State will not have much of a speech for the next Tory party conference.

Mr. Cryer: I can tell from the look on your face, Mr. Deputy Speaker, that you are looking forward to my comments. No doubt you will be disappointed to learn they will be fairly brief.

Mr. Haynes: And in order.

Mr Cryer: And, of course, in order.

I, too, am concerned about the points that my hon. Friend the Member for Cardiff, West (Mr. Morgan) has made. In the early 1980s I was closely involved in questioning the CEGB about the closure of a number of power stations on these sites. I recall, for instance, the one near the centre of Huddersfield and, many years earlier, the one at Canal road, Bradford—a plum site which has been sold for retail development. These are plum sites in every sense because they are near city centres. If the private sector, so beloved of the present collection of incompetents in the Government, acquires them for private generation, they will confer an enormous advantage, particularly if the private generators decide to opt out of generation and sell the sites for retail or industrial development.

I have always felt that city-centre sites should have been retained by the CEGB for electricity generation. I gave the reasons in that unfortunate—unfortunate, as it turned out—intervention in an intervention about combined heat and power. If the waste heat from electricity generation is to be used for heating domestic or industrial units, the generating will have to be done near those units. The sites about which we are talking are situated largely in inner-city areas.

I thought that the CEGB pursued a mistaken policy in concentrating on large power stations, with consequent extended transmission lines, and closing down relatively recently constructed—in some cases in the 1960s—power stations near city centre sites. My view was that the CEGB was creating a power gap to justify the construction of nuclear power stations—because that was surplus generating capacity and was not a basic component—when the small stations were adequate in total to meet the generation demand.

I hope that the Minister will give more concrete assurances that this is not an opportunity for the private enterprise cronies of Conservative Members to come into the industry and have direct access to city-centre sites, which are the most valuable, whether for generation or for making a fast buck, enabling them to get their hands on real estate which at present is publicly owned.

Mr. Lang: I can give the hon. Member for Bradford, South (Mr. Cryer) the assurance he seeks. He is reading more into the amendment than it provides. We debated this matter in Committee. I am proposing a minor modification to the provision that already exists in the schedule to enable the five-year period to be varied and thereby introduce a desirable degree of flexibility. We are talking about a situation in which the Secretary of State and the director general are involved and have a role to play. We are talking in the context of a compulsory purchase order. This is a desirable modification of the provision as drafted.

The hon. Member for Cardiff, West (Mr. Morgan) raised the question of compensation. There are already compensation procedures in schedule 3. The standard situation when a compulsory purchase takes place is that compensation must be paid on the basis of market value without taking account of development value. That would apply here also.

I emphasise that under a Bill as drafted National Power or PowerGen will be able to forestall an attempt by another licensee to raise a compulsory purchase order against their redundant land by showing that they intended to use that land or expecting to apply for planning permission within five years. In our view, while that is a fair measure of protection for those companies, it is right that the Government should have the reserve power to vary the five-year period. That is what the amendment does, and I commend it to the House.

Mr. Morgan *rose*——

Mr. Deputy Speaker: Order. The hon. Gentleman has a right to speak only once at this stage of the Bill.

Amendment agreed to.

Amendments made: No. 92, in page 72, line 16, at end insert—

'(2A) The Secretary of State may by order provide that sub-paragraph (2) above shall have effect as if for the period mentioned in paragraph (b) there were substituted such other period as may be specified in the order.'.

No. 8, in line 46, after first 'of', insert

', and paragraph 3 of Schedule 3 to,'.

No. 81, in page 74, line 37, after '15.', insert

'—(1) Subject to sub-paragraph (2) below,'.

No. 82, in line 41, at end insert—

[Mr. Deputy Speaker]

'(2) Paragraph 10 of the first Schedule to that Act (statutory undertakers' land excluded from compulsory purchase) shall not apply where the land or rights in question belong to another licence holder.'.—*[Mr. Michael Spicer.]*

Schedule 4

OTHER POWERS ETC. OF LICENCE HOLDERS

Amendments made: No. 83, in page 78, line 46, after 'in,', insert 'on,'.

No. 84, in page 79, line 11, leave out 'in' and insert 'on or over'.

No. 93, in page 82, line 48, at end insert—

'Provisions supplementary to paragraph 5

5A.—(1) Where a wayleave is granted to a licence holder under paragraph 5 above—

(a) the occupier of the land; and

(b) where the occupier is not also the owner of the land, the owner,

may recover from the licence holder compensation in respect of the grant.

(2) Where in the exercise of any right conferred by such a wayleave any damage is caused to land or to moveables, any person interested in the land or moveables may recover from the licence holder compensation in respect of that damage; and where in consequence of the exercise of such a right a person is disturbed in his enjoyment of any land or moveables he may recover from the licence holder compensation in respect of that disturbance.

(3) Compensation under this paragraph may be recovered as a lump sum or by periodical payments or partly in one way and partly in the other.

(4) Any question of disputed compensation under this paragraph shall be determined by the Tribunal; and sections 2 and 4 of the Land Compensation Act 1961 or sections 9 and 11 of the Land Compensation (Scotland) Act 1963 shall apply to any such determination.'.

No. 9, in page 83, line 39, at end insert

'or such longer period as the Secretary of State may specify'.

No. 10, in page 83, line 47, at end insert

'or such longer period as the Secretary of State may specify'.

No. 11, in page 84, line 30, after 'heard', insert

'by a person appointed by him'.

No. 94, in page 85, leave out lines 44 to 48.

No. 95, in page 86, line 2, at end insert—

'"moveables" means chattels in relation to England and Wales and corporeal moveables in relation to Scotland;'.

No. 96, in page 86, line 21, at end insert—

'"the Tribunal" means the Lands Tribunal in relation to England and Wales and the Lands Tribunal for Scotland in relation to Scotland.'.—*[Mr. Michael Spicer.]*

Schedule 5

WATER RIGHTS FOR HYDRO-ELECTRIC GENERATING STATIONS IN SCOTLAND

Amendments made: No. 85, in page 87, line 3, after first 'of', insert 'riparian owners and other'.

No. 86, in page 87, line 43, after 'taken', insert

', or into which water is to be discharged'.

No. 89, in page 87, line 45, leave out from 'from' to 'and' and insert

'or into which water is to be so taken or discharged'.—*[Mr. Michael Spicer.]*

Clause 15

DUTY TO SUPPLY ON REQUEST

Amendments made: No 12, in page 13, line 30, after third 'the', insert 'other person's'.

No. 13, in line 41, leave out from 'below' to end of line 43 and insert—

'(e) specify any other terms which that person will be required to accept under section (*Additional terms of supply*) below; and

(f) state the effect of section 21 below.'.

No. 14, in line 44, after 'to' insert

'19, (*Additional terms of supply*), 20 and'.—*[Mr. Michael Spicer.]*

Clause 16

EXCEPTIONS FROM DUTY TO SUPPLY

Amendment made: No. 15, in page 14, line 13, at end insert

'and in this Part "private electricity supplier" means a person, other than a public electricity supplier, who is authorised by a licence or exemption to supply electricity'. —*[Mr. Michael Spicer.]*

Clause 19

POWER TO REQUIRE SECURITY

Amendment made: No. 16, in page 16, line 16, at end insert

'and any notice under paragraph (a) above shall state the effect of section 21 below.' —*[Mr. Michael Spicer.]*

Mr. Kenneth Carlisle (Lincoln): I beg to move, That further consideration of the Bill be now adjourned.

Mr. Haynes: On a point of order, Mr. Deputy Speaker. There has been a welshing on an agreement about today's business, and I am totally disgusted with Conservative Members. *[Interruption.]* We had agreed to go to amendment No. 111 and we are not there yet. I know what the problem is. The Government cannot keep their troops here. We made agreements in Committee upstairs and we stuck to them. There has been no guillotine on the Bill, and now Government Members are welshing on an agreement at this stage of the measure. We should continue our debates up to amendment No. 111, yet now a Government Whip has moved, That further consideration of the Bill be now adjourned. It is shocking.

Mr. Wallace: Further to that point of order, Mr. Deputy Speaker. It is fair to say that, as far as I am aware, the agreement has been honoured.

Mr. Michael Spicer: Further to that point of order, Mr. Deputy Speaker. That is exactly how we see it. It is outrageous for the hon. Member for Ashfield (Mr. Haynes) to raise a point of order on this matter. We have abided by the agreement. The hon. Gentleman may be under some misapprehension. The Democrats also saw the agreement in that way and the hon. Member for Orkney and Shetland (Mr. Wallace) made that clear. We were willing to go further to meet the hon. Member for Ashfield but the Democrats were not prepared to do so. That is why we decided to honour the agreement that we had with the Democrats.

Mr. Deputy Speaker: The Chair is not aware of or party to any agreement.

Question put:—

Bill, as amended (in the Standing Committee), to be further considered on Monday 10 April.

EUROPEAN COMMUNITY DOCUMENTS

Motion made, and Question put forthwith pursuant to Standing Order No. 102 (Standing Committees on European Community documents).

SINGLE MEMBER PRIVATE LIMITED COMPANIES

That this House takes note of European Community Document No. 6705/88 and the Supplementary Explanatory memorandum submitted by the Department of Trade and Industry on 10th March 1989 on single member private limited companies; and endorses the Government's view that if the collective decision of the European Community is that this proposal is to go forward, it should provide for only the minimum of regulation consistent with enabling such companies to be established and safeguarding the interests of those dealing with them.—*[Mr. Alan Howarth.]*

Question agreed to.

CONTROL OF POLLUTION (AMENDMENT) BILL *[Money]*

Queens recommendation having been signified—

Resolved,

That, for the purposes of any Act resulting from the Control of Pollution (Amendment) Bill, it is expedient to authorise the payment out of money provided by Parliament of—

(a) any administrative expenses incurred by the Secretary of State in consequence of that Act; and
(b) any increase attributable to that Act in the sums payable out of money so provided under any other Act.—*[Mr. Alan Howarth.]*

LAW OF PROPERTY (MISCELLANEOUS PROVISIONS) BILL *[Lords]*

Order for Second Reading read.

To be read a Second time on Monday 10 April.

PETITIONS

Football Membership Scheme

12.9 am

Mr. John Garrett (Norwich, South): I beg leave to present a petition, the preamble of which states:

To the Honourable the Commons of the United Kingdom of Great Britain and Northern Ireland in Parliament assembled. The humble petition of supporters of Norwich City football club showeth that the undersigned signatories express their condemnation of proposed legislation to force football supporters to carry identification cards

We believe that a system of identity cards will have little impact on the problem of football related violence, will hinder football's attempts to attract a new generation of supporters and will lead to the eventual demise of the game as a spectator sport.

Wherefore your petitioners pray that your Honourable House urge that the Government bring forward proposals which have the support of genuine football supporters. And your petitioners, as in duty bound, will ever pray, etc.

Attached to that preamble are 10,916 signatures.

To lie upon the Table.

Planning Decisions (Claygate)

12.10 am

Mr. Ian Taylor (Esher): I beg to ask leave to present a petition on behalf of 750 of my constituents. The signatures were collected over a few days after Easter, mainly from residents of the village of Claygate who are

[Mr. Ian Taylor]

concerned about the damage that planning decisions are causing to the character of their area. The problem concerns many of my constituents. The petition states

That the Council of the Borough of Elmbridge is at present unable to carry out the earnestly held wishes of the said residents that their environment be preserved from the demolition of certain residential properties of historic importance to them, and from the consequent loss of established trees and open spaces surrounding and between such properties, even when the Council is in agreement with the wishes of your petitioners. Wherefore your Petitioners pray that your Honourable House will enable them to continue in peace to enjoy the remaining buildings and open spaces, each in his own hamlet, village or town, by supporting the Private Member's Bill of the Hon. Member for Harrow, East . . . "Planning Permission (Demolition of Houses) Bill". This Bill would solve these problems.

I trust that the House will take due note of the views of the petitioners in this important matter.

To lie upon the Table.

Tonsillectomies (North Devon)

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Alan Howarth.]*

12.12 am

Mr. Tony Speller (Devon, North): In raising the subject of delays in tonsillectomy operations in north Devon I am talking of a drama which has no villains in the cast, although some members of it may regard their opponents as villainous.

Although there are no villains, there are victims, and they are children. They are children who need tonsillectomies, and they are children of my north Devon constituents who look for help to the North Devon health authority and, in particular, to our ear, nose and throat specialist, Mr. John Riddington Young. The problem, expressed simply, is that, although Mr. Riddington Young works within the National Health Service and within the North Devon health authority, for several years there has been a stalemate over the use of facilities in our excellent North Devon general hospital, where no tonsillectomies are being performed.

The stage is the hospital and the cast are the highly qualified, well-respected members of the health authority, the consultants, and all the medical and administrative staff within the authority. In essence, the problem is simply that, because of his fears for the safety of youngsters in their post-operative period, the ENT specialist refuses to use the post-operative facilities which the health authority wishes him to use.

Should the young patient be placed in the paediatric ward or in a surgical ward? On one side of the argument is the health authority, which considers that a paediatric ward is the right place for a youngster to recover. On the other side is the argument of the ear, nose and throat specialist, who will only accept placement of his patients in a surgical ward. He wants a physically separate ward or area in which patients may recover, free from fear of cross-contamination. Those are sensible and logical, but argumentative positions. I truthfully have no idea who is in the right.

Now an element of farce appears. The consultant will not operate under the conditions laid down by the health authority. Recently, the Government have provided £75,000 towards cutting the queues of people on waiting lists. I was grateful for that until I found out that, because the consultant will not operate until the health authority accepts his conditions for the children, the health authority, disagreeing with its consultant, is sending 40 children for tonsillectomies at Nuffield hospital in Plymouth. So out of our £75,000 of extra funds, £49,000 will be spent on sending our youngsters 50 or 60 miles to Plymouth for their operations. It seems ludicrous. We have the surgeon and we have the beds, but because the beds are in the wrong ward—or seem to be—we send our youngsters across the county and pay for the privilege of not using our own facilities. We have an outstanding surgeon and a super hospital and they are part of a good local health authority, but no operations are carried out. That waste of abilities and facilities must cause my right hon. and learned Friend the Secretary of State to reach with a shudder for his White Paper.

The problem goes back to 1984. I was first involved when one parent, who was a qualified nurse, complained about the lack of access to her child in the post-operative

period after a tonsillectomy and was in great dispute with Mr. Riddington Young. Time passed, and during 1987 there were rumblings of discontent over the growing list of young people needing tonsillectomies, but having either to go to Exeter—where, I believe, the post-operative system used is that preferred by Mr. Riddington Young—or to go private.

Constituents sought my help and I, in turn, contacted the community health council and the North Devon health authority. As nothing seemed able to break the stalemate, I sought help from the previous Under-Secretary of State, my hon. Friend the Member for Derbyshire, South (Mrs. Currie), but the stalemate continued. We are now into our fourth year of no tonsillectomies, although beds and a consultant are available. We reached the stage that the stalemate always seemed to be on the point of compromise, but whenever the usual channels were used they silted up so it was necessary to find a way over or round them. The purpose of this debate is to ask my hon. Friend the Under-Secretary to use the national part of our National Health Service to effect or even impose a solution.

I want to make two further points. Mr. John Riddington Young has the reputation of being an outstanding ear, nose and throat specialist. His patients appreciate his work and many constituents have written to me in his support. He is from Yorkshire and has many of the talents of that great county and it may be that he also has some of the stubbornness for which it is also renowned. Compromise seems alien to him, as he believes that any compromise may damage his patients. Who can complain about a medical officer who cares more for his patients than for the bureaucracy? I have no specific complaint about the consultant.

Secondly, my North Devon health authority is excellent. In 10 years in the House, I could count on the fingers of one hand the number of complaints about the authority. I listen to colleagues in Question Time and debates complaining about their local health authorities, but I do not have that problem. My constituents like the health authority and they like its consultants. None the less, there are no operations and that is ludicrous. I have used the word "silly" in the past and been criticised for it, but it must be silly that the taxpayers' money is not being used to help the children who need help.

The North Devon health authority claims to be following Government guidelines in making the best use of the beds. Perhaps following the problems of Cleveland, it is unwilling to put young children in an adult ward overnight. The crux of the problem is that the consultant specialist says, "I will operate only if children are placed in a surgical adult ward overnight." However, he would prefer a separated ward and I understand his argument on that. The health authority says, "We have good paediatric staff, with excellent nurses with excellent qualifications, and the paediatric ward is where children should go." Both arguments carry complete conviction to the layman but taken together the two arguments mean that none of the children in my constituency are getting their tonsillectomies, which must be nonsense under any circumstances.

Therefore, I can see both points of view in the play. I do not use the word "play" humorously because this is a play. Although we are talking about operating theatres, the issue is theatre with a play that has a cast of excellent characters who are highly qualified people. They are people of whom I have no personal criticism because they are specialists in their own procedures. However, they are none the less at loggerheads and we have reached the stage where only my hon. Friend the Minister can assist us in making a breakthrough.

My fear is that if we do not resolve the problem soon my area, covered by the North Devon health authority, will lose its ENT operating capacity. Unusually, it is a single consultant facility. Children need to be near their parents, especially when they are in hospital and although Exeter is an excellent hospital it is 50 miles away and for a low-income constituency such as mine that is 50 expensive miles. That is my problem; the children should be near their parents; the parents live in the Barnstaple and the Ilfracombe area, which makes that the logical place for operations.

I turn finally to the White Paper of my right hon. and learned Friend the Secretary of State for Health. It is not to the taste of many medical people and nor are some of my hon. Friends deeply enamoured by it. I believe in local health care and respect Mr. Riddington Young, the consultant, but equally I know well and have full confidence in councillor Mrs. Ro Day the chairman of the authority.

It may be that our regional health authority in far-away Bristol—we in the west country think of Bristol as south midlands, not south west—should have done something earlier. Perhaps the local consultants, individually or collectively, should have brought pressure to bear. But whatever the reason, only the children are suffering. No one else has lost a thing—not a penny, not a pound. No one has lost a night's sleep except for the parents—and the children have suffered. The community is sick and tired of what seems to us to be a dispute that should have been resolved long ago.

Therefore, I ask my hon. Friend the Minister to bring down the curtain on this too long running farce. The cast is excellent but it must get its act together because beyond the size and the scope of what is a petty dispute to the outside world is the whole question of our National Health Service. Some of my constituents were sent to Exeter last year for treatment for cancer and it is well known nationally that a number were badly damaged by an overdose. For what it is worth, constituents come to me and say, "We were promised help but we have not got it. There is some form of delay. There is a problem over legal aid."

While I am a supporter of the NHS—my family and myself are users of our National Health Service—none of us, ordinary laymen, doctors, nurses or consultants, can say that the Health Service is beyond criticism. It is too important for that. That is why I ask my good friend the hon. Member for Kettering (Mr. Freeman) to see what he can do to break this deadlock. We love and are proud of our Health Service, but sometimes it does not work and that is why, late at night like this, I must keep some of us in the House awake to try to help those who need help.

12.23 am

The Parliamentary Under-Secretary of State for Health (Mr. Roger Freeman): I congratulate my hon. Friend the Member for Devon, North (Mr. Speller) on his success in winning this opportunity to debate a matter of some concern to his constituents. He is recognised for his unflagging interest in the welfare of the people of his constituency and I pay particular tribute to him.

[Mr. Roger Freeman]

These matters undeniably involve clinical judgment and it would not be right for me to pass judgment. However, I am concerned, as is my hon. Friend, about the consequences for the children.

I, like perhaps many other hon. Members, had my tonsils out when I was 10 in my local, excellent National Health Service hospital. It was local, and I appreciate what my hon. Friend has said about the need for young children, in particular, to be close to their families and to avoid, if possible, extensive travel.

Perhaps it would be appropriate for me to talk briefly about waiting lists, especially as they affect ear, nose and throat services.

The Government have been concerned in the past two years to tackle the problem of waiting lists and times for people waiting for treatment under the National Health Service. To this end, my right hon. and learned Friend the Secretary of State has set aside considerable sums of money—£25 million in 1987-88, £30 million in the year just ended and £31 million in 1989-90—to enable health authorities to attack those areas and specialties where the number of people waiting, and the length of time they have to wait, is a problem. The money provided will enable more than 300,000 extra in-patients and day cases and over 200,000 extra out-patients to be treated by April 1990.

Looking at the picture more broadly, an impressive 6·5 million in-patients in all specialties are now being treated each year in our hospitals. This represents an increase of nearly one quarter over the past 10 years.

How does north Devon fit into this picture of expanding health care? Current expenditure has increased by over 30 per cent. in real terms since 1982-83. The proportion of frontline staff—doctors, nurses and other health professionals—has increased. Numbers of patients treated have risen correspondingly in the same period. The way in which statistics are collected has recently changed but between 1982 and 1986 in-patient cases rose by 26 per cent., out-patients by the same amount and day cases by 29 per cent.

I mention all this because it is important to see how far we have come in a short time, and what great strides have been made in access to health services for the population as a whole and for north Devon in particular. We do not rest on our laurels, however. We drive on. Problems remain, as this debate testifies, and it would be foolish to suppose that we could ever elininate them all, even if they could be anticipated.

There are various reasons for the build-up of waiting lists and times, where these occur at levels which begin to cause concern. They can often be resolved by changes in patient management, and by better informed referrals. In the south-west, general practitioners are sent information on waiting list numbers by specialty throughout the region on a quarterly basis. In other instances, it means specially targeted resources to help ease bottlenecks. Hence the existence of the waiting list fund.

The South Western region has received substantial sums with which to tackle its waiting list problems—£1·65 million in 1987-88, £1·9 million in 1988-89, and £1·55 million for 1989-90. The regional health authority has made £60,000 available to North Devon in 1988-89, and allocated a further £76,000 for the coming year, out of which, as my hon. Friend said, £49,000 is intended for a project in the ear, nose and throat specialty to tackle that particular problem. The project, which involves contracting with the Nuffield hospital, Plymouth, to take 40 patients and which will last from July to October, will aim to reduce the number of children awaiting removal of tonsils and adenoids. I would draw the attention of my hon. Friend to the fact that the operations on these children would have to be funded by the health authority from either the waiting list initiative or from the authority's allocation.

If the children were not operated on in Plymouth, using the funds available under the waiting list initiative, and if they were looked after in hospital in north Devon, resources would be needed for those operations, so it would not be true to say that we are wasting £49,000 by applying this remedy to the problem.

I wish to comment on one other point that my hon. Friend made. The national and regional policy is that children should be treated in designated children's wards by specially trained staff so as to safeguard both their physical and psychological well-being. I believe that that is an opinion that is generally held, although, I admit, not universally agreed.

My hon. Friend will be aware of some of the background to the rise in the waiting list figures for ear, nose and throat operations in north Devon, about half of which are performed on children. Matters of clinical judgment were involved, which it is not appropriate to go into here, but about which I understand discussions have been taking place between the health authority and the consultant concerned, with independent expert advice. The health authority is optimistic that matters will soon be resolved. I understand that from 10 April Mr. Riddington Young has agreed to operate on children requiring the removal of tonsils and adenoids who are over the age of 10 years. That is recent and good news.

The matter is clearly one for the North Devon health authority to deal with, in consultation with the regional health authority, who hold the consultant's contract of employment. On that point, we have always believed that the level where the contract is held is less important than the actual management of the contract. We would expect the regional and district health authorities to work together in the day-to-day management of consultants and for local managers to deal with problems that arise. As my hon. Friend said, the proposals in the recent White Paper will strengthen those arrangements.

However, even after that recent and welcome news concerning the consultant involved, I appreciate that there may still be a problem to be resolved. I can tell my hon. Friend that I will ask Sir Vernon Seccombe, chairman of the South Western regional health authority, to report to me within one month from today on how the position has developed and on the extent to which it has been resolved. I can give my hon. Friend an assurance, which I hope he will convey to his constituents—especially to the parents of the children involved—that I place great importance on what he has said and that I will write to him at the end of one month.

My hon. Friend raised the altogether separate subject of compensation payments for patients who received radiation overdoses at the Royal Devon and Exeter hospital last year. That matter is being handled by the legal advisers of Exeter health authority and the patients concerned or their executors. As my hon. Friend knows,

the health authority has, following an independent inquiry, accepted that it had failed in its duty and it has already paid out interim sums. It is working with its legal advisers to effect satisfactory final settlements as quickly as possible.

Question put and agreed to.

Adjourned accordingly at twenty-eight minutes to One o'clock.

House of Commons

Friday 7 April 1989

The House met at half-past Nine o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

PETITION

Football Membership Scheme

9.34 am

Mr. Eric S. Heffer (Liverpool, Walton): I wish to present, under Standing Orders Nos. 132 to 136, a petition, which carries 26,411 names. The petition was organised by the supporters of Liverpool football club and by members of the Football Supporters Association in the area. It was handed to me at Anfield, the Liverpool football club ground, at half time on the occasion of the Liverpool versus Derby County league match, which was attended by 40,000 people.

The petition says:

To the Honourable the Commons of the United Kingdom of Great Britain and Northern Ireland assembled. The Humble Petition of supporters of Liverpool Football Club and members of the Football Supporters Association sheweth.

That we condemn the proposed legislation to force football supporters to carry identification cards, and we believe that a system of identity cards will have little impact on the problem of football-related violence, will hinder football's attempt to attract a new generation of supporters and will lead to the eventual demise of the game as a spectator sport.

Wherefore your Petitioners pray that your honourable House will urge the Government to bring forward proposals which have the support of genuine football supporters.

And your Petitioners, as in duty bound, will ever pray.

To lie upon the Table.

Points of Order

9.36 am

Mr. Nigel Spearing (Newham, South): On a point of order, Mr. Speaker. As you will be aware, points of order were raised at the end of business questions yesterday. I have two related points of order which are strictly procedural. In reply to a question asked by my hon. Friend the Member for Falkirk, East (Mr. Ewing), the Leader of the House said:

"nothing new has emerged in recent times."—[*Official Report*, 6 April 1989; Vol. 150, c. 364.]

He was referring, of course, to Sir Leon Brittan's broadcast and matters relating to the Westland affair three years ago.

As I understand it, the submission of oral questions or questions for written answer that relate to historic matters is sometimes not possible. I do not share the view of some that the procedures of the House are arcane, traditional and obstructive. On the contrary, I believe that, if properly followed, they can be used to call the Executive to account, although only on reasonably current matters.

May I confirm with you, Mr. Speaker, that it would be possible for the Leader of the House, if he so wished, to specify where a record of the approval of two gentlemen in the Prime Minister's Office was recorded—in debates at the time or in reports of Select Committees? I have tabled a written question—written question No. 139—and although I shall not push the right hon. Gentleman on it now, may I confirm with you, Mr. Speaker, that it would be open for him to reply to it now if he so wished? If he does not, no doubt he will answer the question fully in writing on Monday, with his customary courtesy.

My second point of order is related to my first. The position is now related to what Sir Leon Brittan and others may already have said in trailers to the broadcast. I understand, however, that there is to be a further broadcast tonight, and either Sir Leon, or others concerned in the matter, may say other things which, prima facie, are in conflict with, or additional to, the evidence given to the Select Committee on Defence or speeches or other documents that are considered official. In that case, Mr. Speaker, may I confirm that the scope for the submission of questions to the Table or to you yourself in written form is related to any apparent discrepancy that may arise and that they will therefore be in order and those matters will cease to be historic?

That is the position as I understand it, but, in view of the intense interest in this matter on both sides of the House and among the media, and as it might be thought that the procedures of the House are obstructive rather than permissive, I thought that it might be helpful to get your ruling on these matters.

Mr. Speaker: I thank the hon. Gentleman for putting his point of order in that way. His first question was not really to me but to the Leader of the House. I am sure that the Leader of the House will answer in whatever way he feels appropriate.

As to the second question, the programme has yet to be seen, so the matter is hypothetical at the moment. I have noted what the hon. Member has said. I have mentioned to the hon. Member for Newham, North-West (Mr. Banks) that I have a constituency surgery tonight, so I

[Mr. Speaker]

shall not be able to watch the programme, but personally I will ensure that it is carefully watched by those who advise me.

Mr. Alan Williams (Swansea, West): Further to that point of order, Mr. Speaker. As the Leader of the House is present, it might be helpful if he would respond now; it would save time at 11 o'clock. Yesterday, he categorically told my right hon. Friend the Member for Morley and Leeds, South (Mr. Rees):

"If the right hon. Gentleman is interested in names he should look at the Select Committee's report".—[*Official Report*, 6 April 1989; Vol. 150, c. 359.]

Yesterday, he was specifically asked twice whether he would say where that information was available. In view of the broadcast which we all know is to take place tonight and which we have seen trailed, it is clear that there will be great speculation over the weekend. Perhaps the Leader of the House could defuse it for the Prime Minister and avoid aggravation for her next week, which I am sure is his greatest wish, by giving us the information today, instead of forcing us to take further action next week.

Perhaps the right hon. Gentleman will think about the matter between now and 11 o'clock and consult his notes. He said yesterday that he had read all the proceedings to refresh his memory. As his memory is probably the freshest of all, perhaps he will look at them again between now and 11 o'clock and give us clarification at 11 o'clock.

Mr. Tam Dalyell (Linlithgow): Further to that point of order, Mr. Speaker. What is not hypothetical is that the most senior appointee that this country has in Europe, the Vice-President of the Commission, has already gone on record many times on television in the past two days saying that two of the most intimate and powerful civil servants of the Prime Minister have indulged in something that they should not have done. They gave approval to something which they knew was wrong. It does the House of Commons no credit whatsoever for the Leader of the House to sit in the House relaxed and laughing at the serious points made by my hon. Friend the Member for Newham, South (Mr. Spearing).

I sat and listened, as did some of my colleagues, to Lord Armstrong of Ilminster on that memorable occasion when he gave evidence to the Select Committee on Defence. Yesterday, the Leader of the House said to my right hon. Friend for Morley and Leeds, South (Mr. Rees) at column 359, to myself at column 361 of *Hansard*, and later to my hon. Friend the Member for Falkirk, East (Mr. Ewing) that nothing had changed. The Armstrong inquiry was based on differences in understanding between No. 10 and the Department of Trade and Industry. What the Leader of the House says is a travesty——

Mr. Speaker: Order. This is a matter for debate, not a point of order. I cannot be held responsible for what the Leader of the House said. I have heard nothing out of order so far. The hon. Gentleman is now seeking to pre-empt a programme which some of us are looking forward to seeing this evening. It would be more appropriate for him to see that programme and then, if there is anything in his point of order, pursue it again on Monday, but not today.

Mr. Dalyell: The key statement has been made and trailed many times. We are expected to believe that four highly trained civil servants—Mr. Mogg, Miss Bowe, Mr. Ingham and Mr. Powell—had a double misunderstanding on the same subject. That is what the Select Committee was asked to believe. Some hon. Members have gone to the trouble of checking with members of that Select Committee. That is exactly the impression that they had. Lord Armstrong should be——

Mr. Speaker: Order. This is a private Members' day. It is not appropriate for the hon. Member to raise these matters now because there is nothing that I can do about them. They are matters of concern that the hon. Gentleman has with the Government. They are not points of order for the Chair.

Mr. Dalyell *rose*——

Mr. Speaker: What is the point of order for me?

Mr. Dalyell: The point of order is that the reputation of the House of Commons is at stake. If the Leader of the House thinks that it is all right for senior civil servants to leak a Law Officer's letter—because that was the implication——

Mr. Speaker: That is not a point of order.

Mr. Dalyell *rose*——

Mr. Speaker: Order. If the hon. Member had a private Member's Bill, he would be concerned if points of order of this kind were being raised during private Members' time. This is not an appropriate moment to raise it. If it is a point of order which I can answer, I will gladly do so, but I have heard nothing so far that has the remotest concern for me as Speaker.

Mr. Dalyell: If I had a private Member's Bill, whether I were an Opposition Member or a Conservative Member, I should be concerned that the leaders of my party and the leaders of the British Government thought that it was all right for Mr. Powell and Mr. Ingham, on their own admission, to leak a Law Officer's——

Mr. Speaker: Order. The hon. Gentleman is kicking in his own goal. It is not a point of order for me. He keeps on saying that it is a matter for the Government. It is a matter for the Government, not for me. It is not a point of order.

Mr. Robert Adley (Christchurch): Further to that point of order, Mr. Speaker. I would like clarification. Can you confirm that it is your ruling that you are not responsible for the contents of Ministers' speeches in this House? In view of what you said a few moments ago, will you further confirm that points of order cannot be based on what is heard on television? If television programmes are to be the basis, not for debate but for points of order, we shall be here for ever.

Mr. Speaker: Order. It is possible that new facts could emerge. None of us has seen the programme yet.

Mr. Dennis Skinner (Bolsover): Further to that point of order, Mr. Speaker. One thing is pretty certain, and that is that you would do well, even though you have your surgery tonight, to get the video working and make sure that the programme is recorded. It is clear that one matter of order that concerns you is that you need to be abreast

of events. In this ever-changing period, relating in particular to the long-standing Westland affair, it would be as well for you to be fully aware of what is happening.

If it so happens that two non-elected people such as Bernard Ingham and Charles Powell are involved and now, it is said, an ex-Member of this House, Leon Brittan, who is on £97,000 a year and in relative safety, economically speaking, has made statements which he seemingly was unable to make when he was a Member of the House, it means that the matter is changing. In view of the fact that you must occupy the Chair for a considerable time, it is necessary for you to be able to conduct the proceedings in such a way as to be able to take account of all matters as they affect Opposition and Conservative Back Benchers.

The Leader of the House is here; he has made himself available. I suggest that he should make himself even more available and go to the Dispatch Box and tell us what he intends to do. It will be a problem for you, Mr. Speaker, as this sad, sorry story unfolds over the next few days and months.

One thing is certain. My hon. Friend the Member for Linlithgow (Mr. Dalyell) stands taller today than he did when he raised this matter against a background of hostility from many parts of the House. As the story unfolds, and as Leon Brittan starts to reveal the truth, Mr. Speaker, you may have to take account of many points of order arising out of what is happening against this sorry background.

Mr. Speaker: I fear that that may well be so, and I shall prepare myself. I am not very good at operating the video, so if the hon. Gentleman could act as a back-up for me, that would be helpful.

Mr. Dalyell *rose*——

Mr. Speaker: No further point of order can arise on this matter.

Mr. Dalyell *rose*——

Mr. Speaker: Please sit down. We have all admired the hon. Gentleman's perseverance, but I do not think that it is a matter for today. We must now move on——

Mr. Dalyell *rose*——

Mr. Speaker: It is not a matter for today.

Mr. Dalyell: Further to that point of order, Mr. Speaker.

Mr. Speaker: I cannot add further to what I have said, but if it is a new point of order, I shall have to hear it.

Mr. Dalyell: What is at stake is the great traditions of the British civil servants. It is absolutely corrupt that two civil servants positively approved a leak and disclosure of a Law Officer's letter. It is absolutely and totally corrupt and wrong, yet here they remain——

Mr. Speaker: Order. This is a speech that the hon. Gentleman might have an opportunity of making at another time, but not on a point of order.

Mr. Dalyell *rose*——

Mr. Speaker: No, I am not hearing any more today——

Mr. Dalyell *rose*——

Mr. Speaker: No. I must ask the hon. Gentleman not to prejudice his chances on Monday——

Mr. Dalyell: There is nothing more important than the integrity of this House.

Mr. Speaker: Order. I order the hon. Gentleman to resume his seat.

Mr. Dalyell: There is nothing more important——

Mr. Speaker: Order. I warn the hon. Member that I shall have to take further action, and I would be reluctant to do that.

BILL PRESENTED

Dock Work

Mr. Secretary Fowler, supported by the Prime Minister, Mr. Chancellor of the Exchequer, Mr. Secretary Hurd, Mr. Secretary Walker, Mr. Secretary Rifkind, Mr. Secretary Channon, Mr. Tony Newton, Mr. John Cope and Mr. Patrick Nicholls, presented a Bill to abolish the Dock Workers Employment Scheme 1967 and repeal the Dock Workers (Regulation of Employment) Act 1946; to make provision for the dissolution of the National Dock Labour Board; and for connected purposes: And the same was read the First time; and ordered to be read a Second time on Monday 10 April and to be printed. [Bill 113.]

Orders of the Day

Parking Bill

As amended (in the Standing Committee), considered.

New Clause 1

AMENDMENT OF ROAD TRAFFIC ACT 1984 (NO. 1)

'S.45 Road Traffic Regulation Act 1984 shall be amended as follows:—

After sub-section (5) insert a new sub-section:

"No Local Authority may issue an order under sub-section (1) which designates any parking place on a highway for use by buses or coaches capable of carrying more than twelve passengers.".'.—*[Mr. Maples.]*

Brought up, and read the First time.

9.52 am

Mr. John Maples (Lewisham, West): I beg to move, That the clause be read a Second time.

Mr. Speaker: With this we may also discuss the following:

New Clause 3—*Amendment of Road Traffic Act 1984 (No. 3)*—

'S.45 Road Traffic Regulation Act 1984 shall be amended as follows:—

After sub-section (7) insert a new sub-section:

"Where any designated Residents Parking Scheme is in operation the relevant local authority may refuse to issue Residents' permits in respect of vehicles other than cars.".'.

New clause 4—*Amendment of Road Traffic Act 1984 (No. 4)*—

'S.45 Road Traffic Regulation Act 1984 add a new clause:—

"Where parking in a public street is considered to seriously restrict the flow of traffic, the relevant Local Authority may make orders prohibiting parking for the purpose of commercial deliveries at specified times.".'.

New clause 5—*Amendment of Road Traffic Act 1984 (No. 5)*—

'S.42 Road Traffic Regulation Act 1984 shall be amended by adding a new sub-section (5):—

"(5) Local Authority shall provide off-street parking facilities for buses and coaches.".'.

New clause 7—*Coach parking places*—

'The following section shall be inserted after section 63—

"*Coach parking places*

63A.—(1) Any parking place within the meaning of this part of this act may be designated as a coach parking place, after consultation between the local authority and the police, and it shall be an offence to park a coach otherwise than at a place so designated.

(2) Any offence under this section shall be punishable by a fine on level 5 of the standard scale and by the forfeiture of the vehicle's licence for such period as a court may determine or by both such fine and such forfeiture.".'.

Mr. Maples: It is a long time since I spoke in the House on a Friday morning. In fact, I think that the last time was when I made my maiden speech. Friday morning is a good time to make a maiden speech because one can have a good lunch afterwards rather than skipping lunch before.

As I was coming here this morning, I could not help reflecting that while Mr. Gorbachev will, I expect, be addressing the world in his Guildhall speech in an hour or so, the House of Commons has chosen to debate parking. I suppose that there are cavillers who would say that that is appropriate for the role that the House of Commons has chosen for itself, but I choose to believe that there are days on which those roles will be reversed, when we shall be discussing international events and world statesmen will discuss parking.

Although parking is a mundane problem, it is far from being unimportant. It is intimately tied up with many of the transport problems that many cities and especially London face.

I congratulate my hon. Friend the Member for Leeds, North-East (Mr. Kirkhope) on getting his Bill this far. I suspect that this must be the fastest time on record for getting a Bill to Report. He had a formal Second Reading and an uncontroversial hour and a quarter in Committee. Perhaps he expected to get his Third Reading by 10 o'clock. I am sorry to disappoint him on that, but this is a serious matter and other matters should be considered with it.

My hon. Friend the Member for Leeds, North-East described the Bill in Committee as a modest measure. I suspect that his reluctance to incorporate more controversial provisions in it may have had something to do with the timetable with which he was faced, but nevertheless those matters should be discussed. As I said, my hon. Friend is to be congratulated on having got his Bill this far this quickly. To get a Bill to Report with an hour and a quarter of debate is pretty good. Perhaps the Government should have put my hon. Friend in charge of the Water Bill—it might have taken rather less than the 200 hours that it has taken.

The Parking Bill allows for charging by non-cash means in local authority car parks. That is obviously a laudable objective and I am amazed that primary legislation is needed to achieve it. I understand that a similar Bill was introduced a couple of years ago which did the same for on-street parking although I have not noticed the benefits of that in practice. Perhaps that is one of the few instances where technology has not caught up with Parliament, rather than the other way round.

My hon. Friend the Minister for Roads and Traffic said in Committee that this is a Benthamite Bill in that there are no losers, only gainers. While that may be true in respect of the limited effect of the Bill, it is certainly not true of parking in general. It is worth spending a little time looking at the problem of parking in the context of transport policy as a whole and that is the end to which my new clauses are directed.

I shall speak primarily about London because it is the area that I know best and I have a London constituency. I suspect that without being unduly parochial it is true to say that London is where most of the problems are at their most obvious. We clearly have problems with commuter transport by train into London, with the Tube and buses and, of course, with cars getting around London.

My hon. Friend the Minister and his colleagues in the Department of Transport have produced some interesting studies recently. There has been the central London rail study and the Department's statement on transport plans for London. I believe that the Department is soon to produce an east London rail study, which will be of considerable interest to myself and my constituents in Lewisham. I understand also that it is in the process of conducting four London assessment studies, and two others, one on the Heathrow area and one on the western environmental improvement route. One of those is extremely relevant to Lewisham as it concerns part of the

south circular road which goes through the constituency. London Regional Transport is also engaged on a fairly major programme to improve the Tube.

The relevance of parking is recognised in the "Transport in London" statement issued by the Department of Transport. The section on London's roads states:

"Increasing the capacity of the road network means making better use of existing roads—dealing with bottlenecks caused by narrow stretches of road or awkward junctions, using new technology to improve the flow of traffic, and tackling the problems caused by anti-social parking."

That last point is crucial. The report then discusses parking in rather more detail, stating:

"Sensible parking policies can make a significant contribution to tackling the problem of congestion. A single badly parked vehicle can halve the capacity of a road junction, reduce a dual carriageway to a single lane, or even block a road completely. London, particularly central London, cannot afford to see scarce road space squandered in this way . . . There is more to sensible parking policies than enforcing the law. It is also important to make the right provision of parking facilities. . . . There is seldom a case for subsidising parking".

That passage put the relevance of parking rather well. If one looks at the transport problems that London faces, one finds that parking is relevant to many of them.

I suspect that the major problem is commuter traffic coming into London. We should encourage the use of public transport and discourage the use of cars. To some extent we are seeing that trend established; commuting into central London by car accounts for only 170,000 journeys on the average day, whereas rail transport accounts for 390,000 and the Underground for 340,000. The percentage of commuters coming into London by rail and Underground has risen while the use of other modes of transport—primarily cars—has fallen. However, although we are starting to see that trend, we need to reinforce it. Many of us who use London's roads during the rush hour are fully aware of the problems and of the fact that reinforcing the trend towards the use of public transport is important.

Mr. Ian Gow (Eastbourne): My hon. Friend read out some statistics about the ways in which people make their journeys into work in the capital. Will he remind the House of the date on which those statistics were compiled? How confident is he that those statistics are more accurate than the statistics that we receive relating to, for example, the balance of trade? The Chancellor told the House yesterday that those figures were subject to a dramatic margin of error. What is the margin of error in my hon. Friend's figures?

Mr. Maples: I have, unfortunately, no reason to say that the statistics are more accurate. However, I am sure that, if my right hon. Friend the Chancellor of the Exchequer were put in charge of those too, we could rely on their accuracy to a far greater extent.

The first statistic on modes of travel into central London is eight years out of date. I imagine that it is the most recent or the Department would not have used it. The second figure, on the percentage of people coming in and out of London, was a trend from 1982 to 1987. I believe that that firmly shows that the proportion using British Rail has risen from 38 to 40 per cent., and the proportion using the Underground has risen from 28 to 36 per cent. The use of other modes of transport has fallen from 33 to 24 per cent. The more up-to-date statistic, in fact, reflects the same trend.

10 am

The Minister for Roads and Traffic (Mr. Peter Bottomley): I confirm the source that my hon. Friend the Member for Lewisham, West (Mr. Maples) has given for the statistics, but my hon. Friend the Member for Eastbourne (Mr. Gow) has raised an interesting point. Perhaps I could advertise that the Bottomley cup has still not been claimed. It is available to any academic, journalist or politician who in 1982 gave anything like a reasonably accurate forecast of how the use of the different modes of transport in London would change between 1982 and 1987. The facts are now available and are reasonably accepted, give or take the Chancellor's influence on them. Although the advertisement has been out in the open for months, so far no politician, academic or journalist has claimed the prize. Therefore, the cup is tarnished. If my hon. Friend the Member for Eastbourne could show that he made a reasonably accurate prediction in 1982, he may be the first person to be considered for the cup.

Mr. Maples: I believe that my hon. Friend can safely extend the offer of his award into other areas of academic endeavour, because academics have made wrong forecasts on a greater range of matters, not least of which was the performance of the economy. I seem to remember that 365 academics wrote to *The Times* saying that the British economy would never grow on the policies that the Government were expounding. We then proceeded to enter eight years of continuous and regular growth. I should have thought that my hon. Friend could extend his offer much more widely without any risk of being parted from his bottle of champagne.

Mr. Robert Adley (Christchurch): As my hon. Friend has rightly drawn our attention to the problems of London's traffic relating to road and rail commuting, will he contemplate the following two points? London Regional Transport and British Rail are required to supply their own police forces, while the taxpayers and the ratepayers of London, and, indeed, the rest of the country, pay for policing.

I received a letter only yesterday from the Secretary of State for Transport that indicated that the Department estimates that a mere 7 per cent. of police time is spent on road traffic matters. Will my hon. Friend agree that in London, with its traffic and parking problems, it would be hard to find any policeman who spends only 7 per cent. of his day dealing with matters related to the internal combustion engine?

Secondly, will my hon. Friend contemplate the proposition that British Rail's Snow Hill tunnel that takes commuters through London from north to south cost £1 million, while the M25, primarily designed for stockbroker belt commuters in the rush hour, cost us £2 billion and will cost an indefinite sum for an indefinite future?

Mr. Maples: My hon. Friend has made some good points which he will no doubt develop later. In defence of motorists I would say that I believe that they pay far more in taxation through the road fund licence and tax on petrol than they get back in terms of roads.

My hon. Friend made an interesting point about the fact that roads are publicly financed—we accept that—and

[Mr. Maples]

that for other modes of transport we look to the user of the facility to pay more directly. That poses an interesting question. I believe that there are cases where public transport investment warrants a public contribution over and above what the users pay, because it takes pressure off public expenditure in other areas.

We should reinforce the trend of discouraging commuters coming into London by car. We appear to have various items built into our system that encourage people to use cars. One is the provision of cars as a fairly standard part of many people's employment; considerable tax advantage accrues from that. I am glad that in the last two Budgets the Chancellor has begun to remove that advantage by making that car benefit subject to a much fuller tax charge. However, there is still a long way to go.

On the other side of the question, many employers complain that they must provide cars for employees when they would much rather pay them the money to buy their own cars. The sooner we ensure that the car benefit is fully taxed, the less people will be encouraged to use their cars to get to work.

There is also the question of the provision of parking spaces for people when they get to work. I know that that is a touchy subject for us, because we have parking spaces provided. I believe that we can—perhaps not entirely objectively—claim that we are a special case. We are often kept here late at night by the likes of the hon. Member for Bolsover (Mr. Skinner), when most of us on the Government side would be happy to go home by Tube at 6 o'clock. I believe that the provision of parking spaces in such places as the City and the west end as part of a person's employment package encourages commuting by car, as do meters and car parks.

There are things that we can do to encourage commuters not to use their cars to go to work.

Mr. Dennis Skinner (Bolsover): As it is a question of trying to set examples, would it not be better, for instance, if the Prime Minister—whom the hon. Gentleman knows better than I do—were to use British Rail? I know that she has to gallivant about in one of those posh cars provided by the taxpayer. Yesterday I think she was in a Zil and making herself available to Gorbachev, in the well-chosen words of the Leader of the House. If the right hon. Lady were to use British Rail more often—I do not think she has used it since she has been Prime Minister——

Mr. Peter Bottomley: My right hon. Friend has used it once.

Mr. Skinner: The Minister says that she has used it once. If she were to use British Rail a little more often, that would set an example to others. As the hon. Gentleman's argument will be that he believes in not restricting people to any great degree and he would like to stop London and the other large cities being congested, would it not be a good idea if she were to use public transport more often? Perhaps the Chancellor of the Exchequer will also make some necessary changes. Why is it, for instance, that Ministers can have all these cars just waiting for them day in and day out? Every hour, one sees the place here full of chauffeurs waiting to drive Ministers from one oak-panelled study to the next. If we want to set examples, let us start from the top.

Mr. Maples: Perhaps the hon. Gentleman would like to talk to his right hon. Friend the Leader of the Opposition, who I believe has a car and driver provided at Government expense, and encourage him to set that example and start a trend. I suspect that the problem looks slightly different from the Ministers' point of view, as all things do when they affect personally. For some Ministers there will be the problem of security. I agree with the hon. Gentleman, however, that whenever I have to go to Birmingham, Sheffield or anywhere to which there is an Inter-City service, it is much more convenient to take the train than to drive. It is a much more pleasant journey, one can read the newspaper or work and one arrives in a reasonable frame of mind rather than being frazzled. The hon. Gentleman is right that travel by train is to be encouraged.

Another problem in London is through traffic. We really want to keep it out of London altogether. That is what the M25 is for and what I believe the east river crossing will help. *[Interruption.]* The M25 must be helpful. I do not know exactly what the statistical evidence is, but it is difficult to believe that all the traffic on the M25 was generated by the motorway. It must be helping through-London traffic. If it is not helping, we should perhaps expand it or double-deck it. We are building a new east river crossing presumably to contribute to solving the problem of keeping through traffic out of London.

The new rail links that are suggested from east to west and north to south in the central London rail study will probably help, because people will no longer need to use surface transport to get from Paddington to Liverpool Street. The Department of Transport has recently let it be known that it is looking at other methods of linking up motorways and major roads outside London in an effort to ease congestion on the M25.

We need to get out of London all road traffic that does not need to be in London. Through traffic should never be in inner London.

Mr. Hugh Dykes (Harrow, East): Is not the reality that we are inevitably coming inexorably closer to having restrictions of one kind or another on private motor vehicles in city centres? That, therefore, should transcend the political spectrum and not be regarded as an anathema to Conservative Members. Be they electronic devices, number plate systems, day allocation systems, or the various experiments in Italian cities, restrictions are inevitable, especially when one considers how many passengers can be carried by two double-decker buses in comparison with private cars with only one driver in each. That is an absurd situation and we must grasp the nettle.

Mr. Maples: My hon. Friend may be right and certainly some of the experiments in Italian cities have been interesting. Although the concept of road pricing and electronic devices on cars may be intellecutally attractive to my hon. Friends, if not to others, it is fraught with political difficulties. I would prefer that the solutions did not involve telling people that they cannot use their cars in central London. We must strive to make it more convenient for them to use other modes of transport and leave it to them to make the choice.

If we adopted the measures proposed by my hon. Friend we would first need to ensure that we expanded the alternative means of transport available. We would need more park and ride facilities and a better commuter service on Network SouthEast, and the cross-London links

envisaged by the central London rail study would need to have been built. I hope that further expansion will also be suggested by the east London rail study.

The third problem relates to intra-traffic, which starts and ends its journey within London. Such vehicles are used for commercial purposes and for pleasure. Essentially that traffic is local, whether on road, rail or bus. The London roads should serve such traffic, which represents a great deal of the traffic in London.

The Department of Transport publication "Transport in London" states—I am sorry to tell my hon. Friend the Member for Eastbourne (Mr. Gow) that there is no date on the statistics—that 67 per cent. of the traffic entering and leaving central London are private cars; 76 per cent. of the vehicles entering and leaving inner London are private cars and 79 per cent. of the vehicles entering and leaving outer London are private cars. Therefore it is logical to assume that the vast majority of intra-London traffic is represented by private cars. For those drivers there is often no ready alternative means of transport. Most of our rail links are radial and although buses represent a viable alternative, trains do not.

The problems have been brought home to me in my constituency through which the south circular road passes. The majority of traffic on that road is local; most journeys start and end in south London. We could improve the journey times on the south circular by upgrading the road. An enormous amount of congestion could be relieved if it were turned into something similar to the north circular. The same people who would gain the advantage, however, would suffer the environmental penalty of having a four-lane highway driven through their neighbourhood.

Intra-London traffic represents a local problem and the solutions should suit local people. Where the majority of traffic on a road is local, the solution lies in considering the local difficulties rather than the commuting difficulties in general. The inescapable conclusion is that roads create traffic. That conclusion is mirrored in the "Transport in London" publication which states:

> "It is simply not possible to provide sufficient road capacity to handle every journey that could be made to or within central London. Indeed, it seems clear that there is already 'suppressed demand' for transport by car into central London . . . There is no point in building new roads into central and inner London if their main effect would be to cause commuters to switch from road to rail . . . the Government has consistently stressed that it does not see a case for driving major new roads into central London."

There is a great deal of evidence to support that argument. If we provide more roads or more parking we are likely to produce more commuters and more through-London traffic. If we built more roads we would be in serious danger of ruining London—we have already seen that happen in other cities. The motorways that have been driven through the centre of Birmingham have considerably detracted from that city's attractiveness. For a time I lived in Boston in the United States, which is a lovely old city with some neighbourhoods of great architectural beauty. That city is bisected by two huge motorways, the south-east expressway and the Massachussets turnpike. Those motorways have created a Berlin wall between sectors of the city. We must not let that happen to our cities, particularly to central London. The environmental price for such a road network is not worth it.

We will probably never provide enough road space to satisfy the existing suppressed demand.

Mr. Eric S. Heffer (Liverpool, Walton): I must leave the Chamber for a short time but before I do, will the hon. Gentleman consider the problem of parking larger vehicles, such as buses and coaches, which bring young people to London to see the House of Commons, Westminster Abbey and the other surrounding historic places? Those young people may come from Liverpool, Birmingham or wherever, and such coach trips are often the only way they can afford to visit London. I do not disagree with most of the hon. Gentleman's arguments, but how does he intend to deal with the parking problems of coaches and buses? Will barriers be erected so that youngsters will be unable to visit the House of Commons? Will there be no place for those vehicles to park? The new clause says that no parking facilities will be provided for coaches or buses:

> "carrying more than twelve passengers"

That is absurd. There are problems, but the solutions should not be nonsensical.

I encourage young people to visit the House of Commons and I like them to know about the democratic process and about our history. If the parking of coaches and buses is restricted, young people will be discouraged from visiting this place. Much of what the hon. Gentleman has said is sensible, but he should consider alternatives to new clause 1.

10.15 am

Mr. Maples: I accept the hon. Gentleman's point, but perhaps he has not paid as much attention to new clause 5 as he has to new clause 1. New clause 5 states that a

> "Local Authority shall provide off-street parking facilities for buses and coaches."

Anyone who travels along the Embankment will know that about 30 per cent. of it is used as a car park for buses and coaches, which is an incredibly uneconomic use of such scarce and valuable road space. Far more people can be carried in a bus—they use less road space than private cars—and it is important that off-street parking is provided. We should encourage the use of buses and coaches as they utilise the roads much better than cars.

I do not want major new highways driven through the centre of our cities, particularly London. We need to reduce the amount of traffic on our roads and make better use of them. The provision of parking space and more sensible parking regulations will help to achieve that goal. It is important to provide alternative means of transport before we start thinking about banning people from using their cars or imposing special pricing to restrict the use of private cars in central London.

A great deal of investment is needed in all forms of public transport—rail and Tube transport are obvious candidates for such necessary investment. Primarily the users should be asked to pay. The financial trade-off to the average commuter would be extremely good. If one's return journey by car is 50 miles a day that costs nearly £4,000 a year, one's employer may pay part of that cost because the car may be provided on a tax break as part of the employment package. The average season ticket to cover that distance costs nothing like that sum. The trade-off for people using private cars would be enough for them to finance at least part of the new investment needed for public transport development. They would pay less to travel, but the revenue accruing to the public transport

[Mr. Maples]

systems would increase and might be sufficient to finance a large part of the extra necessary investment in public transport development.

It is also important that the taxpayer rather than the user also finances investment. We are all affected by the pollution that extra traffic on the roads creates. I am aware of the damage done to neighbourhoods by enormous amounts of traffic. The south circular road damages the environment of those who live close to it and also creates rat-runs through neighbouring residential streets. Public investment in public transport will also mean that it is not necessary to provide so much public investment in roads, and there will be a trade-off there.

There are three factors: the environment, the resistance to traffic taking over residential neighbourhoods and obviating the need for increased investment in roads. Those are three reasons why public investment can properly be made and economically justified in public transport. I agree that, generally, users should pay—the trade-off for the commuter is extremely advantageous.

How can we make better use of existing roads? The answer is parking. Selfish and inadequate parking or parking at inappropriate times can, as the Department of Transport's publication pointed out, reduce four-lane roads to two, and two lanes to one—this always seems to be in the rush hour. I drive to work and am therefore partly guilty but I use the Tube for many of my journeys once I have arrived in London. My drive takes me down one of London's main streets which is normally a six-lane highway but is nearly always reduced to four because vehicles are parked on each side of it. It does not need many cars to block a complete lane of the road through Knightsbridge in the morning—one mail van on one side and a car inconsiderately parked on the other reduces the six-lane road to four lanes and reduces the volume of traffic on that road by one third.

Police and traffic wardens should pay more attention to this problem in the rush hour because better use of existing roads could be made if there were tougher parking regulations and enforcement. My hon. Friend the Minister should consider the point made in one of my new clauses about deliveries. The introduction of a three yellow line offence should be considered. That would be parking on three yellow lines at particular times, notably the morning and evening rush hours. The fines incurred should not be £5 and £10 but should be serious penalties because the costs of the motorist's inconsiderate parking are far in excess of the benefits that he will accrue from delivering or parking at his convenience. The cost of reducing the capacity of major roads by one third or a half is greater than the cost incurred by those who park inconveniently, and that will never be compensated by £10 or £20 fines, as we know from our own experience.

I used to find that the £4 or £5 penalty for leaving my car on the meter for too long in the West End or the City was cheap—probably cheaper than leaving my car in the NCP car park. When the penalty was increased and meant that my car was towed away, causing inevitable inconvenience and costing me £50 to retrieve, or when it was clamped, which was more inconvenient and cost slightly less—£20 or £30 to retrieve—I stopped doing it. I suspect that most people make a cost-benefit analysis of the risks of illegally parking. We need severe penalties to stop inconsiderate and selfish parking in the rush hour on main roads. Such penalties might include losing one's licence and should certainly include having one's vehicle towed away instantly. The financial penalties must be heavy. Most of the problems are created by commercial vehicles delivering goods and, at present, the trade-off in their favour—paying a parking ticket and delivering when it is convenient—is overwhelming. We must alter that, so that the trade-off for companies will be better if they delivered outside rush hours, or in ways and at times which did not reduce the capacity of main roads by one third or a half.

Mr. Gow: My hon. Friend is making an excellent speech. Does he not think that the very fact that there is still so much illegal parking in London is itself proof positive that the penalties for it are not nearly severe enough?

Mr. Maples: To some extent I agree with my hon. Friend, but not entirely. Penalties for the kind of parking that I am talking about are not severe enough. If we want to discourage commercial vehicles from delivering in Knightsbridge or Piccadilly, or main roads in the City, in rush hours, penalties must be severe. In such cases businesses pay the fines and £10 or £20 is no contest for the convenience. Most of the time the offenders are not caught anyway. Fines must be raised to provide a financial incentive for deliveries to be made outside rush hours.

In other cases, the police merely annoy motorists, as those of us who live in central London in places with residents parking zones, return home at 11 o'clock in the evening, park on a single yellow line and are fined, will know. I live in a square which does not have a main road through it. Only people who live there drive through it. However, often at 8.30 in the morning, traffic wardens give tickets to people with residents parking stickers who have left their vehicles on meters or yellow lines. They would be much better employed on main roads giving tickets to motorists who are disrupting traffic flow. Far more discretion should be exercised by the police and traffic wardens.

Mr. Heffer: I shall underline the hon. Gentleman's point with two examples. I never park illegally but once I returned to my flat from the House of Commons at 2 o'clock in the morning when it was dark and parked within the white lines as I was perfectly entitled. However, apparently there was a little notice on the wall that I did not see at that time of the morning which said that parking was not allowed in that place for a temporary period. I did not notice it. I wrote to the authority and said that I was sorry but I had not seen the notice because I had come home from the House at 2 o'clock in the morning. I was still fined and I was not happy.

On another occasion I came home at about the same time and again parked in the white lines but one third of the car was over the white line. I was fined again, and I wrote to the authority but I was still fined. I was not happy with that because at 1 o'clock or 2 o'clock in the morning I had tried to find an appropriate space in the residents' parking zone, for which we have to pay. Discretion should be used.

I underline the point made by the hon. Member for Lewisham, West (Mr. Maples) that it is vital that vehicles should not be illegally parked on main roads and no discretion should be used there. However, in a side road or

a square, some discretion could be exercised. Sometimes, unnecessary antagonism develops between the motorist and the parking authority and that does not help to ensure strict parking regulations where they are required.

Mr. Maples: The hon. Gentleman is right. I share his experience. I was not fined, but my car was towed away because I did not see one of those little notices. I agree that that is annoying and I am interested to hear what my hon. Friend the Minister will say about police and traffic wardens, who could be more effective if they used greater discretion. Harassing residents at 8.30 in the morning when main roads are blocked by inconsiderate parking is a wholly inappropriate use of their resources. Not only does it fail to remove congestion but it aggravates the average, law-abiding citizen.

Mr. Skinner: I wonder if there is anything to be learnt from the Spanish experience and whether we could check how parking limitations are operated there. The hon. Member for Lewisham, West (Mr. Maples) should have a word with his hon. Friend the Member for Mid-Staffordshire (Mr. Heddle) who is well versed in these matters. The incident might be sub judice in Spanish terms so he must be careful how he phrases his remarks.

Mr. Adley: Subo judicio!

Mr. Skinner: Is it? It sounds like Subbuteo. The hon. Member for Mid-Staffordshire may have some valuable experience to relate to the House. It is a pity that he is not here. Has he been fetched back? The Spanish experience may help us.

Mr. Maples: The experiences of other countries are interesting and no doubt the hon. Member for Bolsover in his contribution will bring to bear his vast international experience of parking regulations in other countries.

Reducing congestion on roads would also speed up bus times. I do not wish to exaggerate, as I understand that most bus delays are not caused by traffic jams but many of them are. My hon. Friend the Minister can correct me if I am wrong. One sees buses stuck in jams and they would be a quicker and more effective means of transport if they could be released from jams. The average traffic speed in central London during the day is about 11 mph and the average speed of a bus must be about half that. If buses could be speeded up, they would become a more attractive means of transport.

New clauses 1 and 5 deal with buses and coaches, which should not be parked on roads but in local authority car parks. I have already mentioned the chaos that these vehicles cause on the Embankment. They do not pay for the economic cost of the road space that they use or the congestion that they cause. New clause 1 would reduce their numbers and have a real effect on London traffic.

10.30 am

I am also worried about the vast size of some of the coaches on London's roads—they are becoming as big as the average EEC lorry. I do not know whether my hon. Friend the Minister plans to conduct any battles about them in Brussels. Perhaps this is the selfish attitude of a London resident, but I cannot help questioning whether we need to go on promoting tourism in central London in the summer, when London seems to become the preserve of the tourists and their coaches. Perhaps promoting tourism to other parts of the United Kingdom or laying off promoting it in London would be good for the tourists and for those of us who live here, and it would relieve a little of the extra congestion that tourism adds. My hon. Friend the Member for Christchurch (Mr. Adley) has tabled his own new clause, which may provide a better solution than mine to this problem. I shall be interested to hear what the Minister has to say. We must deal with it.

New clause 4 deals with deliveries, which constitute a large part of anti-social parking. They cause many of the major problems on main roads in the rush hour, turning six-lane roads into four lanes and reducing four lanes to two. I have suggested that three yellow line offences might be appropriate for limited periods, with heavy fines to discourage such deliveries.

The combination of new clauses 1, 4 and 5 would substantially increase the sensible use of our road space at virtually negligible cost. The cost to the public sector and the average motorist would be zero; to the extent that there is a cost, it would be externalised and passed on to buses, coaches and delivery vehicles. It is an appropriate use of public policies in these circumstances to make people bear the costs of the congestion that they cause by using the roads as car parks.

New clause 2 is selected for debate in a separate group. I am not sure why: I should have been happy to discuss it with this group. Perhaps it is House protocol to defer to diplomats, and perhaps we need a Foreign Office Minister to reply to the debate—I know not.

New clause 3 is a pet peeve of mine. Perhaps one is allowed a peeve on a Friday morning. I think that commercial vehicles in residents' parking areas are inappropriate. They spoil the environment for the residents and are another encroachment on some of the few remaining pleasant areas of London. Perhaps most importantly, it encourages the use of commercial vehicles for commuting—they are almost always used to take people to work and back. It is inappropriate that they should be allowed residents' parking spaces; they take up space and encourage more traffic.

To summarise, we face many serious transport problems in London. We cannot solve them by building more roads, which merely encourage more traffic. We must encourage traffic to come off the roads and we must make better use of the roads. Parking is crucial. We must get coaches off the streets and into special car parks and stop peak hour deliveries in main streets. Then we shall have achieved a low-cost way of obtaining greater utilisation of our roads.

Mr. Adley: I congratulate my hon. Friend the Member for Leeds, North-East (Mr. Kirkhope) on his Bill, on the speed with which he has been able to bring it before the House, and on providing the House with an important and invaluable opportunity to discuss transport and related matters. I also congratulate my hon. Friend the Member for Lewisham, West (Mr. Maples) on his perspicacious new clauses. My new clause follows the theme set out by my hon. Friends

The problems of parking in London are well known, but this is a national Bill that does not deal with London alone. It would be wrong to assume that what happens here does not happen elsewhere, too—*[Interruption.]* Does my hon. Friend the Member for Eastbourne (Mr. Gow) want to intervene? He seemed to be talking about

[Mr. Adley]

something, and as his comments are usually so interesting —probably more so than my speech—I tried to catch what he was saying.

I want to take up one or two points made by my hon. Friend the Member for Lewisham, West about commuting to London. He said that many people commuted from 25 miles away and had to pay their own substantial costs. What he did not say, and perhaps should have said, was that that is certainly true of those who use some public transport—particularly the railways—but people who use their own cars to commute to central London, and especially those who use the new breed of commuter coaches, pay nothing like the cost. Most of their costs are borne by the taxpayer and by London ratepayers. I shall come on in a moment to explain the relevance of that to the proposition we are debating.

My hon. Friend the Member for Harrow, East (Mr. Dykes) intervened in the speech of my hon. Friend the Member for Lewisham, West to make a point about this. On this rare occasion I believe that I can carry the hon. Member for Kingston upon Hull, East (Mr. Prescott) with me. It is absolute nonsense to imagine that we can solve the traffic problems in this country without planning. Equally, it is nonsense to pretend that the Government's recent legislation has not been partly responsible for some of the present problems in our towns and cities. I know that my hon. Friend the Minister does not like my saying this, but some of the deregulation measures have undoubtedly exacerbated the problem of congestion. The fact is that public transport and party political dogma are uneasy bedfellows—whether the dogma is of the Left or the Right.

My hon. Friend the Member for Lewisham, West said that we all paid a great deal of money for our road fund tax and that it should be spent on roads. Hypothecation of that sort has never been followed by any Government. It is a pet theory of the AA and the RAC. Before we allow ourselves to be seduced by such an argument we should realise that hypothecation of this sort is ludicrous. If hypothecation of taxation were seriously considered, the money raised from the betting tax would presumably have to be spent on building more casinos, an idea that would not attract many in the House or in the country.

Originally, the Bill's title was the Road Traffic Regulation (Parking) Bill. I congratulate my hon. Friend the Member for Leeds, North-East on sensibly reducing the length of the title, but the original title was certainly rather more descriptive of the Bill's contents. Nevertheless, "Parking" makes a nice short title.

I turn now to new clause 7 and I want to speak about the Government's deregulation legislation and its effect on some of the traffic and parking problems from which we now suffer. My hon. Friend the Minister did not attend, but I recall a meeting myself, my right hon. Friend the Paymaster General, my hon. Friend the Member for Westminster, North (Mr. Wheeler), the chief executive of the Westminster city council, the Secretary of State for Transport, and the predecessor of my hon. Friend the Minister. It was held well over a year ago and it was to discuss, frankly, the effect of Government legislation on London's traffic problems——

Mr. Skinner: A sinister little group. Does she know?

Mr. Adley: Is the hon. Gentleman referring to Lady Porter?

Mr. Skinner: I am referring to Gorby's friend—so-called. That is the flavour of the month. Did the Prime Minister know about this little clandestine arrangement? Was she made aware of what could be called a sort of pseudo-kitchen cabinet which was trying to undermine the free market,. enterprise culture philosphy? I am pleased that the hon. Gentleman has come out with this information; it means that this little group can be the next target. She cannot unseat the Minister—his star has been rising, but it will suddenly wane as a result of what has taken place. The hon. Gentleman should reveal all.

Mr. Adley: I am sorry to disappoint the hon. Gentleman. The meeting took place in the office of the Secretary of State for Transport and was attended by civil servants. I never made any secret of the meeting and I am delighted again to have the opportunity to emphasise that my right hon. Friend the Paymaster General, in his capacity as a first-class constituency Member, overcame his reticence at being seen in a meeting with one of his ministerial colleagues to discuss a matter that is of concern to his constituents even though that might have implied slight criticism of certain Government policies.

As I am sure the hon. Member for Bolsover (Mr. Skinner) knows, the Conservative party is a broad church. When he spoke about a lady he might have been alluding to the fact that Mr. Rodney Brooke, the former chief executive of Westminster city council, might have had more trouble with his erstwhile boss than my right hon. Friend the Paymaster General has had with his boss. Unfortunately, Mr. Rodney Brooke is no longer able to pursue his duties as chief executive of Westminster city council. However, I would be out of order if I were to discuss the fate of certain London cemeteries and I have no intention of so doing.

Government legislation has removed the rights and duties of local authorities, especially London local authorities, to designate coach routes. As a result, coaches are flying hither and thither and parking hither and thither all over London, and that is undoubtedly a significant factor in the creation of London's traffic problems. Vehicles cannot park where they are not allowed to go and, conversely, do park where they do go. If we remove the restrictions on the routes that coaches may take, they will use every route that suits them, regardless of the social consequences and the interests of other road users and residents. In this debate, therefore, we cannot sensibly separate where they park from how they get there.

Coach routes are a material factor in the debate and in that context my first quotation is from the leader of the Kensington and Chelsea council when he referred to the Road Traffic Regulation Act 1984 to which this Bill is related. In a letter to me as long ago as 5 January 1987 he said of licences that the council used to be able to issue:

> "These licences prescribe the routes which those coaches have to take and coaches can stop only at prescribed stopping places. The positive control which has existed hitherto was carried out by the Metropolitan Police Traffic Commissioner and proved generally effective. Coaches for the most part stuck to the prescribed route as failure to do so could affect the renewal of the licence. Certainly this Council, and I dare say Westminster as well, will certainly use what powers we have. Our complaint is, however, that they simply are not as satisfactory as the form of regulation which applied before."

The two major central London local authorities, both firmly Conservative-controlled, are frank in their criticism that that legislation has had a serious effect on traffic congestion and parking in London.

The whole question of deregulation causes me concern because at the last general election I occasionally addressed my constituents from an open-topped bus. I used to pass little minibuses that had sprung up as a result of deregulation. They were called "Charlie's cars" and I used to bellow through my loudspeaker, "Charlie's cars, Conservative transport policy in action." I cannot use that phrase in the next general election, because Charlie's cars have gone bankrupt.

The problem with parking is that one man's convenience is another man's pollution. I am prepared to plead guilty to an obsession with matters such as pollution and congestion. You, Madam Deputy Speaker, and perhaps the hon. Member for Kingston upon Hull, East may recall that in 1979 on the Merchant Shipping Bill I persuaded the Committee to accept a new clause that made the owner, rather than the carrier, of oil responsible for pollution at sea. The then Minister, Mr. Stanley Clinton Davis, in the Labour Government resisted my new clause, as did the spokesman for the Conservative party. However, the other members of the Committee accepted it, it was written into the legislation at that stage and the oil companies went berserk. It is a pity that the Americans did not have such legislation on their statute book to cover happenings in the last month.

10.45 am

We are beginning to accept the phrase, "The polluter pays." I do not want to digress but I hope that the National Rivers Authority set up by the Water Bill will take that point on board. Parking is a form of pollution and at the moment the people who cause the problem in London are not paying for it.

My hon. Friend the Member for Hampshire, North-West (Sir D. Mitchell) when he was Minister for Public Transport wrote to me on 4 December 1987 about the Transport Act 1985. He said:

"our objective in the Transport Act 1985 was to free operators of local bus services from the dead weight of restrictions imposed by the former route licensing system—in the same way as we deregulated long distance coach services back in 1980."

The quotation from the leader of the Kensington and Chelsea council, and other quotations which I shall use, show that the social and pollution costs of congestion as a result of that deregulation have been far too high for us to allow the situation to continue for much longer.

I want to say one thing firmly and clearly in praise of my hon. Friend the Minister and the Government, and it is about the arrangement in the Budget to increase the road fund tax on coaches. That is directly relevant to what we are discussing. For years, coaches were the only form of transport that was not paying its track costs. If the Minister gets any complaints from coach operators about now having to pay their track costs, he will be perfectly entitled to blame me as much as he likes for obsessively pursuing the matter for years. I am grateful to the Chancellor and to the Ministers at the Department of Transport for accepting my proposals, but there is a great deal more to do. I hope that the Bill will do a little more to restore the balance between people and the environment of the cities in which they live, because our cities are adversely affected by pollution, especially coach pollution resulting from some of the deregulation measures.

My hon. Friend the Member for Lewisham, West allowed me to intervene in his speech. In that intervention I said that the Secretary of State for Transport told me in a letter only yesterday that only 7 per cent. of police time is allocated by the Department in its assessment of the police contribution to the assessed track costs of the internal combustion engine. The police do not just attend accidents and control traffic. We must also consider traffic wardens, court time and the cost of running the driver and vehicle licensing establishment at Swansea. I simply do not believe that a mere 7 per cent. of the cost of police time is an accurate assessment of the real track costs.

In the same letter my right hon. Friend mentioned the costs of accidents. About 5,000 people a year are killed on our roads and my hon. Friend the Minister had made a valuable contribution to reducing that figure. However, we are still talking about 5,000 people being killed and 250,000 being maimed on our roads every year. The costs of hospitalisation, hospital treatment and Department of Social Security payments as a result of accidents are not included in the assessment of track costs when assessing submissions in connection with road versus rail investment.

Perhaps my hon. Friend the Minister will allow me to make a specific suggestion. In this country we need something which we have never had before: we need a highway patrol. We need a completely separate police force dealing with road traffic matters. It should have a separate budget so that the police can deal with criminal matters while the highway patrol can deal with road traffic problems. I agree with my hon. Friend the Member for Lewisham, West that London and most of our major cities do not need huge new motorways. We have micro problems that are causing major congestion. These problems will not and should not be solved by driving six-lane motorways through our cities.

Mr. Peter Bottomley: I am grateful for the chance to repeat what I, what the Secretary of State and what my predecessor at the Department of Transport, my right hon. Friend the Member for Wallasey (Mrs. Chalker), who is now the Minister of State, Foreign and Commonwealth Office, have said—that the Government have no plans to drive new motorways into London. The problem is that some people persist in issuing leaflets stating the opposite. Having whispered it now on the Floor of the House, I hope that it will be taken as a leak, rather like a document found on a photocopier. I hope that people will stop saying that we have any proposals for new motorways for London.

Mr. Adley: My hon. Friend has made a very important statement. My elder son Simon, who has a flat in Battersea, an area which is thought to be blighted by the threat of a new road—and I am sure that the hon. Member for Tooting (Mr. Cox) will share my enthusiasm for my hon. Friend the Minister's comments—will be absolutely delighted. I am sure that my son will not do anything so stupid or so silly as to listen to my speech, let alone read it, so I will tell him at the weekend what my hon. Friend the Minister has said. My estimable secretary, who has been responsible for coping with my obsession with these matters over the years, lives in Barnes and she will also be delighted by my hon. Friend's comments.

[Mr. Adley]

We nearly all agree that the solution to the traffic problems in our major cities is not to drive more roads through them, but to deal with the micro problems. Coaches represent one of the serious micro problems and that is why my new clause concentrates on them. We need tighter controls, not endless motorway construction.

I want to thank the officers of Westminster city council for the time and trouble that they have taken in dealing with my numerous inquiries into these matters over the years. I am sure that they would share my enthusiasm for my new clause which relates to the duties of local authorities and of police forces. In a letter to me dated 1 February this year, Mr. Rodney Brooke, the now sadly former chief executive of the council, said:

"The vexed issue of coaches requires the joint consideration of both the City Council and the Metropolitan Police to achieve a sound strategy."

I hope that that will encourage my hon. Friend the Minister to accept new clause 7.

My hon. Friend the Member for Lewisham, West referred to the beneficiaries of the Government's deregulation policies. With regard to London's traffic and the coach parking problem, it seems to me that the main beneficiaries have been stockbroker belt commuters from Reading, Oxford and parts of Kent. Coaches carry those commuters roaring into London on roads provided by the taxpayer. Many of the coaches park in the centre of London, often all day long, and they pay nothing for parking. If we look around Parliament square we can easily see what my hon. Friend the Member for Lewisham, West meant when he said that selfish parking often cuts road space by 50 per cent. The Embankment is reduced from two lanes to one. Outside this building in New Palace Yard two lanes are reduced to one and similarly two lanes are reduced to one on Westminster bridge.

While tourist coaches are partly responsible for the problem, the commuter coaches which inevitably use the roads during the rush hours because of the very nature of their job, are a major cause of congestion in London.

My hon. Friend the Member for Lewisham, West referred to the beneficiaries of deregulation. I want to refer to the losers. Road users have lost as a result of added congestion. Pedestrians have lost because of increased fumes and ratepayers are losing through the cost of an endless supply of "No Coach Parking" signs and through the endless supply of new cast iron bollards which the central London local authorities are required to provide.

Mr. Skinner: And the cyclists.

Mr. Adley: Yes, but the cyclists are not a charge on the ratepayer. How much does this cost? It must be a jolly good business for the manufacturers of cast iron bollards. Because local authorities have lost powers as a result of Government legislation, they have to buy huge quantities of cast iron bollards and then instal them on street corners to try to prevent coaches from using unsuitable roads.

With regard to the relationship between track costs of road versus rail, it seems that while commuter coaches park in central London and pay nothing, British Rail must pay £42 million in rates. New clause 5 refers to an obligation on local authorities to provide parking spaces for coaches. The obligation may well be on local authorities, but the coach operators should pay. There is no earthly reason why ratepayers should pay. The commuter coach and tourist coach operators should pay fo coach parking facilities.

In the large coach park on what was until recently British Rail land in Battersea, coaches are paying 50p a day to park. That land I believe has just been sold for £49 million. If we relate the size of a coach to the value of the land which has just changed hands, instead of paying 50p a day, coaches should be paying at least £10 a day to park there.

Mr. Skinner: Who bought the land?

Mr. Adley: I am afraid that I am not an estate agent and I cannot answer the question.

Mr. Skinner: Was it Al-Fayed?

Mr. Adley: I do not think that it was the Al-Fayeds. I believe it was bought by an anonymous Swiss property company, but I am sure the information could readily be made available to the hon. Member for Bolsover. However, I do not know whether that is particularly relevant to this debate.

My new clause is concerned with coaches parking in London. I have received a letter from the deputy assistant commissioner of the Metropolitan police. His comments about the effect of Government legislation on the Metropolitan police are devastating. My hon. Friend the Member for Lewisham, West perhaps tended to criticise the police for not doing enough to deter people who park illegally. However, by allowing some of this legislation through, we have been partly guilty of placing a huge additional burden on the police by exacerbating the problem.

On 15 January 1987 Deputy Assistant Commissioner Innes wrote:

"You will be aware of the fact that in the Central Area problems with coaches are quite horrendous. We have to balance the proper desire of the tourist boards to attract visitors to London alongside the vastly increased use of coaches for commuting purposes, all in streets designed for horses and carts."

Similarly, the British Railways Board wrote to me about the effect of legislation on its business. On 11 December the board's parliamentary affairs manager wrote:

"We can't hope to match their cost structure, as they pay a nominal track cost, and nothing for terminals, using the street both as a pick-up point and, in many cases, for parking."

To their credit, the Government have begun to deal with the track cost problem. However, my new clause seeks to deal with the other aspects of parking and road use problems, particularly in London.

I referred a moment ago to bollards. On 26 August 1988 I received a letter from the assistant divisional director responsible for highways and environmental design at Westminster city council who stated:

"heavy duty cast iron bollards are to replace those formerly in-situ. These should prove more of a deterrent to coaches than those previously in use, which were knocked over on at least three occasions."

So the anti-social behaviour of coach drivers in London includes deliberately knocking over bollards erected to keep coaches away from certain roads and streets. Those bollards have to be used because of legislation passed by the House, which removed from local authorities their powers to regulate the movement of coaches.

11 am

When my hon. Friend the Member replies, I hope that he will refer to the Bus and Coach Council's code of practice. In a Department of Transport press notice dated 2 March 1988, my hon. Friend in his enthusiasm said that that code of practice was

"a breakthrough, especially for Londoners".

Mr. Tam Dalyell (Linlithgow): On a point of order, Madam Deputy Speaker. I am very reluctant to pursue a matter that has already been gone into, but I request that when considering the matter next Monday and Tuesday, Mr. Speaker takes into account the broadcast made by the former Leader of the House, the right hon. Member for Shropshire, North (Mr. Biffen) on "The World at One" yesterday, when he made important statements about how the Government and the House might conduct themselves. It is my simple request that Mr. Speaker listens to a recording of that six-mintue interview before making any further rulings.

Madam Deputy Speaker: Mr. Speaker carefully studies the *Official Report* and he will certainly read the hon. Gentleman's remarks.

Mr. Adley: Before that intervention, I was referring to the Department of Transport's press notice No. 93 of 2 March 1988 relating to the Bus and Coach Council's code of practice. Its four recommendations were to use only designated coach parking areas, to ensure that coaches stopped only as long as necessary when setting down and picking up passengers, to avoid driving coaches down narrow residential streets, and not to keep engines running when coaches were parked near to houses unless it was necessary. My hon. Friend the Minister described that as "a breakthrough, especially for Londoners".

From 2 March 1988 until today is one of the longest and slowest breakthroughs in history. It has not happened yet. In the realms of wishful thinking, that press notice must rate high on the Richter scale.

As long ago as 1 August 1985, my hon. Friend's predecessor, writing to me about coach parking in London, observed:

"On a wider front we have by no means been idle."

There is encouragement for us all. He also mentioned

"an urgent review of the scope for making use of publicly owned land for short and longer term parking for coaches, in order to relieve the problems caused by on-street parking".

That urgent review was supposed to have taken place four years ago. I do not know what has happened in the four years since. Perhaps my hon. Friend will be able to tell me. My hon. Friend the Minister himself gave a written reply in which he recognised the problems of pollution. He stated:

"The question of avoidable pollution from parked coaches in London has been raised at the coaches working party chaired by Westminster city council. We shall urgently consider any recommendations that they make to deal with this question."—[*Official Report*, 10 December 1986; Vol. 107, c. *152*.]

The word "urgency" is used frequently but subsequent action is barely discernible. Over the past few years, legislation has exacerbated the situation. There have been many words recognising the difficulties but precious little action.

The head of administration, territorial operations, Scotland Yard, Mr. B. Arnold, wrote to me on 2 March 1987—these things always seem to happen on my birthday. He commented:

"Regrettably, the overall situation has not improved. This is certainly the case regarding provision of suitable off-street parking facilities, and is not likely to get better until a large enough replacement for Victoria Coach Station is found. Any solution will also need to provide for the large number of commuter coaches which daily use the central area."

Making reference to the resources at his disposal, Mr. Arnold deals with the argument of my hon. Friend the Member for Lewisham, West that we have placed a huge additional burden on police forces by creating, through transport legislation, problems of the kind that we are now debating.

I do not want to weary the House, but I have done a lot of work on this subject over the past few years. I discussed the matter of coach deregulation with Sir Keith Bright, former chairman and chief executive of London Regional Transport. He wrote to me on 17 November 1987, stating:

"These increases in coach services have placed pressure on the limited space for terminating and parking coaches in Central London and have increased the problem of inappropriate coach routings through London . . .

"The 1980 Transport Act has also led to increased use of coaches for daily commuting and although these provide a lower cost alternative to the railways they do add to traffic congestion on busy inner and central London roads. Perhaps more important is the accumulation of coaches, found at such places as the Embankment, setting down in the morning and waiting to leave in the evening. This can cause severe local traffic congestion which acts to the detriment of bus services when they are particularly busy. LRT is not opposed to commuter coach operations but believes that stricter controls over their stopping on the highway are needed."

I call in aid the comments of my right hon. Friend, the Home Secretary, who, writing to me on 22 December 1986, commented:

"Where coaches are illegally parked and left unattended, enforcement action is taken, although consideration has to be given to the possibility of perhaps fifty or more passengers being stranded if a coach is removed or wheelclamped. The problems of illegal parking are most acute during the early evening peak period, when the police concentrate their resources on maintaining traffic flow on the main radial routes out of London."

How much more evidence does my hon. Friend the Minister need? The police, Home Office, London Regional Transport, British Rail and local authorities in London are all telling him the same story. However, all we see are press releases making frequent use of the word "urgency" and precious little happening. A policy of clamping coaches may be inconvenient for the 50 passengers affected, but are we to condone illegality by coach companies because to do otherwise may be to inconvenience their customers? If carried to its extreme, that proposition would have horrendous consequences.

Picking up on a point made by my hon. Friend the Member for Lewisham, West, I suggest that the Department should do a deal with British Rail, which should be permitted to develop a rail loading bay at somewhere like Olympia, to which illegally parked coaches could be towed and then transported to the nethermost points of the kingdom. Those of Scottish Coaches could be taken to St. Ives in Cornwall, and of Western National to Thurso or Wick. They would then have to return at their own expense. I suspect that that would quickly solve the problem.

My final comment is about the additional pollution caused by parked coaches whose drivers keep their engines running. That horrendous practice forces diesel fumes into the nostrils of pedestrians, cyclists, and people living nearby. It is an anti-social and wholly unacceptable practice that is willingly practised by coach companies all

[Mr. Adley]

the time. The managing director of Southend Transport Ltd., writing to me on 3 February 1988, indicated that he was quite happy for his coaches to park on double yellow lines at Hyde park corner. He further writes:

"The road west of Hyde Park Corner is part of the Company's registered X1 route to and from Heathrow Airport. The vehicle would, therefore, have been in service between the Airport and Southend. It would have been waiting time to operate as per the public timetable. It is not the practice to turn off engines in such a situation."

That practice is disgraceful and deliberately creates pollution. It is, of course, contrary to the Bus and Coach Council Code of Practice. The Government should take immediate action to make it illegal. A former Minister, my hon. Friend the Member for Hampshire, North-West, in a letter to me, commented:

"The Road Vehicle (Constructon and Use) Regulations 1986 make it an offence to leave the engine running if the driver is not in the cab."

We all know what goes on. The drivers are not in their cabs but sit with other staff, very often for two or three hours at a time, playing cards, taking their meals, or sleeping in their coaches.

Mr. Skinner: The problem does not only apply to coaches. I have noticed it outside the House of Lords. As the hon. Gentleman knows, their lordships need only come in, nod to the bobby, get signed in and pick up their £40 or £50 a day tax free. Sometimes when they do not want to stay but just want to clock in for the money, the chauffeurs keep their engines running. If hon. Members have a look any day at 2.30 they will see a car with the engine running and the lord trotting out—well, not really trotting—knowing that he will be in the place for only about three minutes. We could do with some decent statistics on that, seasonally adjusted.

Mr. Adley: The hon. Gentleman makes an important point. As he says, vehicles waiting for people—sometimes for three minutes, but in the case of coaches often for two or three hours—with their engines running are a serious cause of pollution, particularly large diesel vehicles.

On the Embankment 10, 15 or sometimes 20 coaches park for hours on end. One driver stays to look after all the coaches. If the clamping man or the parking meter man comes along, the "duty driver" can get into whichever coach the man is looking at and say, "Look, I am on board. You cannot possibly do anything to me, because the vehicle is not unattended." That is part of the abuse —day in, day out—that is perpetrated by coach operators. Parked coaches are pouring diesel fumes all over our towns and cities.

In a *Sunday Times* article last week, Colin Dryden, referring to the 1984 Royal Commission on Environmental Pollution, reported that smoke from diesel vehicles was

"in many circumstances at an unacceptable level . . . the vehicles themselves have got bigger and more powerful".

We all know that to be true. My hon. Friend the Member for Lewisham, West did not use the phrase "tower blocks on wheels" to describe some of the coaches that are polluting our cities today, so I shall do so now. My right hon. Friend the Minister of State, Foreign and Commonwealth Office, has rightly pointed out that they are responsible for intimidatory driving.

I cannot always find it in my heart to praise the Americans, but, as the *Sunday Times* article rightly says, "American requirements are far tougher, particularly for buses, on the grounds that they put health more at risk through operating in cities."

I have reserved the last word for Deputy Assistant Commissioner Innes of the Metropolitan police. In one simple sentence he sums up what has been going on in London, and the problems created by recent legislation. After all, we have Mr. Gorbachev here today. He will be gone tomorrow, but transport problems, like the poor, are for ever with us and will get steadily worse. My hon. Friend the Minister must know that transport will be a major issue in the next general election.

Deputy Assistant Commissioner Innes says:

"You will be aware that in the Central Area problems with coaches are quite horrendous."

They are indeed. My little new clause tries to deal with them, and I hope that my hon. Friend will find it acceptable.

11.15 am

Mr. Tom Cox (Tooting): I am sure that all hon. Members who have listened to the debate will congratulate the hon. Members for Lewisham, West (Mr. Maples) and for Christchurch (Mr. Adley) on their interesting speeches, which provided plenty of statistics and plenty of food for thought. I support the new clauses, especially new clause 5, which requires that a

"Local Authority shall provide off-street parking facilities for buses and coaches."

That is long overdue.

The hon. Member for Christchurch rightly cited the problems in this area and adjacent to this building. Coaches used to come into London in great numbers only in the spring and summer months, but they now do so throughout the year. Because of the lack of proper parking facilities they park as far away as Lambeth and Wandsworth for hours on end, causing traffic chaos in those areas. Residents would no doubt welcome the proposals in the new clause, and progressive-thinking local authorities would probably consider the provision of such facilities to be one of their responsibilities.

Traffic problems are getting worse not only in London but in all our major cities. We hear a good deal from the Department of Transport in the form of press releases and so on but there is precious little hard evidence of real improvement to back it up. Today's debate has highlighted the absence of a proper integrated transport system, not only in London but in the whole country. Although it may be unpopular with some motorists, there is an urgent need for us to consider the requirements of the country and especially those of people who live in areas that suffer hour by hour, day by day, from the problems caused by all kinds of traffic.

When I hear statements from the Department of Transport followed by statements from the Department of the Environment, I sometimes wonder just how much co-ordination there is of the thinking of those Departments on issues in which both are involved. Judging by correspondence that I receive from my constituents, there is virtually none.

The hon. Member for Lewisham, West made some telling points about parking, which are also touched on in his new clauses. He mentioned the problems caused by commercial vehicles, but many of the problems that I have observed are caused by private cars, especially when they

are parked in residential areas. I can speak only for London, but this may also apply in many other parts of the country. More and more private motor cars are double parked throughout the day and night. They are often not lit, and they cause enormous annoyance to residents as well as potential dangers. There seems, however, to be no policy on the matter. The police in my area say, "Well, sir, it is very difficult. What do we tell them to do?"

To a large extent I go along with the view of the hon. Member for Lewisham, West that penalties for illegal parking are not high enough and do not deter. Regrettably, however, throughout London—and, again, possibly in other major cities—there simply are not sufficient parking facilities, and matters will get worse as more and more cars come on to the roads. Until the problem is tackled, perhaps by the Department of Transport in co-operation with local authorities, indiscriminate parking will undoubtedly continue.

Mr. Dykes: The hon. Gentleman's remarks on the scourge of double parking will be welcomed by every sensible listener. Does he agree that the disease of recent years is becoming a scandal which must be dealt with as soon as possible? Should not double parking be made an absolute offence which should be prohibited full stop, except of course in the case of public service vehicles dealing with an emergency? Could we not also follow the example of Tokyo—albeit with a different street pattern—and require developers building new flats and blocks of flats to provide off-street parking spaces? Usually they do not bother, and, as with the coach problem, ratepayers, suffering residents and local authorities are left to pick up the tab.

Mr. Cox: The hon. Gentleman is absolutely right. All hon. Members will endorse his comments. He referred to property development. Those hon. Members with inner London constituencies know that there has been a great increase in the number of property conversions. Five or 10 years ago large houses were occupied by one family. Three or four families now live in them. Each family has a motor car and there are insufficient parking facilities. That issue must be tackled. If people say, "To hell with the regulations, I'm going to park here" that should be made an offence. People should lose points for doing that. Their cars are a potential danger to those who live in the area and to other motorists.

The Tooting Broadway area of my constituency used to be one of the most profitable commercial areas in Wandsworth. Putney, Clapham Junction and Balham were all popular but the money-making area was Tooting Broadway. It is fast going into a decline. The quality of the shops has not declined, but people no longer shop there because there are no parking facilities in the area.

The Underground station at Tooting Broadway and other underground stations in the area service the Northern line. Many commuters park their cars there between 7 and 8 o'clock in the morning and leave them there until 5 or 6 o'clock in the evening. Local residents who want to use the facilities in the area in which they live and in which they are ratepayers are unable to do so because they can find nowhere to park. If they park on the highway, a traffic warden slaps a parking ticket on the car. Residents therefore say that they cannot run that risk. My area—and, I am sure, many other areas in London—is suffering as a consequence.

Big shopping developments have also caused problems. At Colliers Wood, the Savacentre has parking facilities for about 2,000 cars. There is no charge for parking cars there. The result is that long-established, thriving commercial areas are suffering because of the lack of parking facilities. Has any thought been given to that problem? I have taken up the matter with Wandsworth council. It has told me that it will think about it. It has been thinking about it for the past four years, but has done absolutely nothing about it. It is another example of uncontrolled traffic problems in London becoming a great menace.

When the hon. Member for Christchurch referred to motorways the Minister intervened. He criticised the scare stories that are being put about by various pressure groups and local authorities, such as Wandsworth and other south London boroughs, about major road development proposals. We may differ about whether they are motorway development proposals, but even the Minister must agree that they are major road development proposals that will affect areas such as Lambeth, Wandsworth, Fulham and Hammersmith and Richmond.

There have been a number of public meetings in the London borough of Wandsworth, which is Conservative controlled. I do not exaggerate when I say that hundreds of people attended those meetings. I chaired a meeting in my constituency on Wednesday of this week—one of the worst evenings that we have had so far this year—which was attended by over 300 people. They were there simply because of their serious worry about what they understand may happen in the area. I am referring to the western environmental improvement route.

Mr. Peter Bottomley: I am fascinated by the hon. Gentleman's argument, but I hope that we shall eventually return to parking. If the western environmental improvement route goes ahead, it will create two lanes of traffic towards the north end of Wandsworth bridge. The national taxpayer has paid half the cost of the York road improvement that has created four lanes coming in from Wandsworth Town station and two lanes coming in past the heliport from the other side. A degree of modesty by Wandsworth would appeal to those who are trying to solve the casualty and the environmental problems and who are trying to build in the economic advantages that may come from separating through traffic from those who live and work around the present Earl's Court one-way system that carries 100,000 vehicles a day—a greater volume of traffic than on some parts of the M25 and the M1.

Mr. Cox: The Minister would have been well advised not to say that. His comments will create a furore in the London borough of Wandsworth. That is a classic example of the lack of interest that many people believe the Department of Transport shows in Wandsworth's problems.

Mr. Peter Bottomley: Will the hon. Gentleman, then, say how many pedestrian casualties are created by the Earl's Court one-way system? Has Wandsworth given him that figure?

Mr. Cox: No.

Mr. Peter Bottomley: Until he knows, I suggest that the hon. Gentleman leaves it there and gets back to parking.

Mr. Cox: It is all very well for the Minister to say that I should leave it there and get back to parking but I

[Mr. Cox]

referred to the western environmental improvement route because it concerns parking, congestion, pollution and the standard of living of the people in the area. It does the Minister's case no good to dismiss the anxieties of my constituents and those in Richmond, Fulham and Hammersmith and Lambeth. If that is his attitude, he is in for a very rough ride from local people. Of course we want road improvements, but we do not want road improvements that lead to traffic from the Earl's Court area coming into Wandsworth and Lambeth. The Minister says, "Let's get the traffic out of Earl's Court. We won't worry too much about the problems that it will cause in Wandsworth and Lambeth."

I refer the Minister to statements by the Conservative controlled Wandsworth council. The Minister may say that he does not care about what Wandsworth council says, but he will start to care about what the residents of the borough are saying. All the evidence proves—it has not been disputed—that thousands and thousands of additional vehicles will come into our area every day, resulting in the problems to which the hon. Member for Lewisham, West referred. The issue will not go away. It is not a party political issue. All the political parties in Wandsworth are united about fighting any attempt to destroy our community. However, in his two interventions the Minister has displayed arrogance about our fears.

11.30 am

Mr. Peter Bottomley: On the day when we announced the result of stage 1 of the assessment studies, I attended a meeting organised by the Wandsworth Society to discuss the proposals. The Wandsworth Society was interested in the northern, rather than the southern, part of the borough, and at that point people were rather keen that risk to local residents, whether north or south of the Thames should be reduced. On the wall of the local library were hung the Wandsworth Society's own tentative plans for taking through traffic out of the main shopping area of Wandsworth.

The hon. Gentleman should try to address the question more quietly, and, if he has any influence with the people of Wandsworth, he should try to persuade them into discussion rather than adopting a somewhat casual attitude both to the environmental impact of existing through traffic and rat-running, and to the Department's proposals. He should do that rather than exaggerating and thus casting a cloud of fear over those who seek improvements that they have failed to achieve in the past few decades.

Mr. Cox: I met four members of the Wandsworth Society in the House last night. I understand that they are shortly to meet the Minister. Now that they have examined the proposals in detail, they are very worried about what may happen in the borough. I am sure that the Conservative-controlled borough of Wandsworth will read the Minister's comments with great interest.

Let me deal with another aspect of the matter which, sad to say, has not been dealt with adequately in this debate. We all know the problems that an increased volume of traffic causes. If we are to tackle the problem realistically in London, we must give much more thought to the development of public transport. I believe that in the not-too-distant future we shall have a different pricing policy for motorists coming into London. I think that that will happen, even though it may not be a popular development. We must develop our bus and train services in and out of London and within London in a way that we have not developed them in recent years.

The Northern line, a major Underground line, runs through south London and my constituency. There are enormous problems with that line. We could reduce the volume of traffic greatly if we provided services that the general public wanted to use because they were confident of their punctuality and quality. Then the problems to which hon. Members have referred today would start to decrease.

The new clauses are valid, and I support them, but we must face the fact that we shall have to improve the public transport system in London. At present, people are unhappy about using the services. In my area, one of the great problems is that the escalators often do not work. People say, "I shall not use the Underground because I cannot walk up and down those enormous flights of stairs." There are not sufficient staff at stations to look after passengers, and we all know of the violence that takes place. If we could start to tackle those problems and invest more in public transport and improve public confidence in it, greater use would be made of it. The problems of congestion and pollution referred to today would start to be greatly reduced.

The new clauses are to be welcomed, but, rather than the piecemeal approach that they represent, we need a real attempt by the Department of Transport to produce a coherent policy to tackle the problems of transport in London. The sooner that is done, the better it will be, not only for those who live and work here but for the country as a whole. That is what we should be discussing.

Mr. Ian Gow (Eastbourne): I pay tribute to my hon. Friend the Member for Leeds, North-East (Mr. Kirkhope). He has had the good fortune to come top in the ballot. That could happen to any of us, but my hon. Friend has chosen a matter of the greatest importance and has succeeded in making progress on Second Reading and in Committee in what must almost be record time. It is a tribute to my hon. Friend that there was no debate on Second Reading because there was such broad assent to the Bill. It is a further tribute to my hon. Friend that the Committee stage was completed in 75 minutes.

The hon. Member for Tooting (Mr. Cox) is well qualified to address the House on this subject. He is a former alderman of the borough of Fulham; he used to represent Wandsworth, and he now represents Tooting. I listened with great attention to what he said.

You will remember vividly, Madam Deputy Speaker, that 49 weeks ago today we celebrated the 87th birthday of the late emperor of Japan. You may remember that date: it was 29 April 1988, and you were in the Chair. Just after you had climbed into the Chair, my hon. Friend the Under-Secretary of State for the Home Department made these immortal comments:

"We need to know who is in the Chamber."—[*Official Report*, 29 April 1988; Vol. 132, c. 628.]

That is my view, although they were not my words. They were the words of one of Her Majesty's Ministers. That opinion was not challenged by the occupant of the Chair. It was not challenged a year ago by anyone seated on the Opposition Front Bench or even by anyone sitting below the Gangway. It is true that my hon. Friend the Member

for Christchurch (Mr. Adley) was not in his place; perhaps he would have dissented from the views then expressed by my hon. Friend.

I wish to follow the advice given by my hon. Friend the Parliamentary Under-Secretary of State for the Home Department. It is in accordance with that advice, not challenged at the time from any part of the House, that we may legitimately draw your attention, Madam Deputy Speaker, to a phenomenon that is not unknown. At no stage in our proceedings today has there been present a single representative of the Liberal party or a single representative of the Social and Liberal Democrats—not one. I have been vigilant.

The Comptroller of Her Majesty's Household is not in his weekend attire this morning, the only concession made to the fact that it is Friday being the brown shoes upon his feet. My hon. Friend is not always visible——

Madam Deputy Speaker (Miss Betty Boothroyd): Order. The hon. Gentleman always make a most amusing speech and takes his time with the preamble. I hope that he may be reaching the end of his preamble and that we shall soon hear the fascinating comments that he has to make about the new clauses.

Mr. Gow: The hon. Member for Kingston upon Hull, East (Mr. Prescott) does not dissent from my assertion that not a single representative of both minority parties lhas been present, even though they claim to be champions of the people. Naturally, the Ulster Unionist party has been well represented. The hon. Member for Liverpool, Walton (Mr. Heffer) was present, and the hon. Member for Bolsover (Mr. Skinner) contributed to our debate. The House will have noted that the hon. Member for Bolsover shares a hobby with my hon. Friend the Member for Leeds, North-East. Each is a keen player of the ancient game of tennis. The hon. Member for Bolsover may have left the Chamber to play tennis. He cannot be playing with my hon. Friend as my hon. Friend is vigilant and is in his place.

I hope that the new clause will be accepted by my hon. Friend, although I fear that it may not be. I hope that my hon. Friend the Minister, whose wife's presence we all deplore——

Mr. Peter Bottomley: What?

Mr. Gow: I apologise. We deplore her absence. Please forgive me. It is most uncharacteristic of my hon. Friend the Parliamentary Under-Secretary of State for the Environment, the hon. Member for Surrey, South-West (Mrs. Bottomley), not to be present.

Mr. Bottomley: She will be here later.

Mr. Gow: Then my hon. Friends and I will stay. The hon. Member for Tooting will stay, and so will my hon. and reverend Friend from the Province, the hon. Member for Belfast, South (Rev. Martin Smyth).

Mr. Bottomley: I went to another place two days ago to listen to a debate on road users and the law. I had an opportunity to hear an interchange between Baroness Masham and her noble kinsman the Earl of Swinton when he was correcting her. I shall not do that today, so one need not wait for a similar occurrence.

Mr. Gow: I am grateful for that illuminating intervention.

Mr. John Prescott (Kingston-upon-Hull, East): It is an illuminating speech.

Mr. Gow: I do not want to be led astray by the hon. Member for Kingston-upon-Hull, East, even though he is seated on the Opposition Front Bench.

We have had an important debate, because parking is of great interest to the people of London. There is a lack of adequate parking facilities in London. As my hon. Friend the Member for Lewisham, West (Mr. Maples) pointed out in his admirable speech, the lack of parking facilities and the fact that motors must be parked on the roads are major contributory factors in the gradual decline in the speed at which London traffic moves. A most telling point was made by my hon. Friend the Member for Lewisham, West. Even a single motor parked in a road can impede traffic flow to an astonishing degree.

11.45 am

My hon. Friend the Comptroller of Her Majesty's Household, who has taken time off from his onerous duties overseeing the finances of our Sovereign, will probably have journeyed this morning in a motor from his house to the House of Commons. I shall give way to my hon. Friend so that he can confirm whether that is an accurate observation. We do not hear frequently from my hon. Friend.

Madam Deputy Speaker: Just as well.

Mr. Gow: I find myself in respectful disagreement with the Chair. I should like to hear more from my hon. Friend. He came to my constituency and made a superb speech of which you would have approved, Madam Deputy Speaker, but he will not speak today. I invited him to speak. I introduced him a fortnight ago today. The hon. Member for Bolsover will be pleased, because my hon. Friend travelled in a railway train. We were not contributing to traffic congestion. We made a journey, each accompanied by the other.

Mr. Adley: When the hon. Member for Bolsover (Mr. Skinner) referred to one of our hon. Friends, we were at pains to know the Spanish translation for the term "sub judice". As my hon. Friend the Member for Watford (Mr. Garel Jones) is fluent in Spanish, he might be able to help us and the *Hansard* staff.

Mr. Gow: My hon. Friend is fluent in Spanish and in many other languages as well, but we do not want to be led astray. We might be rebuked by the Chair if we refer to the brilliantly gifted woman who is married to the Comptroller of Her Majesty's Household.

The Government should direct much more attention to parking in London. Mercifully, the Minister is in his place. Mercifully, there are few Ministers whose prospects are more glittering than those of my hon. Friend. He would enhance his prospects for promotion if he were able to speed the flow of traffic. My hon. Friend the Member for Lewisham, West spoke about London, but the matter concerns not just London or even England. I say that to my hon. and reverend Friend the Member for Belfast, South. Even in Belfast, a city which my hon. Friend knows better than I do, but even I am a fairly frequent visitor——

Rev. Martin Smyth (Belfast, South): And North Down.

Mr. Gow: I do not want to stray into that matter. I wish North Down Conservatives well. I will not be led astray.

[Mr. Gow]

Even my hon. Friend the Minister does not have ministerial responsibility for the city of Belfast. Hon. Members will have noticed the final clause which states that the Bill

"does not extend to Northern Ireland."

But it should extend to Northern Ireland. My hon. Friend the Member for Leeds, North-East represents one of the great cities of our land. If he catches your eye, Madam Deputy Speaker, he will not tell the House that there is no problem about parking in Leeds. He will not tell the House that the traffic flows rapidly in Leeds. That will not be the burden of his speech. Therefore, the problem is not only in London or in our great cities but in many of our towns. It is a growing problem, partly because of the success of my hon. Friends who are seated on the Treasury Bench.

Mr. Dykes: Will my hon. Friend give way?

Mr. Gow: My hon. Friend will be able to speak. If he intervenes during my speech, I may speak longer. We do not want that. I want to try to bring my speech to a conclusion. As much as I try, I am not assisted by my hon. Friend if he asks me to give way.

It is because of the success of those who are seated upon the Treasury Bench that more and more of our citizens have motors. The hon. Member for Tooting, who is a former Lord Commissioner of the Treasury, knows about these matters. He was a Minister in the Treasury. He knows what has happened. He knows that more and more of those people who, in the past, would have dreamt of having a motor now have motors. The hon. Gentleman —I almost called him my hon. Friend—is with me when I say that there are families of relatively modest means with two or even three motors, and they are not all minis. Some of them are made overseas. Too many of them are made overseas; not enough are made here. It is because of the growth of motor ownership, achieved through the success of the Government's economic policies.

I know what an enthusiastic supporter of the monetarist cause my hon. Friend is. He is one of the driest of the dries. He is one of those who said, "Let us bear down upon inflation and let us, therefore, having had one great economic success, provide more motors for the people." We are all Thatcherites now. My hon. Friend is a Thatcherite. Because of the economic success and the extent of the ownership of motors, my hon. Friend the Minister has these problems. If we had not been so successful in extending the ownership of motors, my hon. Friend's Bill might not have been necessary.

I fear that even the Minister, as wise as he is on so many matters, may not be wise enough on the new clause. I hope that he will advise the House to agree the new clause, because it will diminish grievous parking problems. We need to provide more space to park motors, and we need to enforce the existing parking regulations much more strictly. We need to impose much heavier penalties on those who defy the law on parking. I welcome the Bill and should have liked to give way to my hon. Friend the Member for Harrow, East (Mr. Dykes). I thank you, Madam Deputy Speaker, for giving me the opportunity to address the House.

Mr. Timothy Kirkhope (Leeds, North-East): Listening to the debate, I felt on occasion that I was in the wrong place at the wrong time or was reading the wrong Order Paper. Nevertheless, it has been a most useful debate thus far in which we have discussed not only parking but cruising, walking, cycling and—close to the other place —trotting, and we have certainly said a lot about not moving.

I have been impressed by the industry and ingenuity of my hon. Friends in devising sufficient new clauses to more than double the number that I had in the original Bill. Perhaps naively, I was working at the time on the premise that small is beautiful. I seem to have ended up with a greater number of interests, which I very much welcome, and a debate that has been much broader than I thought it might be. However, it has served to underline the importance of parking and attendant matters relating to traffic movement to the people of this country.

I am worried about the content of the new clauses because, although they may be desirable in their own respective ways, I am not sure that the Bill is the right vehicle—if I may use that word—for them. If the new clauses were accepted, they would increase the scope of the Bill dramatically and radically change its basic nature. Apart from that, they would attract considerable controversy, which I set out to avoid by being modest in my proposals.

There is, of course, the question of pragmatism, practical politics and what one can actually achieve. I think that the Bill, as proposed and as amended in Committee, is a pragmatic measure that will meet with great support from all quarters. Indeed, I have already received considerable evidence that there is support for it. I am pleased that, among other bodies, the Association of District Councils is particularly keen to see the Bill enacted because it believes that it will enhance and give greater flexibility to the powers of local authorities in relation to parking.

The fact that the title of the Bill was changed in Committee has been mentioned. I make no apology for it. It was an amendment that I moved because I believed that it would make the Bill clearer and easier to understand than did the original title, which appeared to have a rather abstract meaning which could be interpreted in many different ways.

Before I deal in detail with new clause 1, I should like to say a few general words about the purpose of the Bill because this is my first opportunity to do so on the Floor of the House. Hon. Members have been kind in their remarks about the speed with which the legislation has gone forward. I hope that it was well considered in Committee—I am sure that it was—and although the Bill has reached this stage quite speedily, it has received attention and has been considered carefully by many hon. Members.

As this is my first opportunity on the Floor of the House, I should like to emphasise that I have deliberately confined the Bill to a single aspect of parking—the method of payment. My main purpose is to increase choice and flexibility in the arrangements that local authorities can make for off-street car parking. As we have heard today, there are many other aspects of parking provision and enforcement. It may well be that in due course other measures should properly follow to take account of the new efficiency that I hope will arise as a result of this legislation. Some of the new clauses have highlighted those other issues, but I am reluctant to widen the scope of the

Bill along those lines. I believe that the Bill as it stands will benefit many people and, as far as I can envisage, do nobody any harm.

The Bill does not raise any new issues of principle but clarifies and extends an area of the law on parking controls while—this is terribly important—also allowing much greater opportunity for emerging technology. We hear a lot about technology and I think it important that at every opportunity where technology can be applied without harming people or their freedoms, it should be applied.

I have already mentioned local authorities. I emphasise that the Bill will give them greater powers and greater flexibility. Governments are often criticised for doing things that seem to harm local authorities and their powers. That is not true, but it is often alleged. This small measure will underline the fact that we believe strongly in giving local authorities powers where appropriate and where we believe that they can operate them effectively and efficiently.

It may be helpful if I give the House a little background to the Bill. Many hon. Members have referred to the Road Traffic Regulation Act 1984, which enables local authorities to designate parking places on highways in their areas and to provide off-street car parks. The Act places a duty on authorities to exercise their powers and to secure, among other things, the provision of suitable and adequate parking facilities both on and off the highway. That general duty applies to all vehicles, not just to motor cars. Local authorities must take into account the need to maintain reasonable access to premises, the safety and convenience of the motoring public and other matters including—I emphasise this—preserving local amenity.

Interestingly, although some people would think otherwise, local authorities remain the largest collective providers of off-street car parking in the country, though, clearly, there is increasing scope for involvement by the private sector. Many authorities choose to have a form of unmanned pay-and-display arrangement which puts the motorist on trust to purchase a ticket when he arrives and makes him liable to an extra charge if he fails to pay or if he overstays his time.

The method for enforcing such arrangements is provided by means of parking place orders made by the local authority under the 1984 Act. Breaching the provisions of an order constitutes an offence. Indications displayed by parking equipment can be used as evidence in criminal proceedings. The 1984 Act therefore requires parking equipment and the parking devices associated with such equipment to be approved by the Secretary of State. That well-established procedure goes back to the first parking meters in this country. Obviously, it offers a safeguard to the public and ensures that the equipment meets certain minimum standards. That is important, because, I am informed, British standards are being developed as a basis for streamlining the approval process. Clearly, the British standards must be applied to all new parking devices and equipment that might be introduced as a result of my Bill.

That is the background, but why is the Bill needed? Until recently, the Secretary of State could approve the use of coin-operated equipment only. Many people will be somewhat incredulous of the fact that they can use only coin-operated equipment in the late 1980s. The original provisions were drafted before any alternative systems were available, and technology is advancing in this as in other areas. In 1986, the hon. Member for Kingston upon Hull, North (Mr. McNamara) successfully introduced the Road Traffic Regulation (Parking) Act 1986 to allow non coin-operated parking equipment to be approved for use on the street. That extended what had been a London-only provision to apply nationally. It certainly opened up the way for a range of cashless equipment, which includes prepaid tokens, vouchers, magnetic cards and electronic in-car devices.

My Bill will build on that in two specific ways. First, it will allow the Secretary of State to approve for use in off-street car parks the same types of equipment that can now be used legally on the street. Secondly, it anticipates and provides for the introduction of parking equipment on or off street that can accept bank notes and credit and debit cards. While I congratulate the hon. Member for Kingston upon Hull, North on what he did, the new provision gives manufacturers with such equipment the opportunity to take advantage of the market that will become available and to extend their work in developing new parking devices.

12 noon

The second provision is essentially a logical development of the first. It is wrong that we should provide for other cashless forms of payment without also widening the current definition to include bank notes and credit and debit cards, as well as coins. That, of course, assumes that parking equipment and control mechanisms develop in the same direction as those for the payment of other goods and services, which we now enjoy in retail outlets throughout the country. I am trying to ensure that my Bill does not get overtaken quickly by technological progress.

The Bill was further improved in Committee. When I was talking about the speed of the legislation, I mentioned that we carefully considered the Bill's four clauses in Committee. In particular, there is now provided in clause 1(3) a power to allow the Secretary of State to amend the definition of a parking device. That is shorthand for any method of paying for parking by prepayment rather than by a coin in the slot. The definition of a parking device is fairly comprehensive, but there is a possibility that technological advances will produce some further variants. We certainly do not want to have primary legislation in the House every time that happens. The amendments, which cover both on and off-street parking, would allow the Secretary of State by order to extend the categories of parking device that local authorities may be permitted to employ.

My hon. Friend the Member for Eastbourne (Mr. Gow) referred to the unfortunately large number of imported vehicles. I can tell him that the export potential of manufacturers with this new technology and new parking devices appears to be enormous. They would do well to follow up the opportunity that they are given through my legislation.

My hon. Friend the Member for Lewisham, West (Mr. Maples) has rightly drawn attention in new clause 1 to the problem of coaches parking on the streets. I do not wish to dispute his facts—I am not able to do so—but clearly my hon. Friend the Minister may wish to do so. As the Minister's constituency is not that far from Lewisham, the particular problems to which my hon. Friend the Member for Lewisham, West referred may also be problems for the Minister. I emphasise that my legislation is of course—with the sad exception of Northern Ireland—national. While the debate on London problems has been most

[Mr. Timothy Kirkhope]

illuminating to me as a northern Member of Parliament, I found that some of the matters discussed were not completely relevant. If they were allowed to proceed, they would probably muddy the waters. They would certainly diminish the impact of the Bill as a small but national piece of legislation.

I hazard a guess that the main problem concerned in new clause 1 is not that caused by coaches parking at designated bays, but that of coaches parking haphazardly or even illegally in other places. Obviously, we would all like to move the problem off the street, but the passengers who use buses and coaches may not be so happy. That may, of course, be the basis of another debate.

Mr. Adley: My hon. Friend touched on an important point. We cannot have a situation where we pass legislation in the House, or leave the police to administer the law, and then say to the police "Nudge, nudge, wink, wink, we know that they are breaking the law, but if you enforce the law, you will inconvenience a few people." Will my hon. Friend confirm that he agrees that that is a completely unacceptable proposition?

Mr. Kirkhope: I agree with my hon. Friend. He was right to mention that point. I am not trying to come down one way or the other, but am merely pointing out what I believe could be genuine difficulties in pursuing new clause 1. I hope that my hon. Friend the Minister will have more to say on that issue. He is better equipped than I am to remark further on it. However, I thought it right that I should make my views known at this stage.

A decent off-street coach park is expensive to provide, especially in London. Parking is, of course, expensive and taking up the space of a lot of our cities is an expensive operation. It is certainly known that there is little suitable land available for off-street parking in the capital. High land prices tend to rule it out as an easy option, because it is unlikely that a reasonable return could be made on the investment. That is one argument, but there are those who could argue effectively the other way. On that basis, parking charges would have to be high. However, if they were too high, they would obviously drive away customers. It could be argued that that is what we need to do. My hon. Friend the Minister for Lewisham, West suggested that it would be a good idea, especially in London, to drive away some of the customers. It may be the time to consider not allowing so many of these vehicles and their occupants to come here. All round, the argument is for designating a limited number of coach parking places in the areas that need them most, but not elsewhere. Perhaps we should be a little more rigid on that.

I am not sure that the proposed new clause will help the progress of the Bill. However, it is right that it has been proposed. Perhaps it will be useful for the clause to be incorporated in some future legislation that may be more appropriate to it. I should be interested to hear the views of the Minister, but I hope that my hon. Friend the Member for Lewisham, West will not press the new clause.

I am grateful to my hon. Friend the Member for Lewisham, West for his remarks on new clause 3, but I am still in doubt about what that clause would achieve. My understanding is that the Road Traffic Regulations Act 1984 allows local authorities to restrict resident parking places to any class of vehicle that they choose. Some residents may choose to drive a car and some may choose to drive a small minibus or van that occupies the same space as a car. Of course, there are widespread permit schemes for residents, which I believe have been generally accepted. I am not aware of any real pressure to discriminate. I question whether it is a good thing to be more restrictive than we are now. We have not taken account, for instance, of residents' motor cycles. What about areas of mixed residential and business use, where there are bound to be some vans and lorries needing space? I am not saying that it would be always right for them to take up residents' space, but I feel that the matter might best be left to the discretion of the local authorities, which take into account local feeling, rather than being legislated for in this manner.

New clause 4 perhaps raises similar issues to the previous new clause. There are flexible provisions in the Road Traffic Regulations Act 1984 for restrictions on waiting and loading by all kinds of goods vehicles. Those restrictions may apply throughout the day or for any part of the day. Those powers are extensively used already. They may not always, of course, be well enforced, but that is another issue. It is certainly not something that we can put right here and now. I am all for restricting peak hour deliveries, but, if the will is there, that can be achieved under the present law.

New clause 4 would tie the hands of the local authorities unduly. We should be thinking more about giving highway authorities more discretion in parking matters rather than less. Again, it is a matter of retaining as much flexibility in the law as possible. I hope that that my hon. Friend will not press new clause 4.

New clause 5 is, I believe, returning to the theme of new clause 1. It would impose a new duty on local authorities or it would be a more specific variation of their existing general duties to which I referred earlier. Local authorities are already obliged to secure suitable parking provision not just for cars, but for all kinds of vehicles. It does not mean, of course, that they always must provide it themselves at the ratepayers' expense. My hon. Friend the Minister may wish to correct me, but I imagine that, if anyone should be responsible for providing off-street coach and bus parks, it should be the bus and coach operators themselves, if that is possible to achieve.

If I understand the situation correctly, local authorities already have the power to build and operate bus and coach stations and many do so. The need varies from place to place and therefore I am not sure that it would be appropriate to impose a duty on every local authority to provide off-street parking for coaches and buses, especially if it was not required. That extra burden would lead to rigidity rather than flexibility. The power should be given to the local people through their elected representatives.

New clause 7, which is proposed by my hon. Friend the Member for Christchurch, contains an interesting suggestion. Even though it raises important issues to which the Minister should address himself, I am not sure whether it is within the scope of my Bill. I would, however, be interested to learn the Minister's reaction to it. My initial reaction is that the new clause proposes a radical approach that carries a severe penalty. It would have to be considered carefully before it was accepted. I look forward to what the Minister has to say and I am grateful to my hon. Friend the Member for Christchurch for raising the matter.

Mr. Prescott: I can hardly believe that my luck has changed. First, may I apologise on behalf of my hon. Friend the Member for Lewisham, Deptford (Ms. Ruddock) who has been invited to attend the Guildhall lunch with Mr. Gorbachev. She will be dealing with broader and more strategic matters while I am left to deal with London parking—so be our allotted roles. Given my hon. Friend's background, I am sure that hon. Members will appreciate that I was only too willing to help to ensure that she attended that lunch.

I congratulate the hon. Member for Leeds, North-East (Mr. Kirkhope) on his Bill. I must admit that when the hon. Gentleman was discussing the new clauses that have been tabled by the hon. Members for Christchurch (Mr. Adley) and for Lewisham, West (Mr. Maples) I got the impression that he was more concerned about his Bill than the arguments put by his colleagues. The Bill enjoys support from both sides of the House and deals with an important matter. Although the arguments put by his hon. Friends were strong, I appreciate that the hon. Member for Leeds, North-East does not want to take controversial baggage on board as the Government might then feel that they could not accept the Bill.

It is somewhat surprising that this important measure has been introduced as a private Member's Bill. It is the role of Government to provide time to introduce such measures. I notice that the Government have said that they cannot find time for such measures, although they welcome their introduction by others. It is funny that the Government could find time, within about 24 hours, to make a statement about the dock labour scheme. There were no problems there and that statement will affect thousands of dockers. I will not go into that matter now, but it demonstrates that the Government have plenty of time to deal with any piece of legislation if they so wish.

The unique claim on behalf of the Bill is that we are all winners and there are no losers. It is important to judge this Bill, however, against the comprehensive problem of parking. Every speaker has said that one cannot simply solve this growing problem of parking by providing better car parking space or computers to deal with paying the parking fees. Parking is a major problem facing urban communities. I often visit Leeds and Yorkshire—I am told that I now live in Humberside, but that is another matter and I will leave it aside—and Leeds suffers from similar problems with lorries and coaches as those in London. Parking is a national problem.

The Government should have provided time for this Bill and, having studied the business statement for next week, I should have thought that that was possible. Legislation could also be introduced as a result of the North report, which is being produced by the other place. The measures in the Bill could, therefore, have been included in other legislation, but it is important to judge the Bill on its own merits. I wish it well, and I hope that it goes through all its stages today.

The arguments advanced by the hon. Members for Christchurch and for Lewisham, West are worthy of support. The hon. Member for Christchurch and I have had more than two exchanges on transport and other issues, but I hope that he will not be embarrassed if I say that I support the arguments he advanced today.

12.15 pm

The deregulation of buses has added to the problems. More inter-city buses now operate on the motorways and people exercise their right to choose a cheaper way to travel to London. Buses are cheaper than trains, but that gets us on to the question of fair prices and all sorts of other things. Anybody who is familiar with Westminster and Victoria is well aware of the problems caused by coaches. This morning, as I passed Parliament square, I noted two Italian coaches parked on the square. That is one of the major routes out to the motorways and that incident illustrates the problems associated with parking, in many cases illegal parking. Those problems will not be solved by more technically efficient means of payment for parking.

We must deal with the tremendous input of cars, coaches and buses into our city. That problem will demand that we challenge one of the basic philosophies of the Tory party. The Secretary of State has expressed that philosophy on a number of occasions, even at the Tory party conference. It is claimed that the ownership of the car is the greatest expression of individual freedom. The idea is that people may use their cars for wherever they want to go and that we should try to meet the demands of all those with cars. Even though we have a lower proportion of car ownership in comparison with most other European countries, we cannot continue to build more and more roads and more and more car parks to meet that demand.

The hon. Member for Lewisham, West was right when he said that we should try to manage the existing system much better. I am rather sceptical about the auto-glide system, which we shall discuss shortly. I know that that system does more than tell people where the empty road is, but when I have travelled round London, in all forms of transport, I have always found it difficult to find any empty roads. The M25 is certainly not an empty road.

The Bill has a contribution to make, but we need a much more radical approach. One of the Government's major mistakes is to assume that we can deal with this matter in a departmental manner. I am not laying that charge against this Government alone as the problem has been with us for some time. Colin Buchanan told us more than 20 years ago that we would have to do something about organising traffic in our cities. The choices facing us are whether to ban cars in certain areas or to offer better opportunities for public transport.

The hon. Members for Christchurch and for Lewisham, West were right when they said that we need more public money to fund the public transport system. We cannot allow market prices to determine future developments in public transport. The hon. Member for Lewisham, West was careful not to speak about a subsidy, but that is precisely what we are talking about. Public money must be made available so that choice may be affected.

I remember the arguments advanced by the Greater London council about its "Fares Fair" policy. Whatever the controversy about that policy—I supported it—it led to more people transferring to public transport and fewer people using their cars. It also reduced the number of accidents on our roads. In that regard I must give credit to the Government, and particularly to the Parliamentary Under-Secretary of State, for their efforts to reduce road accidents. The Minister is right to be proud of his record. He is aware that the record for pedestrians is not as good and that we need to do a lot more. We welcome the

[Mr. Prescott]

improvements that have been made and, although I have not said it before, I would like to put it on record that the present safety record is something of which he should be proud. If we save lives, in whatever way, it is a matter for congratulation. Let us hope that we can do more about that.

The Bill also deals with safety to an extent, but it relates mainly to cars. Its main concern is how to pay for those cars once they arrive in the city. We are, after all, in a cashless society. I should have liked to pay tribute to my hon. Friend the Member for Kingston upon Hull, North (Mr. McNamara) who brought in the original legislation. I do not know whether hon. Members know, but my hon. Friend has been ill for a time and I am sure that all of us would want to pass on our best wishes, particularly today, when we are following on from his legislation. It was clear that, as the hon. Member for Leeds, North-East said, the legislation was not comprehensive enough and much of the machinery on street parking that it was suggested should be introduced was not introduced because the manufacturers thought that there was not a big enough market and that this would provide them with greater opportunities.

If we are to deal with the problem in our urban cities, we must recognise that there are too many cars and we cannot merely pursue the policy of providing more car parks. My hon. Friend the Member for Tooting (Mr. Cox) made an interesting point. He was really talking about a park-and-ride system, but it was being used by people taking the Underground to the unfortunate disadvantage of people in the area. Those people were denied the very local car parks that they want for business and shops in their areas, because other people were doing something which we would encourage them to do—using the car park because they could not get into the inner city and it is quicker to use public transport.

The combination of park and ride—of public and private transport—is one way forward. We must realise that cars will stay and play an important part in the transport system. They will not go away; we cannot eliminate them. We should consider how we can ration their use within cities.

Another interesting point is whether we should impose more severe penalties on motorists who park illegally. In London there are problems for ambulances and fire services in gaining access to some of our streets. They are held up because cars are illegally parked. The hon. Member for Lewisham, West (Mr. Maples) suggested that the best way to deter such motorists was to increase fines. That may well have happened to a certain extent. The evidence obtained from the use of the clamp tends to suggest that.

However, the clamp brings the worst of both worlds. It makes it inconvenient for motorists who have parked illegally because the clamped car stays in the road much longer, but, because it does so, the congestion continues for much longer. It deters the motorist from repeating his offence. However, many people who use company cars or who are self-employed and use cars for business seem to think that the only way to operate is to park illegally. A parking fine becomes a business fine—almost a business charge. Even if the fine is £50 or £10, it can be passed on, or one can pay by credit card—they have already arrived in the cashless illegal parking system. Credit cards or cheques are used to pay the fine.

We must think more seriously about the penalties to show our displeasure about motorists who park illegally and the way that they are putting so many people at a disadvantage. We may well have to put point endorsements on licences for parking offences. Often when I talk to drivers in business they say that their company boss has said "You must wait there" or "You must deliver this package and if you get a fine I will pay it". If the driver was then able to say "But it is my licence that will be endorsed, not yours," he would have some defence against the businesses which pressure their employees to park illegally to carry out business. Illegal parking is causing considerable problems in our cities, and we may have to consider taking such action to control the car within the community.

Hon. Members have also mentioned environmental problems. The Minister is well aware of the more controversial London assessment road programmes. History has shown that whichever Ministers come along with watever ideas people find them controversial and they oppose them. Much of the opposition to the Bill is because the local authorities which used to deal with the roads programmes and the GLC contribution have been done away with. The London assessment programmes are not assessed against a public transport system. It is not considered what could best be done to achieve the best contribution from public transport—whether eliminating the obstacles in the bus lane, or providing a cheaper fare system so that people use public transport. The GLC, in what was largely a successful transport policy, was trying to achieve all that. Even the lorry bans were introduced by the GLC. There must be a comprehensive approach to the problems in the urban city.

Even the CBI is now calling for planning and one supreme body, which is remarkable from an organisation that professes to believe mainly in market forces. However, market forces cannot solve the transport problems in our cities. We must have a major contribution from public transport but the Government appear to have set their face against that; they are against public transport systems. However, there will be opportunities next week to debate that.

However, the Government are on the wrong side of the argument and are the only Government probably in western Europe who cannot see a role for intervention and planning in integrating the transport systems, even the fare systems. One question posed today is, where will the money be found for the systems? People say that it should come not from the ratepayer but from the user. However, the taxpayer has a role to play. Every other developed economy believes that the taxpayer must make a greater contribution.

No Government has had a hypothecation policy of using all money raised in that way. However, every other European country spends about 50 per cent. of the road tax raised on roads and transportation. In this country, in 1979, 35 per cent. was spent and now it is 25 per cent. It is not that, in this country the same share of road tax has not been spent on roads, but we have given more and more of the money to the Treasury. The money has not gone into any other form of transportation—whether public passenger revenue support or building more roads. We are spending less as a proportion and less in absolute terms

—in case the Minister asks for a comparasion of the two Government records. That is an argument for another time.

There is much to be said for using more of the money raised in road transport taxation, not just on roads but on transport generally and for considering more radical ways of raising transportation tax and how we spend it.

The M25 has at least relieved some of the through traffic. Before London had a circular road around its centre it must have been unique amongst capital cities. A number of political parties were involved and they each must share the political blame. What we have at present is quite inadequate. Although I understand that we cannot have—and would not want—five or six motorways through our cities and must do more to rationalise our use of space within the city areas, we must have a much more effective means of moving around our cities, particularly with the advent of the Channel tunnel, which will have a major effect on transport flows in this country.

All these factors show that many of the Government's present policies—their central rail study, the Channel tunnel and London road assessments—are dealt with separately, instead of being seen as contributions to a whole, as is the case abroad. To do so Government must have an active role and intervene and plan. It is tragic that such language is the language of ideological difference in this country. The hon. Member for Christchurch made that point. There must be other ways of making rational decisions rather than leaving it to the price and the market.

In any civilised developed economy transport must play its part. It is no coincidence that transport is a much more politically sensitive issue now than it was 10 years ago. That is not solely due to recent terrible tragedies; it is because it involves people's daily experience of being stuck on the M25 or being unable to find car park space in a town, or having to pay fines.

Our main criticism of the Government's approach is their lack of an overall transport policy. Nevertheless, I offer my congratulations again to the Bill's promoter and my support on behalf of the Opposition for the Bill. It is a sensible Bill, worthy of our support. I hope that it will be supported generally and that the Government will accept the amendments to it, if not today, then eventually. These problems must be dealt with if we are to solve the problems of transport by car in our urban areas.

12.30 pm

Mr. Peter Bottomley: I join previous speakers in congratulating my hon. Friend the Member for Leeds, North-East (Mr. Kirkhope). There was a time when many would have bet that no private Member's Bill would have reached this stage, but my hon. Friend's quick reactions got the Bill through Second Reading. There was a good debate in Committee—perhaps more closely related to the Bill than some of the issues raised by the new clauses discussed today, but that is understandable.

A word of caution to my hon. Friend. I have been conscious during proceedings on other private Member's Bills to which I have responded for the Government in the past two or three years that just one hon. Member has been able to try to force an amendment or block a Bill. That is what happened last year to the Bill promoted by my hon. Friend the Member for Cheadle (Mr. Day), a measure dealing with child restraints in cars. I am pleased to see the hon. Member for Belfast, South (Rev. Martin Smyth) here. Northern Ireland was included at the suggestion of an hon. Member from Northern Ireland. The year before that saw the passage of the Adley Act—if I may call it that. It did much to reduce the terrible noise pollution from motorcycles, which can do more to ruin the lives of people than even coaches. I am sure that many are grateful to him for the priority that he gave to that issue at that time.

I hope that my hon. Friend's Bill makes further progress. I do not intend to speak for long as I know that other important Bills await discussion. The next to come up may not be controversial, but it will be important to some people, and the House has an obligation to small as well as large numbers of people.

My problems is that the hon. Member for Kingston upon Hull, East (Mr. Prescott) has made the speech for which we have waited for two and half years, so I can get rid of my response to the speech that I thought that he was going to make. When and if I appear shortly on "Any Questions" I shall be able to report to Carol Stone that the hon. Gentleman's New Year resolution, announced on "Any Questions" two years ago, to avoid shouting, has now been fulfilled. If he stands again for deputy leader of the Labour party I am sure he will be successful. He is certainly more active than its present deputy leader. I had better stop exchanging compliments before I get into trouble——

Madam Deputy Speaker: That would be a good idea.

Mr. Bottomley: What we are really discussing is whether store cards, credit cards and even kidney donor cards can be used to pay for parking in an off-street parking place. As the hon. Member for Kingston upon Hull, East said, we understand the absence of his hon. Friend the Member for Kingston upon Hull, North (Mr. McNamara) who, in 1986, brought forward a similar group of measures. Had anyone guessed then that our legal friends would say that one cannot be certain whether the same equipment authorised for on-street parking will be lawful for off-street parking, the previous legislation might have been more comprehensive. Today's debate is an important use of private Member's time and I congratulate my hon. Friend the Member for Leeds, North-East on that.

We shall return to the subject of small coaches next Tuesday night when discussing European driver licencing, and to general traffic arrangements which, I am sure, will be able to be debated on the Second Reading of next Thursday's legislation. I want to make plain the Secretary of State's and my position on motorways in London. We do not intend to put forward motorway proposals. As the hon. Member for Tooting (Mr. Cox) said, there are reasons for considering new roads. He served in Fulham and in what is now the borough of Wandsworth. As I said in an earlier intervention, Wandsworth Council has promoted—and, I have no doubt, will promote in future —road schemes of advantage to local people. They will need to be considered in terms of their wider impact, but I do not believe that Wandsworth or any other London borough or the Department of Transport will promote a road that will be a substitute for the M25 for crossing London.

I have made this point almost so often that it bores me silly to repeat it. It is not our aim to spend public money on building roads to encourage people to give up their rail season tickets and get into their one-tonne motor cars——

Mr. Deputy Speaker (Mr. Harold Walker): Order. It is hard to see what this has to do with the new clauses.

Mr. Bottomley: Perhaps I can make myself plain by referring to page 59 of the Forshaw and Abercrombie report of 1943, which referred to people who drive their cars into theatreland. Messrs. Forshaw and Abercrombie recommended that there should be 7,000 car parking spaces for vehicles in the West End theatreland alone. My aim, even if it upsets my hon. Friend the Member for Christchurch (Mr. Adley) is to ensure that such people will come in by coach from the railway terminus, go to the theatre, and then use the railways to go home.

Nothing I have done or said in more than three years as Minister for white lines and potholes should give anyone the idea that we will try to build motorways in London —or on radial routes in and out from the centre—which will only increase car commuting. We are not trying to do that and have said so. I would be grateful if Mr. Nick Lester of the Association of London Authorities, and others who produce resident groups leaflets describing half mile wide motorways covering most of London, would stop doing so. Could they please desist.

I should like to give some advice to Thames Television which spends some time covering parking provision and other road issues in London. Instead of quick responses and asking the Minister to make a comment when somebody else has grabbed the microphone, Thames Television should occasionally read our leaflets or listen to our speeches. We have issued publications called "Transport in London" and "Statement on Transport in London". Why does it not heed the rather good speech that I made on Tuesday in Brighton at the Traffex exhibition? It was called "Civilising the Motor Car."

There are many opportunities for media people to listen to what we say. As the hon. Member for Kingston upon Hull, East has said, we ought to take some of the party politics out of this. There are always local issues and in that context I pay tribute to the societies and associations who pay attention to them. I had a meeting only last night with the Eltham society about various considerations in the borough of Greenwich. But we must make sure that we do not say that we must never build any more roads in London. There are too many casualties and too much of an environmental impact because of present traffic arrangements. In many areas of London new jobs need to be created. When people from the boroughs come to see me about parking or other traffic problems I advise them to seek advice from their officers about how many casualties they have and where they occur, on the rat runs as well as on the main roads. I advise them to bring in a map showing which households are affected by through traffic.

We must start talking positively rather than just slipping back into the mistakes that have been made over the last 100 years. The whole history of parking in London is covered in the Gibbon and Bell book called "The History of London County Council—1889-1939" and in the follow up edition. If we look at those, or at the Bressey report of 1938, or at Forshaw and Abercrombie we see that it is a case of people taking short-term decisions to do nothing without taking account of the impact on others. As the hon. Member for Kingston upon Hull, East said, that kind of approach does not work in other forms of transport and will not work on the roads.

I am grateful to the hon. Member for Kingston upon Hull, East for his remarks about reducing casualties. However, we have not gone nearly far enough. I suspect that when the account for 1988 comes forward the casualties will amount to about 5,000. The target is not just to get below 5,000 a year. Over the last 14 years casualties have been reduced by about 1,500 a year, but we have to reduce the figure of 100 lives per week being lost on the roads to 80 then to 60 and then to 40. Two thirds of deaths and injuries on the roads are unnecessary.

My hon. Friend the Under-Secretary of State for Northern Ireland, the hon. Member for Wiltshire, North (Mr. Needham) is with me on the Front Bench. Perhaps I should seek to work as his junior because the Northern Ireland figures used to be better than those in Great Britain, but now they are not so good. We have heard about parking problems in Belfast as well as about those in the rest of Britain. We must seriously consider the new clauses, and I would do that at great length if we did not have other pressing business before the House.

Coach parking is an emotive problem and there are no easy solutions. I sympathise with people on both sides of the argument. In his ninth Nicholas Bacon memorial lecture John Julius Norwich talked about tourist pollution. He said that it was possible to destroy the things that we are trying to see and appreciate if too many people come in. He was referring to the hundreds of coaches going to Florence and to the outskirts of Venice. We see the same thing around Westminster.

There are problems to be faced, but they cannot be faced effectively by blanket new clauses which would ban coaches that do not have designated parking spaces. It would be imprudent to adopt the alternative new clause which says that parking spaces should not be designated. There is a great conflict between two of the new clauses that we are debating. We must recognise that the Bus and Coach Council is trying but has not yet succeeded.— *[Interruption.]* Perhaps when my hon. Friend's birthday next comes around we will send him a letter or arrange for a parliamentary question.

As a non-sponsored member of the Transport and General Workers Union, I do not want to see too much unjustified criticism of drivers who face difficult problems when they have to drop people at the right place at the right time, pick them up at the right place at the right time and must also find time to take a break and leave the coach if it is not being used. The same problems apply with buses.

Buses and coaches provide a valuable service for the public and since deregulation they have provided alternative provision for customers. Put another way, they may be regarded as extra competition for British Rail because, unlike the railways, buses and coaches do not require expensive infrastructure for which they must pay themselves. They share infrastructure which is provided at great expense.

Do coaches use the existing road space efficiently? The answer must be yes. However, in terms of parking the answer is no. A parked coach takes up the space of three cars. However, a coach carrying 50 people is saving a great deal of road space in terms of the number of cars on the road.

There is a particular problem in London and the Metropolitan police are stepping up their efforts against illegal parking. I understand that the police have been in touch with the Bus and Coach Council to enlist its support.

Local authorities already have discretion about the vehicles that they allow to use designated parking spaces. Coach meters are not numerous, but they exist. We would like to see more in central London. The City of Westminster council has already introduced card-operated machines on the streets and that has been made possible more generally since the Road Traffic Regulation (Parking) Act 1986. Designated spaces are better than unrestricted coach parking. Clamping and towing have had some impact on yellow line parking. They may delay a car an extra hour or two, but research from the Transport and Road and Research Laboratory shows that they cut illegal parking by 30 or 40 per cent.

Mr. Adley: I would like a ministerial reply to a narrow point. We know that the Metropolitan police have described the problems of illegal parking as horrendous. What is the Government's position if coaches are parking illegally? We know that the police are short of resources, and the police believe that the coach is causing a major traffic problem, but they are worried about enforcing the law because of the inconvenience to passengers. Will my hon. Friend the Minister make it clear that the Government expect the police to enforce the law regardless of inconvenience? Only in that way will coaches stop acting illegally.

Mr. Bottomley: I fear that I may have to disappoint my hon. Friend. Part of my work involves proposing legislation and I try to avoid saying what the police should do. The law is there to be observed. That is plain. If there is supposed to be discretion in obeying the law, that should be written into legislation. However, most of us would expect to see a degree of common sense in terms of enforcing the law, as the hon. Member for Liverpool, Walton (Mr. Heffer) explained in relation to his parking circumstances. In areas like drink driving, I have held back from saying anything about the way in which the police should use their discretion. If my hon. Friend the Member for Christchurch will allow me, I prefer to maintain my degree of discretion today.

There are problems with designation. In a wide-ranging and very important speech, my hon. Friend the Member for Lewisham, West, like my hon. Friend the Member for Christchurch and my hon. Friend the Member for Eastbourne (Mr. Gow), put into context the problems facing travellers and residents. We must consider residents as well.

If we said that a local authority could not allow a resident to park a van in a resident's parking space—that is an implication in the new clause—we would be going too far. However, we can expect more local authorities to be as rigorous as some authorities in central London have been recently in checking to discover why so many people with residents' parking permits use that permit at 8.30 am and stop using it at 5.30 pm because they drive away elsewhere. Local authorities have power to deal with that type of cheating.

Our economic life requires service vehicles. I am not referring here to residents parking, but to road use. More people should read the articles which have been published in *The Times* about the time that is wasted in trying to make deliveries during the commuter rush hour. Many of the firms that contributed to the Confederation of British Industry's interesting report on London traffic congestion should consider whether they can stagger their deliveries to avoid the main commuting rush, especially in outer London. I do not think that there is a solution for central London, because in central London there is often more traffic during the day than there is in the morning and afternoon commuter periods.

12.45 pm

I hope that my remarks illustrate that the Government are continuing to examine the issues raised on other occasions by my right hon. and hon. Friends. However, it would be inappropriate to load the Bill with the new clauses proposed.

As to new clause 5, the duty on local authorities themselves to make provision for off-street parking would cut away from some of the initiatives we have been encouraging, in requiring local authorities more often to use private sector resources. I do not want to see a return to the old cycle that we had in London especially, whereby for 10 years one was not allowed to construct a building unless it included plenty of parking provision, followed by 10 years of saying that new buildings could not incorporate any parking provision—with the Government trying to set themselves against the market and swinging from one extreme to another, rather like the pendulum in the Science museum. It may be better to allow a mixture of self-interest and planning guidance, rather than to go for an absolute solution.

There has been congestion in London since Roman times, and as we shall not find a solution to parking or to traffic movement, we should try to move to a sensible position. Today, I think that it is sensible to have off-street parking that is paid for by cashless means, mainly by stored value or by credit cards.

It should not be assumed that all local authorities are confronted with a serious parking problem, though that may be true of London, of other city centres, and of some historic towns. I look forward to attending the historic towns forum that is to take place in two or three weeks' time. However, I may wish to return early, so that I may be negatively neutral on the Right of Reply Bill. Given my job, if I had a formal right of reply, half the newspapers would be full of items explaining that they had misunderstood me. I am one of the more misunderstood Ministers, in the same way that the hon. Member for Kingston-upon-Hull, East is frequently misunderstood.

I move on past new clause 6, which is not being debated, to new clause 7. My hon. Friend the Member for Christchurch is right to say that coach parking is a serious problem. I do not want to hold out a false prospect of accepting new clause 7 at a later stage of the Bill or of having it adopted in other Government legislation. I should like to give it further consideration and will write to my hon. Friend about detailed points and the difficulties as we see them. That is not meant as a false promise so that my hon. Friend will not press his new clause today, but I fear that if he did so, we might lose the whole Bill—and that would be a major loss. It is only by the kind of persistence shown by my hon. Friend that we shall move towards partial solutions to very real problems.

London has a population of about 7 million people, in addition to those who commute to London to work. That population is equivalent to that of Austria and twice that of Singapore. To believe that we can destroy economic activity so that traffic may move easily, or that we can impose the kind of solution adopted by Singapore, whereby a car has only eight years' life, would be foolish.

[Mr. Bottomley]

We have a duty to improve London's environment and prosperity, and to make certain that the casualties of traffic congestion are reduced. Off-street parking is part of that.

I shall be grateful if the House will not agree to the new clauses that have been proposed in a helpful way today, but will let the Bill as it came from Committee go forward to another place. Perhaps we may then consider other problems in the debates that we are likely to have on traffic in London, use of the motor car, and designated parking.

Mr. Maples: I am grateful for the comments of my hon. Friend the Minister, who recognises that the problems mentioned by myself and by other hon. Members are integrated and that the solutions to them must encompass various forms of transport and of parking regulation. I feel sure that we shall return to the subject many times. In view of my hon. Friend's comments, I beg to ask leave to withdraw the motion.

Motion and clause, by leave, withdrawn.

Order for Third Reading read.

12.49 pm

Mr. Kirkhope: I beg to move, That the Bill be now read the Third time.

I do not intend to detain the House for more than a moment. I have already explained the purpose of the Bill, and its detailed provisions were considered fully in Committee. I am grateful both to the hon. Members who participated in that process and to those who have contributed so constructively to today's debate. I am also grateful to the Minister and his officials for their kind assistance during the conduct of the legislation so far.

This is not a party political matter, and I am particularly grateful to the Opposition spokesman, the hon. Member for Kingston upon Hull, East (Mr. Prescott), who made some very helpful remarks. The Opposition clearly recognise that, although modest, this is a worthy piece of legislation. Many people stand to gain from it, including local authorities, equipment manufacturers and, perhaps especially, motorists.

It may seem odd that we must resort to primary legislation to give local authorities more scope and flexibility in this regard. The truth is that the present law is outdated; technology has marched ahead while statute as dragged behind. We have the opportunity to put that right, and to establish a firm footing for future progress.

As I have said, the Bill is modest, but I believe that it is worthwhile. I feel privileged to have had the opportunity to bring it forward, and I commend it to the House.

Question put and agreed to.

Bill accordingly read the Third time, and passed.

Disabled Persons (Northern Ireland) Bill

As amended, considered

Order for Third Reading read.

12.51 pm

Rev. Martin Smyth (Belfast, South): I beg to move, That the Bill be now read the Third time.

If you had been in the Chair earlier, Mr. Deputy Speaker, you might have understood what was going through my mind during the humorous speech of the hon. Member for Eastbourne (Mr. Gow). When casting light on the subject of the preceding Bill, the hon. Gentleman encouraged us all to remain until later this afternoon to meet another Minister. My mind went back to a political gathering. It was late in the evening and the speaker was roaring on. The chairman was present, along with one other person. The speaker said, "Mr. Chairman, I am deeply indebted to my friend for remaining to the end", to which the response was "Friend my eye, I am the next speaker."

I sat through the previous debate on the important subject of parking as it affects London, in particular, but also the nation as a whole. I appreciated the Minister's reference to the upsurge in casualties on the roads in Northern Ireland. I speak today out of concern for both disabled people and those who care for them. Let me put on record my indebtedness to right hon. and hon. Members throughout the House who have supported me, and pay tribute to the helpful guidance I received from the Minister and the Department when I sought to discuss with them the implications of the Disabled Persons Services, Consultation and Representation Act 1986 as it affected Northern Ireland.

It was mooted at that time, both in Committee and in the other place, that the measure should be extended to Northern Ireland, but, because of the administrative arrangements for health and social services in Northern Ireland, that was set aside. Nevertheless, as I was successful in the ballot for private Member's Bills, I decided to introduce this Bill which I hope will become an Act during the Session. It will give the people of Northern Ireland the same disability rights as those enjoyed in the rest of the United Kingdom. The people of Northern Ireland avidly await the implementation of the Bill's provisions. Councils throughout the Province support the Bill. The Law Society for Northern Ireland also supports it, as do the various organisations that help the disabled. I pay tribute to Mencap and the Act Now campaign who have helped me to frame the Bill.

When I drafted the Bill I sought to make it apply to Northern Ireland in the same way as the 1986 Act applies to the rest of the United Kingdom. That meant that it had to contain provisions relating to local authorities and housing. The 1986 Act places an onus on local authorities. I did not proceed with the drafting of a Bill along those lines because there had been insufficient time for consultation with everybody in Northern Ireland. Discussions subsequently took place and the Department encouraged me to table amendments to bring this Bill into line with the 1986 Act. The changes place an onus on local councils and on the Department of the Environment—through the Northern Ireland Housing Executive—to deal with disabled people in the same way as they are dealt with in the rest of Great Britain.

A few minor amendments were made in Committee. We originally used the words "a mental health commission." However, there is only one mental health commission in Northern Ireland. I am not a supporter of quangos and I do not want to encourage the Department to create another one. Therefore I was happy to change the wording to "the" mental health commission. Muckamore Abbey is under the control of the Eastern board although it is within the area of the Northern board. That was another consequential amendment.

I urge the House to pass the Bill. We are three years behind the parent Bill that was skilfully piloted through the House by the hon. Member for Monklands, West (Mr. Clarke). I am happy that he is a sponsor of my Bill.

The Bill has financial implications. As I am a Unionist, I do not want for Northern Ireland what is not available to the rest of the United Kingdom. I was encouraged by the Minister's positive response in Committee. I know that he will use his best efforts to encourage the various boards and agencies to implement the Act in Northern Ireland. When budgeting for Northern Ireland we have to recognise that a sign of a caring society and of a caring nation is its care for the disabled. If there is a financial surplus, I hope that part of it will be released for this purpose. It ought not to be stored up for other purposes. It should be used to help those who are in real need.

The main purpose of the Bill is to improve arrangements for advocacy and representation. People in Northern Ireland look forward to having a legal right of advocacy so that those who cannot argue the case for themselves and who do not know their way round the system may have somebody to speak for them. The Bill will certainly do away with the present system under which a child may ultimately have to appeal against the health and social services board that is responsible for him or her. Quite apart from financial resources, the Bill gives those children the right to be represented by an advocate who will look after their interests.

In Committee I was asked about the respective ratios of disabled people in Northern Ireland and in Great Britain. We have had difficulty in finding up-to-date and accurate statistics, but we can make comparisons nevertheless. The incidence of Down's syndrome, for example, is one in 600 live births in Northern Ireland as compared with one in 1,000 live births in the United Kingdom as a whole. I am never convinced that such statistics are accurate. How can we tell the proportion if we do not know the total incidence? Those are the figures that are used, however, and they show a disproportionate need in Northern Ireland.

People have asked what causes the difference. In Committee the Minister drew attention to morbidity and to the problem of larger families and of mothers of advanced years bearing children as possible contributory factors.

Another factor has been mentioned. I am not sure that it is a cause of the problem and we should draw attention to it if only to challenge it. The scare stories that some have put around excite fear in people rather than seeking to deal with the problem. Dr. Sheehan from Dublin, who conducted a study of the incidence of Down's disease in Dundalk and other southern areas, claimed that Sellafield was a cause. Professor Lowry challenged that assumption in a later report. Perhaps I am partial because Professor Lowry and I were colleagues at school, but I found his study more objective than the study that claimed Sellafield as a cause. He cast doubt on Dr. Sheehan's theory and showed that the evidence was inconclusive.

We must still ask why the ratio is higher in Northern Ireland and hope to discover a means to eliminate the disease. The Down's Association has said that the new education system in Northern Ireland benefits the children as it makes a better use of their talents. The association expresses a worry that is shared by others—that when the children reach the age of 19 and have to leave school, provision for them is not adequate. I welcome some of the moves made to improve that situation. At least the Bill puts responsibility on departments and boards to be more accurate in their assessments and provide the necessary support.

The number of discharges from hospital has been mentioned. It was interesting to discover that although there has been a decline in the number of beds in mental hospitals recently, there has also been an increase in the number of admissions. Therefore, the Bill is timely. I trust that the support of right hon. and hon. Members will speed it on its way to the other place, ultimately to become an Act for the well-being of our people in Northern Ireland.

1.4 pm

Ms. Jo Richardson (Barking): I congratulate the hon. Member for Belfast, South (Rev. Martin Smyth) on extending the provisions of the existing legislation to Northern Ireland. He and everybody else in Northern Ireland consider that it is long overdue.

One of my principal concerns is about the problems of carers, as distinct from the obvious problems that affect disabled people. I was pleased to see that clause 8 is about the duty of the board to take into account the abilities of carers. From my own experience and from my Front-Bench responsibilities, which I am not exercising now, I know that when we consider the problems that many women face, we do not always look at people's ability to look after someone within their family. They do the job willingly and lovingly, and would not necessarily want anybody to take it from them, but we do not sufficiently recognise that they need great support. As hon. Members will know, the overwhelming majority of carers are women. They range across the age spectrum. They could be children, young women, middle-aged women who have had to give up their jobs, or pensioners looking after another pensioner or even a younger person. It is generally recognised that it is their role to look after somebody, simply because he or she happens to be a member of the same family. That causes some resentment and problems. If society, the authorities, agencies and, in this case, the board recognise that people in that position need maximum support, the hon. Gentleman will earn the thanks of all those people.

I often say that the most invisible group of people in our society is carers. They are behind closed doors. They often cannot go out. They are trapped into the caring responsibility which they must undertake. As legislators, it is our job to ensure that doors are opened to them, to enable them not only to continue their work, which is so valuable and which saves the community so much money, but to participate in society.

Clause 8 specifically relates to carers. It is an excellent way of ensuring that a carer is able to do the job. Many people have that job thrust on them. It is not just a matter

[Ms. Jo Richardson]

of respite care, which is essential to people who have the responsibility thrust on them day and night—very often a 24-hour job. Respite care is very much a hit-and-miss affair, depending on the resources of the local authority. It is also a matter of training. It is extraordinary that, given the caring responsibilities of those who undertake this work, it is rare that they get any kind of help and advice about how to cope with the person for whom they are caring.

I know of many women—and, indeed, of one or two men—who have to lift another person in their family in and out of a bath or on and off the toilet—that is quite common—but they have no idea of how to do so properly and how to save themselves getting a bad back. One women of my acquaintance has a permanently damaged back because she has a heavy husband. She has managed to teach herself with no help from outside how to lift her husband in and out of the bath. I hope that the board will consider such matters when assessing the abilities of carers.

Finally, I hope that when the Bill becomes law—I hope that it will receive its Third Reading today without anybody saying anything against it because there can be nothing against it—the position of carers will form a central feature of the developments that the hon. Member for Belfast, South has so widely put forward.

1.10 pm

Mr. Alfred Morris (Manchester, Wythenshawe): This is an important occasion for the hon. Member for Belfast, South (Rev. Martin Smyth). I congratulate him both on his good fortune in the ballot for private Members' Bills and on his choice of Bill. He has made the case for his Bill upstairs in Committee and here in the House today with both eloquence and obvious sincerity. Speaking from the Opposition Front Bench, I express our warm support for the Bill's purposes and our desire to see it fully and speedily implemented.

As the House knows, the Bill's purpose is to apply to Northern Ireland the Disabled Persons (Services, Consultation and Representation) Act 1986, which my hon. Friend the Member for Monklands, West (Mr. Clarke)—with support from both sides and both Houses of Parliament—took to the statute book with such marked skill and humanity. My hon. Friend was naturally anxious to be in the House to see this further progress in extending his Act to Northern Ireland. Through no fault of his own, he cannot be here, but I am sure he is very much in the thoughts of everyone present for this debate.

Very unfortunately for many disabled people, my hon. Friend's Act still awaits full implementation on this side of the water. Extremely important sections of the Act still lie dormant on the statute book nearly three years after it became law. I refer to sections 1, 2, 3, 7 and 11, all of which are of the first importance to the Act's purposes. The Government's failure to implement those sections of the 1986 Act is said to be due to lack of resources; but that does not convince many right hon. and hon. Members, even on the Conservative Benches, who have spoken of their frustration and concern. The Government's excuse for delay is totally rejected on this side of the House and by all the organisations of and for disabled people. They regard the delay in implementing the Act as both disgraceful and scandalous.

Mr. Stuart Randall (Kingston upon Hull, West): Does my right hon. Friend not find it worrying or ironic that today we are talking about extending the existing 1986 Act to Northern Ireland when, as he rightly said, we do not seem to have fully implemented the Act satisfactorily in the other part of the United Kingdom? I am sure that my right hon. Friend is aware that in Humberside we are greatly concerned about that because disabled persons, especially mentally ill children, are not being provided with the right kind of services when they come out of hospital. My right hon. Friend referred to resources. Does he agree that it is ironic that we have just put £14·7 billion—or some phenomenal sum—into reserves yet people like that are not being——

Mr. Deputy Speaker (Mr. Harold Walker): Order. I very much hope that hon. Members will not pursue that matter because this is a Northern Ireland Bill.

Mr. Morris: My hon. Friend spoke about resources, as the Minister did at the Committee stage. I understand the concern of both sides of the House about the unsatisfactory reason given for the delay in providing them. Incontrovertibly, the resources have been and are now available for the full implementation of the 1986 Act. The problem is not one of resources, but of political will and priorities. Yet the provisions of the Disabled Persons Act 1986 are, in human terms, surely deserving of the highest priority. To govern is to choose, and, sadly, Ministers have chosen other priorities in preference to the full implementation of an Act which is so important to people with disabilities, their families and their carers. My hon. Friend the Member for Barking (Ms. Richardson) made wholly valid points about the importance of the role of carers and I entirely agree with her. She was right to make that role more visible in this House. We need to be told more by the Minister about the resources the Government intend to make available for the full implementation of the Disabled Persons (Northern Ireland) Bill.

In Committee the Parliamentary Under-Secretary of State for Northern Ireland stated that his Department spends proportionately more on health care—more than 20 per cent.—than is spent in England and Wales. Can the Minister now tell us what that higher priority for health care spending in North Ireland means in terms of the pace at which the Bill can be implemented there? What has he to say about implementation dates? Will he be able to move more quickly than the snail's pace of his colleagues on this side of the water? Fewer than three weeks have passed since the Committee stage, but I hope that the Minister can now give the House more precise guidance than he was able to do in Committee.

In Committee the Minister said that in Northern Ireland:

> "People are not moved out of hospitals or institutions without there being a plan for them to go into the community."

But he later said:

> "We are determined in Northern Ireland that nobody, but nobody, will leave institutional care and go into the community without individual care plans. If there is any question of anyone going out into the community without such a plan, because it has not been arranged . . . "

That appeared to amend, or at least modify, the Minister's earlier statements. I hope that he can tell us more today about his Department's survey of what actually happens to people who move from institutional care in Northern Ireland into the community. The Minister referred to the survey as being one to establish the facts. In response to the hon. Member for Birmingham, Edgbaston (Dame J. Knight) in Committee, who had referred to the people from mental hospitals in England who now live in cardboard boxes in some of our cities, he said:

"We shall not have people living in cardboard boxes on the streets of Northern Ireland."—[*Official Report, Standing Committee C*, 22 March 1989; c. 8-12.]

Without the proper assessments required by the Bill the revolving-door syndrome—about which MIND has spoken—will continue with all the tragic consequences that flow from it for disabled people. Time after time, as my hon. Friend the Member for Monklands, West said in Committee, people are released from hospital and then have to be readmitted. As the House has been told on more than one occasion in debates on the care of people released from long-stay hospitals, people spend weeks or months in between release and readmission not only in cardboard boxes, but often in gaol.

What proper assessment aims to achieve is that people with disabilities are given the right help, in the right place and at the right time. That is what successful rehabilitation of disabled people is all about and why the delay in giving full implementation to the Disabled Persons (Services, Consultation and Representation) Act 1986 is so misconceived and so self-defeating in that appropriate care is also the most cost effective. There is no saving in denying people with disabilities the care appropriate to their needs when they leave long-stay hospitals. If community care, properly so-called, is not available to them, they are often forced to stay in or to return to institutional care at a far higher cost to the taxpayer than that of providing care in the community. Thus the policy of so strictly rationing resources for community care is neither cost-effective nor humane.

Any discussion of community care raises, of course, another inexcusable delay for which the Government are under attack from both sides of the House, namely, their failure to respond to the report from Sir Roy Griffiths, which was published over a year ago. It is indefensible for the Government to have dragged their feet for so long in relation to a report—whatever one may think of its findings—of such importance to many of the most needful people in Britain today.

The Bill has been described as being, in part, a parliamentary response to Griffiths. To that extent it anticipates the Government's response about which many of us now urgently want to be informed. The Parliamentary Under-Secretary is a Minister for Northern Ireland, but he is also a member of the Government as a whole. Can he now say when we will have the Government's response to Griffiths? At the same time, can he tell us any more than has so far been disclosed to the House about implementation dates for sections 1, 2, 3, 7 and 11 of the 1986 Act from which this Bill flows? He must have had consultations with ministerial colleagues on this matter if only because of the embarrassment that could result from speedier implementation of the legislation in Northern Ireland than in England, Scotland and Wales.

The last information that we had from the Minister for the disabled, was that section 11 would be the next section to be implemented at the end of this year. We were told that the implementation of section 7 would follow and then, even later, the implementation of sections 1, 2 and 3. The Minister gave us that information at a meeting of the all-party disablement group in the House on 24 January.

Can the Parliamentary Under-Secretary go any further today? He may know that his ministerial colleague was left in no doubt at the meeting of the all-party group that there is deep concern on both sides of the House about the delay in implementing crucial sections of the 1986 Act. Can the Parliamentary Under-Secretary give us any further information today?

With specific regard to the individual care plans for disabled people moving out of hospitals in Northern Ireland, who draws them up? Can the Minister tell us who is involved? How much further does clause 7 go than existing practice in Northern Ireland? It is extremely important for us to know, before the Bill leaves this House for the other place, how existing practice works, how successful it has been and precisely what changes the Minister envisages when the Bill is enacted and fully implemented?

In Committee the Minister won praise for his helpful response to the issues raised and for being refreshingly frank and fair in debate. I feel sure that he will want to be as helpful as possible in clarifying the Government's position today. In so doing, will he clarify the arrangements where a patient is discharged to Great Britain from a hospital in Northern Ireland or from a hospital in Great Britain to Northern Ireland? That question also has implications for implementation dates on both sides of the Irish sea.

I visited Northern Ireland as the then Minister for the Disabled, in the late 1970s. That was shortly after the extension to Northern Ireland of my Chronically Sick and Disabled Persons Act 1970. That was accomplished by Lord Fitt who was then the Member of Parliament for Belfast, West. I was told by disabled people in Northern Ireland of the very considerable importance of the 1970 Act to them and of the concern of their organisations about the long delay there had been in extending its provisions to the United Kingdom as a whole.

I pay tribute today to all who work in the service of disabled people in Northern Ireland and profoundly hope that the Minister can assure us that this Bill will be fully and speedily implemented there. It is about ending preventable suffering and making life better for people whose claims on the attention of this House are among the most important we have to consider. To economise on them at a time when the Chancellor has such an enormous surplus at his disposal, and when the richest 1 per cent. of taxpayers have never had it so good, is patently unacceptable to everyone who understands the importance to disabled people—not least to disabled children—of this Bill and the legislation from which it derives.

Again I congratulate the hon. Member for Belfast, South. I thank the Minister for his helpfulness in Committee and pledge total support from these Benches for the fastest possible enactment and implementation of this Bill.

1.23 pm

Ms. Marjorie Mowlam (Redcar): I shall be brief. I should like to lend support to the comments made by my right hon. Friend the Member for Manchester, Wythenshawe (Mr. Morris) in welcoming the measure that the hon. Member for Belfast, South (Rev. Martin Smyth) has brought to the House as a private Member's Bill this afternoon. We, too, hope that it will be speedily implemented.

I have on two hats—I represent pressure groups for the disabled in Redcar and the Northern Ireland Council on Disability. Both organisations are concerned that we might see the same sort of delays with this Bill that we saw with the Disabled Persons (Services, Consultation and Representation) Act 1986. We are keen that it should be implemented quickly and want assurances from the Minister when he responds this afternoon that we shall not have to wait solely on lack of resources.

Sometimes, the Government use another excuse for delaying legislation—lack of statistical detail and factual background. I am sure that the Minister will remember that the Office of Population Censuses and Surveys' survey did not apply to the disabled in Northern Ireland. The information service press release which it put out on 15 December 1988 said that a survey on disability for Northern Ireland would be carried out. The press release said that the survey would be

"carried out by the Policy, Planning and Research Unit of the Department of Finance and Personnel and will take about 2 years to complete."

It would be useful for the Minister to tell us how that survey has progressed in the first couple of months, whether it is on schedule and what results—if any—have been found up to now. It would be useful to know whether he will tell us at a later date that the Bill will not be implemented because the factual background and statistical detail is not available and there will be a two-year wait for the statistics. If we are to hear that excuse it would be useful if we could hear it from the Minister this afternoon so that we do not have to wait for oral and written questions and then, in two years' time, find that we are given this excuse.

I should like to highlight clause 5 which relates to special needs education which, with part of the Education Reform Act 1988 being implemented in Northern Ireland, concerns many Opposition Members. We are concerned about what will be done for those with special needs when the national curriculum is introduced and whether children in need of particular educational requirements will be denied that curriculum or segregated. Clause 5 is important in relation to education for that group.

Finally, if I may make so bold, I ask the Minister to clarify his position on how the Disabled Persons (Services, Consultation and Representation) Act 1986 applies to Northern Ireland. I am sure that he remembers responding to the hon. Member for Belfast, South in Committee by saying:

"The Department was considering introducing a Bill, but the hon. Gentleman"—

namely, the hon. Member for Belfast, South—

"came to our rescue. We are therefore most grateful to him. I think that we all agree that the 1986 Act should apply in Northern Ireland."—[*Official Report, Standing Committee C*, 22 March 1989; c. 5.]

However, in response to a question about whether the Bill should apply to Northern Ireland, the Minister said in a written answer:

"No. It would not be appropriate for Northern Ireland to be included in the scope of this Bill."—[*Official Report*, 24 February 1986; Vol. 92, *c436*]

I am sure that by that the Minister meant that it should not relate to the 1986 Act, but it would be useful if he would put that on record so that we are not left with contrary views that could be misinterpreted by the Minister.

We should be grateful if these two points were dealt with. We lend our full support to this Bill, but we want reassurance from the Minister that the political will and the resources exist to implement it, so that we do not have to wait as long as we did for regulations to be introduced under the 1986 Act, and so that disabled people will begin to benefit.

1.31 pm

Mr. John Hughes (Coventry, North-East): I welcome the opportunity to congratulate the hon. Member for Belfast, South (Rev. Martin Smyth) and to ask the House to consider whether the Bill offers enough protection for the disabled, especially those discharged from hospitals because of the pressures imposed on staff due to the denial of adequate finance for the National Health Service.

I draw this problem to the attention of the House because of the horrific circumstances in which my constituent John Carl Wright was discharged from a Coventry hospital into the community. Because of the Government's unwillingness to provide adequate finance, the hospital could not give him proper support. That led to a sequence of events which resulted in my constituent being detained in Birmingham's Winson Green hospital—

Mr. Deputy Speaker (Mr. Harold Walker): Order. I hope that the hon. Gentleman will not pursue this case very far, because the Bill is a Northern Ireland Bill. On Third Reading we are required to address ourselves to what is in the Bill.

Mr. Hughes: The circumstances that applied to my constituent could apply to a disabled person in Northern Ireland. I ask the House to consider whether a society in which such circumstances arise is civilised. Was my disabled constituent a criminal, or are the real criminals the Government who deny the necessary services for support in the community—

Mr. Deputy Speaker: Order. The hon. Gentleman might be on safer ground if he hypothesised about a hypothetical person in Northern Ireland who might find himself in hypothetical circumstances that were affected by the Bill.

Mr. Hughes: Whether the person lives in Northern Ireland, England, Wales or Scotland, the problems of all such people have been compounded by the changes in social security benefits. Government figures show that 3.65 million disabled people will be losers under the new system. New claimants could be £50 a week worse off from these changes.

I support this Bill, and congratulate its promotion.

1.35 pm

The Parliamentary Under-Secretary of State for Northern Ireland (Mr. Richard Needham): I was pleased to hear the contribution by the hon. Member for Coventry, North-East (Mr. Hughes) and noted his interest in the

affairs of Northern Ireland. I look forward to his continued participation in such debates, given his obvious knowledge about the affairs of the Province.

We have spent much time discussing aspects of the 1986 Act which, of course, do not bear on the Bill, although I accept that what we are discussing is an exact replica of that Act. I shall do what I can to answer the questions posed by the right hon. Member for Manchester Wythenshawe (Mr. Morris) about the aspects of the legislation that affect Northern Ireland. However, I am afraid that I am not able to do that in connection with matters that are the responsibility of my colleagues.

I am sure that the hon. Member for Redcar (Ms. Mowlam) knew the answer to the second question that she asked before she posed it. The 1986 Act was not appropriate for Northern Ireland because in Northern Ireland the social services and the health boards are integrated. That is why the Griffiths report does not have the relevance to Northern Ireland that it has to the rest of Britain. That was also why in Committee I congratulated the hon. Member for Belfast, South (Rev. Martin Smyth) on rightly pushing the Government to introduce the Bill. Although we had intended to do so, I congratulate him again on getting the Bill as far as he has.

The Bill institutionalises the good practice, which I hope currently exists, as the basis for caring for disabled people in Northern Ireland. It is right for the Bill to do that. I hope that in Northern Ireland the vast majority of the proposals in the Bill are already being applied. I accept that there is a need to institutionalise them and to build on them and we shall certainly do that.

The hon. Member for Redcar asked about the review. That was a "When did you stop beating your wife?" type of question. As the hon. Lady well knows, we do not intend to come forward prematurely with proposals that have been properly thought through or are not based on the statistics that are available to us. A review that could not be supported by the facts would be a mockery.

I shall not repeat what I said in Committee to the right hon. Member for Wythenshawe, but I stand by what I said then. Under no circumstances will we allow people in Northern Ireland to be released into the community without an assessment being made of their needs; nor will we tolerate people living in cardboard boxes. As I said in Committee and elsewhere, if there is any question of people not having proper care they will not be moved out. We shall ensure and insist that proper care is provided in every case. As I have said many times, we have no evidence that that has happened to anyone. If anyone can give us such evidence I shall look upon it with the utmost gravity.

Mr. Dennis Skinner (Bolsover): Will the hon. Gentleman give way?

Mr. Needham: No. I shall now reply to the hon. Member for Belfast, South, whose Bill it is. The sections of the Great Britain Act that are currently in force are sections 4, 5, 6, 8, 9 and 10. The equivalent clauses in the Bill are 4, 5, 6, 8 and 9. As the hon. Member for Barking (Ms. Richardson) said, clause 8 relates to carers. I was grateful for and accept her comments about carers. Clause 8 is a crucial part of the Bill. I trust that the boards in Northern Ireland consider cases at the moment with regard to carers in the terms set out in the Bill. We hope to get the equivalent clauses into operation as quickly as possible. I give an undertaking to the hon. Member for Belfast, South that we intend to do that as quickly as possible.

Ms. Mowlam: My point and the point that I am sure that the hon. Member for Belfast, South (Rev. Martin Smyth) was making is that we appreciate that the Minister says that he will do this as quickly as possible. However, we are concerned that many sections of the Disabled Persons (Services, Consultation and Representation) Act 1986 are still awaiting implementation. Therefore, "as quickly as possible" is a little vague and general. We want a definite response from the Minister about the time span.

With regard to my earlier point, I was not interested in whether the Minister beats his wife although it looks as if someone has beaten him this afternoon. I was asking specifically whether he will use the survey which is being carried out into disability in Northern Ireland over the next two years as a reason why nothing will happen over the next two years. The Minister's response seemed to be that we will have to wait two years before anything happens.

Mr. Needham: I did not say that. The hon. Lady heard perfectly well what I said. She reaffirms my view that she knew the answer to the question that she asked. She knows perfectly well that whatever I say she will treat as unsatisfactory. It would be intolerable, as the hon. Lady knows, for us to come forward with a review if it had not been thought out and we did not have all the available statistics. This process will take however long is necessary. I cannot say that it will take two years, two months or two days. We will do it as quickly as possible, as the hon. Lady knows. We need to do it as quickly as possible to ensure that the service available for disabled people in Northern Ireland is as capable and adequate as we can make it.

The right hon. Member for Wythenshawe asked why there is such so much money available for the budget in Northern Ireland in comparison to the rest of the country. The right hon. Gentleman and the hon. Member for Redcar know that there are higher levels of deprivation and morbidity in Northern Ireland. I was grateful to the hon. Member for Belfast, South for explaining the valid reasons for the funding and for putting on the record some of the not so valid reasons.

We must analyse how we can best use the resources. We are going back to the boards to discuss the costs of this legislation once it is introduced. The figures are not available at the moment. The right hon. Member for Wythenshawe knows only too well that it is not for me to say, priority by priority, how the boards spend the money that is allocated to them. If I did that, there would be no point in having the boards. It is up to the boards, as part of their strategic plans, to determine how the resouces are to be spent and what resources they can find to implement the legislation.

However, I accept that the Bill is important and necessary for Northern Ireland. I congratulate the hon. Member for Belfast, South on the way in which he has handled his Bill and, as I said, I will do everything to ensure that we implement as quickly as possible everything that is already being implemented in Britain. Thereafter, we will look at the other clauses, which I hope will soon be sections, to see how quickly we can add those to the list. I agree entirely with the hon. Member for Belfast, South

[Mr. Needham]

that we must do everything possible to improve and build on the very good level of care that we currently provide for disabled people in Northern Ireland.

Mr. Deputy Speaker (Mr. Harold Walker): I call Mr. Skinner.

1.44 pm

Mr. Skinner (Bolsover): Said Mr. Deputy Speaker with a heavy sigh.

Mr. Deputy Speaker: Order. The hon. Gentleman underrates the gravity with which I called him.

Mr. Skinner: I was here this morning on the dot, and I have just listened to the Minister reply to the points made by my right hon. and hon. Friends. I also recall other Bills for the disabled being brought before the House since 1970 by other Back Benchers. One of them was my right hon. Friend the Member for Manchester, Wythenshawe (Mr. Morris), who in 1970, together with his brother, introduced a Bill. My right hon. Friend has been arguing for additional resources for the disabled ever since.

The law is being broken left, right and centre by the Government and by mainly Tory local authorities refusing to implement the Chronically Sick and Disabled Persons Act 1970. My hon. Friend the Member for Redcar (Ms. Mowlem) asks when the Bill will be enacted and when extra resources will be made available. Despite her further intervention, the Minister has not given a satisfactory reply.

The hon. Member for Belfast, South (Rev. Martin Smyth) should beware the sprat that is thrown to catch a mackerel. There is just half a chance that the Under-Secretary of State for Northern Ireland will tell him that a little more might be done, provided that he signs on the dotted line in respect of the Anglo-Irish Agreement. I can see that coming. I can see there being a bit of blackmail, with the Government saying, "We can hurry this measure along and help the hon. Member with his private Member's Bill", because that is how callously the Government treat the disabled. If that were not the case, why does my right hon. Friend have to battle week in, week out for the necessary resources? I warn all right hon. and hon. Members who think that the Bill is past the post that they should beware when a private Member's Bill is given the nod by the Government.

One would think that the Government did not have the money to implement the Bill yet we are talking about helping only 100,000 disabled people in Northern Ireland. We are talking about providing them with telephones, and it can be argued that they need telephones more than people in other parts of the United Kingdom. Only a few weeks ago the Chancellor of the Exchequer told the House, "I've got £14,000 million and I do not know what to do with it." Then a Minister tells the House on a Friday afternoon that he does not know where the resources to meet the Bill's provisions will come from—just a few hundreds of millions of pounds to help to meet the needs of the disabled.

My right hon. Friend the Member for Wythenshawe pointed out that the Bill is all about making sure that assessments are speeded up. We know only too well that it is one thing to tell the disabled that their local authority is looking into the matter, but it is another when an official reveals that the rate support grant has been cut again and that assessments must be slowed down, saying, "We feel sorry for the disabled but we must shove those assessments into a little pigeon hole." The country is awash with money. The Chancellor is paying off the national debt when he should be paying off society's debt to the disabled both in Britain and in Northern Ireland. He should be paying off our debt to the people who have grafted all their lives and who generated this country's wealth. Instead, we have a tinpot Minister coming to the House who must have tumbled off his motor bike—he has a scar on his face.

The Minister says that he cannot guarantee when the Bill will be enacted, but he dangles that prospect like a carrot. It may be a question of waiting until a few moffths before the next general election and then of making a special announcement to provide a sweetener to the people of Northern Ireland. We may subsequently see English, Scottish and Welsh Ministers coming to the House and telling my right hon. Friend that, in lieu of the Northern Ireland legislation, the Government intend doing a little more.

My right hon. Friend the Member for Redcar wanted the Minister to be more specific over timing.

Ms. Mowlam: I am sure that my hon. Friend is aware that one of the reasons why the Northern Ireland Council on Disability is so keen to see the legislation on the statutue book is the impact of the Government training schemes, which is causing particular concern in Northern Ireland. The schemes are not servicing the needs of the disabled and many young disabled people have no future.

Mr. Skinner: This has always been a problem in Northern Ireland. Disabled people are usually at the bottom of the pile, and you can bet your bottom dollar that in a capitalist society they will be the first to be shoved on one side and thrown on the scrap heap. If hon. Members look at the cardboard boxes on the Charing Cross embankment, they will see a lot of disabled people.

In Northern Ireland, mass unemployment has prevailed throughout my lifetime at least. It has never been conquered, and it is one of the problems—although not the only one—at the root of the trouble in Northern Ireland. That is why from time to time the Government throw other little sprats, such as the Harland and Wolff privatisation scheme, but I shall not talk about that today —I noticed you shuffling in your chair, Mr. Deputy Speaker.

Let me say this to the Minister: get along to the Prime Minister—when she has got rid of her flavour-of-the-month friend Gorbachev—and tell her, "There has been a debate in the House of Commons this morning about a necessary Bill for Northern Ireland. Only a few hundred million pounds are needed to provide a bit more comfort for disabled people there." The Minister is not listening; he does not care.

Let the hon. Gentleman say to the Prime Minister, "You are the Prime Minister who, only a few weeks ago, found £500 million on the nod to try to placate a dozen Tory Kent constituencies with which you were in trouble." The Bexley Mujahidin came down with the hordes, and she found the money—I hear that it has now risen to £800 million. That is the Prime Minister who found a sum of money on a television programme because there was a mix-up over some figures between her and the Secretary of State for Northern Ireland. She trots around all those

gimmicks. Is it not time that Ministers had the guts to challenge her? Instead of letting themselves be treated like rubbing rags or dishcloths, why do they not say to her, "If I am to carry out the proper wishes of the people of Northern Ireland, I need money"? And the same applies in Great Britain.

Having more or less assured the hon. Member for Belfast, South that the Bill would be passed, and having given him other little assurances on the side that everything would be all right, the Minister now comes along on the fateful morning—sent by his gaffer—to tell the House, "I will not give in on the question of resources", and to stick to it rigidly. He has been told, "Stand your ground. We have £14,000 million of taxpayers' money, but you cannot give it to the disabled."

I think that the Minister should make one last effort to answer at the Dispatch Box. He should say exactly what he will do about resources, when the Bill will be enacted, when the necessary assessments will be made and when money will be provided to cure some of the problems in Northern Ireland. Then we in Great Britain can build on that.

1.53 pm

Rev. Martin Smyth: I appreciate the helpful contributions made by hon. Members on both sides of the House, particularly the arguments of the hon. Member for Barking (Ms. Richardson) on behalf of carers. I think that the Minister has got the message.

I was also delighted by what was said by the hon. Member for Bolsover (Mr. Skinner). It may reflect a conversation that I had recently with an old sparring partner of his who now deals with social services in Northern Ireland, and who sent his greetings.

If there is any suspicion that we in Northern Ireland can be bought off on this day of days, I must say that we, too, can speak Russian and that we say, "Niet."

Question put and agreed to.

Bill accordingly read the Third time, and passed.

Common Land (Rectification of Registers) Bill

Considered in Committee.

[MR. HAROLD WALKER *in the Chair*]

Clause 1

REMOVAL FROM REGISTER

Amendments made: No. 1, in page 1, line 6, leave out from 'the' to end of line 9 and insert

'registration authority maintaining a register of common land and of town and village greens under the Commons Registration Act 1965, object to the inclusion on either of the registers of the whole or part of any land in respect of which the requirements specified in subsection (1A) below are satisfied.

(1A) Those requirements are—

(a) that there is, and at all times since 5th August 1945 has been, a dwellinghouse on the land;

(b) that in so far as the land is not the site of the dwellinghouse it consists of land ancillary to that dwellinghouse; and

(c) that the land does not include any land which on the said 5th August was niether the site of the dwellinghouse which was then on the land nor land ancillary to that dwellinghouse.

(1B) For the purposes of subsection (1A) above land ancillary to a dwellinghouse means a garden, private garage or outbuildings used and enjoyed with the dwellinghouse; and in that subsection "dwellinghouse" includes a building consisting of two or more separate dwellings.'.

No. 3, in page 1, line 13, leave out from beginning to end of line 16 and insert

'requirements specified in subsection (1A) above are satisfied in the case of the land to which the objection relates, he shall give notice of his decision to the registration authority who shall modify the register so as to exclude that land.

(3) Where a register is modified under this section so as to exclude any land the registration authority shall also cancel the registration of any person as the owner of that land.'.—*[Mr. Favell.]*

Clause 1, as amended, agreed to.

Clauses 2 and 3 disagreed to.

Clause 4

CITATION

Amendment made: No. 5, in page 2, line 6, at end insert—

'(2) This Act applies in relation to land in which there is a Crown or Duchy interest within the meaning of section 23 of the said Act of 1965 as it applies to land in which there is no such interest.

(3) This Act does not extend to Scotland or Northern Ireland.'.—*[Mr. Favell.]*

Clause 4, as amended, agreed to.

New Clause 1

REGULATIONS

'Section 19(1), (4) and (5) of the said Act 1965 (Regulations) shall have effect as if this Act were included in that Act; and regulations under that section may also prescribe the payment of a fee not exceeding £100 on the making of an objection under this Act.'.—*[Mr. Favell.]*

Brought up, read the First and Second time, and added to the Bill.

Title

Amendment made: No. 6, in line 1, leave out from beginning to 'and' in line 5 and insert

'Provide for removing from the registers maintained under the Commons Registration Act 1965 land on which there is, and at all times since 5th August 1945, has been a dwelling house.'. —*[Mr. Favell.]*

Bill, as amended, reported.

Order for Third Reading read.

Mr. Speaker: Queen's and Prince of Wales's consent?

Sir Bernard Braine (Castle Point): So given.

1.56 pm

Mr. Tony Favell (Stockport): I beg to move, That the Bill be now read the Third time.

Under the Commons Registration Act 1965, all common land in England and Wales, or a town or village green, together with rights of common ownership of such land has to be registered. In all, about 1·5 million acres of land were registered. Kate Ashbrook of the Open Spaces Society says in her excellent booklet "Our Common Right" that the variety of landscape and habitat embraced by common land is quite unique. Both she and others who are interested in our rural heritage want to protect the existing commons. I support them in their anxiety to see the Government implement the pledge that was given in the last Conservative party manifesto to that effect.

This short Bill is directed not towards protecting existing commons but towards remedying an injustice that arose out of the 1965 Act. The result is that several hundred home owners have had their houses registered as common land and they have found that it is difficult, if not impossible, to sell their houses.

Under the 1965 Act, common land has to be registered. Acre upon acre was registered provisionally by interested parties. Provisional registration was advertised. If no objection was received by a date now long since past, those rights were recorded on a common register. Unfortunately, the Act contained no provision to remove from the register houses that had been registered as common land by mistake. It is towards remedying that defect and injustice that the Bill is directed.

1.59 pm

Ms. Joan Walley (Stoke-on-Trent, North): I support the Bill, and I should like to use this opportunity to make some points on the wider issues. The Bill addresses a small element of the problem that surrounds common land, and I welcome the opportunity that it affords to put right a small part of what is wrong. I also welcome the Bill's proposals in relation to land registry and the fact that it does not appear to prejudice the more general legislation that is so obviously needed.

There are deficiencies under the Commons Registration Act 1965 which need to be rectified. The Bill addresses itself to the anomaly of land mistakenly registered as common land and makes provision to deregister in such cases. At least two safeguards should be introduced. First, application to deregister under the Bill should be advertised on site and, secondly, the common registers office—usually the county council—should notify the Commons Open Spaces and Footpaths Preservation Society. That would ensure that full and fair public notice was given of any claim to deregister and that appropriate experts with the necessary resources and commitment could properly assess the case in hand.

I am sure that Conservative Members who support the Bill will agree that we have been waiting for a long time for comprehensive legislation to deal with the matter. The Government must address themselves to the much wider issues of common land registration. This is the appropriate time to ask exactly when they will honour their manifesto commitment to common land on the basis of the common land forum. The Government have said that they will legislate as soon as parliamentary time permits. They must surely be able to give a clear indication of when that will be. I suggest that these are matters of political will. I hope that the Government will have the political will to deal with this matter just as they have clearly shown their political will in respect of many other issues for which they have made parliamentary time, and the time of parliamentary counsel, available.

Mr. Favell: I shall probably not have another opportunity to speak, so let me just say that I agree with the hon. Lady that applications or objections under the Bill should be clearly advertised on site. The Bill has had to be introduced precisely because people were not aware of what was happening. I also agree with the hon. Lady that we need omnibus legislation. Finally, I think that it would be useful if societies such as the open space society and other interested parties were made aware of applications under the Bill.

Ms. Walley: I welcome the hon. Gentleman's intervention. It would be sad if we made the same mistakes in the Bill as were made 20 years ago. The Minister is nodding; I am sure that she has taken those points on board.

I am not usually a cynical person but if one were cynical, one might imagine that groups such as the Moorland Association had undue influence upon the Government through traditional channels. Those private interest groups made loud noises following the Conservative manifesto commitment, saying that access to areas of grouse moorland and the like registered as common land should be restricted to public footpaths. Any concessions to such interest groups would lead to equal pressure being exerted by other groups and would debase the agreement surrounding the common land forum. They would also represent a clear breach of the Government's manifesto promise.

The public have a right to walk on all common land in England and Wales subject to commonsense restrictions enshrined in bye-law's. At present there are 1·5 million acres of common land—an area the size of Lincolnshire —yet the public have rights in relation to only one fifth of that area. It is clear that management associations should be made up of all interests in common land—owners, common rights holders and the public—represented by local authority nominees. Such associations would sort out the necessary provision of common land in the best interest for use and recreation by the general public.

Perhaps the most essential purpose of the legislation is to sort out all the deficiencies of the Commons Registration Act 1965. The Act allows properly registered land to be deregulated, for example if the owner of the land gets the common right holders to give up those rights, thus extinguishing common land and allowing it to be deregistered. Therefore, further to deregistering land that is mistakenly classified as common land, the legislation should tighten up abuses of the system which allow properly registered land to be deregulated. All land on the registers at the time of this legislation should be deemed to

remain common land, unless there is proof that it was originally classified by mistake. Those measures are supported by the common land forum and were endorsed by the Government. I ask for a clear commitment to those principles by the Government and for it to be made known if and when the Government will honour their promises. In that context, I welcome the Bill.

2.5 pm

The Parliamentary Under-Secretary of State for the Environment (Mrs. Virginia Bottomley): I warmly congratulate my hon. Friend the Member for Stockport (Mr. Favell) on bringing forward this important Bill which will rectify an injustice and grievances which have faced many people in this country. I will put the matter in its context to reply to the hon. Member for Stoke-on-Trent, North (Ms. Walley).

The registration of commons took place as a first step to meet the 1958 Royal Commission's report on common land and its suggestion that legislation should be brought forward to cover common land generally—obviously, a first step was to establish registration—before moving on to measures covering better management and access, which the hon. Lady mentioned. Arising out of the Commons Registration Act have been the anomalies which my hon. Friend hopes to redress. The common land forum was set up by the Countryside Commission to analyse the various steps that would be necessary to meet some of the 1958 Royal Commission's report. It produced its report in 1986, and, a year later, the Government produced a consultation paper on the basis of it.

Although there is broad agreement on many issues and the common land forum did an excellent job in bringing together diverse interests—for example, access groups, local authorities and landowners—several controversial issues have not been satisfactorily settled. As soon as it is possible to make progress on legislation, when parliamentary time is available, the Government will bring forward that legislation. I share the hon. Lady's wish for these matters to be brought to a satisfactory conclusion. It must be on the basis of a little further work and agreement. Within that overall strategy, which is a firm Government commitment, we are making headway today with my hon. Friend's Bill to redress the anomaly.

The hon. Lady asked for an assurance that local authorities will be informed of any proposals to remove a property from the register. I can give that assurance. When we make regulations as soon as possible after the legislation comes into force, we will make sure that the widest possible publicity is given to applications under it. We expect that publicity to include advertisements in the local press, notice to local authorities, including parish councils, and, possibly, a notice on the property. We will also give sympathetic consideration to any suggestion that amenity societies should be informed of an application to remove a dwelling from the register. The lack of notification led to many of the difficulties of the 1965 Act.

I wish the Bill well and hope that it will achieve the objective of dealing with unfortunate anomalies.

2.9 pm

Mr. Dennis Skinner (Bolsover): I have lived all my life in the countryside, and my constituency is rural in character. It is about 30 miles long and about the same wide.

For the past 12 months or thereabouts I have sat in this House and heard talk from the Government about privatising water. I should like to know from the Minister just how this Bill will fit in, supposing that water is privatised and that the Water Bill receives Royal Assent this year. When the French come in and buy up all the land, how much will this Bill, introduced by the hon. Member for Stockport (Mr. Favell), prove to have been taken into account in relation to the privatisation? Instead of private companies or public authorities holding 75 per cent. of the land associated with water, Perrier-type people will be buying it all up. Therefore, I want to know what safeguards the Government will provide to make sure that the Bill is carried through properly.

I also want to know—I have not heard this from the Minister—about the money that will be provided. However, perhaps I should not ask too many questions too quickly because the Minister's hon. Friend the hon. Member for Maidstone (Miss Widdecombe) is having to run backwards and forwards to the civil servants in the Box to try to find the answers. These things should have been thought through.

If the Government are so keen on privatising water, they should not be giving these assurances to their hon. Friend the Member for Stockport who also wants to privatise water but who wants at the same time to preserve common land to some extent. Those two things are in contradiction and we want an answer on that point.

I also want to know who will be responsibile for picking up the litter on the common land. We hear a lot of talk from the Prime Minister who runs about the country with a bag in her hand——

Mr. Deputy Speaker (Mr. Harold Walker): Order. I hope that the hon. Gentleman will address himself to what is in the Bill. It is about removing from the register of common land certain dwelling houses as specified in the Bill.

Mr. Skinner: Yes, and when those things are removed from the register——

Mr. Gerald Bermingham (St. Helens, South): What comes after?

Mr. Skinner: My hon. Friend is absolutely right to ask what comes after. One cannot deregulate this and deregulate that and expect everything to remain the same. I have asked a simple enough question. The Prime Minister runs to Tory party conferences talking about, "Bag it and bin it and stick her in it"—at least that is what she should have said. What is going to happen? Who will see to the litter? How much money will the Government provide to ensure that the provisions of the Bill are carried out?

I referred earlier to the fact that there is all this money in the country, so will the Minister provide the necessary resources? *[Interruption.]* I am not talking about this year; I am talking about later. The hon. Member for Surrey, South-West (Mrs. Bottomley) has been a Minister for only five minutes and does not know whether she is on this earth or Fuller's. I am telling her that private Member's Bills have been passed before. My right hon. Friend the Member for Manchester, Wythenshawe (Mr. Morris) was here earlier. He thought that he had got all the money under the sun for the chronically sick and the disabled back in 1970, but they did not get it. That is why I am

[Mr. Skinner]

asking these questions. What about the necessary resources? I should like to hear from the Minister about what effect the water privatisation——

Mr. Favell: The hon. Gentleman, who represents Bolsover, which is a place that I know well because I fought the seat in 1979—alas unsuccessfully—has raised an important point. In the Bill I have provided that those applying to take their houses off the register should pay a fee not exceeding £100 so that no burden should fall on others.

Mr. Skinner: And that will apply this year, next year and sometime never, irrespective of the rate of inflation and other things? The way that we are going on with 8 per cent. inflation, it will not be long before that £100 will have to be changed. It is all very well to think that here we are caught in a time warp on a Friday morning and that everything in the garden is lovely, but we should project our minds a little further ahead and think about what this Bill will mean when water has been privatised, when the French have moved in and when we are under the domain of the Common Market to an even greater extent than at present—and that will happen because the Tories will give in over and over again. We should think about all those things and about what the Bill will mean. It will probably not be worth a row of beans.

I am asking the hon. Member for Stockport to ask the Minister to ensure that the safeguards are built in not just for today, and that the Bill will have something of value in years to come.

Question put and agreed to.

Bill accordingly read the Third time, and passed.

Licensing (Low Alcohol Drinks) Bill

Order for Second Reading read.

2.15 pm

Mr. Conal Gregory (York): I beg to move, That the Bill be now read a Second time.

I consider that Private Members' time is a traditional time for remedying deficiencies in our legislation, and my Bill is in that mould. It seeks to rectify an anomaly in the law relating to beverages. I declare a distant interest as I am a master of wine by qualification. That involves an examination based on a thorough knowledge and evaluation of wine. I should like to place on record my thanks to the National United Temperance Council, whose energetic secretary, the Reverend Bernard Kinman, has been most helpful, to Mrs. Ann Jesper of Leisure Drinks Limited and to those right hon. and hon. Members who have indicated their support, especially the hon. Members for Berwick-upon-Tweed (Mr. Beith) and for Greenock and Port Glasgow (Dr. Godman) and my hon. Friends the Members for Bolton, North-East (Mr. Thurnham), for Derbyshire, South (Mrs. Currie) and for Southend, East (Mr. Taylor). The Bill clearly has all-party support.

Garibaldi could have been right when he said:

"Bacchus has drowned more men than Neptune."

Moderation in the consumption of alcohol is very much the sensible approach today. At a governmental level the production, distribution and sale of beverages crosses many Departments. I welcome my hon. Friend the Under-Secretary of State for the Home Department to our debate. Only this week the Home Office research and planning unit produced a study of drinking and disorder in rural areas. Today the House has the opportunity to bring legislation into line with modern practices. It is nonsensical that the law regarding low and non-alcoholic drinks is based on the manufacturing process rather than on the alcohol present in the product at the time of sale. As a result, shandy, which may be 0·9 per cent. by volume, can be bought in any corner shop selling soft drinks, but a de-alcoholised wine only 0·05 per cent. by volume cannot be sold through such an outlet and is legally confined to licensed premises.

The market for alternative drinks hardly existed in the United Kingdom before the 1980s. The phenomenal growth, together with the increase in the consumption of mineral waters, constitutes possibly the most significant change in drinking habits this century. Those changes have evolved alongside greater public awareness of health care, drinking and driving, and of the alcoholic factor in such issues as child abuse, broken homes, football hooliganism and a long list of criminal activities.

The fact that similar trends have been observed in the United States of America and in other countries gives good reason to assume that this change in the nation's drinking habits is not a passing fad. It is necessary that alternative drinks be covered by unambiguous and enforceable legislation. Existing legislation—both the Licensing Act 1964 and the labelling regulations—causes confusion not only to the public, but to the trade. Despite that simple fact, the Licensing Act, when applied to alternative drinks, makes a distinction according to the method of production, and the labelling regulations make a distinction according to the type of drink.

Imagine a girl serving behind a bar in a large hotel in one of our major cities plaintively asking, "Can I sell this low alcohol lager in the afternoon?" Such a scene highlights a growing identification problem that afternoon opening hours have not resolved.

The problem is the complicated labelling requirements for drinks that do not need a licence. Those are not the regular soft drinks—we all know where we stand with those—but the new breed of alternative drinks. Those are the non-alcoholic lagers and wines, and many other non-alcoholic drinks now coming on to the market, such as the Pernod and Campari lookalikes, and the vermouths and the ciders that contain less than the magic 1·14 per cent. of alcohol by volume above which a licence is required for their sale.

Why do the British have to complicate such things? In France, West Germany and the rest of the European Community, drinks below the respective country's licensing level are called such things as "alcohol-free wine" or "biere sans alcohol". In the United Kingdom the phrase "alcohol free" is used if the alcohol content is less than 0·05 per cent., the phrase "de-alcoholised" is used if the drink is below that level and "low alcohol" is used if the alcohol content is above 0·05 per cent. A drink must also be described as low alcohol if it is above the 0·05 per cent. content, but not produced by a de-alcoholisation process.

Mr. Gerald Bermingham (St. Helens, South): Does the hon. Gentleman agree that if one puts "alcohol free" on the label of a drink that contained a percentage of alcohol, but was below the required alcohol level, one would be misleading the public? They would believe that the drink was alcohol free and what would happen to those persons who suffer from an illness that makes them allergic to anything that contains alcohol? Would they be put at risk?

Mr. Gregory: I share some of the hon. Gentleman's reservations and I look forward to debating this further with him on Report.

The purpose of the Bill is to remove from the Licensing Act 1964 and the Licensing (Scotland) Act 1976 certain words that prevent some beverages with low alcohol content from being sold without a justice's licence or the Scottish equivalent. The definition of "intoxicating liquor" in section 201(1) of the Licensing Act 1964 contains an exception for, inter alia:

"any liquor, whether made on the premises of the brewer for sale or elsewhere, which is found on analysis of a sample thereof, at any time, to be of an original gravity not exceeding 1016° and of a strength not exceeding 1·2 per cent."

Time is now against me, but in a debate in the other place on 31 March 1988, Lord Lucas of Chilworth moved an amendment to the Licensing Bill which was similar to my Bill. The one area with which he did not deal was alcohol free clubs. If my Bill is passed such clubs would be allowed to open. Currently, we are forcing such clubs—clubs in the north of England are particularly anxious about this—to obtain a licence. That defeats the object they wish to achieve. At present retail outlets do not know whether it is legal to sell certain products because the production method may not be stated on the label.

I appreciate that we may be months away from new labelling legislation, which I would welcome. My Bill seeks to push us on to modern legislation a little quicker. As T.L. Peacock said in "Melincourt":

"There are two reasons for drinking; one is, when you are thirsty, to cure it; the other, when you are not thirsty, to prevent it."

The Bill will extend choice and introduce sense to the legislation on beverages. I commend it to the House.

2.22 pm

The Parliamentary Under-Secretary for the Home Department (Mr. Douglas Hogg): Time is short and therefore I shall be brief.

My hon. Friend the Member for York (Mr. Gregory) has explained the purposes of the Bill and I will not repeat them save to say that he is to be congratulated on bringing the Bill before the House. My hon. Friend is correct that there is a problem with the definition. There is considerable merit in the suggestion that the definition should be directed at the alcoholic content of the drink at the moment of sale and not at the process of manufacture, which is now the case. The House may adopt such an approach. If it does so, it must then consider the threshold at which the definition must bite.

The Bill, as presently drafted, contemplates a definitional threshold of 1·2 per cent. by volume. The House may feel that that is too high and that some lower threshold is appropriate. That matter should be looked at on a subsequent occasion.

The Government are not opposed to the principle of the Bill; nor would we oppose its Second Reading. However, we have considerable reservations about the threshold as presently reflected in the provisions of the Bill.

2.24 pm

Mr. Stuart Randall (Kingston upon Hull, West): I too congratulate the hon. Member for York (Mr. Gregory) on introducing the Bill and providing the House with an opportunity to discuss a serious matter. I am also glad that the Minister has shown his support for the Bill in principle, although the Government are concerned about some technical matters, such as the levels of alcohol.

The 1964 Act, which the Bill aims to amend, is a complicated and thick piece of legislation. The definitions in the Act consist of two parts: the classes of liquors—referring to wines, spirits, beers and ciders—and the specific gravity. The 1964 Act was originally designed to ensure that when people bought drinks they were not watered down. The Bill provides the opportunity of moderating the consumption of drink. I am sure that all hon. Members will welcome the fact that people are being given the opportunity to choose which sort of drink to take.

The problems towards which the Bill is directed include those relating to young people when they go out together. A few weeks ago I saw a group of young students—sensible people—who wanted to go out for an evening. They all decided that they would go to a pub. I questioned them on this but they replied, "Where else can we go?" We seem to have a society where it is automatically assumed that if we want to go out, we go to a public house. When we arrive, there are compulsions and pressures to drink alcohol.

In light of the pressures that society has placed on young people it seems reasonable to ensure that they are given as wide a range of drinks as possible. I shall not expand on the way in which I should like pubs to change, because that would be wide of the Bill. We are talking about the levels of alcohol in the drinks on sale, in accordance with the Licensing Act 1964.

[Mr. Stuart Randall]

Another matter that concerns all hon. Members is the crime-related aspect of drink. As the House will be well aware, there are record levels of crime in this country and much of it is carried out by young people. We also know that those crimes are often drink related. Women and elderly people are often frightened about going out late at night because they fear that people who have drunk too much will be on the rampage.

Mr. Bermingham: Does my hon. Friend agree that the Minister made a valid and telling point when he raised the question of the level at which the alcohol-free symbol is used? Young children could be affected by 1·2 per cent. of alcohol.

Does my hon. Friend also agree that we must not only set the appropriate level but make it clear to the public at large that "alcohol free" may not mean "alcohol free", because some people who react to alcohol may be endangered by not understanding the real meaning of the phrase?

Mr. Randall: My hon. Friend makes a good point. We could mislead the public if drinks are not properly labelled. The Germans call drinks "alcohol frei". We must be careful because they are not always alcohol free.

I shall end now because other hon. Members want to speak. There is also a health aspect to this matter. The Opposition welcome the Bill and hope that it will have a speedy passage through the House.

2.29 pm

Sir Bernard Braine (Castle Point): Common sense suggests that it must be socially desirable to increase the availability of low and non-alcoholic drinks, especially for drivers and young people, at a time of growing alcohol abuse.

The hon. Member for St. Helens, South (Mr. Bermingham) was absolutely right: the cut-off level of alcoholic content in the Bill, at 1·2 per cent., is far too high. There are good reasons——

It being half-past Two o'clock, the debate stood adjourned.

Debate to be resumed on Friday 7 July.

Private Members' Bills

ABORTION (TREATMENT OF NON-RESIDENT WOMEN) BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 5 May.

INDECENT DISPLAYS (NEWSPAPERS AND WORKPLACES) BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 14 April.

FUEL AND ENERGY PROVISION BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 21 April.

PROTECTION OF RESIDENTS IN RETIREMENT HOMES BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 21 April.

HOUSING THE HOMELESS BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 21 April.

PLANNING PERMISSION (DEMOLITION OF HOUSES) BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 7 July.

ABORTION (AMENDMENT) BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 5 May.

AGE OF LEGAL CAPACITY (SCOTLAND) BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 14 April.

HOUSING ASSOCIATIONS (ACCESS TO INFORMATION) BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 21 April.

FUNERAL INDUSTRY (CODE OF PRACTICE) BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 21 April.

GAMING MACHINES (PROHIBITION ON USE BY PERSONS UNDER EIGHTEEN) BILL

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 14 April.

LONDON GOVERNMENT BILL

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 21 April.

HARE COURSING BILL

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 5 May.

JUNIOR HOSPITAL DOCTORS (REGULATION OF HOURS) BILL *[LORDS]*

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 21 April.

Mr. Dennis Skinner (Bolsover): On a point of order, Mr. Deputy Speaker. I have just been watching this procession of Bills. My hon. Friend the Member for Birmingham, Hodge Hill (Mr. Davis) has moved the Second Reading of a Bill to reduce the number of hours that junior doctors work. The hon. Member for Watford (Mr. Garel-Jones), a Government Whip, objected to the Bill, which is terrible——

Mr. Deputy Speaker (Mr. Harold Walker): Order. Be that as it may, the hon. Gentleman will have to wait until Second Reading to express his views. Nothing was out of order.

Mr. Terry Davis (Birmingham, Hodge Hill): Further to that point of order, Mr. Deputy Speaker. This is an unusual situation. The Bill has already been passed in another place, where the Government neither opposed it nor objected to it. Is it not unusual for the Government to shelter behind procedure of this sort in order to thwart a worthwhile Bill's passage?

Mr. Deputy Speaker: Nothing out of order occurred.

RIDERS OF EQUINE ANIMALS (WEARING OF PROTECTIVE HEADGEAR) BILL

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 14 April.

Mr. Deputy Speaker: May I ask hon. Members to make their objections quite clear?

COAL MINING SUBSIDENCE (DAMAGE, ARBITRATION, PREVENTION AND PUBLIC AWARENESS) BILL

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 21 April.

DATA PROTECTION

Ordered,

That the provisions of paragraph (2) of Standing Order No. 84 (Constitution of standing committees), paragraph (1) of Standing Order No. 86 (Nomination of standing committees) and Standing Order No. 101 (Standing Committees on Statutory Instruments, &c.) shall apply to the Pension Arrangement of the Data Protection Registrar as if it were a statutory instrument; and that the said Pension Arrangement be referred to a Standing Committee on Statutory Instruments, &c.—*[Mr. Garel-Jones.]*

Mr. Harry Greenway (Ealing, North): On a point of order, Mr. Deputy Speaker. I thought that I heard the hon. Member for Bolsover (Mr. Skinner) object to the Riders of Equine Animals (Wearing of Protective Headgear) Bill, but he indicates that that was not the case. Would it be possible to put the Question again?

Mr. Deputy Speaker: I know not from whom the cry came, but the hon. Gentleman will recall that to put the matter beyond doubt I asked for confirmation that there was an objection and clearly received such confirmation. The hon. Gentleman will also recall that, in the light of that, I asked hon. Members to make their objections clear and beyond peradventure.

Mr. Gerald Bermingham (St. Helens, South): On a point of order, Mr. Deputy Speaker. There was an objection to Bill No. 17 on the Order Paper. I promptly asked the Government Whips which one of them had done the dirty deed and they all denied it. As there was nobody else on the Bench, I should like to know who objected.

Mr. Deputy Speaker: I am surprised that hon. Members are able to tell me that they have been engaged in conversation across the Chamber while I am on my feet trying to conduct business. I heard the word "object" loud and clear, and we have passed on from that.

BUSINESS OF THE HOUSE

Ordered,

That, at the sitting on Wednesday 12 April, notwithstanding the provisions of Standing Order No. 15 (Prayers against statutory instruments, &c. (negative procedure)), Motions in the name of Mr. Neil Kinnock relating to National Health Service and National Health Service (Scotland) may be proceeded with, though opposed, for three hours after the first of them has been entered upon; and if proceedings thereon have not been previously disposed of, Mr. Speaker shall then put the Question already proposed from the Chair.—*[Mr. Garel-Jones.]*

Malta

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Garel-Jones.]*

2.37 pm

Mr. Harry Barnes (Derbyshire, North-East): In discussing our relations with Malta we are contrasting two very different nations. The differences are not just in size, climate, location, religion and life styles, because, related to those factors, there are deep economic and political differences. In this forum it is naturally the economic and political factors on which we should concentrate.

Britain was the first country to industrialise and was the birthplace of fully-fledged capitalism. With such a position came the acquisition of an empire, including the establishment of a Crown colony in Malta in the early years of the 19th century. Although Britain developed its own vigorous trade union and Labour movement, the strength of competitive, individualistic and jingoistic ideas have always been strong here and have had a powerful impact on the norms and values of a wide section of working class people. Hence we have seen, at least temporarily, the triumph of Thatcherism entering into jingoistic activity in the Falklands and pushing forward the power of monopoly capitalism.

Malta is very different from us in such matters, although it has deep bonds with and affection for the British people, has English as one of its two languages and welcomes masses of British tourists to its shores. Everyone will remember its herioc struggle against Fascism in the second world war.

Throughout its history until recently it has been dominated by many outside forces, although those influences have all been assimilated in the rich intellectual and social culture of Malta. Nevertheless, it gained its independence from Britain only in 1964 and its status as a republic in 1974. That is only 25 and 15 years ago, respectively. Malta's struggle for independence was a struggle for democracy. It was a collective activity rather than a process of competitiveness, individuality and selfishness. People worked together rather than against one another.

There is much else about Malta that nurtures collectivism and co-operation. It is a small island about the size of my constituency and that means that the opportunities for direct and representative democracy are much greater than in Britain. Recently the Malta Labour party held rolling conferences to discuss the full agenda before it. Would that we could do that at Labour party conferences in this country.

The island's climate means that the two political parties hold regular rallies which achieve mass attendances. One in six of the island's population were present at a recent rally. The island's deep Catholic religion encourages festive, co-operative and social action as distinct from the Protestant and more individualistic religion which at one time dominated this nation.

Malta is littered with Labour and Nationalist clubs and, unlike Britain, is a highly politicised nation. Some 70 or 80 Labour clubs exist in Malta and Gozo. Even when Labour voters were threatened with hell and damnation by their Church hierarchy, the final stages of which threats took place between 1962 and 1966, they survived within a communal network and Labour later governed Malta from 1971 to 1987. It lost the 1987 election by only one seat.

Over that time, Labour established a welfare state, made significant moves towards public ownership and worker self-management, especially in the important Malta dry docks, and increased the standard of living and social wage of working people considerably. The Labour party in this country looks with envy at the ability of the Malta Labour party to take almost, and sometimes more than, 50 per cent. of the votes. The Labour party in this country has never achieved that.

However, new forces are now threatening those achievements and the collective lifestyle that I have described. Those forces and Britain's role in assisting them worry me greatly. Malta has built up its economy on tourism associated with its considerable construction industry. Its one raw material is rock. It also has agriculture, fisheries, shipbuilding and a protected industrial capacity which must import its raw materials.

Malta is about to face a wave of corrupting, consumer-oriented, capitalist values. They come from outside television stations, especially from Sicily and Italy. They also come from the competitive values of tourism upon which Malta depends. For example, Malta feels strongly about nude bathing although that is imported into the area. Above all, Malta faces the power of international capital and overseas investment with links between this Government and Malta's Nationalist Government.

In an article in the *Financial Times* on 10 March 1988, commenting on the transfer of governmental power to the Nationalists, Mr. Richard Evans wrote:

"the economy is dominated by the public sector, which generates about 40 per cent. of the gross national product and employs 46 per cent. of the work force . . .Malta's Prime Minister, Dr. Eddie Fenech Adami, would dearly like to grab Mrs. Thatcher's axe and wield it energetically."

I would like the Minister to explain whether policies which would seriously alienate half Malta's population are being encouraged and aided by the Government. Already the Nationalist Government's actions have led to widespread demonstrations and civil disobedience in Malta.

Conflict arose over the visit of the "Ark Royal" and other nuclear-capable ships to Malta. Demonstrations and blocking actions were organised by the General Workers' Union which organises 70 per cent. of the trade unionists in Malta. That action prevented the ships entering Valletta harbour. When the ships were turned away they anchored in an area known locally as the "Bay of Defeat" which gained its name at the end of the second world war when the Italian navy surrendered there.

Malta is an unaligned nation and if we examine its position on the map we will understand why that is a practical and pragmatic line for it to take and place in its constitution, as well as a morally correct stance. Will the Minister assure us that we will keep nuclear weapons away from Malta so that its position will not be compromised? Malta's non-alignment and neutrality could also be compromised by joining the European Community and joining a club associated with NATO. Its Nationalist Government is interested in Community membership.

A further difficulty with membership would be the free flow of goods, capital and labour into Malta when the country requires protection for its home industry to sell

within its own market. Foreign investment on a massive scale would mean Malta's small economy being entirely dominated by outside forces and interests—that country having established full independence only 15 to 25 years ago. What advice have the British Government given the Malta Government about EEC entry? What are the Minister's reactions to the points that I have just made?

My final point is of immediate relevance. These days, we are all supposed to support green parties, having the welfare of the environment at the top of our agendas. I doubt the seriousness of the Conservatives' commitment, but at least it exists in theory. Chernobyl showed us that no country can consider itself to be an isolated island, and that certainly applies to Malta. A polluted Malta would hit the Mediterranean and British tourists taking their summer holidays there.

I am deeply concerned about the building by Malta's Nationalist Government of a power station at the Delimara site. We can only be thankful that Malta is too small to qualify for an economically viable nuclear power station, because a nuclear accident could destroy the whole island. I am not the only person who is concerned, because mass demonstrations and acts of disobedience are occurring on the island, including a recent demonstration by 50,000 people out of a total population of 300,000. The Labour leader and former Prime Minister Dr. Karmenu Mifsud Bonnici says that a future Labour Government will have nothing to do with those who provide services in the construction of the power station. Will the Minister say whether the British Government and British firms have, or are likely to have, any such involvement?

What is wrong with that power station? First, as a coal-fired and oil-fired power station, it will require full imports of both materials because they are not available within Malta. The power station's construction, subsequent imports and operation will destroy the fishing and tourist trade in the fishing village of Marsaxlokk, which is the most popular recreational site among the Maltese, who flock there in the summer and who enjoy walks there in the winter months. Eighty per cent. of the area's inhabitants petitioned against the power station's construction.

Next to that fishing village is Birzebbuga and what is known as Pretty bay. It will become a polluted bay if construction of the power station is pursued, with disastrous consequences for the Maltese and for tourists. Its construction is also causing widespread ecological damage, being built on clay foundations at huge cost. It involves the destruction of a large area of good quality arable land, which is not easy to come by in Malta. The plant's massive chimney stacks and ash residues will also create a massive environmental mess.

Due to the prevailing winds, which change direction, any power station must be at the southern end of the island, where Delimara is located. There are much better alternatives. Malta's Labour party has produced plans for a site at Hal Far on the southern coast, where a power station could be built into the rock cliffs, hiding its chimneys, in the area of an industrial estate, with built-in facilities for heating that estate.

On 6 November last, I inspected the Delimara and Hal Far sites, and I am convinced by the case put to me by Daniel Micallef and his fellow Malta Labour Members of Parliament.

I want to put several questions to the Minister. First, what co-operation has there been with the Malta Government in respect of the Delimara project? Secondly, has any agreement been signed with the Nationalist Government of Malta to send British troops to the island if civil disobedience arises there? Thirdly, will the Minister give an undertaking that there will be no interference, direct or indirect, in Malta's internal affairs? Fourthly, will the Government refuse any financial, technical or moral aid for this disastrous project? Fifthly, will they lend their voice to calls for internationally recognised environmental agencies to prepare a study of the proposals by visiting Malta and looking for an alternative site and alternative, non-harmful power sources—an internationally backed experiment in the use of solar power in Malta being one of the options?

2.50 pm

The Minister of State, Foreign and Commonwealth Office (Mr. William Waldegrave): I am grateful to the hon. Member for Derbyshire, North-East (Mr. Barnes) for giving us this opportunity of having a short debate about relations with Malta. I know that he has a particular interest in Malta, and has visited the island both privately and as a member of the United Kingdom branch of the Commonwealth Parliamentary Association.

I hope that the hon. Gentleman will join me in a welcome formality and congratulate Dr. Censu Tabone, who, having recently resigned as Foreign Minister, has just been sworn in as Malta's president. I am sure that the House will want to wish Dr. Tabone every success in his new office. He has had a remarkable ministerial career, and his appointment is a tribute to the respect in which he is held by his countrymen.

I listened attentively to the hon. Gentleman's speech, which included a brief summary of the history of relations between Malta and the United Kingdom. Let me add that Malta is one of the few countries which entered voluntarily into a relationship with the British Crown. The 1802 treaty of Amiens provided for the Maltese Administration to revert to the Knights of St. John, but the Maltese people petitioned Britain to place the island under British sovereignty. That is a relatively unusual way of establishing such a relationship.

As the hon. Gentleman said, ever since then Malta has occupied a key strategic position. The hon. Gentleman mentioned briefly the heroic record of the Maltese people in the Second World War, which was recognised uniquely in the award by King George VI of the George Cross to the island collectively. That, along with many other things, forms a bond between the people of Malta and those of the United Kingdom.

I was, however, somewhat surprised to hear the hon. Gentleman first say that he called on the British Government not to intervene in Malta's affairs—a principle that I am delighted to reinforce as the basis of our relations with Malta—and then give a long list of matters on which he wanted me to intervene in the government of that independent and democratic country, whose present Government, I fear, may not be to his taste. Just for a moment I thought that he might have transported himself psychologically across the water—I could understand that, in view of the recent weather here—to the Maltese Parliament, and, in his imagination, might be cross-examining a Minister there. To many of the questions that he put, pertinent though they may be to the Maltese labour party, I have little answer. It is for the Maltese

[Mr. William Waldegrave]

Government to make decisions about the establishment —or non-establishment—and the location of power stations.

As a former planning Minister, I know the difficulties. I know that people are unwilling to allow power stations to be sited in certain places. There are always arguments against them, wherever they may be, particularly from those who live nearby. This must be a matter for the Minister of Planning in Malta—I do not know whether he is called that, but he undoubtedly exists. Whoever he is, he has my sympathy, for these are difficult decisions and are never popular. It cannot be for a British Foreign Minister, or any other Minister in the British Government, to make such decisions on behalf of the democratically elected Government of Malta.

Mr. Barnes: Does the Minister grant that there is at least a theoretical distinction between interference in another nation's affairs and assistance and involvement with them, although it may on occasion be difficult to draw the line? I was trying to say that, while some actions would amount to direct intereference in Malta's affairs, others would be helpful and fruitful in assisting the development of the rôle that Malta has traditionally played in the world.

Mr. Waldegrave: There are regimes where there is no democracy. From time to time British Governments, both Labour and Conservative, have taken the view that it is right to protest. The British Government, with the support of the hon. Gentleman and his Front Bench colleagues, have protested about the violation of human rights in Romania because we do not acknowledge that that Government was elected democratically.

The position is different in Malta. Democracy and the rule of law prevails there. Whatever we as individuals or politicians may think about it, we have to respect legitimately taken decisions. If the Maltese Government or a public utility seeks quotations from British companies for work on power stations, it is not for the British Government to stand in the way of British firms. If their tenders are successful, it might lead to jobs for the hon. Gentlemen's constituents and mine. So long as the decision had been properly taken and there was no question of export controls, I should not want to stand in the way.

Relations between Malta and Britain, which have had their ups and downs over the years, are now extremely good. They were stormy at various points, particularly during Dom Mintoff's term as Labour Prime Minister. There is an affectionate and amusing account of the ups and downs of that relationship in the memoirs of Lord Carrington who had a great deal to do with Dom Mintoff when he was Prime Minister, including unscheduled and unexpected visits to Chequers. If he has not already read them, I recommend Lord Carrington's memoirs to the hon. Gentleman.

The "downs" were much regretted by the British Government. Relationships between Britain and Malta became much easier under Dr. Bonnici. They improved to such an extent that the Maltese Labour Government invited HMS Brazen to pay a visit to Malta in August 1986 to commemorate the arrival of the famous relief convoy in 1943. That demonstrated the Maltese Government's willingness to see the old connection revived in some form. HMS Brazen received an emotional welcome by the Maltese people. That is, perhaps, not surprising when one considers the naval links between Britain and Malta, particularly as many Maltese have served in the Royal Navy at one time or another.

The arrival in power of the Nationalist Government after winning the May 1987 general election has seen a further substantial improvement in our bilateral relations. From the very beginning the new Government made it clear that they wished to improve relations with us and to develop economic and political relations with us. Our bilateral relations are now excellent. They involve no interference in affairs, either way. They are warm and getting warmer. There has been a succession of ministerial vsits in both directions.

We were delighted that Dr. Fenech Adami was able to pay a guest-of-Government visit to London in September last year. During his visit he had discussions with my right hon. Friend the Prime Minister on 15 September when she told him that we would resume our technical assistance programme for Malta. The joint statement was issued after their discussions pointed the way towards enhanced bilateral co-operation. In particular, it covered co-operation to counter international terrorism—that new scourge —the illicit trade in arms, and drug trafficking. Dr. Fenech Adami also had talks with the Leader of the Opposition and with a number of British leaders of industry who are interested in investing in Malta.

Dr. Fenech Adami came to this country again at the beginning of this year to open the international boat show at Olympia, and he had a meeting with my right hon. Friend the Member for Wallasey (Mrs. Chalker) on 13 January. That demonstrates the warmth of the existing relationship, which I hope is based on mutual respect. It is certainly based on the principle of non-intervention in the affairs of either country.

The technical co-operation programme is now fully operational. Its immediate priority is to help the Maltese to establish a manpower training commission through the provision of United Kingdom training for individual Maltese and by sending British advisers to Malta for short and long-term attachments. As a first step, we have agreed to appoint an expert to help the Maltese set up a computerised profile of the Maltese labour market. We shall follow it up with the provision of a long-term training leader to work in Malta for about a year.

The return of the British Council to Malta is another illustration of our renewed warm relations with the country. Sadly, Dom Mintoff decided to ask us to close the British Council operations in 1978. Following an interval of 11 years, the council has now decided to open an English language resource centre this autumn. After discussion with the Maltese authorities, we have agreed that the resource centre will concentrate initially on liaising with Maltese teachers of English and providing them with back-up advice on the latest methods of teaching English.

United Kingdom-Maltese relations are not confined to Government-to-Government contacts. It would be strange if they were. There is a network of links that continue irrespective of the political climate. To illustrate the diversity of such links, I would mention the Young Vic's successful production in Malta last year of "Remeo and Juliet". Here in London various Maltese artists participated in a celebrity concert to coincide with Malta's official participation at the international boat show in January this year.

Tourism plays an important part in the Maltese

economy and last year 500,000 British tourists visited Malta. That figure represents 60 per cent. of all tourist arrivals in Malta and more than adequately compensates for the imbalance in visible trade. Many Britons have found the attractions of Malta's history, beauty and Mediterranean climate irresistable and have made their homes there. This is a two-way process. Many Maltese, too, have decided to settle in Britain, although perhaps for different reasons.

Trade is also an important factor. Britain is the second largest supplier, after Italy, to the Maltese market. In 1988 we exported products worth £121 million to Malta. Britain is also Malta's second largest export market. I give these figures to show that the ancient and mutually beneficial connections are still very much alive. Famous British companies such as De La Rue and Dowty have large investments and employ many people in Malta, to the mutual benefit of both countries.

I have shown, I hope, that United Kingdom relations with Malta are diverse, deep and friendly. As hon. Members would expect, they in no way compromise the independence of our countries and they take full account of the differing roles that we play on the international scene. Malta is at a crossroads. Her geographical position gives her a special role as a bridge between Africa and Europe. That has been so throughout history.

Mr. Barnes: The Minister has twice criticised—or at least, made sideswipes at—the Labour Government during Dom Mintoff's premiership. They were stormy times. Malta had established its independence of us and turned itself into a republic. It was looking to adopt a nonaligned position in the Third world. Naturally, there was some hassle under Labour Governments during that period but relations were beginning to be re-established not just in the period of Nationalist rule but towards the end of Mintoff's premiership and under the leadership of Bonnici.

Mr. Waldegrave: I certainly did not intend to take a swipe at anyone. Quite a number of those in different countries who had dealings with Mr. Mintoff at one time or another found him to be a man of charm and panache, although sometimes somewhat mercurial and unpredictable. Britain has good relations with many of the non-aligned countries and, indeed, with the founding members of the non-aligned movement. We have good relations with Egypt and India. We have no difficulty in establishing warm relations with Malta—either now or with Dom Mintoff's successor and the Labour party. There is no point in going back over history. We should celebrate the fact that relations now are very warm, and there seems to be no reason why they should not become warmer.

The hon. Gentleman asked about Malta and the European Community. Again, that must be a matter for the Maltese Government. It would be wrong for me to lay down what their policy should be. As far as I know, they have made no formal application to join the European Community, and Community countries and the Commission would obviously wait to analyse the implications of any such application if it ever came. It cannot be for me to advise the Maltese electorate or their Government on the right course for them. They have an association with the Community from which both sides already benefit.

We have been giving support for and finding ways of exploiting the potential of the existing association agreement. During the fourth European Community-Malta Association Council on 20 March, the third financial protocol was signed. It provides Malta with generous access to grants and European Investment bank loans and fully reflects the closeness of European Community-Maltese relations.

The Maltese Government have been active on the international scene. They had a successful presidency of the Council of Europe from May to November last year. In the United Nations they take a particular interest in the environmental matters to which the hon. Gentleman referred. We co-sponsored with the Maltese a resolution on climate change last year from which a great deal has flowed. Malta made an important contribution to the recent ozone layer conference in London at which Dr. Tabone made a major speech.

It is not for me to intervene in internal Maltese affairs. On the international scene, the Maltese Government have played an honourable role in relation to the environment.

Mr. Barnes: Will the hon. Gentleman give way?

Mr. Waldegrave: If there is time to give way to the hon. Gentleman, I am happy to do so.

Mr. Barnes: I asked several specific questions. I have not had time to convey the exact nature of them——

The motion having been made after half-past Two o'clock, and the debate having continued for half an hour, MR. DEPUTY SPEAKER *adjourned the House without Question put, pursuant to the Standing Order.*

Adjourned accordingly at six minutes past Three o'clock.

House of Commons

Monday 10 April 1989

The House met at half-past Two o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

Oral Answers to Questions

ENERGY

London Electricity Board

1. **Mr. Cox:** To ask the Secretary of State for Energy when he last met the chairman of the London electricity board; and what issues were discussed.

The Parliamentary Under-Secretary of State for Energy (Mr. Michael Spicer): My right hon. Friend and I meet the chairman of the London electricity board regularly and discuss a range of issues of mutual concern.

Mr. Cox: I note that reply, but the Minister must be aware that over many years hon. Members have conducted a campaign with the electricity board, aimed at achieving a more humane and consultative policy to be followed before disconnection of electricity supply. Will the Minister assure the House that, once the industry is privatised, and other organisations are running domestic supplies to consumers, a policy of proper consultation before disconnection of supply will be followed?

Mr. Spicer: Yes, Sir. I can give the hon. Gentleman the assurance for which he is looking. When the industry is privatised under the terms of the Bill that we shall be discussing later, special provisions of the kind that he requests will be put in place, and conditions will be attached to licences given to public electricity suppliers.

Mr. Harry Greenway: When my hon. Friend meets the chairman of London electricity board, in addition to the important point made by the hon. Member for Tooting (Mr. Cox), will he discuss the need to ensure that all lights in London streets, particularly main roads, are on whenever it is necessary? Is my hon. Friend aware that the lighting in the area of the Target roundabout has gone off or failed many times in the past three or four years, despite my repeated requests that it be kept on?

Mr. Spicer: I was not aware of the Target roundabout problem, but I take my hon. Friend's assurance that there is a problem there. There has been some concern about street lighting connections in the LEB area, but that problem has greatly improved in recent months. Under privatisation, local authorities will be able to contract elsewhere when they wish to do so.

Severn Barrage

2. **Mr. Stern:** To ask the Secretary of State for Energy what assumptions he made as regards availability of pumped storage and capacity in his evidence to the Energy Select Committee in arriving at the conclusion that a Severn barrage could amount to 14 TWH/year of electricity.

The Minister of State, Department of Energy (Mr. Peter Morrison): The assumptions derived from the previous published study by the Severn tidal power group. These are being updated in the current study, which will be published in a few months' time.

Mr. Stern: I am grateful to my right hon. Friend for that reply. How confident is he of the accuracy of the predictions on which the study is based? Will he ensure that not only the conclusions of the study, but the scientific data on which they are based, will be published?

Mr. Morrison: As I said, the assumptions derive from the previous study. Another study is taking place and the figures produced in the interim report—it is only an interim report—on the Hinckly inquiry were a little more than the figures that I gave, which were 14 TWH per annum. That is interim, and I shall certainly publish what my hon. Friend has asked for.

Electricity Privatisation

3. **Mr. Cran:** To ask the Secretary of State for Energy what studies have been undertaken by his Department as to the effect of privatisation of the electricity industry on the production of electricity from all other energy sources.

Mr. Michael Spicer: We have framed our privatisation proposals to encourage competitive generation from all sources.

Mr. Cran: Does not recent experience show that the use of fossil fuels in the production of electricity is susceptible not only to interruptions of supply but to variations of price? That being so, should not the non-fossil fuel obligations be used to the maximum after the Electricity Bill is enacted, and reviewed constantly thereafter?

Mr. Spicer: I agree that there have been disruptions in the supply of coal as a result of strikes and variations in the price of oil. That is why we have ensured, through the non-fossil fuel obligation, that a variety of sources of energy will be available, with resulting security for the consumer. We have particularly ensured that renewable sources of energy will be given a special place within the non-fossil fuel obligation.

Mr. Campbell-Savours: Is privatisation a consideration in the mind of the Central Electricity Generating Board in pursuing its planning application for dry storage at Heysham? Does it think that that is cheaper than reprocessing? Will the Minister personally intervene? We want the material in west Cumberland, where it can be reprocessed by British Nuclear Fuels plc. Is the Minister aware that the people of the Heysham area object and that we in west Cumberland want the material?

Mr. Spicer: I am not inside the CEGB's mind. As the hon. Gentleman said, it is applying for dry storage at Heysham. He is right to say—perhaps we shall be discussing this in greater detail later in the week—that

there are advantages attached to the processing which is proposed at the thermal oxide reprocessing plant in terms of the recovery of uranium and the development of plutonium. However, there must be an application and an inquiry before we can go ahead on that basis.

Mr. Jack: Does my hon. Friend agree that British Nuclear Fuels plc is working hard to take full advantage of the opportunities for nuclear power generation under the terms of the Electricity Bill? Will he join me in congratulating both the management and the unions on the agreement recently struck, which will further the exploitation of BNF's new investment programme at the Springfield works in my constituency?

Mr. Spicer: I am happy to join my hon. Friend in those congratulations. I hope that British Nuclear Fuels plc will continue to be successful.

Mr. Morgan: Does the Minister agree that the supplementary question by the hon. Member for Beverley (Mr. Jack), and his answer to it, constitute the most astonishing question and response that one can imagine from a supposedly market-oriented Government? Is the Minister able to confirm that the advice that he is receiving from the merchant banks that are advising him on privatisation is that the private investment community does not want to know about nuclear power and will not pay genuine money for it? Whereas it might be possible to sell the family silver, the Government cannot even give away the family plutonium.

Mr. Spicer: No, Sir. I do not accept that for one moment. When it comes to the establishment of the contracts for the future of the nuclear industry, we shall ensure that they allow for investment incentives and ensure that the consumer has a good deal. There is no question of it being an unattractive proposition financially to sell the industry, especially in the context of the non-fossil fuel obligation.

Wave Energy

4. **Mr. Macdonald:** To ask the Secretary of State for Energy what further funding he proposes to provide for the next stage of research into Dr. Stephen Salter's wave energy project.

Mr. Peter Morrison: There are no current plans for additional funding for this project.

Mr. Macdonald: Nevertheless, will the Minister undertake to ask the technology support group at Harwell to reconsider the feasibility of Dr. Salter's project? With the benefit of hindsight, does the Minister agree that it was a mistake for the Government to cut off funding for wave energy projects in 1982? Surely Britain should be taking the lead in wave energy development and not allowing countries such as Norway to gain export orders on the back of British know-how.

Mr. Morrison: The hon. Gentleman will know that Dr. Salter has been in correspondence and has had meetings with my noble Friend the Under-Secretary of State, who is specifically responsible for such matters within the Department. He will realise that since 1983, about £446,000 has been spent on Dr. Salter's project. I do not believe that there is currently a specific application. Were there to be one, that would be considered in the light of all the other competing priorities.

British Nuclear Fuels

6. **Mr. Campbell-Savours:** To ask the Secretary of State for Energy when he last met the board of directors of British Nuclear Fuels; and what matters were discussed.

Mr. Michael Spicer: My right hon. Friend and I regularly meet the chairman and other board members to discuss a wide range of matters.

Mr. Cambell-Savours: When the Minister next meets the chairman and the board, will he put to them that they should take a particular interest in the development of nuclear fission as outlined in the articles by Fleischmann, Pons and others, including Jones in America, and ensure that every effort is made to make resources available for further development of the process? If necessary, moneys should be diverted from the Culham, Oxford laboratories, which are currently undertaking work and which have a substantial sum at their disposal, into a new area of work that may herald a new energy source for the future.

Mr. Spicer: I shall certainly draw the hon. Gentleman's comments to the attention of the chairman and the board. I am sure that they will take a close interest in the experiments and will monitor the results, but British Nuclear Fuels is responsible for reprocessing rather than for initial generation.

Mr. Salmond: Does the Minister accept that the additional charges by BNFL to the Scottish electricity boards over the past few years amount to £250 million for the extra costs of reprocessing fuel and the breaking of the Chapelcross contract? What is the Minister's estimate of the impact of these huge additional charges on Scottish electricity bills this year and in future years?

Mr. Spicer: It is certainly the case, and the Government's policy, that British Nuclear Fuels should charge an appropriate cost-related price for its service and that the consumer will ultimately have to pay for those proper costs. Under our proposals, particularly our privatisation proposals in the Electricity Bill, those costs will be much more transparent than in the past, when they have often been disguised.

British Coal

7. **Mr. Janner:** To ask the Secretary of State for Energy when he last met the chairman of British Coal; and what matters were discussed.

16. **Mr. Hardy:** To ask the Secretary of State for Energy when he last met the chairman of British Coal; and what matters were discussed.

Mr. Michael Spicer: My right hon. Friend and I meet the chairman of British Coal regularly to discuss all aspects of the coal industry.

Mr. Janner: Has the Minister discussed with the chairman of British Coal the deep anxiety of Leicestershire's stalwart, skilled coal miners at the steady loss of jobs for miners in the county and the east midlands? Has the hon. Gentleman considered, either with the chairman of British Coal or alone, the Government's

promise even before the last general election to build a coal-fired power station at West Burton, thereby creating 3,000 jobs for coal miners in the area? Is it right to say that nothing has happened? If so, why?

Mr. Spicer: It is not right to say that nothing has happened. The CEGB has filed an application. It must get the approval or disapproval of the planning authorities. As I understand it, discussions are going on between the two appropriate planning authorities—the district council and the county council. I understand also that the one outstanding issue looks as though it will be resolved. If it is, it will be for my right hon. Friend the Secretary of State to determine whether he wants to hold a public inquiry. The process of applying for that power station is well advanced. Until my right hon. Friend can proceed with his consideration of the application, I must hold his position in reserve.

Mr. Hardy: Will the Minister discuss with the chairman of British Coal the need to extend the perception of the conquences of developing coal import dependency, not least through increased coal prices? Would the hon. Gentleman care to express his support for the retention of British Coal's science laboratories at Wath upon Dearne, an area which has suffered severe contraction, where economic need is dire and where this establishment is needed as a signpost for technological development?

Mr. Spicer: British Coal is increasingly aware of the need to be competitive against imports and also of our view that it will be able to compete against imports if the present procedures for improving productivity are maintained.

The hon. Gentleman was good enough to give me notice that he wanted information about the laboratories to which he referred. This is a matter for British Coal, but my understanding, in the short time available to find out about this matter, is that there is no problem about the laboratories' future. If my understanding is incorrect, I shall write to the hon. Gentleman.

Mr. Andy Stewart: When my right hon. Friend the Secretary of State last met the chairman of British Coal, did he reassure him that on his visit to Russia he would say that we no longer wanted Russian coal in Nottinghamshire and that, it was no more welcome than that from South Africa?

Mr. Spicer: I do not think that any imports are welcome. The question before the Government is whether to allow imports in the interest——

Mr. Blair: What?

Mr. Spicer: I said that no imports would be welcomed by the Government. The question before the Government is whether to allow imports in the interest of bringing prices down, especially prices of electricity to the consumer. We have made it clear that we will allow coal imports. We have also said that with £2 million a day being given in investment to the coal industry, we have done a tremendous amount—more than any other Government—to improve the productivity of the coal industry. If productivity increases at the present rate, British Coal should be able to beat off imports.

Mr. Batiste: My right hon. Friend the Secretary of State has already announced his intention that the coal industry should be privatised after the next general election. Can my hon. Friend give a timetable against which the discussions and deliberations will take place, which will lead to decisions about the shape of that privatisation and, in particular, the need for competition in it?

Mr. Spicer: No, Sir. We have said that it is a matter that we want to put to the British people at the next general election and we do not wish to prejudge their decision. We shall have to make decisions about details in precisely the same way as we did with electricity. We shall make a commitment to privatise coal at the next general election, but the shape and content of that privatisation will have to wait until after the election.

Mr. Jack Thompson: At the next discussions with the chairman of British Coal, will the Minister take the opportunity to raise with him the question of the British Coal engineering workshops? The rundown in manpower and the dilution of skills in the workshops is having an effect on the efficiency and, especially, the safety of the industry. Are there any plans to take out the engineering workshops before any proposals are made to privatise the industry?

Mr. Spicer: The future of the workshops is a matter for British Coal. However, I shall ensure that the hon. Gentleman's comments are drawn to the chairman's attention.

Mr. Gow: Did the chairman of British Coal confirm to my hon. Friend at their last meeting that there was growing interest and support among miners for the proposal to privatise the industry? Did the chairman report that miners, notably in the Bolsover constituency, were looking forward to becoming owners of the mines?

Mr. Spicer: That point was not discussed in those terms with the chairman of British Coal by my right hon. Friend or myself. However, I can confirm to my hon. Friend that it is most probable that the employees of British Coal will be as enthusiastic about becoming owners of that industry as the employees of all the other industries that have been privatised.

Mr. Skinner *rose*——

Mr. Speaker: Yes, all right.

Mr. Skinner: Is the Minister aware that, when I was going through my reselection procedures in the past few weeks, not one miner or representative mentioned ownership or privatisation? They were more concerned that I, along with my colleagues, should make it plain that the Government should stop the chicanery of backing those private Bills which will allow the import of more coal through the Humber ports. If the Government do that, they will be able to stop some of the imports that the Minister wants to stop.

Mr. Spicer: The hon. Gentleman did not tell us whether he won his reselection, but the implication is that he did. Presumably, he meets different people from those whom I meet, or perhaps people tell him different things. I can assure him that there is every sign that, when we privatise the industry, it will have a great deal of support among those who work in it.

Mr. Holt: Does my hon. Friend care to say whether he discussed with the chairman, British Coal's appalling

record in polluting the beaches of north-east England and the rather benign statement that British Coal cannot do anything about it? Does he agree that British Coal must learn to clean up its act?

Mr. Spicer: I am very much aware of that problem and that British Coal is under increasing pressure to do something about pollution in that part of England. I shall write to my hon. Friend with details, but I understand that there are specific plans on that question which should be coming to fruition.

Mr. Barron: When the Minister and the Secretary of State met the chairman of British Coal, did they discuss the implications of the imports of coal that are likely to come through the Humber ports, the threat to the midlands coalfields posed by the Bills for the Humber ports and the report recently received from members of the Standing Committee that one Bill went through by the Chairman's casting vote? They said that the implications for the coal industry are horrendous and that the Government should take action to protect our indigenous coal industry. When shall we receive a statement from the Government that they are not going to let the wool be pulled over their eyes by cheap subsidised coal but are going to take some action to protect the coal miners in the midlands?

Mr. Spicer: When one is a member of a Government who are still spending £2 million a day of taxpayers' money on the coal industry, one has to be a little careful on the question of subsidy. That is precisely what we are being at the moment—to counteract the undoubted threat of imports, which we recognise and for which we have allowed, by continuing with the process of improving the productivity of British coal. We have good coal and a good industry which should be able to compete against imports, and that is the way we believe it will be in the future.

Pressurised Water Reactors

8. **Mr. Dalyell:** To ask the Secretary of State for Energy what information he has about technical problems and cost over-runs experienced in the construction and operation of the pressurised water reactors managed by the Brazilian utility Electrobras and about related transmission problems; and what assessment he has made of their implications for the robustness of the case for adopting a programme of generally similar reactors in the United Kingdom.

Mr. Peter Morrison: I am aware that Electrobras does have some problems with its PWR programme. The CEGB is confident that PWRs built in this country will operate satisfactorily.

Mr. Dalyell: If only because those who want to prevent significant flooding in the Amazonian rain forest have a duty to say where the electricity and power will come from if not from dams, may I ask the Minister if we are in a position to help Brazil and to co-operate with the nuclear power programme between Sao Paulo and Rio? On the question of transmission, has any assessment been made of the difficulties in superconductivity of transmitting energy over a distance of 2,000 miles?

Mr. Morrison: I know that the hon. Gentleman feels very strongly about this matter. When I went to Rio de Janeiro I met the president of Electrobras, and during that meeting we discussed many matters and I suggested that it might be helpful if, when he was next in London, he found the opportunity to talk to our electricity division and to the energy efficiency office. In his second point about transmission, the hon. Gentleman put his finger on the key element—that the vast distances involved in Brazil, as compared with those in this country, for example, mean that there are inevitably difficulties of a different order.

Mr. Moss: Can my right hon. Friend confirm that the faulty equipment referred to in the question about the Brazilian utility is French? Does not that endorse the CEGB'S preference for Westinghouse American technology rather than French technology?

Mr. Morrison: My hon. Friend is absolutely correct. Brazil and other countries should look very carefully indeed at the sort of technology and experience that we have been able to develop here, in conjunction with other countries.

Redundant Miners

9. **Mr. Skinner:** To ask the Secretary of State for Energy, further to his answer of 27 February, *Official Report*, column 5, if he will now indicate what measures he will take to resolve the problems created by the restart scheme for redundant miners; and if he will make a statement.

Mr. Michael Spicer: I am now able to confirm that it is our intention to introduce an amending order to modify the redundant mineworkers payments scheme such that receipt of benefits under the scheme will no longer be conditional upon the beneficiary making himself available for work.

Mr. Skinner: I think that the next question must be when will that amendment be brought before the House to ensure that officers at unemployment and social security departments throughout the British coalfields are instructed to stop the harassment that has been taking place? Will the Minister also guarantee that, in the amending legislation, provision will be made for those miners who have lost money—in some cases more than £1,000—to be paid back retrospectively?

Mr. Spicer: Yes, Sir. We intend to take powers to recompense those former mineworkers who have lost RMPS benefits due to changes in the availability for work procedures. The hon. Gentleman was ungenerous enough not to admit it, but employment offices have been careful in the way in which they have dealt with the redundant mineworkers payments scheme.

Mr. Beith: I welcome the Minister's decision and the efforts that Energy Ministers have put into securing the decision. Will he recognise, however, that the Department of Social Security and the Department of Employment between them have made an absolute mess of the scheme and have caused a great deal of anxiety to men who were told, when they left the industry, that they were doing it a favour by taking retirement when they did and that they were helping to restructure the coal industry? Does he agree that, this decision, though overdue, is welcome?

Mr. Spicer: The hon. Gentleman is wrong. The miners were made aware at the time—in the pamphlet issued by British Coal—that availability for work would be one of

the criteria by which they would continue to qualify for RMPS payments. That was always clear; it was never in any doubt. We are amending the rules in the light of the stricter rules accompanying restart. That is all. There was never any question but that they would have to be available for work.

Mr. Eadie: We should be extremely churlish if we did not welcome the Minister's statement. Is he aware that we are glad that he has told us that any proposed legislation will be retrospective? However, will he accept that when the miners parliamentary group met the Secretary of State for Energy and the Minister of State, Department of Employment, we were given an understanding that there would be a sort of ca' canny and no harassment of miners who were involved in what was really a Government error? In view of the hon. Gentleman's statement today, will he assure the House that he will instruct the Departments involved that there should be no more harassment of redundant mineworkers? I heard of two cases this weekend that are an absolute disgrace.

Mr. Spicer: I should very much like to hear from the hon. Member for Midlothian (Mr. Eadie) about the two cases. There is every intention that such cases should be treated as lightly as possible and that the miners to whom he is referring should not be harassed, to use the hon. Gentleman's word—I do not think that "harassment" is exactly the right word to use. However, if there are any cases with which he has problems, I shall be happy to hear from him.

Mr. Batiste: Is my hon. Friend aware that whatever the technicalities of the documentation, many miners, especially elderly miners, genuinely believed that they would not be required to re-offer themselves for work and therefore there will be the warmest welcome from hon. Members of all parties for what he has announced? We hope that legislation will be introduced as speedily as possible.

Mr. Spicer: My hon. Friend is right in that there was the perception among some miners that they would not have to be available for work and that they had received some kind of retirement payment. However, leaflets were produced which made it quite clear that they would have to be available for work—the majority knew that—and that has been part of the problem with restart. I take my hon. Friend's point and thank him for what he has said.

CEGB

10. **Mr. Radice:** To ask the Secretary of State for Energy when he next expects to meet John Baker, the chief executive of the Central Electricity Generating Board; and what matters will be discussed.

Mr. Michael Spicer: My right hon. Friend and I regularly meet senior members of the Central Electricity Generating Board, including Mr. John Baker.

Mr. Radice: Will the Minister tell the House about an important issue that has arisen from discussions that he might have had with Mr. Baker—that is, the latest estimate of the costs of the flotation of electricity supply industry shares?

Mr. Spicer: No, Sir. Never have any Government made that sort of information available, especially before the enabling legislation has passed through the House of Commons. It would be wrong of us to get estimates and to go into deep preparations for flotation campaigns before Parliament has finally passed judgment on the Bill that would enable us to do so.

Mr. Rost: Will my hon. Friend seek assurances from the chief executive of the CEGB that the privatised generation companies will not inhibit competition by continuing to hoard the 100 or more redundant power station sites that the CEGB has not been interested in redeveloping or refurbishing, but which the private sector is keen to develop with new technologies for the smaller power stations which have planning approvals because it will be difficult to find sites for competitive power stations unless we use those that we already have?

Mr. Spicer: My hon. Friend makes an extremely good point. We have made flexible provisions for compulsory purchase by private power companies should they wish to take over the land that has not been used by the existing operators. I shall ensure that my hon. Friend's words are widely heard.

Mr. Blair: Does the Minister agree that if the costs of selling electricity are the same as those for gas and British Telecom, we are talking about £25 for every household in the country and when that is added to higher prices, to a special nuclear tax and to uncertainty even about security of supply, it is no wonder that the vast majority of people in this country oppose privatisation?

Mr. Spicer: The hon. Gentleman is giving us an overture to what will no doubt be his speech at the beginning of our Report and Third Reading debates later today.

This is the biggest privatisation of all time—and quite rightly so. Many consumers will benefit, and there will be a much increased number of shareholders. One of the Opposition Front Bench Members said that he hoped that the privatisation would be properly undertaken. I can assure the hon. Gentleman that it will be properly undertaken and that there will be a proper campaign to promote it.

Mr. Malcolm Bruce: Does the Minister recall that during the Report stage of the Electricity Bill his right hon. Friend the Secretary of State said that a new code of practice on disconnections would be brought before the House, or at least would be notified to the House, before that stage of the Bill had been completed? Can he tell us what has happened to the code of practice, and when we are likely to hear the details of it?

Mr. Spicer: I hope very much that we shall be able to bring the code of practice forward before the House has finished its consideration of the Bill. I shall have to refresh my memory, but I think that that is what was said. Certainly it is what we shall try to do.

Severn Tidal Power Group

11. **Mr. Tony Banks:** To ask the Secretary of State for Energy when he expects to receive the final report of the Severn tidal power group.

Mr. Peter Morrison: The study by the Severn tidal power group is nearing completion, and I expect to receive a final report within the next few months.

Mr. Banks: While talk of the Severn barrage is not exactly the matter of the moment in pubs in Newham, a good renewable energy source certainly is. Tidal power presents precisely that prospect. Will the Minister say whether the Government are committed in principle to the idea of tidal power? When the report has been received, and before any of the recommendations are implemented, will he make sure that the interests of both Welsh miners and redshanks are well protected?

Mr. Morrison: I am sorry that tidal power is not the chat of the pubs in Newham; I can assure the hon. Gentleman that it is the chat of the pubs in my constituency, the City of Chester, not least because of the Mersey barrage. Indeed, there is great interest in it there. Of course, the final decision on whether the scheme should go ahead will be taken on commercial grounds, as well as environmental grounds, to which the hon. Gentleman has referred, and which, I agree, are very important indeed.

Mr. Stern: Will my right hon. Friend do his best to bring the report forward as soon as possible? While this matter may not be the talk of the pubs in Newham, I can assure him that it is the talk of the pubs around the docks in Bristol, not least because it is hoped that the new opportunities that will be created in Avonmouth by the abolition of the national dock labour scheme will not be stopped by a barrage just outside the port.

Mr. Morrison: As my hon. Friend knows, the speed of a convoy is the speed of its slowest ship. I can assure him that in this matter, I will not be the slowest ship. We shall make sure that as soon as the report reaches us it is put expeditiously in the right places so that everyody can see it.

Acid Rain

12. **Mr. Archer:** To ask the Secretary of State for Energy if he will make a statement on the programme to combat the polluting emissions which cause acid rain.

Mr. Michael Spicer: The CEGB announced in February the award of the contract for retrofitting flue gas desulphurisation equipment to Drax power station. The board is currently considering which station should be retrofitted next.

Mr. Archer: Has the Minister grasped that it is not only the international relations of this country that are threatened by acid rain, but every industry and every activity that depends upon pure water, and that those waters that have not yet acidified are depending on their buffering effect, which is by definition a diminishing asset? Does he have no sense of urgency about this?

Mr. Spicer: We have a very great sense of urgency. That is why we will comply, and will make sure that our industry complies with the regulations under which there must be a 60 per cent. reduction in SO_2 emissions by the year 2003.

Mr. John Evans: Is the Minister aware that there is growing concern in the Warrington and St. Helens area that the CEGB is backtracking on the proposal to install a gas scrubber in the Fiddlers Ferry power station? Will he give an undertaking that, notwithstanding privatisation, the CEGB, or the privatised company, will go ahead with that scrubber, which is essential if acid rain in the Warrington and St. Helens area is to be reduced?

Mr. Spicer: I cannot say that Fiddlers Ferry will get the next scrubber, because that will be the responsibility of the successor company, PowerGen. However, I can give the hon. Gentleman an assurance—the assurance that I have just given the right hon. and learned Member for Warley, West (Mr. Archer)—that the regulation requiring a 60 per cent. cut in SO_2 emissions by the year 2003 will be complied with by the industry. Which existing power stations it decides to retrofit will be a matter for the industry. However, I repeat that the 60 per cent. reduction regulation will have to be complied with.

British Coal

17. **Mr. Allen:** To ask the Secretary of State for Energy how many miners there were in 1979; how many there are at present; and what information he has of British Coal's estimate of long-term trends in future numbers working in the industry.

Mr. Michael Spicer: At the end of British Coal's 1988-89 financial year there were 81,739 men on colliery books compared with 233,163 at the end of 1979-80. Numbers for future years will depend on the performance of individual collieries and the success of British Coal in meeting the requirements of its customers.

Mr. Allen: Is the Minister aware that those numbers will decline even further unless the Government take action to prevent major imports of coal? Will he look at the possibility of subsidising exported coal to the same extent as nations such as Russia, South Africa, many South American countries, Poland and Australia, subsidise their exports to this country? Will he introduce some balance into subsidy?

Mr. Spicer: First, I must draw the hon. Gentleman's attention to the fact that those reductions in manpower from 233,000 to 81,000, which are considerable, have been accompanied by an almost static production rate, which shows a tremendous, fantastic increase in productivity. Secondly, I remind him of the Government's policy to ensure that that improved performance will continue in future. That continuation will be sufficient to beat off imports. We shall not introduce either increased subsidies on the present levels, which are considerable—we have spent £9 billion of taxpayers' money in recent years, and the hon. Gentleman should remember that when he talks about coal subsidies—or import controls, because that would not be in the best interest of consumers, particularly of electricity.

ATTORNEY-GENERAL

Magistrates (Appointment)

60. **Mr. Allen:** To ask the Attorney-General how many local advisory committees on the appointment of magistrates *(a)* have and *(b)* have not made their membership publicly known; and what further steps he is taking to encourage an end to secrecy in the appointment of magistrates.

The Solicitor-General (Sir Nicholas Lyell): About half the 95 advisory committees had made the identity of their members public by the end of 1988. All committees are required to do so by the end of 1992. The Lord Chancellor and the Chancellor of the Duchy of Lancaster are encouraging committees to make the identity of their members public immediately.

Mr. Allen: Is the Solicitor-General concerned about the secrecy involved in these local advisory committees? Will he encourage the committees that have not yet responded, so that the local community is properly reflected by sex, ethnic origin and class? Will he also ensure that he finds out how many freemasons are on the committees, so that they, too, have a fair share of local magistrates?

The Solicitor-General: As I have said, the Lord Chancellor is encouraging the local advisory committees to publish their composition without delay. He is anxious that they should be broadly based and reflect the nature of the local community, as should the broad base of the magistracy itself.

Mr. Harry Greenway: Can my hon. and learned Friend give the age of the youngest magistrate? Could more and younger magistrates be appointed? That would have the obvious advantages that they would serve for a long time and gain in experience, as well as being useful on appointment.

The Solicitor-General: I cannot tell my hon. Friend the exact age of the youngest magistrate, but certainly the Lord Chancellor seeks to procure magistrates from a wide age range, including younger ones, who are more difficult to get because they tend to be more involved in their work. He will certainly take note of my hon. Friend's suggestion.

Legal Profession (Green Papers)

61. **Mr. Archer:** To ask the Attorney-General what responses the Lord Chancellor has received to his Green Papers on the future of the legal profession.

The Attorney-General (Sir Patrick Mayhew): At 31 March a total of 702 such responses had been received.

Mr. Archer: While thanking the Attorney-General for that informative reply, may I ask whether he has now grasped that the Green Papers have succeeded in uniting opposition from a diverse spectrum of opinion? Is he aware that some of us are troubled not because the proposals are too radical, but because it has not become apparent how Manchester school of economics principles will achieve the stated objective of making effective legal services avalable to the wider public?

The Attorney-General: The right hon. and learned Gentleman will have observed, perhaps, that in another place on Friday, my noble Friend the Lord Chancellor said that it was part of the purpose of the Green Papers to stimulate debate and that they had certainly succeeded in that objective. The purpose of the Government's provisonal proposals is to ensure that the public are provided with the most efficient and effective network of legal services at the most economical price.

Mr. Favell: No one should be granted immunity from change—not doctors, not nurses, not dockers and not lawyers.

On the constitutional issue raised by the Lord Chief Justice, will my right hon. and learned Friend assure the House that the Government will do all that is necessary to ensure the long-term future independence of judges, never forgetting that the Left would dearly like to bring the judiciary within the long arm of the state?

The Attorney-General: The legal profession is certainly not one which expects, requires or seeks to be immune from change.

As to the constitutional requirement of the independence of the judiciary in this country, I can give, on behalf of the Government and of the Lord Chancellor, the most categorical assurance that they hold firmly to that principle, which is absolutely central to the rule of law.

Mr. Winnick: Will the Attorney-General ensure that, whatever may be the final outcome regarding the future of legal services in this country, there will be adequate provision for the confidentiality of letters written by Law Officers about matters related to Cabinet affairs? Does not the right hon. and learned Gentleman consider that he was the fall guy in the Wesfland affair? Does he not feel deeply resentful and angry at the way in which he was used by No. 10?

Mr. Speaker: That has nothing to do with the main question.

The Attorney-General: Far be it from me, Mr. Speaker, to quarrel at this early state of the afternoon with your opinion.

Mr. Ashby: Will my right hon. and learned Friend accept from me that the Green Papers have stimulated necessary debate and that we should be looking for changes in the legal profession only where those are necessary? In the course of seeking advice on the Green Papers, will my right hon. and learned Friend also institute inquiries into the way in which estate agents up and down the country are insisting that people go to them for legal services and for mortgages as well as for the purchase of houses? Will he consider the effect of that policy on small town solicitors throughout the country who are the backbone of legal advice?

The Attorney-General: I am grateful for what my hon. Friend said at the beginning of his question with which, of course, I fully agree. It is the key to the Government's provisional proposals that they should stimulate competition, because the Government's belief in competition being very much in the interests of the ordinary citizen, in whatever area with which we are concerned, lies behind these provisional proposals. I believe that what my hon. Friend has said would form the basis of a very proper submission to the Lord Chancellor in response to the Green Papers.

Mr. Mullin: Given some of the people who have come out against the Lord Chancellor's proposals, does the Attorney-General agree that the proposals cannot be all bad?

The Attorney-General: I would welcome the opportunity—although I am surprised that one should be thought necessary—of saying that my opinion is that these proposals are not "all bad".

Mr. Stanbrook: Will my right hon. and learned Friend ensure that there is adequate consultation with the

members of the Bar whose future careers are involved in this matter, and not give undue credence to the aged opponents of reform in the other place, who are no more representative of the Bar than the other place is of the general public?

The Attorney-General: My hon. Friend asks that the Lord Chancellor in particular, and the Government in general, shall not give undue credence to any particular expression of opinion. It would not be the purpose of my noble Friend the Lord Chancellor to be undue in any response to what is put to him.

What is required in response to the Green Papers is, as my noble Friend has so often made clear, the fullest and the most frank and uninhibited discussion possible. At the end of the period that has been set aside for consideration of the proposals the Government will consider what the next step forward should be.

Mr. Tony Banks: Is the Attorney-General aware that at the performance of The Plantagenets at the Barbican the line from Henry VI, Part 2

"let's kill all the lawyers"

gets the largest cheer from the audience? Is the right hon. and learned Gentleman aware just how unpopular lawyers are—perhaps even more unpopular than Members of Parliament? Therefore, will he ensure that they are brought to heel and that when we have a vote in this House it will be a free one?

The Attorney-General: I have just come back from a visit to the People's Republic of China where quite a large number of lawyers were killed not long ago. That country is now trying to recruit about half a million lawyers.

Land Registry

62. **Mr. Colin Shepherd:** To ask the Attorney-General what is the present number of staff employed by the Land Registry.

The Solicitor-General: At 1 March 1989 the Land Registry employed 11,476 staff.

Mr. Shepherd: Is my hon. and learned Friend aware that, despite an increase in staff, the Land Registry has admitted that there is no prospect of an immediate reduction in the unacceptable delay in handling transactions? Is my hon. and learned Friend satisfied that the current policy of compulsory registration by 1990 is sustainable? Should the time scale be extended, the backlog cleared and then calls for voluntary registration, where appropriate, made?

The Solicitor-General: My hon. Friend may know that, last year, the complement of staff was increased by more than 2,100 and as a result the Land Registry's throughput has increased considerably. Last year, some 6·4 million pre-completion, pre-contract transactions were dealt with —90 per cent. within four days and the remaining 10 per cent. within six to seven days. The problem arises with the post-completion, substantive applications where there has been an average delay of four months. With the increase in staff, those applications are now being worked off quite fast at the rate of about 112,000 since the beginning of this year, over and above the speed at which those applications are coming in. It is reckoned that the Land Registry is on course to achieve a satisfactory standard by March next year.

OVERSEAS DEVELOPMENT

Yemen

69. **Mr. Adley:** To ask the Secretary of State for Foreign and Commonwealth Affairs if he will make a statement about the aid programmes to the Yemen Arab Republic and to the People's Democratic Republic of Yemen.

The Minister for Overseas Development (Mr. Chris Patten): Our aid to the Yemen Arab Republic came to about £6·9 million in the financial year just ended. The programme comprises assistance for technical co-operation projects, notably in natural resources, and English language teaching, together with training. Assistance has also been provided under the aid and trade provision. In the case of the People's Democratic Republic of Yemen, our aid came to just under £1 million last year, including emergency relief, colonial pension payments and a small technical co-operation programme concentrating on training and English language teaching.

Mr. Adley: I thank my hon. Friend for that reply. Does my hon. Friend accept that in north Yemen, due to the lack of longstanding links between that country and our own, our aid programme is substantially less than that of most of our European Community partners and that in south Yemen, the needs are great, but, due to the unhappy ending of our previous relations in 1967, our assistance is extremely small? In the light of the Foreign Secretary's recent visit will my hon. Friend consider reassessing our relationship in terms of aid with those countries?

Mr. Patten: We looked at our aid programme in the Yemen Arab Republic and in its next door neighbour before my right hon. and learned Friend's visit and that is one reason why, during that visit, he announced an increase of about £500,000 in the technical assistance programmes to the YAR.

The development of our aid partnership with the People's Republic of Yemen has been held back not only by political factors, but by the lack of a memorandum of understanding on technical co-operation. That has posed administrative problems, but there is a draft memorandum with that country's Government and I hope that they will return it to us as soon as possible.

Dr. Marek: Does the Minister agree that now is a good time to improve relations with the People's Democratic Republic of Yemen? If he does, will he give careful consideration to making a generous donation to the PDRY to alleviate the floods and destruction that have just occurred there?

Mr. Patten: Following the recent floods we have been able to give help of £190,000 to the PDRY for the purchase of two Land Rovers, shelter materials and water purification tablets. I repeat what I said to my hon. Friend the Member for Christchurch (Mr. Adley); it would help us to develop our technical assistance programme with the PDRY if it would agree a memorandum of understanding with us.

Disasters

70. **Mr. Moss:** To ask the Secretary of State for Foreign and Commonwealth Affairs if, following the Armenian earthquake, he has reviewed Britain's capacity to respond to disasters overseas.

Mr. Chris Patten: I have now carried out such a review and introduced a number of improvements in our operations. These include more staff and disaster management training in the Overseas Development Administration and better co-ordination with other Departments and voluntary agencies in this country involved in disaster relief.

At the international level I have put proposals to the United Nations disaster relief office for improving the co-ordination of the response to disasters.

Mr. Moss: While recognising that this country and many others responded extremely generously, should not the international community do more to prepare in a better way for such disasters, so that it can respond in a more professional and organised manner?

Mr. Patten: I agree with what my hon. Friend said. It is important that, at the outset of the United Nations natural disaster reduction decade, we should put forward initiatives for better co-ordinating our assistance. We have proposed to the United Nations that the disaster relief office should hold an international register of pledges of specific assistance that could be cashed whenever a disaster occurred. I have also told the UNDRO that we are prepared to host a ministerial conference to take forward those ideas. I hope that that will be possible in the next few months.

Mr. Hanley: Is it not true that the British Government and people are extremely generous with emergency aid? Is it not also true that we are greatly respected throughout the world for our quick and positive response to such circumstances?

Mr. Patten: The propositions of my hon. Friend are true. I particularly commend our experienced international charities such as the Red Cross and Oxfam. We have lessons to learn from those charities and—without requiring an excess of Christian humility on their part—they occasionally have lessons to learn from us.

Ghana

71. **Mr. Greg Knight:** To ask the Secretary of State for Foreign and Commonwealth Affairs if he will make a statement on British aid to Ghana.

Mr. Chris Patten: The United Kingdom continues to be a major supporter of Ghana's economic recovery programme, for which we announced on 1 March a pledge of a further £20 million of balance of payments finance. This brings the total of our balance of payments support to Ghana since 1983 to £92·5 million.

Mr. Knight: Does [illegible] Friend agree that those figures show that the Government's record of aid to Ghana is excellent? However, does not the success in Ghana show that African countries that follow a sensible reform programme—for example, that suggested by the World Bank or the United Nations—do better than those which do not?

Mr. Patten: Yes. The World Bank and the United Nations development programme have just issued an encouraging report underlining the point made by my hon. Friend. I hope that other countries will draw confidence and inspiration from what Ghana has achieved in the past few years. I hope that they will also follow Ghana in attempting to design good social programmes to accompany the economic reform programmes.

Mr. Boateng: Given the outstanding success of the British Council library and reading rooms in Ghana, will the Minister consider extending aid and assistance to the British Council so that it can open similar libraries and reading rooms in southern Africa, particularly in Namibia, where they are much needed in the run-up to independence?

Mr. Patten: I endorse what the hon. Gentleman said about the important role played by the British Council. I am delighted that the amount that it can do in developing countries will have increased during this year. It has an important job to do in countries in the front line in southern Africa, as the hon. Gentleman said, and I am sure that we particularly need to go on training, teaching the English language and providing as much assistance as possible in Namibia as it moves towards independence.

World Bank

72. **Mr. Barron:** To ask the Secretary of State for Foreign and Commonwealth Affairs if he will consider publishing the United Kingdom's voting record at the World Bank.

Mr. Chris Patten: I have considered this question, but have decided for the moment to make no change in the longstanding practice of successive Governments.

Mr. Barron: Will the Minister reconsider that answer in view of the fact that the United States of America not only discloses its voting record in the World Bank but encourages other countries to do so? It seems to me and many others essential that people who ask for help from the World Bank should know what decisions are being taken, because that will help them to put their case.

Mr. Patten: I note what the hon. Gentleman says about the advocacy of the United States in the World Bank. It has not been as successful there as elsewhere, as we do exactly the same as everyone else in the organisation, with the exception of the United States.

It is important to remember that votes in the World Bank board are extremely rare. Our main interest is that the World Bank should be as effective as possible, but, as a matter of course, we consult widely on controversial matters that come before the board—for example, with interested environmental groups.

Mr. Jack: What are the Government doing to encourage the World Bank to develop more environmentally sensitive approaches in its investment policy, particularly on the rain forests?

Mr. Patten: We are doing a good deal to encourage the World Bank and other multilateral organisations to do more environmentally. The World Bank has learnt a good number of lessons in the past few years. We also intend to do more through our bilateral programme in this extremely important area.

Miss Lestor: Will the Minister reconsider his answer about the World Bank, bearing in mind that the Canadian Government have expressed concern that matters should not be shrouded in secrecy and that more information should be available? The United States Treasury Secretary, Mr. Brady, has written to the president of the World Bank about the same issue. Remembering that things that are kept secret by the Government tend to be leaked at the end of the day, is it not important that taxpayers should know how we behave on these important matters in the World Bank, and should not the information be made available?

Mr. Patten: To be honest, the best way of keeping a secret is to make a speech or deliver an answer in the House. It is conceivable that that will continue to be so for this answer, too.

We should not get this out of perspective. It seems to me that, as the recent controversy over the power sector loan for Brazil has shown, when matters of controversy arise there is a good and open debate about them. The members of the Overseas Development Administration who are at present answering the thousands of letters about the proposed loan to Brazil, which I think is unlikely to go forward in the shape originally suggested, would not think that matters had been shrouded in secrecy.

Points of Order

Mr. Tam Dalyell (Linlithgow): On a point of order, Mr. Speaker. Have you had any request from Ministers about a statement on the entirely new doctrine that it has apparently now become all right for a principal private secretary to the Prime Minister to authorise the leaking of a Law Officer's letter to Mr. Chris Moncrieff?

Have you had any request for an explanation of whether Lord Armstrong of Ilminster knew that there had been explicit approval of a disclosure of a Law Officer's letter when he put forward a report that concentrated on differences of understanding between civil servants? Might he not have been just a little economical with the truth?

My point of order is this: in the style of Mr. Justice McCowan, is it now the case that a principal private secretary to the Prime Minister should carry out the instructions of politicians, even though he knows that those instructions are against the highest traditions of the British Civil Service?

Finally, when did Mr. Ingham and Mr. Powell tell their Prime Minister what they had done and what they had approved?

Mr. Speaker: The short answer to the hon. Gentleman is that I have had no such request. These are matters for political debate and not for points of order to me.

Mr. David Winnick (Walsall, North): I have a point of order which is directly for you, Mr. Speaker, and it is one which I consider to be of such importance. I do not think that an hon. Member who has been here for a quarter of a century or more is suspended simply for the joy of it. My hon. Friend the Member for Linlithgow (Mr. Dalyell) was suspended; it is true that there was a vote on it. I want to ask you a question, Mr. Speaker, because there is no one else I can ask. If later events prove that an hon. Member who has been suspended was telling the truth—and everything indicates that my hon. Friend has been telling the truth about Westland—what can be done about the suspension?

Mr. Speaker: I can deal with that question quite simply. The hon. Member was not suspended for what he said but because he would not withdraw an unparliamentary word.

Mr. Max Madden (Bradford, West): On a point of order, Mr. Speaker. I apologise for not giving you notice of my point of order, but I expect that the article by Adam Raphael in yesterday's edition of *The Observer* has been brought to your attention because it makes serious allegations about the workings of the House. In the article, a Mr. Charles Miller, of Public Policy Consultants, is quoted as saying that some Select Committee Chairmen had been bought. He says:

"I have found a large number of venal members of Parliament."

The article makes a number of serious allegations, including allegations that some research assistants employed by Members are full-time members of companies that are professional lobbyists of the House. The article is headlined:

"A £10m trade in influence".

It makes serious allegations that I ask you to consider. As there is a range of matters affecting a number of Committees, I should be most grateful if you would consider this matter with a view to requesting the appropriate Committees to interview Mr. Miller and to consider other steps that could be taken to clean up what is being rapidly seen as a corrupt, or potentially corrupt, House of Commons?

Mr. Speaker: Of course I saw that article. I understand that the Select Committee is already investigating this matter and has taken evidence. If the hon. Gentleman has a further point to put about Mr. Miller's allegation, he should direct it to the Select Committee.

Mr. Alan Williams (Swansea, West): On a point of order, Mr. Speaker. On Tuesday you gave a ruling which no one in the House challenged. It was about the application of the sub judice rule in connection with published sections of the report on Harrods, Al Fayed and Lonrho. We did not challenge your ruling because the Secretary of State for Trade and Industry—*[Interruption.]* We are trying to be serious about an important national matter. We did not challenge your ruling, Mr. Speaker, because we had the assurance from the Secretary of State for Trade and Industry that any such quotations could have prejudiced the fairness of any subsequent trial and because the serious fraud office had said that further disclosure could prejudice its further inquiries.

On the front page of today's *Financial Times* there is a fascinating article by a Mr. Clive Wolman. The article is based on extensive information, including quotations about activities by members of the serious fraud office and officials. We have had the much publicised comment by the Secretary of State for Trade and Industry about wrongdoing. That comment may have been a political gaffe and a blunder, but we are not making much of that because such things occasionally happen. However, when it is taken in conjunction with what is clearly leaked information that could have come only from the Department of Trade and Industry or from the serious fraud office, it reveals information that would prejudice any future trial.

May I ask you, Mr. Speaker, to look at the contents of the article and let us know, perhaps tomorrow, whether, in view of what is clearly official leaking from one or other of those two bodies, the ruling that you gave last week should be reconsidered?

Mr. Speaker: I will have a look at the article. It would be difficult for me to read all the newspapers every day. I do my best at the weekend. The sub judice rule is well known. I have nothing to add to what I said about it last week.

Mr. Jeff Rooker (Birmingham, Perry Barr): On a point of order, Mr. Speaker. When you consider the point made by my right hon. Friend the Member for Swansea, West (Mr. Williams), will you consider this point as well? I do not expect you to respond immediately to it. It flows directly from your ruling last Tuesday, which I do not challenge—and I genuinely mean that.

For questions to the Attorney-General on 12 December and 23 January the Table Office allowed me to table specific questions—which were answered—about the report of the Department of Trade and Industry on the House of Fraser and Lonrho. For questions to the Attorney-General on 13 February, by which time the issue had gone to the other place, I was prevented from asking such questions, and so resorted to questions about the serious fraud office.

[Mr. Jeff Rooker]

The issue before the other place is whether the Secretary of State misdirected himself. Win or lose in the other place, it is up to the Secretary of State to decide whether to refer the matter to the Monopolies and Mergers Commission. He cannot be ordered to do so. Therefore, the sub judice rule is being extended. When the other place has made its decision, it does not matter what the Secretary of State decides to do; he cannot be wrong. The law gives him total discretion as to the reference.

When the other place has so decided, will I and other hon. Members be free, as I was in both December and January, to table specific questions about this matter, to be answered at the Dispatch Box? There are no other changed grounds—no proceedings, no prosecutions, no charges. It is simply an internal working document of government for which no legal actions will be pending. I hope that you will consider this point, Mr. Speaker.

Mr. Speaker: Of course I will look into the matter. When the hon. Gentleman tabled his questions before, the matter was not before a court, and in such circumstances hon. Members could table questions. My sub judice ruling last week was well understood by hon. Members. I said that it was not in order to quote from the document. The House will know that, with that proviso, I granted a private notice question on the matter.

Mr. Dennis Skinner: (Bolsover): On a point of order, Mr. Speaker. I have been listening carefully to the points of order that have been raised this afternoon. I do not know whether you videoed the programme last Friday. It was a bit boring in parts, I have to agree, but it made an essential statement that needs to be looked at.

My hon. Friend the Member for Linlithgow (Mr. Dalyell) asked when you would be able to assist him in getting a statement or a debate about the renewed arguments about Westland, and you had to say, "It's nowt to do with me." You were than asked about the takeover of Harrods, which is also in the public eye, and you had to say, "Sorry, I can't help." My hon. Friend the Member for Bradford, West (Mr. Madden) asked about an article in *The Observer*, which claimed that Members of Parliament who table questions on behalf of somebody can get £200 a time, and you had to say, "Sorry, it's none of my business."

This afternoon, we shall be debating the Electricity Bill, and not one Opposition Member wants that Bill. I doubt whether more than 20 per cent. of our people want the electricity industry to be privatised. If we had a proper system in this cock-eyed place, we would be debating those three important issues and not the Electricity Bill.

Mr. Speaker: The hon. Gentleman draws attention to an interesting point. Too frequently, points of order are matters of political controversy across the Chamber, as they have been today. I fully understand that, over many years, it has become a practice for the Opposition to put questions such as these through the Chair, but the House knows that they are not really matters for me. I do not think that it would be wise for the Speaker of the House to be given the responsibility of deciding also what business we should debate every day.

Several Hon. Members *rose*——

Mr. Speaker: Mr. Campbell-Savours.

Mr. Martin Flannery (Sheffield, Hillsborough): I was rising in my place long before anyone else.

Mr. Speaker: The procedure does not work like that.

Mr. Campbell-Savours: May I ask you, Mr. Speaker, to be most diligent——

Mr. Flannery: Disgraceful.

Mr. Speaker: Order. I have the difficult task of deciding who catches my eye first, and it was the hon. Member for Workington (Mr. Campbell-Savours).

Mr. Campbell-Savours: I ask you to be most diligent, Mr. Speaker, when dealing with the article, and especially the statement which clearly emanates from the serious fraud office. Will you examine the article on the basis that I intend to table a long series of motions that will bring into the public domain hitherto unpublished material that sets out what happened in Lonrho and what appeared in the Lonrho broadsheet over the past few months during which Mr. Tiny Rowland has been pursuing the Al Fayeds.

Mr. Speaker: First, the hon. Gentleman must submit his motions, and then we shall see what happens.

Several Hon. Members *rose*——

Mr. Speaker: Order. I shall now hear the hon. Member for Sheffield, Hillsborough (Mr. Flannery).

Mr. Flannery: Thank you, Mr. Speaker. It is about time.

Mr. Speaker: That is unworthy of the hon. Gentleman. It would be courteous if he were to rephrase that comment.

Mr. Flannery: May I rephrase it by saying thank you, Mr. Speaker?

Further to the point of order raised by my hon. Friend the Member for Bradford, West (Mr. Madden). I note that the Leader of the House is in his place. The article which appeared in yesterday's edition of *The Observer* which was written by Mr. Adam Raphael reveals a state of affairs that should concern every hon. Member.

You know as well as I do, Mr. Speaker, that the majority of the lucrative consultancies within the House are held by Conservative Members. Most of the consultancies that are held by Labour Members relate to trade unions. Any other consultants on the Labour Benches should be ashamed of themselves. The article to which I have referred reveals that extremely important individuals on the Government Benches have masses of directorships and consultancies, and that some of them are in charge of Committees. The hon. Member for Shipley (Sir M. Fox) said that he was taking up these activities for the later part of his life, suggesting that the rest of us do not need to do it. In any event, we do not do it in that way.

Is it in order for me, Mr. Speaker, to ask the Leader of the House to say something about the serious issue which has been drawn to our attention, whether now or in the future? People throughout the country know now that there is something sick and wrong in this place. They know that vast sums are being made by some hon. Members, largely Conservative Members. The rest of us are being blamed for the things that they do. They are making millions of pounds out of their activities.

Mr. Speaker: I am sure that the Leader of the House has heard what the hon. Gentleman has said.

Several Hon. Members *rose*——

Mr. Speaker: Order. We have a busy day ahead of us.

Mr. Eric S. Heffer (Liverpool, Walton): I wish to take up, Mr. Speaker, your reply to my hon. Friend the Member for Walsall, North (Mr Winnick), which concerned something said by my hon. Friend the Member for Linlithgow (Mr. Dalyell), who was recently thrown out of the House. My hon. Friend was thrown out because he said that someone was a liar. If I know that an hon. Member is lying and I wish to say that he is lying, does your action in having my hon. Friend thrown out mean that for all time none of us can ever say that an hon. Member is lying when we know that he is? How can we deal with such an issue?

I understand that it is custom and practice that we do not say certain things in this place. At times I have retreated, as it were, because I have been instructed to retreat. I did not think it right to retreat, but you, Mr. Speaker, told me to retreat, and so I retreated. I do not believe in getting thrown out of the House, and never have done. However, if I know that someone is a liar and he says something that I know is a lie, how can I relate that to the House? Apparently, I cannot table a motion that states that a Member of this place is a liar. How can I deal with it?

Mr. Speaker: Hon. Members know that self-discipline in the House requires that hon. Members do not impute dishonour to each other. Every occupant of the Chair is reluctant to use the weapon of naming a Member. Most hon. Members, when instructed by the Chair to withdraw an unparliamentary word, such as that which the hon. Member mentioned, do so, and I hope that that will always happen. If an hon. Member wishes to persist in making an allegation about another hon. Member, he must do so by an appropriately worded substantive motion.

Mr. Tony Banks (Newham, North-West): Further to the point of order, Mr. Speaker. It appears that the Government are trying to secure the receipt of all copies of *The Observer* special edition which was published last week. Incidentally, the print comes off the special edition just as it comes off the regular edition, but the factual content is interesting.

Will we be advised by you, Sir, to hand our copies to the Government? A number of us have received the special copies—indeed, I am doing a fairly good trade in lending mine to Conservative Members, including Front-Bench Members. Are we entitled to keep our special copies, or do we have to return them to the Government?

Mr. Speaker: That is not a matter for me. I have not seen the special edition either, so perhaps the hon. Member will lend me his copy.

STATUTORY INSTRUMENTS, &c.

Ordered,

That the National Health Service (Functions of Health Boards) (Scotland) Order 1989 (S.I., 1989, No. 446) be referred to a Standing Committee on Statutory Instruments, &c.—*[Mr. Heathcoat-Amory.]*

Orders of the Day

LAW OF PROPERTY (MISCELLANEOUS PROVISIONS) BILL *[LORDS]*

Order for Second Reading read.

Motion made, and Question put forthwith, pursuant to Standing Order No. 90(6) (Second Reading Committees), That the Bill be now read a Second time.

Question agreed to.

Bill accordingly read a Second time, and committed to a Standing Committee pursuant to Standing Order No. 61 (Committal of Bills).

Electricity Bill

As amended (in the Standing Committee), further considered.

Clause 19

POWER TO REQUIRE SECURITY

3.52 pm

Mr. Malcolm Bruce (Gordon): I beg to move amendment No. 116, in page 16, line 22, leave out subsection (4) and insert—

'(4) For the purposes of subsection (1)(a) above, reasonable and sufficient security shall be deemed given

(a) (i) where the person giving security is prepared to take supply of electricity through a pre-payment meter; and

(ii) it is reasonably practical in all the circumstances (including in particular the risk of loss or damage) for the supplier to provide such a meter; or

(b) where a direct payment is made to the supplier under regulation 35 of the Social Security (Claims and Payments) Regulations 1987 (deductions from income support and other benefits and direct payments to thrid parties); or

(c) the person requiring the supply is prepared to enter an agreement to pay the estimated costs by means of a weekly or monthly instalment plan, the payment to be adjusted on an annual basis to reflect actual consumption.

(5) In sub-section 1(a) above, "security" means any arrangement in consequence of which a public electricity supplier may be assured of payment of money due to him and shall include a deposit given to such supplier or guarantee or charge (whether legal or equitable) in favour of such supplier.

(6) Any dispute arising under sub-paragraphs (4) and (5) above between a public electricity supplier and a person giving or wishing to give security shall be determined by the Director as though it were a dispute falling to be determined under section 21 below.'.

Mr. Speaker: With this it will be convenient to take the following amendments: No. 115, in schedule 6, page 89, line 38, at end, insert—

'(2A) For the purposes of paragraph 2, (2) (a) above, a person shall be regarded as having made good the default—

(a) where the person giving security is prepared to take supply of electricity through a pre-payment meter—

(i) which is calibrated to recover over a reasonable period any money in respect of which he is in default; and

(ii) it is reasonably practical in all the circumstances (including in particular the risk of loss or damage) for the supplier to provide such a meter; or

(b) Where a direct payment is made to the supplier under regulation 35 of the Social security (Claims and Payments) Regulations 1987 (deductions from income support and other benefits and direct payments to third parties).

No. 152, in schedule 6, page 91, line 6, at end add—

'5A. If a tariff customer has not, after the expiry of 28 working days from the making of a demand in writing by a public electricity supplier for payment thereof, paid all money due from him in respect of the supply of electricity by the supplier to any premises at the provision by the supplier of any electric line or electric plant, the supplier may—

(a) apply to a court for an order granting permission to cut off the supply to the premises, or to any other premises occupied by the customer, by such means as he thinks fit;

(b) recover any expenses incurred in so doing from the customer and

(c) an application to court under this schedule shall be by way of summary procedure.'.

Mr. Bruce: Amendment No. 116 is designed to reduce the incidence of disconnection of electricity customers, and amendment No. 115 is designed to speed up and facilitate reconnection for those who have had the misfortune to be disconnected. Hon. Members who served on the Standing Committee will recollect our considerable debate on disconnections and the wider linked issue of fuel poverty. Somewhat to our surprise, and to the surprise of Conservative Back Benchers, we got an assurance from the Secretary of State that the Government intended to support a revised code of practice similar to that nearing completion of negotiation for the gas industry. The right hon. Gentleman accepted that it was absurd that the code of practice for disconnection in the electricity industry should be less advantageous to the consumer than that which applied in the gas industry.

When pressed, the Secretary of State amplified the position somewhat. I hope that the Minister can give us a little more detail. The Secretary of State finally said:

"Because of the consultations that must take place, the final form may not be settled before the Bill leaves its Committee stage, but it will be settled well before the Bill leaves the Commons. There is a three-month cycle of consultations which may not end before the Committee stage. We expect the licence to be modified by Report stage."—[*Official Report, Standing Committee E*, 31 January 1989; c. 614.]

I raised this matter during Question Time and the Minister gave the impression that a final agreement was not yet to hand. I hope that he will accept that it is appropriate and legitimate at this point to press him for some clarification about the terms of the code of practice—to the extent that he is able to reveal them—about the timetable for when the code of practice will be agreed and about how and when it will be incorporated into the licence. It is not wholly satisfactory to be told that the code of practice may be available to us before the Bill finally leaves this House.

If the Bill is unamended in the other place, it will not come back to this House. However, when it goes to the other place, we shall seek to press this amendment. Whatever happens, it will be helpful if the Minister can give us some clarification.

I am sure that the Minister will accept that many people are interested in this matter and want to know what will happen. For the record, it may be worth pointing out that, as the Bill is drafted, there is a significant distinction between the gas code of practice and the electricity code of practice proposed under the draft licence. It is proposed that the electricity consumer should be given only 15 days' notice of disconnection, whereas the gas consumer receives 28 days' notice.

The issue of disconnection ebbs and flows and arguments about the figures in themselves are not especially constructive. The annual rate of disconnections is still about 80,000 which I hope all hon. Members will regard as far too many. There has been some dispute about whether the figure is coming down throughout the country. Some of the figures suggest that the disconnection rate is going up in at least one or two areas, which is a matter for concern. We cannot be absolutely sure that, even to the extent that figures suggest that disconnections are decreasing, it is entirely to do with modified practices as opposed to the good fortune of having had a mild winter, which inevitably reduces the likelihood of disconnection.

It is all very well for the Government to say that the trend is downward and that there is no need to worry

because they will ensure that that trend will continue after privatisation. The experience with the privatisation of British Gas was the reverse: as soon as privatisation came into effect, the number of disconnections increased. That is why a new code of practice for disconnections is being introduced for gas consumers. I am sure that the Minister does not want a repeat of that in the privatisation of electricity because it would be politically embarrassing for him and, of course, far worse for those who suffer disconnection.

Mr. Eric S. Heffer (Liverpool, Walton): Will the hon. Gentleman take note of the fact that there are just two hon. Members on the Government Benches? We are discussing disconnections and people who will suffer considerably as a result. Yet Conservative Members are so interested in the matter that they will simply come in to vote against the amendment. The general public should take note of that.

Mr. Bruce: I am grateful for the hon. Gentleman's intervention. Whey I saw the number of Members on the Conservative Benches I thought that I had come lucky in an unexpected raffle for an extra Adjournment debate.

The Parliamentary Under-Secretary of State for Energy (Mr. Michael Spicer): Will the hon. Gentleman confirm that only three Back-Bench Labour Members are present? The hon. Member for Liverpool, Walton (Mr Heffer) should not cast stones when he is sitting in a glasshouse himself.

Mr. Bruce: I think that I had better let that pass. I shall say simply that it would be helpful for the debate if more hon. Members were present. We are debating a serious and important issue which affects many people and causes them considerable concern.

We must avoid a situation in which new companies come into effect under the licensing procedures proposed in the Bill, but are not required to adopt a process of disconnection that automatically gives a better deal to the consumer than exists or has existed hitherto. The amendments seek to include specific measures in the Bill to ensure that whoever receives a licence is required to operate a code of practice that will minimise the incidence of disconnection.

4 pm

In that context the obvious factor to be considered is the extent to which lower income groups and poorer people are disadvantaged because they spend proportionately more of their income on electricity. Low-income pensioner households spend, on average, 30 per cent. more on electricity than average-income pensioner households. That makes electricity like an old-fashioned Giffen good. The 19th century example is the potato. As the price of potatoes went up, people bought more, because the potato was their staple diet. They had to ensure that they had an adequate supply, and it was other things such as bread and the luxury of meat that went by the board.

The same applies to electricity. People on low incomes facing increased electricity costs are forced to cut back on other commodities. They sometimes economise on heating, causing great danger to their health and safety, and, regrettably, many of them die of hypothermia as a direct result. Some economise on food, which also undermines their health, or on other near-essential commodities which are nevertheless not quite as necessary as heat and light.

Mr. Alex Salmond (Banff and Buchan): Does the hon. Gentleman agree that his arguments are particularly relevant to the north-east of Scotland—the area that he and I represent—where charges for heating are about 30 per cent. higher than they are in the south-east of England?

Mr. Bruce: The hon. Gentleman has anticipated a point that I proposed to raise. He is absolutely right that, in areas such as the north of Scotland where winter temperatures are generally lower, although we have been luckier than usual this winter, people have to spend even more on heating than people in the milder south.

The problem is further aggravated by a number of measures introduced by the Government that squeeze people on low incomes. A direct consequence of the switch from the community programme to employment training has been a significant reduction in the number of home insulation schemes carried out by organisations under the neighbourhood energy action umbrella. SCARF—Save Cost and Reduce Fuel—an organisation in Aberdeen, which covers part of my constituency, is concerned about its ability to maintain a programme that is of benefit to people on low incomes and helps them to be warmer at lower cost. The reduction in such provision increases the burden.

The second factor that has to be taken into account is the introduction of the poll tax or community charge in Scotland this year. The poll tax falls proportionately more heavily on low-income families and will reduce their ability to pay for other essential services such as electricity. People on low incomes tend to depend more on electricity for their heating. Their houses tend to be less well insulated and they tend to be unable to take appropriate action to deal with the problem.

It is interesting, too, that the Government are about to launch a promotion campaign because of the relatively low take-up of family credit, which was designed to help low-income families. Many people have not taken up their entitlement, perhaps because of a lack of information and perhaps because of a reasonable feeling that if a household has wages coming in—particularly if there are two wage earners—it ought to be able to meet the essential bills. People do not like the idea of having to seek additional support and feel that wages ought to be paid at an economic level rather than being subsidised by the taxpayer. The very title "family credit" gives the impression that repayment is required, and that may deter people from taking up the benefit. Perhaps they are unable to service their existing debts and wisely do not wish to go further into debt. All those measures have increased the squeeze on low-income families at a time when they face rising costs.

An additional factor, touched on by the hon. Member for Banff and Buchan (Mr. Salmond), is that in certain parts of the country heating costs are higher. Yet the heating allowances scheme has been abolished in favour of the much less generous incorporation into the normal benefit process and a severe weather payment which has not been invoked since its introduction because we have had a mild winter. No one has benefited from those arrangements.

[Mr. Bruce]

The situation is serious. We must introduce measures that give people a fairer deal in relation to disconnection. The Government say, "We resent the implication that we are responsible for inflicting disconnections." Yet in a variety of ways the Government's policies are hitting low-income groups and making it harder for them to pay electricity bills. That makes it more likely that they will get into difficulty and, under the existing code of practice, increases the likelihood that they will be disconnected. We must make a stand and prevent that happening.

The final factor to be taken into account is that privatisation will result in higher electricity prices for the whole population, and especially for those on low incomes. Even the Government acknowledge that that will happen in the short run, and many of us believe that it will happen in the long run as well. Electricity prices have already been increased unnecessarily and unjustifiably. Again, the situation is worse in Scotland than in England and Wales. In Scotland, the increase in electricity prices has been higher than the average rate of inflation, with no justification, other than that the companies—now the boards—are preparing for the privatisation requirement. That will force up electricity prices in Scotland—from the lowest in the United Kingdom to the highest in the United Kingdom. Such burdens on lower income families will mean an increase in the risk of disconnection and the hardship associated with it.

The amendments represent essential improvements to the Bill to ensure a specific agreed workable means of preventing disconnection wherever possible. I have not suggested a more radical measure, such as that in operation in Wisconsin, where all electricity supplies are reconnected on 1 October regardless of the customer's outstanding debt because of the importance of giving people heat and light throughout the winter. There should be no disconnections during the winter. I have refrained from making such a suggestion because I felt that the Government might be inclined to resist it. Instead, I have tabled practical and reasonable amendments which propose a code of practice within the law to prevent disconnections.

Obviously, the best solution is the use of prepayment meters. They enable people to pay as they go and remove the uncertainty of credit. People can see how fast they are using electricity. Meters can be adjusted by agreement to take account of any previous debt. For many, meters represent the best way to pay, particularly now that new meters have been introduced to reduce the risk of people breaking in, forcing the mechanism and running away with the money—or, in the case referred to last week, the washers—that they may find in the meter. If a person is prepared to take a prepayment meter, and if it is reasonable to provide such a meter, if direct payment has been agreed—from the social security office or by standing order—or if a person has agreed to pay a deposit, there should be no question of disconnection. If someone disconnected under the existing arrangements agrees to the proposals, he should automatically be reconnected immediately.

Our objective is to prevent disconnections, and that is why amendment No. 116 is so important. The argument is overwhelming. The increase in fuel poverty that the Government are imposing on people on low incomes is intensifying and, as drafted, the Bill would increase the possibility of hardship. The amendment is reasonable, practical and workable, and I hope that the Minister will accept it.

Mr. Kevin Barron (Rother Valley): First, I should like to comment briefly on the absence of Conservative Members. The hon. Member for Gordon (Mr. Bruce) will remember our debate in Committee on fuel poverty. From the beginning of the sitting at 10.30 am until 7 pm every Tory Back Bencher who spoke defended the code of practice, only to be wiped off the floor when the Secretary of State spoke later. Perhaps Tory Members are not too keen on having a re-run of that in this debate.

The amendments pursue a number of the issues that we raised in Committee and seek to ease the burden of fuel debt for badly off consumers and to ensure that no one's fuel supply is disconnected because he or she is unable to meet the fuel bill.

People are fuel-poor for several reasons. Obviously, income plays a major part. People on low incomes have great difficulty in providing themselves and their families with enough heat to keep warm and enough power for adequate lighting and hot water. Unfortunately, those whose bills are the largest and the most difficult to meet tend to live in homes with no insulation, damp proofing, double glazing or central heating. In the long term, it will be only through a policy of bringing all homes up to insulation standards, as well as ensuring that everyone has an adequate income, that we will make inroads into solving the problems of fuel poverty.

It is important to stress that now, because, as a result of changes in employment regulations, the different funding of projects through the Manpower Services Commission and the changes made to employment training, unfortunately many schemes that had been useful in helping people who live in poorly insulated homes to fight fuel poverty have had to be stopped in the past six months.

However, at least at the moment we can ensure that people do not have to live without heat or power. Living like that is a miserable experience which causes great stress to individuals and families, as well as depriving them of warmth and light. I am sure that in this day and age and in this country, which is energy-rich in coal, oil and gas, there should be no need for people to suffer fuel poverty.

We are anxious to avoid the massive increases in disconnections that followed the privatisation of the gas industry. As the House knows, since that privatisation disconnections have risen by 30,000 per year.

In Committee, we were pleased that the Secretary of State finally agreed with us that the present voluntary code of practice, which had been defended by many of his hon. Friends, has not proved adequate and has not protected consumers who need protection. The Secretary of State told the Committee:

"there are good grounds for moving to the system that Mr. McKinnon"

—the director of Ofgas—

"is recommending for gas . . . we shall add a similar clause to the licence. It will be a better arrangement."—[*Official Report, Standing Committee E*, 31 January 1989; c. 607-8.]

It was on that basis that we withdrew all our amendments on fuel poverty to this section of schedule 6. The Secretary of State gave the Committee an assurance that the House would see the proposed clause. He said that he hoped that that could happen before reaching this stage of our proceedings on the Bill but, unfortunately, he has

notified us that that cannot happen because Mr. McKinnon is revising his proposals in the light of the consultations that he has held since the original publication of the modification for the licence.

4.15 pm

The major weakness of the original proposals—I assume that the Secretary of State as well as Mr. McKinnon is considering this—was that the additional protection would be available only to those who made contact with British Gas. Advice agencies have expressed their worry that those who do not make contact—out of fear, because they are unaware of the need to do so, because of language or literacy problems or because they have no experience of dealing with bills—will fall into even greater debt and suffer disconnection. All hon. Members who have ever dealt personally with those who have been disconnected or who are in default with electricity boards will know that such people normally fall within the categories that I have outlined.

There has also been no clarification about with whom contact should be made or how, whether it should be in person, in writing, by telephone, to the accounts department or to a showroom. A customer may believe himself to have made contact, but that will not prove sufficient. For all those reasons, we would prefer that the additional protection that will be afforded customers will not be dependent on their making the contact. In any case, at least the "who" and the "how" should be defined and the administrative procedures explained.

The proposed modification still leaves the question of access to pre-payment meters rather vague. We were told by the Secretary of State that electricity consumers would have a new right to demand a pre-payment meter, but that appears to be only at the point of disconnection or in lieu of a deposit. It is absolutely right that pre-payment meters should be provided as an alternative to disconnection, but there is no reason why a consumer should have to reach that point before being able to make such a choice. Every consumer should have the right to choose to have supply through a pre-payment meter at any stage. Wider availability of such meters would help to prevent the build-up of debt. Problems arise when one cannot meet one's quarterly bill, and one way of avoiding that problem is to pay for one's electricity as one goes along, by means of a pre-payment meter.

We are pleased that the Government are at last making some moves on the issue of disconnections and are no longer simply asserting that the voluntary code is suifficient in either its content or application. However, it would be even better if a full and comprehensive code of practice were written into the Bill. We attempted to do that in Committee, but, of course, it was not accepted. Such a code of practice would make clear the rights and obligations of both consumers and suppliers and would enshrine the principle of a right to warmth and light. That is what we hoped would happen, but, unfortunately, the Government were not able to accept it. We hope that the measures that will be brought forward and written into the licence will achieve Mr. McKinnon's aspiration of making disconnections a thing of the past. We urge the Secretary of State to adopt our suggestions.

I do not know whether the hon. Member for Gordon will want to press his amendment to a vote. If he does, the official Opposition will support him.

Whether or not the Secretary of State meant to say what he did in Committee, we believe that he must take action so that even if a code is not included in the Bill, there will at least be a code in the licences to give direct specifications to the supply boards about how they should treat customers who have fuel debt and about the availability of pre-payment meters. Such meters should be available throughout the country, not just in some area or supply boards.

We hope that the Minister will show some good will and that that will happen. We said in Committee that we did not wish to divide the Committee, and we do not wish to divide the House on this issue. However, as Mr. McKinnon said of gas, we hope that electricity disconnections will become a thing of the past.

Mr. Michael Spicer: The hon. Member for Rother Valley (Mr. Barron) is right that pre-payment meters will not be available on demand except as a substitute for a demand of security. However, under clause 21 the director will have powers to arbitrate if he thinks that there is any unfairness in any dispute where there is demand but where the company does not wish to give pre-payment metering, if he thinks that pre-payment metering would help people.

In answering both the hon. Member for Rother Valley and the hon. Member for Gordon (Mr. Bruce), I shall speak only briefly now because we have already had lengthy discussions on this subject. The number of disconnections has been falling, by and large, throughout the country over a three-year period. Therefore, although I do not think that the hon. Member for Gordon was relating disconnections specifically to weather conditions, I should like to put on the record that I do not think that it is right to do that.

On the understandable question that the hon. Member for Gordon asked me at Question Time and to which he has again referred, we have not yet been able to bring forward the licence conditions that will apply to the problem that he has outlined. I confirm what my right hon. Friend the Secretary of State told the Committee; these codes will be the subject of licence conditions. There is no doubt about that. But, as the hon. Member has said, and as my right hon. Friend said in Committee, we want to make sure that they are absolutely on a par with the code that is currently under discussion between Mr. McKinnon and British Gas.

The problem that we face is that there has been a round of consultations between Mr. McKinnon and the industry, as a result of which he is making proposals further to strengthen the conditions. We do not want the conditions that we attach to licences for the electricity industry to be in any way weaker that those in respect of gas. The only issue at the moment is to make sure that the two sets of conditions are comparable—preferably indentical. The wait for the outcome of the gas discussions is all that is holding us up at the moment. That is why we have not been able to bring the conditions forward for this stage of the parliamentary deliberations. Certainly, we shall want to do so before the Bill receives Royal Assent. I hope that what I have said amounts to a substantive answer to the hon. Gentleman's legitimate concern about this matter.

Amendment No. 116 suggests that where there is some form of payment arrangement, that arrangement provides security. Manifestly it does not. It is not an alternative to prepayment as a form of security. Therefore we cannot accept amendment No 116. Nor,

[Mr. Michael Spicer]

I fear, can we accept No. 115, because the industry and the Government already accept the principle that if a payment arrangement allowing both the recovery of an outstanding debt and payment for future charges is entered into and is kept, disconnection should not be necessary. That is clearly set out in the industry's voluntary code of practice on the payment of bills. The public electricity suppliers will be required, as a condition of their licence to produce a code and to agree it with the director. Thus, I think that the spirit of amendment No. 115 is met.

In relation to amendment No. 152—indeed, this is implied in amendments No. 115—we cannot accept the idea that the existence of a pre-payment meter itself constitutes some sort of security that debt will be settled. Manifestly, that is not the case. The substance of amendment No. 152 was referred to in Committee. I think that it was I who pointed out that 15 working days are allowed for payment of bills and that this reflects existing practices within the industry. In England and Wales, some 166,000 consumers are billed monthly, so the 28-day condition is not appropriate for them.

The second part of the amendment leads me briefly to remind the House that, for the first time, the supplier will have to go through a formal procedure before he can disconnect a consumer. In any case, there can be no disconnection where there is a genuine dispute. In addition, under the licence, the public electricity supplier will be obliged to produce a code of practice on payment of bills, including arrangements, for people having difficulty meeting their bills. While I am unable, at the moment to give the details of the conditions, I can say that it is intended that a distinction shall be made between those who cannot pay their bills and those who will not pay their bills. That is a perfectly fair distinction to make.

I think that we are meeting what all sides of the House undoubtedly want, which is that pre-payment meters should be available as an alternative to security; that where people want a pre-payment meter, but are not offered one by the supplying company, the director shall arbitrate; and that there shall be written into the licences a code of practice that will ensure that all this is done fairly and in the best interests of consumers.

Given that that is the spirit behind the amendments, and behind the Labour party's pronouncements on this matter, I very much hope that the hon. Member for Gordon will not press the amendments.

Mr. Malcolm Bruce: I am grateful to the Minister for clarifying the position on the code of practice. It is a little disappointing, although I understand the reasons, that it is not possible to shed any more light on the nature of the code of practice that we discussed in Committe. The hon. Member for Rother Valley (Mr. Barron) has pointed out, quite rightly, that there was not much support from the Secretary of State's own side for his commitment to an improved code of practice. Possibly that is because he had not told his hon. Friends his view before he entered the debate at the end. There is a feeling that some Conservative Members are less than sympathetic to the need for this kind of code of practice. However, I accept that the Secretary of State and the Under-Secretary are not in that category that they are determined that the agreement in respect of gas should be applied to electricity.

Mr. Barron: We should not jump to too many conclusions. The hon. Member for Gordon (Mr. Bruce) will recall that the Minister said earlier that there was no question but that this would be written into the licences. Well, it was not in the draft licences. We can only assume that at that time the Government were going to let the industry draw up its own supply codes. It is because of what happened in Committee that a supply code will be written into the draft licence.

Mr. Bruce: The hon. Gentleman is absolutely right. It is very interesting that in Committee the Secretary of State was clearly somewhat stung by the attack—though perhaps that is an internal matter for those who were present. Perhaps he decided on the spot that the Opposition's arguments were correct. Perhaps he decided that the suggestion that there should be a worse code of practice for electricity consumers than for gas consumers was ludicrous and indefensible, and determined, at that point, to do something about it. I accept that he is still committed to that position, but he has not actually come up with the answer. Obviously, that makes the position a little difficult for us at this stage.

The Minister took issue with me on the question of security. I feel that the reference to security is a sufficient undertaking to the supplier. The amendment says:

> "'Security' means any arrangement in consequence of which a public electricity supplier may be assured of payment of money due to him and shall include a deposit . . . in favour of such supplier."

It seems to me that that is a pretty clear definition of "security"—meaning that the supplier will get his money, and that there is an adequately agreed method: by paying a deposit up front, or by going for a meter, or by some mutually agreeable standing order arrangement, both sides having the right to appeal to the director.

As the Minister will appreciate, I do not claim total credit for the amendment or its contents. It has been thought through, and I believe that it would write into the Bill a specific defence for those who face the possibility of disconnection. I should like to give the lie to, or lay to rest, any suggestion that I or my colleagues, or any Opposition Member, is interested in enabling people who can pay their electricity bills to get away with failing to do so. I believe that the wording of the amendment takes care of that. People in that category could be forced to pay a deposit, or to set up an unbreakable standing order, or to provide some other kind of security. But people who cannot pay would have the option of a meter or a direct payment, such as is provided by the fuel direct scheme, from social security. That seems to me to be a very considerable improvement on the present arrangement, and will ensure that the supplier gets his money—which I think is quite reasonable, even though suppliers' charges are too high—and that the customer is able to keep up with payments because they are geared in a way enabling him to pay as he goes along and to monitor both the cost and the level of consumption.

I hope that the Minister will accept that I am not being churlish when I say that I wish to divide the House. I believe that we do not have a firm enough position on the record. If the amendment were included, it would improve the Bill considerably. It would in no way be incompatible with the code of practice, but rather it would help to stiffen the contents of the code of practice that we have not yet seen. The issue is sufficiently important to divide the House.

Question put, That the amendment be made:—
The House divided: Ayes 146, Noes 226.

and
Mr. John Mark Taylor.

Question accordingly negatived.

Clause 20

SPECIAL AGREEMENTS WITH RESPECT TO SUPPLY

Amendments made: No. 17, in page 16, line 29, after '19', insert

'and (*Additional terms of supply*)'.

No. 18, in page 16, line 47, after '19', insert

'and (*Additional terms of supply*)'.—[*Mr. Michael Spicer.*]

Clause 21

DETERMINATION OF DISPUTES

Amendments made: No. 19, in page 17, line 7, after 'to', insert

'19, (*Additional terms of supply*) and 20'.

No. 20, in page 17, line 16, after 'to', insert

'19, (*Additional terms of supply*) and 20'.

No. 21, in page 17, line 18, leave out from 'section' to 'may' in line 23 and insert

'the Director may give directions as to the circumstances in which, and the terms on which, the supplier is to continue to give the supply pending the determination of the dispute.

(3) Where any dispute arising under section 19(1) above fails to be determined under this section, the Director may give directions as to the security (if any) to be given pending the determination of the dispute.

(3A) Directions under subsection (2) or (3) above.'.—[*Mr. Michael Spicer.*]

Clause 23

ORDERS FOR SECURING COMPLIANCE

Mr. Michael Spicer: I beg to move amendment No. 22, in page 18, line 3, leave out

'has contravened and is likely again'

and insert 'is likely'.

Mr. Deputy Speaker (Mr. Harold Walker): With this it will be convenient to take Government amendments Nos 23 to 25, Government amendment No. 27 and amendment No. 191, in clause 46 page 35, line 45, at end add—

'(e) include a financial statement surveying costs for each area board during that year.'.

Mr. Spicer: I merely want to say, by way of proposing the amendments, that there was some discussion about these issues in Committee. I believe that the hon. Member for Cardiff, West (Mr. Morgan) in particular argued that the director general should have powers to take action if he has clear reasons for believing that action contrary to licence conditions is likely to be taken. If the amendments are acceptable to the House that point will be met. The director general will be able to take action if he has legitimate reasons for believing that action contrary to licence conditions is likely to be taken.

Mr. Tony Blair (Sedgefield): The purpose of amendment No. 191 is to ensure that, when the director general makes a report to the Secretary of State—as under clause 46 of the Bill he will be obliged to do—on his activities during the year, he includes a financial statement surveying the costs for each area board during that year. It is entirely appropriate on this day, when we will be debating a series of amendments concerning the rights and needs of consumers, that we ask what price the consumers will be required to pay for this legislation. At the end of the day—no matter how many discussions that people who are fond of debating the industry structure may wish to have—what the ordinary consumer will ask is, "Will privatisation improve the service and will it bring down bills?"

The boast of the Secretary of State about this legislation was that this privatisation is somehow different from gas and British Telecom because there is no monopoly. The criticism that was implicitly acknowledged by him was that gas and British Telecom had gone wrong as privatisations because there was a monopoly element in relation to consumers. However, for the vast majority of consumers, that is exactly what has happened here. The consumer will deal with the same electricity board as now, with no ability to transfer custom if he is dissatisfied with the service, and with no opportunity to hold the electricity board publicly accountable, because it will no longer be publicly owned.

4.45 pm

If we have learnt anything from privatisation, it is surely that, when one turns a public monopoly into a private monopoly, one combines in the worst way possible public service and private profit. One has the need to use without the right to choose. That will exactly describe the plight of Britain's 22 million electricity consumers following privatisation.

When we examine what the Bill includes for consumers, we must point out first that there will be no choice in relation to the area board used and that, of course, the grid system will be a monopoly owned by those area boards.

The only element of competition comes twice removed from the consumer in generation. Yet I believe that, if the Committee stage of the Bill accomplished anything, it exploded the notion that the duopoly that will be created —big G and little G owning the generating capacity—will make it at all likely that there will be any true competitive element operating within the scheme. In other words, as it became increasingly apparent during Committee, the Government are driven to rely on the public sector regulator to give any credibility at all to their notion of public accountability.

We have been told of all the independent power projects that are due to flood the system. We have consistently asked for details of the 20 power projects that the Government say are awaiting us in the new privatised structure, but we have not yet been given them. At one point in Committee I thought that we might have been promised them, but perhaps we can have them now. I suspect, however, that on examination many of those projects will turn out to be nothing more sophisticated than bids by various fuel suppliers or power plant builders to ensure that they are in on the act after privatisation.

The Secretary of State continually said throughout the Committee proceedings that this was no longer a cost-plus system. I suppose he meant by that that we were no longer in a situation where the costs would be simply passed on to the consumer. Yet it is extremely difficult to envisage how that is not the case. Most of the contracts for power generation will be long term. Many will be on a take-or-pay basis. If the regulator is involved at all, he will be involved when those contracts are first concluded and agreed.

The licence agreement that governs the area boards in what they charge the consumer will operate according to the formula RPI minus X plus Y. We do not know what X is, we do knot know how Y is formulated, and we find in the licence conditions that, even after the formula has been set for the area boards, they will be permitted to exceed it by what is called in the licence "the permitted percentage". That is an excess by which the area boards will be able to exceed whatever targets the regulator sets. Yet again, when we look at the licence to discover what the permitted percentage is, another blank appears. So often in our debates, when we get down to the detail of what awaits the consumer after privatisation, we face a blank. The truth is that this is a bill without any specific charges in it at all.

If we wanted any proof as to what will happen to prices after privatisation, the proof is with us already—it was 9 per cent. last year, because of privatisation raising the rate of return, and 6·5 per cent. this year. We now know that the rate of return will be raised from 5 to 8 per cent. for nationalised industries. I suspect that that is to provide the colour of an excuse, so that area boards and the privatised electricity industry will have written into their regulatory structure a minimum rate of return of 8 per cent. Perhaps the Minister and the Secretary of State can confirm that. If the Secretary of State is right—although we can never be sure when dealing with figures whether he is right or wrong —he is talking about £30 billion of investment over the next few years, at an 8 per cent. rate of return. That will have a dramatic upward pressure on prices. In relation to the nuclear industry, we know that the higher the rate of return, the higher the nuclear tax that consumers will pay for nuclear power.

Mr. Geoffrey Lofthouse (Pontefract and Castleford): Does my hon. Friend appreciate—does the Minister appreciate—that during the past three years the CEGB's costs for the nuclear fuel cycle have increased by £460 million? That is a 53 per cent. increase. Who will pay for that—the consumer?

Mr. Blair: My hon. Friend is absolutely right to point out that rise. He is also right that it will be the consumer who will pay along with the taxpayer, as we shall see later.

The irony of the Bill is that, whereas the profit from the electricity industry moves to the private sector, much of the risk and liability stays in the public sector. The Government can no longer seriously maintain that prices will fall. Although it is true that back in the heady days of 1987 when the Secretary of State was first talking about the proposals he wrote an article in the *Daily Express*

"How I am going to cut your electricity bills".

We get little from the Government even to remotely suggest that bills will come down. Instead they have mounted a fairly defensive exercise to say that bills will not go up as much as Labour says.

The truth is that replacing the downward pressure on costs—that was the slogan of the Government—is an inexorable upward pressure on costs as a result of privatisation. The Government's only real hope of prices falling after electricity privatisation lies in fuel costs coming down. In other words, something entirely extraneous to the process of privatisation. That is the only vestige of respectability that the argument for falling prices has left.

I have often said that one of the extraordinary things about the Bill as it moves through the House is that whether the discussion has been about prices, the nuclear tax or the costs of flotation, even the least curious Conservative Members would want to know what it is going to cost their constituents. The cost of flotation is a prime example of that.

The analysis we provided in Committee suggested that the cost of flotation, as a percentage of the proceeds, would be about 5 per cent. If that calculation is repeated on figures such as those given in the newspapers regarding what the industry will fetch on the market—about £18 billion—we are talking about flotation costs of about £900 million, which represents a £25 premium or special additional surcharge on every household in the country.

Yet we have been consistently denied any explanation from the Government as to whether they think that that calculation is wrong or wildly inaccurate. They have given no estimate themselves as to what they consider to be the costs of flotation. If they say, "We never normally provide that" then perhaps it is about time that they did. Surely that is one of the things that we are entitled to take into consideration when deciding whether to support this Bill.

Mr. Alexander Eadie (Midlothian): Does my hon. Friend realise—it was published quite recently—that because the Bill is doing so badly the Government intend to spend another £20 million on advertising?

Mr. Blair: My hon. Friend is absolutely right. If £20 million were the sum total we would consider that we had got off fairly lightly, but, unfortunately, that is not so. The CEGB has allocated £76 million this financial year to be spent on privatisation—this does not include the cost of the flotation itself; it is all pre-flotation costs. That does not include the promotion costs of the flotation or,

[Mr. Blair]

perhaps most important, any of the costs of the area boards or of the national grid as a result of privatisation. That is why it is right to ask for figures from the Minister so that we know exactly what we are up against.

One interesting aspect of the presentation given by Mr. Baker to electricity board managers a short time ago was a document presented by Lazard Brothers, who are advising the new National Power—big G—on the financial aspects of the privatisation. That document says quite clearly exactly what we can expect as consumers and taxpayers from privatisation. It states:

"The challenge to be faced in the reorganisation of the industry cannot be overstated. A restructuring of this sort so close to flotation is unprecedented in its scale and complexity . . . the reorganisation of the electricity industry raises fundamental problems of logistics."

It also states that a considerable marketing exercise will be required to establish the commercial credibility of the new National Power company. All of this, helpfully admitted by Lazards, will be paid for by us, the consumer and the taxpayer. We shall have advertisements promoting a sale that no one wants. That is what is so wrong with this privatisation.

We have had opinion polls that show almost 70 per cent. of the population oppose the privatisation, as they oppose water privatisation. The Government made no effective attempt to persuade public opinion during the Committee. They believe that if they have a majority here that obviates the need to explain to people why they are carrying on with this privatisation process. The answer is that they are doing it for no other reason than privatisation itself.

This essential public service that we all need to use will be privatised at enormous cost to the consumer and the taxpayer at a time of immense uncertainty in the industry. There can be nothing more irresponsible than to embark upon that process, but I am afraid that there is nothing more typical of the Government.

Mr. Peter Hardy (Wentworth): I suppose that any Government are obliged to give serious consideration to the values or dogmas that they hold dear. However, they also have an obligation to the nation to see that the application of those dogmas is not prejudicial to the interests of the community and the country. Unfortunately, there is cause for grave concern about the effects of Government policies on the price of the electricity paid for by the domestic consumer and by industry.

Since the introduction of the Bill I have had a number of discussions with people engaged in the special steels industry. Only the other day I met people from the Iron and Steel Trades Confederation—men who work in the Rotherham works of the engineering steels industry, who are represented by my hon. Friend the Member for Rotherham (Mr. Crowther) and myself. We meet representatives of that industry frequently and high on the agenda is the price of electricity. In our area we produce steel by the electric arc method and the price is significant.

Those steel workers who were worried about the price of electricity have, during the past decade, broken world record after world record. They take pride in the superb achievements of their works and the knowledge that their skill has made them most competitive. They deeply resent the fact that, last year, there was a 9 per cent. increase in electricity charges followed by a 6 per cent. increase this year. Those price increases could take the competitive edge off their industrial endeavours.

They are conscious of the fact that if we are to build from the ashes of deindustrialisation that the Government have inflicted on the country during the past decade, industries with the potential to export should be able to expect Government assistance and encouragement rather than the introduction of enormous economic strategic disincentives.

For example, I calculated that last year's electricity price increase would make a 4 per cent. increase in the cost of our steel production inevitable. When the special steels industry of Britain is competing with that of Germany, Japan and other steel producers, it is nonsense for the Government deliberately to embark on a policy that forces up the industry's prices and takes off its competitive edge. However, that is what has happened.

My hon. Friend the Member for Sedgefield (Mr. Blair) virtually invited the House to look at the realities of this increase. When the 9 per cent. increase was imposed, the Secretary of State—who I know cannot be with us, but I doubt whether he or the Under-Secretary could deny this—made it absolutely clear that the increase was necessary to provide the electricity industry with an investment capacity. However, the industry had already budgeted for an investment of just over £1,000 million, of which the Secretary of State for Energy appeared to be unaware. He said that we had to make an increase in excess of £1,000 million so that the CEGB could invest.

5 pm

The Minister knows that, in Committee, I made a number of attempts to secure from him the actual record of investment following that 9 per cent. increase in prices. Capital expenditure by the electricity supply industry in 1987-88 was £1,089 million and that approved in 1988-89 was £1,474 million—little more than the amount that would have been spent by the industry without the 9 per cent. increase in prices. The amount planned for next year is little more than would have been fulfilled by the electricity supply industry without this year's 6 per cent. increase in prices—let alone the 9 per cent. increase of last year.

I know—as do the steel workers of my area—why the 9 per cent. and 6 per cent. increases were applied. It was to ensure that, despite the existing burdens on domestic consumers—millions of whom find it difficult to pay their bills—and despite the enormous trade deficit we have as a result of the Government's incompetence and negligence, consumers must also bear the burden of increased costs of production.

The Government give no priority to industry, and I regret that organisations such as the CBI and others that are supposed to represent Britain's important industries tend to be supine in their criticism of Government policies which are not in the interests of British industry. Sooner or later, a Government will have to take office who recognise that the job of exporting and matching the enormous deficit now facing the United Kingdom requires a different set of priorities. Such a Government would not force industry and domestic consumers to bear enormous price increases only in order to provide the Government with a sweetener to enable them to privatise the industry.

Mr. Frank Haynes (Ashfield): In Committee and on Report we have been constantly told that the Bill is in the interests of the consumer. That is a lot of rubbish. It is really in the interests of the people who will buy into the industry. It is all right for the Minister to tell us, both in Committee and on the Floor of the House, that ordinary people will be able to buy into the industry. In previous privatisations the Chancellor of the Exchequer had the nerve to stand at the Dispatch Box and say that pensioners would be in the queues to buy shares in the privatisation of our public industries. Some pensioners may have bought a share or two but it was not long before they flogged them to the big-money folk who moved in to buy them off. Organisations and people with big money are the ones who have bought up willy nilly the industries that the Government have privatised.

My hon. Friend the Member for Sedgefield (Mr. Blair) mentioned the regulator who will be acting not in the interests of the consumer but, once again, in the interests of those who will get a rake-off—those whom Conservative Members represent. Conservative Members represent the people with pockets of money—I am not joking. They have put so much money in their pockets that they cannot find enough pockets to hold it.

My hon. Friend the Member for Sedgefield mentioned big G and little G, which reminded me that in my youth there were two first-class Warner Brothers film stars—Humphrey Bogart and Edward G. Robinson. They were always talking about getting hold of big G. They robbed banks and folks in the street for big Gs, which they used to call greenbacks. That is what the Bill is all about. I understand big G and little G and it hurts me because Opposition Members represent ordinary folk in the street. Conservative Members represent people in big business—by God, they look after them.

While the Minister is listening, I shall tell him something else. I am terribly disappointed that the Secretary of State is not here. He is swanning around in Concorde in the Soviet Union when he should be here delivering this wicked Bill for the privatisation of electricity. He has ducked out of his responsibility and nipped across to have a word with Gorbachev, perhaps to try to convince him to sell off his electricity industry. He will have a job over there, although it appears that he has a simple job here.

Mr. Hardy: I knew that the Secretary of State was away but I did not know that he was travelling in Concorde. If so, his journey time must be short enough to allow him to fulfil both his obligations—the one here and the one in Russia.

Mr. Deputy Speaker: Order. I fail to see how any of this can possibly arise under any of the amendments before the House.

Mr. Haynes: No. I shall duck out of that one.

I am making the point that the Secretary of State should be here, delivering the Bill through the House on the last day on Report, and Third Reading, instead of swanning around in the Soviet Union. Too many Secretaries of State swan around in different places of the world. Half of them live in the stratosphere instead of here, doing their jobs on behalf of the people they are supposed to represent.

I am getting a bellyful from my constituents who, as I told the Minister in Committee, had a bellyful of Sid, when the Government were flogging off gas. All we saw when we switched on our televisions was Sid. All of a sudden, Sid disappeared and the Secretary of State seems to keep disappearing on this Bill too. In Committee I also suggested that the Government ought to consider seriously their advertisements. My constituents tell me that they know all about our electricity industry, yet the Government keep putting advertisements on television telling us all about it. It is all in the interests of flogging off the industry to those people who have plenty of money but who want to make more. The Secretary of State keeps bumping up the price of electricity—by 9 per cent. last year and by seven point something this year, after we were told that the increase would be 6 per cent. The Minister is not looking at me—he is looking around the Chamber. I am trying to educate him about my constituents' feelings but I shall be happy to give way to him if he wants to intervene.

Mr. Michael Spicer: I have certainly been listening to the hon. Gentleman, but it takes some concentration because he always makes the same speech. If he made a different one, it would be easier to listen with intense interest.

Mr. Blair: Ministers are so difficult to educate.

Mr. Haynes: I must keep repeating my message until I get it across; some of these Ministers are really thick. They do not listen.

The Opposition are talking sense. We hear a lot of technical rubbish from the Government, but when we get back to our constituencies we hear in no uncertain terms about what people there think about the Government's actions. At the moment, we are talking about the privatisation of electricity——

Mr. Deputy Speaker: Order. We are talking about the amendments before the House.

Mr. Haynes: Come on, Mr. Deputy Speaker, be fair. I am talking about the costs and price of privatisation, and I am telling the Minister how my constituents feel. I am speaking of lower-paid workers, not Members of Parliament, particularly Conservative Members who hold seven or eight directorships as well as this job.

My hon. Friend the Member for Bolsover (Mr. Skinner) raised a point of order earlier about where the money was really going to go. It will not go to the people we represent—it will go to the people the Conservatives represent. The Conservatives always look after their kind, but, as the Minister knows full well, come the next election we shall occupy the Government Benches and the Minister will be here only if he wins his seat.

I am repeating myself for a specific purpose. We shall put the electricity industry right when we return to power, and it will be under public control so that the people out in the country can take the decisions—not a small clique of 300 or so Conservative Members deciding matters for 60 million people in the country. It is true that the Government gave fair warning in their manifesto that they intended to privatise this and other industries. My notes at this point read, "Consumers—ha! ha! ha!" This is a big joke; the Government are not interested in the consumer.

The Government Benches are empty today, but here comes the little lad from Bosworth who made a contribution in Committee last week. I hope that the hon. Member for Bosworth (Mr. Tredinnick) will make one today. Occasionally he makes sensible contributions about

[Mr. Haynes]

this privatisation. He has probably been outside the Chamber preparing his speech, which I can see on his knees. I hope that he will tell us his real feelings about the people in his constituency. I know plenty of people there; Bosworth is not far from my constituency. At one time it was Labour-controlled——

Mr. David Tredinnick (Bosworth): Not any more.

Mr. Haynes: It will go back to being so——

Mr. Deputy Speaker: Order. Bosworth is not mentioned in the amendments. I hope that we shall get back to them now.

5.15 pm

Mr. Haynes: Privatisation affects Bosworth as well as my constituency or Sedgefield or the Minister's constituency. It involves every constituency—even Doncaster, Mr. Deputy Speaker. I do not think that you will pull me up for mentioning Doncaster, which will be seriously affected by the privatisation of electricity. It has a race course, with occasional night racing, for which lights are needed. The race course will be affected by the prices which we will enjoy following privatisation. So put that in your pipe and smoke it, Mr. Deputy Speaker, if you do not mind my saying so. Mr. Deputy Speaker is fair; he gives us the opportunity to speak our feelings, which is what I am trying to do this afternoon. I know that you have pulled me up a couple of times, Mr. Deputy Speaker, but you did not really mean it. The important thing is that many people at the lower end of the income scale are wholly dependent on social security benefits—yet the Government have cut them. Such people will really feel the massive price increases that are on the way.

I know how this will end up: more people will have their electricity cut off, and Members of Parliament will face real problems. When Labour returns to power after the next election, we shall put all that right. We shall reduce the number of cut-offs, introduce fairness and put the money where it is needed, not into the pockets of the rich.

I remember my hon. Friend the Member for East Lothian (Mr. Home Robertson) holding up his poll tax form from Scotland. The poll tax is another way in which the Government are robbing the poor whom we are trying to look after. My hon. Friend held up his poll tax demand and said that it was for £1,000 less than he had paid last year. That shows what the Government are up to. The lower paid and those just above the border line will pay——

Mr. Tredinnick: Will the hon. Gentleman inform the House next that since the privatisation of the gas industry there have been far fewer disconnections?

Mr. Deputy Speaker: Order. I hope that he will not do so on this group of amendments.

Mr. Haynes: You are right, Mr. Deputy Speaker, gas is not mentioned in the amendment. The hon. Gentleman has got himself in a mess and should rephrase his question.

Mr. Tredinnick: I am sorry if I misled the hon. Gentleman. Since the privatisation of the gas industry the number of disconnections has fallen, so it is likely that the number of disconnections in the electricity industry will likewise fall because of the downward pressure on prices.

Mr. Haynes: The hon. Gentleman has not done his homework. I am suggesting that, because of previous privatisations, prices have risen and gas cut-offs have trebled. After this privatisation there will be more and more cut-offs of electricity——

Mr. Hardy: Does my hon. Friend agree that, in addition to the people who may be disconnected, a growing number of people are likely to need special concessions in the form of pre-payment meters, tokens and so on? These people will pay more for their electricity than those who can afford to pay the higher bills without much trouble.

Mr. Haynes: Exactly. The Secretary of State has talked about the pre-payment meter with a card. That is more costly to the consumer, but the Secretary of State did not mention that. People in the lower income groups will be hit hard.

I am being bombarded by representatives of industry who tell me of how their industries will be affected by the increased costs of electricity. Industry is telling us in no uncertain terms that it is not looking forward to privatisation. I see that the Minister is busy. I hope that he does not need to send his Parliamentary Private Secretary to find an answer to my questions. The problems that I am putting to the Minister are simple and he should fully understand them because the problems in his constituency must be similar to the problems in mine in connection with what will happen after privatisation. People are asking how they will pay their bills. They want to know whether they will be cut off or whether they will have a pre-payment meter put in and pay extra. Will industry in the Minister's constituency pay more and more which will then be reflected in prices? Bread, a necessity of life, will increase in price because of privatisation. That is why we keep pressing the Minister, as we did in Committee, about exactly what will happen under the Bill.

The Government do not listen and that is why Ministers repeat themselves at the Dispatch Box. They will not listen to home truths from Members who really represent the people. Our constituents tell us and we bring the information to the House. There are real problems now in the constituencies, quite apart from the problems that will exist after privatisation. The situation will get worse, but it is a waste of time asking the Minister to consider the issues that we are putting forward. The Minister will not be able to answer my next question because his right hon. Friend the Secretary of State for Energy is not in the Chamber. He is in Moscow, talking, I hope, to Gorbachev.

The Bill will hit our constituents and at this eleventh hour I ask them to withdraw the Bill and leave the industry under public control. That is where it will be when we are in government.

Mr. Alan W. Williams (Carmarthen): Amendment No. 191 asks distribution companies to

"include a financial statement surveying costs for each area board during that year.'."

That is a modest request. People are greatly concerned about what the Electricity Bill holds in terms of future prices. The same concern applies to the Water Bill because water prices are likely to rise by 50 per cent. or more in the

next few years. The Bill will create a private monopoly because there will be no real competition and no alternative source of supply for the consumer. Each area board will have to make a profit for its shareholders and at the end of the day such profit can come only from the bills that are sent to consumers.

Last year there was a 9 per cent. increase in price and this year there will be a further 6 per cent. rise. There is no justification for either of those rises and it is quite clear that they were imposed simply to fatten the industry for privatisation. About 80 per cent. of our industry relies on coal and the productivity record of our coal industry has been stupendous. There has been a more than 50 per cent. improvement in productivity in the last five years, so there is no justification for the price rises.

At the first sitting of the Standing Committee in January we discussed prices, franchises and the future investment policy of the Central Electricity Generating Board. The justification given for last year's price rise was that the electricity industry needed to embark on a massive investment programme of £45 billion. At that first sitting the arguments advanced by the Secretary of State on that £45 billion figure were torn to shreds. There is no way that the industry requires investment on that scale. It obviously needs new power stations, not PWRs, but proper environment-respecting coal-powered stations. Thanks to my hon. Friend the Member for Sedgefield (Mr. Blair), the figure of £45 billion was knocked into shape. The Government were talking about outturn prices in the year 2000. The correct figure turned out to be £13 billion at present prices. In Committee we destroyed the case for last year's 9 per cent. increase and this year's 6 per cent. increase.

As I have said, the ordinary consumer is greatly concerned about the future price of electricity. That concern is shared by industry. In my part of the world, in south Wales, industry has the highest proportion of electricity demand of any region. Fifty-nine per cent. of electricity produced in south Wales goes to industry. The Merseyside and North-Western electricity board area has the second highest with 56 per cent. Industry faced a price rise of 9 per cent. last year and 6 per cent. this year, but who knows what sort of increase it will face in the years ahead? Such increases affect the competitiveness of British industry.

Mr. Jack Thompson (Wansbeck): My hon. Friend is on an important issue and in some ways the matter has gone full circle. The only source of energy for operating industrial machinery is electricity. Machines cannot run on gas or oil or on any other energy source. An increase in electricity prices to the coal industry, which consumes a huge amount of electricity, will push up coal prices and create pressure on the coal industry.

Mr. Williams: My hon. Friend is right. Increases in the price of electricity feed right through industry and result in increases in the price of raw materials such as coal and the price of the manufactured goods that we need to sell on world markets. It crucially affects competitiveness.

Faced with increased charges, many major industries, the large consumers, may decide to opt out of supply from the distribution companies and provide their own independent supply. That will have a knock-on effect on the domestic consumer because prices to the householder will go even higher. We should remember that electricity costs bear heavily on elderly people, families and the low paid. That compounds the retail prices index. Electricity costs are a small part of a rich person's budget, but for the low paid and the elderly—people who spend most of their time at home—the electricity bill forms a large chunk of their outgoings.

The Bill talks about some kind of mythical downward pressure on prices that might come from increased efficiency. However, shareholders will demand their cut. Where can that money come from other than from higher prices? I recently had a look at the 1987-88 annual report of the CEGB, which has a 50-year history. In the last 30 years electricity prices have fallen in real terms and have dropped below the retail price index.

Part of the reason for that is increased efficiency in the running of power stations and the generating of electricity. Another part of the reason is that, generally, fuel costs have fallen in real terms.

5.30 pm

I cannot see why the Bill should not contain a clause saying that, over the next 10 years, electricity prices need not rise in real terms so that that pattern is continued. British Coal has offered the CEGB a 10-year price agreement under which the price of coal would be fixed to the retail prices index. In the past five or six years, coal prices have fallen, and that could be continued for the next 10 years. Fuel costs represent the major cost in generating electricity, and 80 per cent. of our electricity comes from the burning of coal, so there is no reason why electricity prices should increase in real terms over the next 10 years.

As a result of the amendment,

"a financial statement surveying the cost of each board"

would be submitted every year. That is a simple safeguard for consumers. I am certain that the Bill will inevitably lead to higher electricity prices, but there must be transparency about what is happening.

Mr. George J. Buckley (Hemsworth): I agree with my hon. Friend that increased electricity prices are the inevitable result of privatisation. However, will not the main pressure to increase prices, as has been stated by the Minister in Committee, be a result of the higher return on capital investment that is bound to be demanded from a privatised electricity industry?

Mr. Williams: My hon. Friend is right. The Government are increasing the rate of return. In an electricity industry in the hands of private shareholders, there are dangers that that will be pushed further. Another pressure on the cost of electricity is the nuclear component that the Government insist on having—the nuclear quota or nuclear tax. The four PWR stations will cost at least £1 billion each, and the electricity that they produce will be uneconomic especially at the high discount rates that the Government are talking about.

The Bill is a cause of great worry for the domestic consumer. People are concerned that, as with water prices, electricity prices will go through the roof over the next few years. That is why the Government should be listening to public opinion. Some 70 per cent. of the people are opposed to the Bill.

Dr. Kim Howells (Pontypridd): I commend amendment No. 191. A financial statement for each area board would allow some visible mechanism whereby a proportion of the profits that the area boards will undoubtedly rake off from the business of selling electricity can be diverted into vital

[Dr. Kim Howells]

research and development by our universities, our centres of research and our centres of excellence. That might put them on a par with the research and development carried out by the large multinational corporations. They will be selling us technologies that at the moment may not be profitable, but in the future will be both vital and profitable. For example, renewable energies and clean burn technologies are being developed and investigated at Grimethorpe. Research is being carried out into the decommissioning processes, about which we know so little but which those on the Government Front Bench blandly assume will be carried out with impunity. There is also research into the storage of nuclear waste. The Government have already admitted that there is a good case for a nuclear tax, which is what it will amount to—let us not try to gloss over it. In other words, there will be a rake off of profits to sustain a ringfence nuclear industry.

Instead of that, why should not a proportion of the profits that will undoubtedly accrue in large amounts go into research and development? That would ensure that in the 21st century we shall not be held hostage by the technologies that will otherwise be designed and developed by the multinational corporations in Japan, the United States and Germany. Why can we not develop them here, so that British industry will be in the forefront of these industries? This amendment would give us some purchase on this otherwise hostile Bill, and mean that the state can insist that the electricity industry pays attention to research and development because, if it does not, the electricity supply industry will fall badly behind.

Mr. Frank Doran (Aberdeen, South): My hon. Friends have made out a clear case as to why amendment No. 191 should be accepted. The principal reason is that, as the consequence of the Bill, the price of electricity will increase considerably. Last year, there was an increase of 9 per cent., and this year an increase of 6 per cent. in England and Wales and 8·5 per cent. in Scotland, all as a direct consequence of the Bill. Additional costs will result from the nuclear levy, and costs of flotation and various other associated costs, and the need for the new privatised companies to increase profits for their shareholders.

We must ask what the Government have to be afraid of that makes them oppose our amendment No. 191. We are simply asking that, in his annual report, the director includes a financial statement so that the consumer can see what the costs are in the various area boards. The Government have claimd that the Bill will introduce competition, but they are refusing us the opportunity to see how that competition will operate in practice and how the costs of the boards match up to one another. That is a simple service to provide the consumer, and the best person to provide it is the director. That is why we have tabled our amendment.

The Government amendments relate mainly to the powers of the director in relation to the companies, and in particular the sanctions that the director will have to ensure compliance with the Act and the various licence conditions. Amendment No. 22 will strengthen the hand of the director. Under the Bill as previously drafted, the director would have had to show that there had been a previous contravention by the licence holder. We argued against that in Committee and were pleased that the Government agreed that the director could anticipate a contravention on the part of a licence holder. However, amendment No. 25 lets the licence holder off the hook to a certain extent because it gives the director the power to negotiate. I am concerned about that, and I ask the Minister to explain how he sees that operating.

I am particularly concerned about clause 46, which requires the director to produce an annual report. Specifically, clause 46(2)(b) requires him to set out in his annual report

"any final or provisional orders made by the Director during that year".

That will exclude boards or licence holders who have transgressed, but who are able to get into a negotiating position because of amendment No. 25, and avoid any publicity that might result from their transgression and the adverse effect on their business that that might involve.

I am also concerned about what would be involved in the failure of any board or licence holder to recognise the order of the director. Apart from the issue of a provisional order or a final order, there is no real sanction on the continually transgressing boards.

Mr. Michael Spicer: In speaking to amendment No. 191, the hon. Member for Sedgefield (Mr. Blair) designated today as consumer day. I must tell the House that, after the passage of the Bill, every day will be consumer day. I shall tell the hon. Member for Ashfield (Mr. Haynes), all others who contributed to the debate and anyone else who cares to listen why that is so. The generating side of the business, which the hon. Member for Sedgefield designated as twice removed, accounts for about 70 per cent. of all the costs that pass through to the consumer. Therefore, it is of some direct interest to the consumer. That side of the business will be subject to stringent competition.

We know of 20 projects with cost structures that are considerably below those that are now the average for the CEGB. I can inform the House of some of them because they are in the public domain. These include Barking, Corby, Roosecote, Leicester and Brigg. I cannot refer to them all because some of them are commercially confidential. However, the cost structures that we have seen are considerably below those of the CEGB.

The Government's case does not rest on the existence or otherwise of 20 new independent projects that will represent anything up to 7·5 GW of potential electricity. Our case rests on fundamentally altering the structure of the generating side of the electricity industry We are changing an industry in which there is only one supplier of electricity in England and Wales. It is that supplier which determines the cost structure of the industry and then passes the consequences of that straight through to the consumer. The fact that we are interposing a new set of pressures on the generating side of the industry constitutes our basic argument that we are doing more for the consumer in one piece of legislation than the Labour party will ever contemplate doing, even in its wildest dreams.

5.45 pm

I call in evidence the pronouncements, for example, of the chief executive designate of National Power, Mr. Baker, whom the Opposition are especially keen to quote. There are also the pronouncements of Mr. Malpas, the chairman designate of PowerGen. The Opposition do not seem to understand that those gentlemen's pronouncements signal a radical change in attitude on the part of undertakings which, for the first time, are having to think

about the market place. Mr. Baker's speech, which was of particular interest to the Opposition in its leaked form, made the position clear for future employees. He was categoric when he said, in effect, "Unless we start to realise that we are in competition from now onwards with other companies, your jobs and our business will be at stake." That is precisely the change in attitude that I call in aid in justifying the argument that the Bill is in the interests of consumers.

Mr. Rhodri Morgan (Cardiff, West): Are the private generators to which the Minister has been talking willing to proceed on anything other than a take-and-pay basis?

Mr. Spicer: I can tell the hon. Gentleman what I told him only the other day. The motivation of the companies does not reside in any price structure that is either imposed on them or given to them, or in conditions of the sort to which the hon. Gentleman has referred. Instead, it resides in their knowledge of the efficiency with which they will be able potentially to compete with existing players. They know that they have new technologies, ideas, management structures and practices that will enable them to compete with the successor bodies.

Mr. Blair: Perhaps the Minister will care to confirm something that he was not prepared to commit himself to in Committee. Under the contracts concluded by area boards and the duopoly structure—PowerGen and National Power—that the Government are setting up, there will be no yardstick competition prevailing.

Mr. Spicer: The question of contracts is one that is yet to be settled. I have never made any bones about that. There is no secret about it. Nor is there any secret about the fact that the Government intend that the contracts should not be agreed to in a way that will prevent future and further competition.

As for competition——

Mr. Blair: Will the Minister give way?

Mr. Spicer: I shall let the hon. Gentleman intervene later. I wish to develop an important argument.

The hon. Gentleman based his speech on the argument that we are doing nothing for the consumer. I have said already that that is manifestly untrue in respect of generation. Even if the considerations and worries that the hon. Gentleman has presented were realities, the fact remains that the generation side of the industry is to be changed radically. The hon. Gentleman cannot get away from the fact that there is one monopoly supplier. That supplier is to have his monopoly broken, and from now on the industry will be geared up to encourage new entrants.

Incidentally, the amendment refers to area boards. I thought that we would be able to agree that the Bill refers to public electricity suppliers. Area boards will be abolished by the Bill. However, I put that on one side. Opposition Members have argued that competitive pressures will bear too strongly on the public electricity supply companies. For example, large companies or smaller companies will have a right not to contract with their local public electricity supply company. The supply companies will face pressures that have never existed in the past. As they will have the right to charge the tariff structures that they wish to introduce under the regulatory conditions, undoubtedly there will be a measure of competitive pressure that does not presently exist.

Where competitive pressures do not exist, there will be the regulator and the regulatory rules. For the first time, the regulator will have the consumer as one of his prime responsibilities when he comes to focus upon his duties. The regulatory duties that relate to the consumer are spelt out in a way that is different from anything which has existed in the past. That is denied by the hon. Member for Sedgefield, but it is a fact that duties will be placed upon the regulator to regard as paramount the interests of consumers.

Under the Bill, there is a right to the supply of electricity that did not exist previously for anyone with connections, or potential connections, more than 50 yd away from the mains supply. That is another consumer right that has been introduced. There is to be a panoply of new consumer rights under the Bill. At least give us the credit for that. If the companies do not meet certain standards, moneys will be returned to consumers. That is a brand new provision. That is something which the hon. Member for Sedgefield might acknowledge in a debate that is about consumers.

Mr. Blair: The Bill does not do a single thing for consumers that could not be done separately from privatisation. The hon. Gentleman must make a case showing why the Government are privatising the industry. So that the public fully understand, will the hon. Gentleman confirm that the ordinary, average consumer will have no choice but to continue contracting with his area board?

Mr. Spicer: The case that the hon. Gentleman must make is in answer to the hon. Member for Ashfield, who said that he wanted to put the industry back into public control. I shall not leave that point alone and I shall certainly address the question "Why privatise?" put by the hon. Member for Sedgefield.

I have already said that customers, including, for instance, those managing large new estates or large blocks of flats, would have the right to opt out—as everyone has —and it might even be a practical proposition— *[Interruption.]* The hon. Member for Sedgefield is not listening to my answer to his question. Domestic customers will have the right to opt out, and certain managers of large new estates or large blocks of flats may well want to do so——

Several Hon. Members *rose*——

Mr. Spicer: I have answered one question put by the hon. Member for Sedgefield and I want to deal with his other questions.

One feature for which no Opposition Member has given credit in the context of a debate on consumer rights, although I am sure that they have understood it, is the new place of the consumers' committees within the regulatory body. For the first time, instead of shouting outside the industry and giving the benefit of their advice to anyone who wishes to listen, consumers' committees will be players involved in the regulatory process. They will have statutory rights that they did not have before. At least the Opposition might congratulate the Government on this new innovative approach to the involvement of consumers' committees within the regulatory authority.

Mr. Lofthouse: Is the hon. Gentleman saying that domestic dwellings can opt out?

Mr. Spicer: I am saying that everyone will have the right to opt out. The question on which, I suspect, the Labour Front Bench will wish to come back to me is whether that is a practical proposition. I have told the House that in certain circumstances the managers of large new estates or large blocks of flats may decide that, at the very least, they want to ensure that their local public electricity supply company understands that they have that right. The pressure that those managers could exert might be satisfactory from the consumers' point of view——

Mr. Deputy Speaker: Order. I hope that we can return more closely to the amendments before the House.

Mr. Spicer: I hesitate to quarrel in any way with your ruling, Sir, but you allowed the hon. Member for Sedgefield to develop an argument against our proposals in relation to consumers.

Mr. Deputy Speaker: Order. The Minister is right. I was a little overrelaxed in allowing a wide debate. The Minister is being given an adequte opportunity to respond to those points which I should not perhaps have allowed. I hope that, now that the matter has been redressed, we shall return to the amendments.

Mr. Spicer: You allowed the Opposition to ask why we were going to privatise, Mr. Deputy Speaker. I am sure that they felt that that question was related to the question of surveying costs for, as they described it, each area board, although it will not be an area board. This matter is relevant and, if I may, I should like to answer the question "Why privatise?" It is a fair question in the context of consumerism and prices.

One reason why we wish to privatise is that the country is faced—this relates directly to the question of surveying costs—with a massive investment programme. We have argued about exactly what it will comprise. The central part of our position is that that investment will not take place on the taxpayers' back, as it would in the public sector.

More fundamentally, it will occur in a form that is not dependent upon political decisions taken behind beige doors in Whitehall but has reference to genuine market needs. That must be a better way of engaging in investment decisions than having decisions that are a result of political infighting, as so many investment decisions are at present.

Because of your strictures, Mr. Deputy Speaker, let me leave aside the issue of increasing further public ownership of shares. By "public ownership of shares" we mean increasing ownership from the present 9 million shareholders and particularly increasing ownership of shares by employees—something about which the Opposition have never liked hearing.

I should like to ask the Opposition a question which we have asked before but to which we have not had an answer. Do they or do they not agree with the Labour Whip, the hon. Member for Ashfield, who jumps from the Front Bench to the Back Benches and makes a statement on the Opposition's behalf that he would renationalise——

Mr. Deputy Speaker: Order. We are being led back into a Second Reading debate, but we will not have that. Hon. Members must return to the amendments before the House. I hope that when hon. Members demand flexibility from the Chair they realise the consequences of opening that door.

Mr. Spicer: Of course I bow to your ruling, Mr. Deputy Speaker. I shall ask that question later. I serve notice on the Opposition that, when it is in order, I should like them to say whether public control means renationalisation under a different name.

We have not heard much about the Government's amendments, I suspect, because the Opposition basically agree—*[Interruption.]* I have been answering the points raised by the hon. Member for Sedgefield, and I think that it is fair for the Government to do that. Hon. Members should not provoke me if they do not want answers.

The Government amendments were suggested after discussion in Committee, as were a number of Government amendments that have been tabled in the past few days, as the Opposition recognise. These amendments relate to the power of the director general to deal with matters when it is likely in his view that a public electricity supplier or licence holder will take actions that may break the licence conditions. The hon. Member for Sedgefield asked whether an enforcement procedure would be provided for in subsequent Government amendments. There is such a procedure. It concerns various levels and is allowed for in the Bill, as a reading of the Bill makes clear. There is no question of enforcement being a problem. I can give that assurance.

These Government amendments have been brought forward in a desire to meet the points made by hon. Members in Committee.

Amendment agreed to.

Amendments made: No. 23, in page 18, line 9, leave out 'has contravened and is likely again' and insert 'is likely'.

No. 24, in page 18, line 30, leave out 'has contravened and is likely again' and insert 'is likely'.

No. 25, in page 18, line 38, after 'order', insert—

'(aa) that the licence holder has agreed to take and is taking all such steps as it appears to the Director for the time being to be appropriate for the licence holder to take for the purpose of securing or facilitating compliance with the condition or requirement in question;'.

No. 26, in page 19, line 18, leave out 'the preceding provisions of this part' and insert 'section 8 or sections 15 to 19, *(Additional terms of supply)* 20 and 21 above'.—*[Mr. Michael Spicer.]*

Clause 25

VALIDITY AND EFFECT OF ORDERS

Amendment made: No. 27, in page 21, line 20, leave out 'the supplier' and insert 'him'.—*[Mr. Michael Spicer.]*

Clause 27

REGULATIONS RELATING TO SUPPLY AND SAFETY

Amendment made: No. 28, in page 22, line 25, leave out from 'efficient' to end of line 30 and insert—

'(b) protecting the public from dangers arising from the generation, transmission or supply of electricity, from the use of electricity supplied or from the installation, maintenance or use of any electric line or electrical plant; and

(c) without prejudice to the generality of paragraph (b) above, eliminating or reducing the risks of personal injury, or damage to property or interference with its use, arising as mentioned in that paragraph.'. —*[Mr. Michael Spicer.]*

Schedule 7

USE ETC. OF ELECTRICITY METERS

Amendments made: No. 29, in page 96, line 22, after 'whom' insert

'and the circumstances in which'.

No. 30, in page 98, line 9, leave out from 'supplier' to end of line 10 and insert

'otherwise than in respect of the supply of electricity, the provision of an electric line or electrical plant or the provision of the meter'.—*[Mr. Michael Spicer.]*

Clause 30

ELECTRICITY FROM NON-FOSSIL FUEL SOURCES

Amendments made: No. 31, in page 24, line 16, leave out from 'made' to end of line 18 and insert—

'(a) such arrangements; or

(b) where a previous order under this subsection has had effect in relation to him, such additional arrangements,

as will secure the result mentioned in subsection (1A) below.

(1A) The result referred to in subsection (1) above is that—

(a) on and after the second day appointed by the order; or'.

No. 32, in page 24, line 22, leave out first 'him' and insert 'the public electricity supplier.'

No. 33, in page 24, line 23, leave out 'this section' and insert 'subsection (1) above'.

No. 34, in page 24, line 29, leave out 'that subsection' and insert 'subsection (1A) above'.—*[Mr. Michael Spicer.]*

Clause 31

FOSSIL FUEL LEVY

6 pm

Mr. Michael Spicer: I beg to move amendment No. 35, in page 25, line 32, leave out 'makes an order' and insert 'has made one or more orders'.

Mr. Speaker: With this it will be convenient to take Government amendments Nos. 36 to 43.

Mr. Spicer: After the previous debate, I shall be brief, although the Opposition may want me to come back to some points. I shall explain the purpose of the amendments. If the contract between the generator and the supply company contains terms that allow for payments to be made before stations are commissioned, the amendments will allow the costs to be covered through the levy.

The issue is complicated, so the best way to proceed is for me to listen to any Opposition comments and respond to them if necessary.

Mr. Doran: I was interested to hear the Minister's point. My interpretation is that the amendment extends considerably the scope of the nuclear levy and introduces the concept of advance payments. There is no reference to contracts between suppliers and generators, so it seems that the amendment seeks to introduce the concept of payment in advance of the intended nuclear generating capacity. We have heard of four new generators and we have already referred today to the cost of that scheme, which the Minister put at £38 billion. That is interesting in the context of the debates in Committee. My hon. Friend the Member for Sedgefield (Mr. Blair) often pressed the Secretary of State and the Minister to make clear what was covered by the nuclear levy and it was made clear at that time that it did not cover advance payments.

One possible interpretation of the amendment is that the whole cost of any new generating capacity can be included in those advance payments. In Committee, the Minister conceded that the level of the levy was likely to be in excess of 8 per cent., and gave a figure approaching 10 per cent. when pressed by my hon. Friend the Member for Sedgefield. That is a crucial and fundamental question on a day that is devoted to consumers and prices. The Minister should advise us what extra cost has been added to consumer costs as a result of the amendment, which allows the payment of advance expenses. The Minister conceded a figure of 8 per cent. If we take into account the additional expenditure of about £30 billion between now and the turn of the century, we must be talking about a considerably increased cost. We are entitled to an answer at this stage of the debate.

It is also important to note—although we are talking about a different degree of cost—that amendment No. 40 allows the Government to farm out the whole process. In Committee, the Minister talked about the possible use of a firm of accountants. That is another area where the bureaucratic structure of regulation and the collection of the levy will involve more cost for the consumer. I shall be interested to hear from the Minister what costs he envisages will be involved. The structure required to assess the level of levy and to collect it will be considerable. Amendment No. 36 appears to add substantially to the costs brought within the scope of the levy. We demand to know what that will mean for the consumer.

Mr. Hardy: I had not intended to speak on these amendments, and I want merely to make one point. In his rather long reply to the previous debate, the Minister did not say a word to explain the grossly unsatisfactory situation that faces industries that are high energy users, such as the one in my own constituency to which I referred. The Minister will be aware that, while the Bill was in Committee, the chemical industry expressed deep anxiety about its position. British industry, especially that part of it that uses a great deal of energy, will have found no cause for comfort in anything the Minister has said. He did not appear to address the problem at all.

Mr. Michael Spicer: I must remind the hon. Member for Wentworth (Mr. Hardy) of a point that needs to be made every so often, which is that, in real terms, electricity prices have been falling over the past five years. Industrial electricity prices have fallen by 6 per cent. It also has to be said—and I did not want to raise the point again—that in the five years of the last Labour Government, domestic prices rose by 9 per cent. and industrial prices by 6 per cent. in real terms. The hon. Gentleman asked a question on behalf of the chemical industry or possibly the steel industry—I do not know which. Under the last Labour Government, prices rose in real terms, whereas under this Government prices have fallen in real terms. What substantial case is the hon. Gentleman making?

Mr. Hardy: The Minister overlooks the central point. The Government should be looking at our industrial costs in comparison with those of our competitors. It is no good the Minister saying that electricity prices have fallen in real terms. I would not say whether they have or not. What we must do is to compare the costs faced by British industry with the costs faced by our competitors. As I said in an earlier debate, the competitive edge of British industrial high energy users is considerably blunted as a consequence of the decisions taken last year and this year. It seems that we are justified in being fearful about the effect next year or the year after.

Mr. Michael Spicer: I am grateful for that further intervention, because it gives me the chance to put the record straight. I gave one figure wrongly by 100 per cent. Industrial prices have fallen not by 6 per cent., but by 12 per cent. under this Conservative Government. That is one of those slips of the tongue on which the Opposition would be happy to sit. Industrial prices have fallen by 12 per cent. under this Conservative Government, whereas they rose by 6 per cent. in real terms under the last Labour Government.

The hon. Gentleman made a fair point about competitiveness, so I must point out that if one compares our industrial electricity prices with those of, for example, other European countries, we come in about the middle. If we consider the West Germans, we do much better than——

Mr. Morgan: Not for bulk supply.

Mr. Spicer: The hon. Gentleman refers to bulk supply and industry sometimes makes the case that there is a panoply of special contracts in Europe about which nobody knows much. I have asked the industry from time to time to come up with information that can be publicised about this mass of subterranean contracts which would give a different picture from the one that I have given to the House, but it is difficult to obtain specific, detailed evidence. However, we have published data about electricity prices for industry generally. That shows that British industry as a whole receives electricity at about the median price level compared with other European countries. Nobody denies that.

Mr. Morgan: What about contract prices?

Mr. Spicer: The Government have to go on published data. Private contracts may exist, but such private information is not available to the Government.

The hon. Member for Aberdeen, South (Mr. Doran) asked what was to be included in the levy, and whether the amendment would mean an increase in the levy. I shall make broadly the same point as my right hon. Friend the Secretary of State made in reply to the hon. Member for Sedgefield (Mr. Blair) in Committee. At the moment, the cost of financing nuclear power stations is taken directly, within the price. Whether that will be the case in future, and whether the levy will directly finance nuclear power stations—as it would under the present arrangements—depends on what contracts are struck. In particular it depends on the financing arrangements catered for and the timing of payments under those contracts. Until the contracts have been settled, therefore, I cannot give the hon. Gentleman the answer that he seeks.

What I can say is that the Government will ensure that the contracts strike the right balance between providing a motivation for the industry to invest in nuclear power stations and ensuring that they do not make excess profit from, and are not wasteful in, that investment to the detriment of the consumer. I can give the hon. Gentleman that assurance.

Mr. Doran: The Minister seems to have confirmed what he refused to confirm in Committee. I want to be clear on exactly what he is saying. The amendment says nothing about contracts. It gives a specific right to the new supply industry to receive payments in certain specific circumstances. The amendment seems to cover the whole cost of providing the capacity and appears to have nothing to do with contracts or the Government's control of those contracts.

Mr. Spicer: The hon. Gentleman is absolutely correct, because the amendments are permissive and allow for the recouping of costs. I am not saying that the costs will be financed as he suggests, because that will depend on how the contracts are struck. At the moment, the industry finances its development directly and passes its costs straight on to the bulk supply tariff. In future, there will, no doubt, be an element of financing, but we cannot tell what the exact result will be until the contracts have been struck. I hope that, on the basis of that explanation, the Opposition will feel able to accept the amendments.

Mr. Morgan: That was a completely unsatisfactory reply. An issue of *Electrical Review* that came out over Christmas carried the headline "Proposed Contracts are Riskless". The description that the Minister has given is a perfect description of a contract that is riskless for the private sector. The electricity consumer will now have to pay the private generator to build private generating stations. If that is the purpose of the Bill, it is about time the consumer knew it.

My hon. Friend the Member for Aberdeen, South (Mr. Doran) and I spent a long time examining Government amendments Nos. 36 to 43, and concluded that they showed that the nuclear levy is in serious trouble. The Government and the electricity companies do not know, and the consumer and the House certainly do not know, how the nuclear levy will work. It has been devised at a Sir Humphrey's mad hatter's tea party and the amendments show us all just how much trouble the levy is in and just how short a time the Government have left to get it right.

The area boards do not know how the nuclear levy will be collected. They know only that the additional costs of nuclear production over coal production—which John Baker, the chief executive, told us would be 42 per cent. in the financial year that has just started—will be distributed in some way. The proposal cuts completely across the concept at the heart of the Bill and the idea of direct contracts between generators and suppliers. It looks to us as though the Government are beginning to admit that they have devised a wholly unworkable system for collecting the levy.

Amendment agreed to.

6.15 pm

Amendment proposed: No. 36, in page 25, line 42, after 'the', insert

'aggregate of the amounts given by subsections (2A) and (2B) below.

(2A) The amount given by this subsection is a one-twelfth part of any advance payments which, in pursuance of qualifying arrangements, fall to be made by the public

electricity supplier during the relevant year; and in this subsection "the relevant year" means whichever one of the following periods the qualifying month falls within, namely—

(a) the period of twelve months beginning on the first day appointed by the first order under section 30 above; and

(b) each successive period of twelve months.

(2B) The amount given by this subsection is the'.

Question put, That the amendment be made:—

The House divided: Ayes 262, Noes 180.

Question accordingly agreed to.

Amendments made: No. 37, in page 25, line 44, leave out from 'cost' to 'during' in line 45 and insert

'to the supplier of purchasing or generating any electricity supplied by him'.

No. 38, in page 26, line 1, after 'cost,' insert 'to him'.

No. 39, in page 26, line 4, leave out 'the regulations' and insert

'regulations under this section and excluding, in the case of the cost mentioned in paragraph (a) above, any advance payments taken into account under subsection (2A) above'.

No. 40, in page 26, line 14, after 'sufficient', insert

'(after payment of the administrative expenses of the prescribed person)'.

No. 41, in page 26, line 17, at end insert—

'"advance payment" means—

(a) any payment made by the public electricity supplier in pursuance of the qualifying arrangements; and

(b) where he is generating electricity in pursuance of those arrangements, any expense so incurred by him,

which is made or incurred before any electricity is generated in pursuance of those arrangements, and any reference to the making of advance payments shall be construed accordingly;'.

No. 42, in page 26, line 21, leave out

'the order under section 30(1)'

and insert

'an order under section 30'.

No. 43, in page 26, line 25, leave out from 'the' to end of line 26 and insert

'first day appointed by the first order under section 30 above or, if that'.—*[Mr. Michael Spicer.]*

Clause 32

FUEL STOCKS ETC. AT GENERATING STATIONS

6.30 pm

Mr. Michael Spicer: I beg to move amendment No. 44, in page 27, line 26, at end insert—

'(4A) A direction under subsection (2) or (3) above which confers on any person the function of specifying anything failing to be specified under the direction may require that person to exercise that function in such manner as may be specified by the direction.'

This is essentially a technical amendment, designed to provide an additional and necessary element of flexibility to the direction-making powers in the clause. It allows the Secretary of State, when giving directions to the operators of generating stations, to give directions to the National Grid Company also. Clearly, that makes sense. It seemed to us right to underline that in the Bill.

Amendment agreed to.

Clause 33

CONSENT REQUIRED FOR CONSTRUCTION ETC. OF GENERATING STATIONS

The Minister of State, Scottish Office (Mr. Ian Lang): I beg to move amendment No. 45, in page 28, line 1, leave out 'subsection (2)' and insert 'subsections (2) and (2A)'.

Mr. Speaker: With this it will be convenient to consider Government amendments Nos. 48, 46, 97, 99 and 100.

Mr. Lang: We have put down these amendments to clause 33, which provides for consent to be obtained for the construction, extension or operation of generating stations. The proposed amendments will provide a degree of flexibility if, for example, we wish to exclude certain types of station from the consent required should the 50 MW threshold be lowered at any time in the future. The amendments will also enable certain types of works in connection with generating stations, or certain changes in operation, to be exempted from the consent requirement if the Secretary of State considers it more appropriate that they should be dealt with under normal planning procedures.

Amendment No. 46 refers to fees accompanying applications. We have decided that, in future, fees should be payable with such applications. No such power exists under present legislation, and I think that the House would agree that it has long been anomalous that the Department's costs have not been recoverable.

Amendments Nos. 97 and 99 relate to the deeming of the granting of hazardous substances consent. New paragraph (1A) parallels a provision to be inserted into the Town and Country Planning Act 1971 and the Town and Country (Scotland) Act 1972 by part IV of the Housing and Planning Act 1986, which the Government intend to bring in force later this year.

Part IV of the 1986 Act will introduce new controls over hazardous substances. Under the provisions to be introduced by the Act in relation to statutory undertakers, a Minister will be able to deem to be granted hazardous substances consent where a hazardous substance will be present on a development for which his authorisation is required. This does not imply any diminution of scrutiny of any hazardous substance aspect of any application.

The purpose of the amendment is to simplify the procedures for those making applications under clause 33. Not all such applicants will be deemed to be statutory undertakers, and the relevant provision under part IV of the 1986 Act will not, therefore, be applicable in all cases. It is because of this that a free-standing provision in relation to deemed planning permission is already included in paragraph 7(1) of schedule 8. A similar free-standing provision is necessary to enable the Secretary of State to deem hazardous substances consent to be granted, where appropriate, in granting consent under clause 33.

The new paragraph requires the Secretary of State to consult the Health and Safety Commission before deeming a hazardous substances consent to be granted. This requirement is consistent with the parallel provision to be introduced under the Housing and Planning Act 1986.

Amendment No. 100 is a consolidation amendment, which also corrects an error in the original drafting.

Mr. Doran: I wish to raise some minor points of clarification.

As I understand it, amendment No. 48 will give the Secretary of State the power to order that certain power stations of the classes or descriptions that he will specify should not require his special consent. Under the terms of clause 33(2), power stations of under 50 MW generating capacity are already excluded, so I should like clarification of why that power is required. Does the Minister envisage that larger power stations—and if my memory serves me correctly, the 50 MW capacity can already be altered by order—would be excluded if they fell into a particular category?

In relation to amendment No. 97, the Opposition always get nervous when we feel that the Health and Safety Commission is being excluded or is not being given its proper place. Obviously I am conscious that the amendment would require it to be consulted, but in what circumstances would that be, and what change in the existing procedure is envisaged? My understanding is that at present the specific permission of the Health and Safety Commission—not just consultation—is required for the granting of a hazardous substance consent.

May I please have clarification on those two points?

Mr. Eadie: The Minister talked about fees having to be paid. He said that the House would probably be astonished to find that the Department's fees had never been recoverable. I wonder if he could tell us something about the circumstances, and about the sums that are likely to be involved.

Mr. Lang: I shall try to answer the three points that have been put to me.

As I explained in the context of amendment No. 48, we were anxious to have a degree of flexibility—for example, in case we might want to exclude certain types of stations from the consent requirement if we were to reduce the 50 MW threshold at any time in the future. It is also worth mentioning that the amendments would enable generating stations on offshore oil and gas installations which operate for the generators' own use to be exempted from the consent requirement. The hon. Member for Aberdeen, South (Mr. Doran), particularly with his constituency interest, will know that there are special provisions under the Offshore Installations Act which cover offshore platforms, but that is an example of the kind of thing that we might wish to exclude from the provisions here.

The hon. Member is concerned about the implications for the Health and Safety Commission. Let me reassure him that under part IV of the 1986 Act we are tightening up the controls over substances of this kind, such as chlorine, hydrogen and asbestos. The amendments bring the Bill into line with the thinking behind that Act. As I have mentioned, the Secretary of State would be required to consult the Health and Safety Commission before deeming a hazardous substances consent to be granted.

In respect of the point raised by the hon. Member for Midlothian (Mr. Eadie), it is difficult to be precise about the fees. They would tend to relate to the land involved in the application and would, therefore, form a very small proportion of the overall costs of any project in the context of the construction of a generating station. However, I think that the hon. Gentleman will agree that it is in line with our general policy that such costs should be recovered. The provision would bring the situation into line with the arrangements for other planning applications.

Mr. Eadie: I know that the hon. Gentleman has made a statement about fees and costs, but would he care to write to me, when he has had an opportunity to consider the matter, and tell me what the cost is likely to be? Ministers are bound to have some idea.

Mr. Lang: How long is a piece of string? Certainly I will write to the hon. Gentleman—I am keen to be helpful. I am not sure that there is much more that I will be able to say to him, but I shall try to give some hypothetical cases, which I hope will assist.

[Mr. Lang]

Amendment agreed to.

Amendment made: No. 48, in page 28, line 13, at end insert—

'(2A) The Secretary of State may by order direct that subsection (1) above shall not apply to generating stations of a particular class or description, either generally or for such purposes as may be specified in the order.'.—*[Mr. Michael Spicer.]*

Schedule 8

CONSENTS UNDER SECTIONS 33 AND 34

Amendments made: No. 46 in page 98, line 37, at end insert—

'(3) Regulations under this paragraph may make provision for determining the fees to be paid on applications for consent under section 33 or 34 of this Act, and the circumstances in which they are to be paid.

(4) Any sums received by the Secretary of State under this paragraph shall be paid into the Consolidated Fund.'.

No. 97, in page 101, line 40, at end insert—

'(1A) On granting a consent under section 33 of this Act in respect of any operation or change of use that would involve the presence of a hazardous substance in circumstances requiring hazardous substances consent, the Secretary of State may, after consultation with the Health and Safety Commission, direct that hazardous substances consent shall be deemed to be granted, subject to such conditions (if any) as may be specified in the direction.'.

No. 99, in page 101, line 42, after 'permission', insert 'or hazardous substances consent'.

No. 100, in page 102, line 7, at end insert—

'(2) In section 149 of the Local Government, Planning and Land Act 1980, each of the following, namely—

(a) subsection (3)(a) (power of Secretary of State to confer on urban development corporation functions of local planning authority in England and Wales); and

(b) subsection (8)(a) (which makes corresponding provision in relation to Scotland),

shall have effect in relation to the provisions of this Schedule (so far as applying to applications for consent under section 34 of this Act) as it has effect in relation to the provisions referred to in that subsection.'.—*[Mr. Michael Spicer.]*

Schedule 9

PRESERVATION OF AMENITY AND FISHERIES

Mr. Malcolm Bruce: I beg to move amendment No. 118, in page 102, line 10, leave out paragraphs 1 and 2 and insert—

'Code of Practice for Environmental Conservation: England and Wales

1.—(1) The Secretary of State in consultation with the Director General shall by order made by statutory instrument issue a code of practice with respect to the environmental and recreational duties for the purpose of:

(a) requiring, when formulating or considering any relevant proposals, each of the following, namely, any licence holder, any person authorised by an exemption to generate electricity, the Director and the Secretary of State,

(i) to further the conservation of the natural beauty and amenity of the countryside (including its flora and fauna and geological and physiographical features) and of any features of archaeological interest there;

(ii) to further the protection of buildings, features and other objects of architectural or historic interest; and

(iii) to promote energy conservation.

(b) giving advice to any licence holder, and any person authorised by exemption to generate electricity, with respect to any of the requirements in subsection 1(a) above.

(c) promoting practices that will further the requirements under subsection 1(a) above;

(2) In fulfilling their responsibilities those named in subsection 1 above shall:

(a) take into account any effect the proposals would have on the natural beauty of the countryside or on any such flora, fauna, features, buildings or objects, as described in subsection 1(a) above.

(3) In subsection (1) 'relevant proposals' means:

(a) in relation to any licence holder or any person authorised by an exemption to generate electricity, any proposals, programme or series of proposals:

(i) for the construction, extension or operation of a generating station;

(ii) for the installation of an electric line, whether above or below ground;

(iii) for the execution of any other works for or connection with the generation, transmission or supply of electricity;

(b) in relation to the Director any proposals, programme or series of proposals which arise as a result of his general duties to promote the generation, and efficient use, of electricity;

(c) in relation to the Secretary of State, any proposals for which his consent is required under this Act.

(4) In fulfilling their responsibilities under this section those named in subsection 1 shall consult on any proposals as defined in subsection (3) above with the Countryside Commission, the Nature Conservancy Council, the Historic Buildings and Monuments Commission for England and the Historic Buildings Council for Wales.

(5) The Secretary of State shall prior to issuing an order under this section in consultation with the Director General, take into account the views of the Countryside Commission, The Nature Conservancy Council, the Historic Buildings and Monuments Commission for England and Wales, the Historic Buildings Council for Wales and other persons it is reasonable to expect him to consult.

(6) A person who, contravenes or fails to comply with an order issued under this section shall be liable—

(a) on summary conviction, to a fine not exceeding the statutory maximum;

(b) on conviction on indictment, to a fine.

(7) Any person shall be entitled to lay a complaint of breach of any order under this section at any magistrates' court in England and Wales.

(8) This paragraph extends to England and Wales only.

Code of Practice for Environmental Conservation: Scotland

2.—(1) The Secretary of State in consultation with the Scottish Office of the Director General shall by order made by statutory instrument issue a code of practice with respect to environmental and recreational duties in Scotland for the purpose of:

(a) requiring, when formulating or considering any relevant proposals, each of the following, namely, any licence holder, any person authorised by an exemption to generate electricity, the Director and the Secretary of State,

(i) to further the conservation of the natural beauty and amenity of the countryside (including its flora and fauna and geological and physiographical features) and of any features of archaeological interest there;

(ii) to further the protection of buildings, features and other objects of architectural or historic interest;

(iii) to promote energy conservation;

(iv) to, without prejudice to the generality of subsections 2(1)(a)(i) and (ii) above, to avoid causing injury, so far as possible, to fisheries or to the stock of fish in any waters;

(b) giving advice to any licence holder, and any authorised by exemption to generate electricity, with respect to any of the requirements in subsection 1(a) above;

(c) promoting practices that will further the requirements under subsection 1(a) above.

(2) In fulfilling their responsibilities those named in subsection 1 above shall:

(a) take into account any effect the proposals would have on the natural beauty of the countryside or on any such flora, fauna, features, buildings or objects, as described in subsection 1(a) above;

(3) In subsection 1 'relevant proposals' means:

(a) in relation to any licence holder or any person authorised by an exemption to generate electricity, any proposals, programme or series of proposals:

(i) for the construction, extension or operation of a generating station;

(ii) for the installation of an electric line, whether above or below ground;

(iii) for the execution of any other works for or connection with the generation, transmission or supply of electricity;

(b) in relation to the Director any proposals, programme or series of proposals which arise as a result of his general duties to promote the generation, and efficient use, of electricity;

(c) in relation to the Secretary of State, any proposals for which his consent is required for under this Act.

(4) In fulfilling their responsibilities under this section those named in subsection (1) shall consult on any proposals as defined in subsection (3) above with the Countryside Commission for Scotland, the Nature Conservancy Council, the Fisheries Committee, the Historic Buildings Council for Scotland and the Ancient Monuments Board for Scotland.
